出版说明

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切：“如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。”今人之于古人的“以意逆志”尚且如此，又遑论国人之于西人？于是王国维先生认为“外国语中之无我国‘天’字之相当字，与我国语中之无God之相当字无以异”；经典之妙，“无论何人，不能精密译之”。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本书编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出“世界大师原典文库（中文导读插图版）”，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，“世界大师原典文库（中文导读插图版）”会成为各界读者阅读、研究和收藏的精神大餐。

郭英剑

《大学的理念》（*The Idea of a University*）是一部阐释教育哲学思想的演讲集，更是一部语言优美且言简意赅、思想深刻又发人深省、影响深远而令人难忘的经典演讲录。

有人把*The Idea of a University*翻译作“大学的理想”，这没有错，作者在这里所使用的“idea”一词，的确是有“ideal”（理想）的意思。但就我个人理解而言，更倾向于使用“大学的理念”，也认为这个翻译更为合适一些，因为它确实是在讨论理想的大学应该具有怎样的教育理念与措施。

《大学的理念》的作者是英国著名的牧师、神学家、文人、思想家、教育家约翰·亨利·纽曼（John Henry Newman）。纽曼在宗教、哲学等领域的建树和成就我们忽略不谈，主要来考察一下他在大学教育上有着怎样的思路和理念，又是如何影响当今高等教育的。

除了教会组织外，大学算得上是在纽曼一生当中与其关系最为密切的机构了。他1801年2月21日出生于英国的伦敦。16岁进入牛津大学（Oxford University），19岁毕业。他后来一直在为教会工作，即便是在大学期间也不例外，后成为宗教领袖，有红衣主教的身份。

1851年，对纽曼来说是个重要的年份。因为在这一年的11月12日，也就是他50岁的时候，他被爱尔兰主教任命为爱尔兰天主教大学（Catholic University of Ireland）——也就是现在的都柏林大学学院（University College, Dublin）——的创校校长（founding rector）。

3年之后的1854年11月，爱尔兰天主教大学正式创建。正是在这期

间，纽曼做了很多有关高等教育特别是大学教育的演讲。后来，他将这些演讲结集出版，于是就有了《大学的理念》。

但令人遗憾的是，在该校建校整整4年后的1858年11月12日，由于对宗教领袖干涉大学事务的不满，纽曼辞去了该校校长一职。1890年8月11日，纽曼在英国伯明翰去世。

在今天的高等教育研究中，纽曼及其对大学的思考是个绕不过的门槛。那么，一本已经超过150年历史的演讲集，要有怎样闪光的思想光芒才能使其依旧照耀在今天的大学上空呢？

可以说，《大学的理念》几乎涵盖了纽曼所有有关大学的哲学思考，其中提出了很多在当时的欧洲高等教育中所面临的重大问题，比如宗教在大学中的地位、大学中的道德观、人文教育与职业教育的冲突、学术社区的特征、文学的文化作用以及宗教与科学的关系等等。但就历史背景而言，纽曼及其大学教育观的出现不是偶然的。

纽曼处于欧洲高等教育历史转折点上。当时，有多种思潮和现实的力量交织在一起，迫使高等教育面临着前所未有的危机和挑战。政治革命所带来的政治自由逐渐兴盛，宗教的影响力日渐减弱，科学技术的地位扶摇直上，而这些都对大学及其教育产生了重大影响。在这种变化面前，一方面是传统的大学（如牛津和剑桥）固守传统只重智性的培养而排斥科学，而另一方面新型大学则以市场为导向唯职业教育为马首抛弃了知识的整体性。

恰在这样的历史关头，作为人文主义者的纽曼，以其渊博的知识、丰富的经验和深刻的洞察力，全面阐述了大学教育中所面临的种种问题，给出了详实的答案。

那么，纽曼在书中所阐述的大学教育理念甚多，难以一一道来。但我们可以试着追问的是：就其整体思想而言，哪些是纽曼理念中最重要最根本的观念？而这些最重要、最根本的观念，与当今的高等教育有着怎样的联系？特别在顶尖的世界大学中又发挥着怎样的作用？

在我看来，就其最现代的意义而言，《大学的理念》所具有的永恒的价值，主要体现在纽曼的三个最基本的问题以及他所提供的答案上，即：大学是个什么地方；为什么要学习知识；大学应该提供什么样的教育。

纽曼所提出的“大学是个什么地方”这样一个看似简单的问题，无疑直指大学的核心问题。

纽曼问道，大学是个什么地方呢？他（在“序言”中）对此的回答是，大学“是一个传授普遍知识的地方”（a University...is a place of teaching universal knowledge.）。他在进一步的阐释中说，最重要的是，大学是学者、教师和学生共同追求真理的社区。而为了强调这一点，纽曼甚至强调指出，所有的大学都是教学机构（teaching organisations），讲究的是“知识的传播与延伸而非发展”。在他看来，“在教学与研究之间”没有必然的关联。发现（discovery）与教学（teaching）各有自己的功能，两者属于不同的天赋才能，不大容易统一在一个人身上。

当然，后来他的这一观点，在洪堡所倡导的大学教育一统欧洲江山的时候，以及到了美国19世纪中期的时候，很快就显得“落伍”了，也被新型的大学教育观念所取代——新型的大学都强调教学与研究之间的紧密关系，但很显然，纽曼所强调的教学本身是大学的第一功能，仍然是强大的和行之有效的。

而必须看到的是，他所提出的“大学是个什么地方”，到如今，依旧是世界范围内的大学在前进的道路上所必须面对的问题。2007年10月，新任哈佛大学校长德鲁·福斯特（Drew Faust）在就职演讲中也对“大学是个什么地方”做出了思考。她说，大学是一个“思想共同体”。应当首先明确一所大学的精神所在，然后就应该知道大学是做什么的了。她提出的观点是，大学要对历史和未来负责——而不单单或者仅仅对现在负责，大学是要对永恒做出承诺。而在此基础上，她进一步指出，作为人类，我们要去寻找意义，这就是所有学问的真谛。

像哈佛大学这样已经办了370多年的大学还在思考纽曼所提出的问题，而且就其根本意义而言，所得出的答案并未出其右者，已经足见纽曼的远见卓识了。

纽曼对“为什么要学习知识”的回答干脆而简洁。他认为，在大学教育中，知识本身就是目的，追求知识不是为了别的，就是为了知识本身。换句话说，学习就是为了追求知识本身的力量，而不是为了其他实用的和功利主义的目的和价值。

但我们需要明确说明的是，他所以这么说，并不是为了纯粹的研究，而是为了人的个性发展。他认为，追求真理是教育理想的一部分，而这种教育理想能够对一个有教养的人的性格培养产生影响，而这与道德教育和宗教教育很难完全分得开。因此，大学是“教育而非教学的场所”，大学的根本意图是在智性（intelligence）与教育。

那么，如何才能做到让学生安心于知识本身的学习呢？他为此提供了具体的方案，即课程设置要以人文学科为主，要提供“人文教育”（liberal education），因为“人文教育”代表着一种最高境界。

纽曼在其演讲中，把“人文教育”与“职业教育”（commercial or professional education）分得一清二楚。他认为大学是传授“普遍知识”的地方，专业性的培训尽管有其实用的地方，但也应该让位于更广阔的人文教育。

据此而言，在这样的大学中，学生该怎样看待大学？又该怎么做呢？纽曼认为，对于大学生来说，大学不是一个单纯传播信息或是专门知识的地方，而是一个小社会，是学生要在其中去汲取和收获诸如优雅与辉煌这样具有更高生命形态的地方。在大学之中，追逐知识与意义，是属于更广阔的文化中的一部分。一个人不仅要“了解”（know）事物，还要接受这事物背后的一切。

纽曼的这些理想，后来被诸如马修·阿诺德（Matthew Arnold）发扬光大，也成为后来英国大学教育的重要特征，即教育应该是培养通才，而非狭隘的专业性人才。那些非职业性的看似无用的科目——如艺术的或是纯科学的——则能对培养人的心智有益，并能使之适应更广泛的工作。

应该说，在提倡“人文教育”传统的问题上，纽曼既继承了欧洲高等教育文化的精髓，也成为纽曼的教育理念与当代高等教育对接的重要支柱。

我们都知道，西方现代意义上高等教育的功用，除了宗教的因素外，最初就是缘起于人文学科的功能，而所谓人文学科，就是注重学习和研究文学、哲学、历史与艺术等这些看似无用的科目。这样的教育理念，在欧洲已经沿袭了上百年甚至数百年。

然而，随着现代科学技术的迅猛发展，人文学科在大学中的地位乃

至人文教育的作用，不断受到来自大学内外的人士的质疑，因为现在的人们，越来越多地使用是否“实用”来衡量一切。因此，在是否要坚持人文教育的问题上，呈现的就是两种不同的教育理念。

那么，当代世界一流大学是如何承继了纽曼的思想呢？我们不妨来看看在外人看来特别讲求实用的美国大学是怎样看待这个问题的。加州大学伯克利分校（UC Berkeley）文理学院在阐释“为什么学习人文？”的问题时，是这么说的，“大学所授予的学位是某一特定领域的，但生活却是不分专业的。无论我们的社会多么发达，我们都必需反省人生，甄别善恶，区分正义与非正义，从有用之中辨别出高贵与美。”因此，“人文教育为学生未来迎接现实生活的挑战所做的准备，是那些职业学院常常无法提供的。”哈佛大学校长德鲁·福斯特对此有更加明确的阐释。她说，教育不是一个把各种事实（facts）塞满大脑的过程，对于大学教育来说，冲破头脑中现实的束缚至关重要。不能忘记的是，教育，特别是高等教育，对人的教育与影响应该是深远的。应该说，这样的理念与纽曼在演讲中所阐述的观点有一脉相承的关系。

当然，对纽曼所提出的三个问题的讨论，从纽曼时代一直持续到今天为止，也还没有（应该也不会有）一个统一的定论。但从这些问题的讨论中，无论支持者还是反对者都至少会承认纽曼及其《大学的理念》的当代性和经典意义。

在阅读《大学的理念》时，还有一点不能不提，那就是这本演讲集的文学价值。应该承认，虽然《大学的理念》的当代性与经典意义备受关注，但所以为时人和后人津津乐道，其文学价值也功不可没。

可能并不是所有人都知道，纽曼还是一位著名的文学家，创作有自传《生命之歌》（*Apologia Pro Vita Sua*，1865—1866），诗歌《哲朗提斯之梦》（*The Dream of Gerontius*，1865）等优秀的文学作品。就《大学的理念》而言，纽曼最大的特征是文笔极好（或者说是口才极佳），堪称非常出色的散文家（或者演说家）。

下面，我摘录两小段原文，从它们所讨论的有关大学是个什么地方、大学教师应该对学生产生何种影响的文字中，我们可以体味到，作为一名教育家，纽曼丰富而深刻的思想是怎样从他优雅的表达和漂亮的文笔中自然而然地流露出来的：

The view taken of a University in these Discourses is the following.— That it is a place of *teaching universal knowledge*. This implies that its object is, on the one hand, intellectual, not moral; and, on the other, that it is the diffusion and extension of knowledge rather than the advancement. If its object were scientific and philosophical discovery, I do not see why a University should have students; if religious training, I do not see how it can be the seat of literature and science. (见“序言”)

An academical system without the personal influence of teachers upon pupils, is an arctic winter; it will create an ice-bound, petrified, cast-iron University, and nothing else. (见“大学的兴起与进展”)

像这样散落着真知灼见的优美的文字和词句，在《大学的理念》中可以说随处可见。作为一名教育家，在阐述自己思想的时候，能够用如此优美的散文表达出来，或许只有纽曼可以做得得到。

或许，这就是纽曼何以伟大、《大学的理念》何以成为当代教育家谁也绕不过去的大学读本的原因所在。

Preface

The view taken of a University in these Discourses is the following:—That it is a place of *teaching* universal *knowledge*. This implies that its object is, on the one hand, intellectual, not moral; and, on the other, that it is the diffusion and extension of knowledge rather than the advancement. If its object were scientific and philosophical discovery, I do not see why a University should have students; if religious training, I do not see how it can be the seat of literature and science.

Such is a University in its *essence*, and independently of its relation to the Church. But, practically speaking, it cannot fulfil its object duly, such as I have described it, without the Church's assistance; or, to use the theological term, the Church is necessary for its *integrity*. Not that its main characters are changed by this incorporation: it still has the office of intellectual education; but the Church steadies it in the performance of that office.

Such are the main principles of the Discourses which follow; though it would be unreasonable for me to expect that I have treated so large and important a field of thought with the fulness and precision necessary to secure me from incidental misconceptions of my meaning on the part of the reader. It is true, there is nothing novel or singular in the argument which I have been pursuing, but this does not protect me from such misconceptions; for the very circumstance that the views I have been delineating are not original with me may lead to false notions as to my relations in opinion towards those from

whom I happened in the first instance to learn them, and may cause me to be interpreted by the objects or sentiments of schools to which I should be simply opposed.

For instance, some persons may be tempted to complain, that I have servilely followed the English idea of a University, to the disparagement of that Knowledge which I profess to be so strenuously upholding; and they may anticipate that an academical system, formed upon my model, will result in nothing better or higher than in the production of that antiquated variety of human nature and remnant of feudalism, as they consider it, called “a gentleman.”^[1] Now, I have anticipated this charge in various parts of my discussion; if, however, any Catholic is found to prefer it (and to Catholics of course this Volume is primarily addressed), I would have him first of all ask himself the previous question, *what* he conceives to be the reason contemplated by the Holy See in recommending just now to the Irish Hierarchy the establishment of a Catholic University? Has the Supreme Pontiff recommended it for the sake of the Sciences, which are to be the matter, and not rather of the Students, who are to be the subjects, of its teaching? Has he any obligation or duty at all towards secular knowledge as such? Would it become his Apostolical Ministry, and his descent from the Fisherman, to have a zeal for the Baconian or other philosophy of man for its own sake? Is the Vicar of Christ bound by office or by vow to be the preacher of the theory of gravitation, or a martyr for electro-magnetism? Would he be acquitting himself of the dispensation committed to him if he were smitten with an abstract love of these matters, however true, or beautiful, or ingenious, or useful? Or rather, does he not contemplate such achievements of the intellect, as far as he contemplates them, solely and simply in their relation to the interests of Revealed Truth? Surely, what he does he does for the sake of Religion; if he looks with satisfaction on strong temporal governments, which promise perpetuity, it is for the sake of

Religion; and if he encourages and patronizes art and science, it is for the sake of Religion. He rejoices in the widest and most philosophical systems of intellectual education, from an intimate conviction that Truth is his real ally, as it is his profession; and that Knowledge and Reason are sure ministers to Faith.

This being undeniable, it is plain that, when he suggests to the Irish Hierarchy the establishment of a University, his first and chief and direct object is, not science, art, professional skill, literature, the discovery of knowledge, but some benefit or other, to accrue, by means of literature and science, to his own children; not indeed their formation on any narrow or fantastic type, as, for instance, that of an "English Gentleman" may be called, but their exercise and growth in certain habits, moral or intellectual. Nothing short of this can be his aim, if, as becomes the Successor of the Apostles, he is to be able to say with St. Paul, "Non judicavi me scire aliquid inter vos, nisi Jesum Christum, et hunc crucifixum." Just as a commander wishes to have tall and well-formed and vigorous soldiers, not from any abstract devotion to the military standard of height or age, but for the purposes of war, and no one thinks it any thing but natural and praiseworthy in him to be contemplating, not abstract qualities, but his own living and breathing men; so, in like manner, when the Church founds a University, she is not cherishing talent, genius, or knowledge, for their own sake, but for the sake of her children, with a view to their spiritual welfare and their religious influence and usefulness, with the object of training them to fill their respective posts in life better, and of making them more intelligent, capable, active members of society.

Nor can it justly be said that in thus acting she sacrifices Science, and, under a pretence of fulfilling the duties of her mission, perverts a University to ends not its own, as soon as it is taken into account that there are other institutions far more suited to act as instruments of

stimulating philosophical inquiry, and extending the boundaries of our knowledge, than a University. Such, for instance, are the literary and scientific “Academies,” which are so celebrated in Italy and France, and which have frequently been connected with Universities, as committees, or, as it were, congregations or delegacies subordinate to them. Thus the present Royal Society originated in Charles the Second’s time, in Oxford; such just now are the Ashmolean and Architectural Societies in the same seat of learning, which have risen in our own time. Such, too, is the British Association, a migratory body, which at least at times is found in the halls of the Protestant Universities of the United Kingdom, and the faults of which lie, not in its exclusive devotion to science, but in graver matters which it is irrelevant here to enter upon. Such again is the Antiquarian Society, the Royal Academy for the Fine Arts, and others which might be mentioned. This, then, is the sort of institution, which primarily contemplates Science itself, and not students; and, in thus speaking, I am saying nothing of my own, being supported by no less an authority than Cardinal Gerdil. “Ce n'est pas,” he says, “qu’il y ait aucune véritable opposition entre l’esprit des Académies et celui des Universités; ce sont seulement des vues différentes. Les Universités sont établies pour *enseigner* les sciences *aux élèves* qui veulent s’y former; les Académies se proposent *de nouvelles recherches* à faire dans la carrière des sciences. Les Universités d’Italie ont fourni des sujets qui ont fait honneur aux Académies; et celles-ci ont donné aux Universités des Professeurs, qui ont rempli les chaires avec la plus grande distinction.”^[2]

The nature of the case and the history of philosophy combine to recommend to us this division of intellectual labour between Academies and Universities. To discover and to teach are distinct functions; they are also distinct gifts, and are not commonly found united in the same person. He, too, who spends his day in dispensing

his existing knowledge to all comers is unlikely to have either leisure or energy to acquire new. The common sense of mankind has associated the search after truth with seclusion and quiet. The greatest thinkers have been too intent on their subject to admit of interruption; they have been men of absent minds and idiosyncratic habits, and have, more or less, shunned the lecture room and the public school. Pythagoras, the light of Magna Græcia, lived for a time in a cave. Thales, the light of Ionia, lived unmarried and in private, and refused the invitations of princes. Plato withdrew from Athens to the groves of Academus. Aristotle gave twenty years to a studious discipleship under him. Friar Bacon lived in his tower upon the Isis. Newton indulged in an intense severity of meditation which almost shook his reason. The great discoveries in chemistry and electricity were not made in Universities. Observatories are more frequently out of Universities than in them, and even when within their bounds need have no moral connexion with them. Porson had no classes; Elmsley lived good part of his life in the country. I do not say that there are not great examples the other way, perhaps Socrates, certainly Lord Bacon; still I think it must be allowed on the whole that, while teaching involves external engagements, the natural home for experiment and speculation is retirement.

伟大的思想家都曾或多或少逃避过课堂或公校。柏拉图（公元前427—公元前347，希腊伟大哲学家）离开雅典，退隐到了阿卡德摩。

Returning, then, to the consideration of the question, from which I may seem to have digressed, thus much I think I have made good,—that, whether or no a Catholic University should put before it, as its great object, to make its students “gentlemen,” still to make them something or other *is* its great object, and not simply to protect the interests and advance the dominion of Science. If, then, this may be taken for granted, as I think it may, the only point which remains to be settled is, whether I have formed a probable conception of the *sort of benefit* which the Holy See has intended to confer on Catholics who speak the English tongue by recommending to the Irish Hierarchy the establishment of a University; and this I now proceed to consider.

古希腊数学家、哲学家毕达哥拉斯（公元前572—公元前497）曾经隐居在山洞中一段时间。

泰勒斯（约公元前624—约公元前547）一直安静地过自己的生活，甚至一度拒绝了王子的邀请。

Here, then, it is natural to ask those who are interested in the question, whether any better interpretation of the recommendation of the Holy See can be given than that which I have suggested in this Volume. Certainly it does not seem to me rash to pronounce that, whereas Protestants have great advantages of education in the Schools, Colleges, and Universities of the United Kingdom, our ecclesiastical rulers have it in purpose that Catholics should enjoy the like advantages, whatever they are, to the full. I conceive they view it as prejudicial to the interests of Religion that there should be any cultivation of mind bestowed upon Protestants which is not given to their own youth also. As they wish their schools for the poorer and middle classes to be at least on a par with those of Protestants, they contemplate the same object also as regards that higher education which is given to comparatively the few. Protestant youths, who can spare the time, continue their studies till the age of twenty-one or twenty-two; thus they employ a time of life all-important and especially favourable to mental culture. I conceive that our Prelates are impressed with the fact and its consequences, that a youth who ends his education at seventeen is no match (*cæteris paribus*) for one who ends it at twenty-two.

All classes indeed of the community are impressed with a fact so obvious as this. The consequence is, that Catholics who aspire to be on a level with Protestants in discipline and refinement of intellect have recourse to Protestant Universities to obtain what they cannot find at home. Assuming (as the Rescripts from Propaganda allow me to do) that Protestant education is inexpedient for our youth,—we see here an additional reason why those advantages, whatever they are, which Protestant communities dispense through the medium of Protestantism should be accessible to Catholics in a Catholic form.

What are these advantages? I repeat, they are in one word the

culture of the intellect. Robbed, oppressed, and thrust aside, Catholics in these islands have not been in a condition for centuries to attempt the sort of education which is necessary for the man of the world, the statesman, the landholder, or the opulent gentleman. Their legitimate stations, duties, employments, have been taken from them, and the qualifications withal, social and intellectual, which are necessary both for reversing the forfeiture and for availing themselves of the reversal. The time is come when this moral disability must be removed. Our desideratum is, not the manners and habits of gentlemen;—these can be, and are, acquired in various other ways, by good society, by foreign travel, by the innate grace and dignity of the Catholic mind;—but the force, the steadiness, the comprehensiveness and the versatility of intellect, the command over our own powers, the instinctive just estimate of things as they pass before us, which sometimes indeed is a natural gift, but commonly is not gained without much effort and the exercise of years.

This is real cultivation of mind; and I do not deny that the characteristic excellences of a gentleman are included in it. Nor need we be ashamed that they should be, since the poet long ago wrote, that “*Ingenuas didicisse fideliter artes Emollit mores.*” Certainly a liberal education does manifest itself in a courtesy, propriety, and polish of word and action, which is beautiful in itself, and acceptable to others; but it does much more. It brings the mind into form,—for the mind is like the body. Boys outgrow their shape and their strength; their limbs have to be knit together, and their constitution needs tone. Mistaking animal spirits for vigour, and over-confident in their health, ignorant what they can bear and how to manage themselves, they are immoderate and extravagant; and fall into sharp sicknesses. This is an emblem of their minds; at first they have no principles laid down within them as a foundation for the intellect to build upon: they have no discriminating convictions, and no grasp of consequences. And

therefore they talk at random, if they talk much, and cannot help being flippant, or what is emphatically called “*young*.” They are merely dazzled by phenomena, instead of perceiving things as they are.

It were well if none remained boys all their lives; but what is more common than the sight of grown men, talking on political or moral or religious subjects, in that offhand, idle way, which we signify by the word *unreal*? “That they simply do not know what they are talking about” is the spontaneous silent remark of any man of sense who hears them. Hence such persons have no difficulty in contradicting themselves in successive sentences, without being conscious of it. Hence others, whose defect in intellectual training is more latent, have their most unfortunate crotchets, as they are called, or hobbies, which deprive them of the influence which their estimable qualities would otherwise secure. Hence others can never look straight before them, never see the point, and have no difficulties in the most difficult subjects. Others are hopelessly obstinate and prejudiced, and, after they have been driven from their opinions, return to them the next moment without even an attempt to explain why. Others are so intemperate and intractable that there is no greater calamity for a good cause than that they should get hold of it. It is very plain from the very particulars I have mentioned that, in this delineation of intellectual infirmities, I am drawing, not from Catholics, but from the world at large; I am referring to an evil which is forced upon us in every railway carriage, in every coffee-room or *table-d’hôte*, in every mixed company, an evil, however, to which Catholics are not less exposed than the rest of mankind.

When the intellect has once been properly trained and formed to have a connected view or grasp of things, it will display its powers with more or less effect according to its particular quality and capacity in the individual. In the case of most men it makes itself felt

in the good sense, sobriety of thought, reasonableness, candour, self-command, and steadiness of view, which characterize it. In some it will have developed habits of business, power of influencing others, and sagacity. In others it will elicit the talent of philosophical speculation, and lead the mind forward to eminence in this or that intellectual department. In all it will be a faculty of entering with comparative ease into any subject of thought, and of taking up with aptitude any science or profession. All this it will be and will do in a measure, even when the mental formation be made after a model but partially true; for, as far as effectiveness goes, even false views of things have more influence and inspire more respect than no views at all. Men who fancy they see what is not are more energetic, and make their way better, than those who see nothing; and so the undoubting infidel, the fanatic, the heresiarch, are able to do much, while the mere hereditary Christian, who has never realized the truths which he holds, is unable to do any thing. But, if consistency of view can add so much strength even to error, what may it not be expected to furnish to the dignity, the energy, and the influence of Truth!

Some one, however, will perhaps object that I am but advocating that spurious philosophism, which shows itself in what, for want of a word, I may call "viewiness," when I speak so much of the formation, and consequent grasp, of the intellect. It may be said that the theory of University Education, which I have been delineating, if acted upon, would teach youths nothing soundly or thoroughly, and would dismiss them with nothing better than brilliant general views about all things whatever.

This indeed, if well founded, would be a most serious objection to what I have advanced in this Volume, and would demand my immediate attention, had I any reason to think that I could not remove it at once, by a simple explanation of what I consider the true *mode* of educating, were this the place to do so. But these Discourses

are directed simply to the consideration of the *aims* and *principles* of Education. Suffice it, then, to say here, that I hold very strongly that the first step in intellectual training is to impress upon a boy's mind the idea of science, method, order, principle, and system; of rule and exception, of richness and harmony. This is commonly and excellently done by making him begin with Grammar; nor can too great accuracy, or minuteness and subtlety of teaching be used towards him, as his faculties expand, with this simple purpose. Hence it is that critical scholarship is so important a discipline for him when he is leaving school for the University. A second science is the Mathematics: this should follow Grammar, still with the same object, viz., to give him a conception of development and arrangement from and around a common centre. Hence it is that Chronology and Geography are so necessary for him, when he reads History, which is otherwise little better than a story-book. Hence, too, Metrical Composition, when he reads Poetry; in order to stimulate his powers into action in every practicable way, and to prevent a merely passive reception of images and ideas which in that case are likely to pass out of the mind as soon as they have entered it. Let him once gain this habit of method, of starting from fixed points, of making his ground good as he goes, of distinguishing what he knows from what he does not know, and I conceive he will be gradually initiated into the largest and truest philosophical views, and will feel nothing but impatience and disgust at the random theories and imposing sophistries and dashing paradoxes, which carry away half-formed and superficial intellects.

Such parti-coloured ingenuities are indeed one of the chief evils of the day, and men of real talent are not slow to minister to them. An intellectual man, as the world now conceives of him, is one who is full of "views" on all subjects of philosophy, on all matters of the day. It is almost thought a disgrace not to have a view at a moment's notice on any question from the Personal Advent to the Cholera or Mesmerism.

This is owing in great measure to the necessities of periodical literature, now so much in request. Every quarter of a year, every month, every day, there must be a supply, for the gratification of the public, of new and luminous theories on the subjects of religion, foreign politics, home politics, civil economy, finance, trade, agriculture, emigration, and the colonies. Slavery, the gold fields, German philosophy, the French Empire, Wellington, Peel, Ireland, must all be practised on, day after day, by what are called original thinkers. As the great man's guest must produce his good stories or songs at the evening banquet, as the platform orator exhibits his telling facts at mid-day, so the journalist lies under the stern obligation of extemporizing his lucid views, leading ideas, and nutshell truths for the breakfast table. The very nature of periodical literature, broken into small wholes, and demanded punctually to an hour, involves the habit of this extempore philosophy. "Almost all the Ramblers," says Boswell of Johnson, "were written just as they were wanted for the press; he sent a certain portion of the copy of an essay, and wrote the remainder while the former part of it was printing." Few men have the gifts of Johnson, who to great vigour and resource of intellect, when it was fairly roused, united a rare common-sense and a conscientious regard for veracity, which preserved him from flippancy or extravagance in writing. Few men are Johnsons; yet how many men at this day are assailed by incessant demands on their mental powers, which only a productiveness like his could suitably supply! There is a demand for a reckless originality of thought, and a sparkling plausibility of argument, which he would have despised, even if he could have displayed; a demand for crude theory and unsound philosophy, rather than none at all. It is a sort of repetition of the "Quid novi?" of the Areopagus, and it must have an answer. Men must be found who can treat, where it is necessary, like the Athenian sophist, *de omni scibili*,

“Grammaticus, Rhetor, Geometres, Pictor, Aliptes,
Augur, Schoenobates, Medicus, Magus, omnia novit.”

I am speaking of such writers with a feeling of real sympathy for men who are under the rod of a cruel slavery. I have never indeed been in such circumstances myself, nor in the temptations which they involve; but most men who have had to do with composition must know the distress which at times it occasions them to have to write—a distress sometimes so keen and so specific that it resembles nothing else than bodily pain. That pain is the token of the wear and tear of mind; and, if works done comparatively at leisure involve such mental fatigue and exhaustion, what must be the toil of those whose intellects are to be flaunted daily before the public in full dress, and that dress ever new and varied, and spun, like the silkworm’s, out of themselves! Still whatever true sympathy we may feel for the ministers of this dearly purchased luxury, and whatever sense we may have of the great intellectual power which the literature in question displays, we cannot honestly close our eyes to its direct evil.

One other remark suggests itself, which is the last I shall think it necessary to make. The authority, which in former times was lodged in Universities, now resides in very great measure in that literary world, as it is called, to which I have been referring. This is not satisfactory, if, as no one can deny, its teaching be so offhand, so ambitious, so changeable. It increases the seriousness of the mischief, that so very large a portion of its writers are anonymous, for irresponsible power never can be any thing but a great evil; and, moreover, that, even when they are known, they can give no better guarantee for the philosophical truth of their principles than their popularity at the moment, and their happy conformity in ethical character to the age which admires them. Protestants, however, may

do as they will: it is a matter for their own consideration; but at least it concerns us that our own literary tribunals and oracles of moral duty should bear a graver character. At least it is a matter of deep solicitude to Catholic Prelates that their people should be taught a wisdom, safe from the excesses and vagaries of individuals, embodied in institutions which have stood the trial and received the sanction of ages, and administered by men who have no need to be anonymous, as being supported by their consistency with their predecessors and with each other.

University Teaching

Discourse I

Introductory

1.

In addressing myself, Gentlemen, to the consideration of a question which has excited so much interest, and elicited so much discussion at the present day, as that of University Education, I feel some explanation is due from me for supposing, after such high ability and wide experience have been brought to bear upon it, that any field remains for the additional labours either of a disputant or of an inquirer. If, nevertheless, I still venture to ask permission to continue the discussion, already so protracted, it is because the subject of Liberal Education, and of the principles on which it must be conducted, has ever had a hold upon my own mind; and because I have lived the greater part of my life in a place which has all that time been occupied in a series of controversies both domestic and with strangers, and of measures, experimental or definitive, bearing upon it. About fifty years since, the English University, of which I was so long a member, after a century of inactivity, at length was roused, at a time when (as I may say) it was giving no education at all to the youth committed to its keeping, to a sense of the responsibilities which its profession and its station involved, and it presents to us the singular example of an heterogeneous and an independent body of men, setting about a work of self-reformation, not from any pressure of public opinion, but because it was fitting and right to undertake it. Its initial efforts, begun and carried on amid many obstacles, were met from

without, as often happens in such cases, by ungenerous and jealous criticisms, which, at the very moment that they were urged, were beginning to be unjust. Controversy did but bring out more clearly to its own apprehension the views on which its reformation was proceeding, and throw them into a philosophical form. The course of beneficial change made progress, and what was at first but the result of individual energy and an act of the academical corporation, gradually became popular, and was taken up and carried out by the separate collegiate bodies, of which the University is composed. This was the first stage of the controversy. Years passed away, and then political adversaries arose against it, and the system of education which it had established was a second time assailed; but still, since that contest was conducted for the most part through the medium, not of political acts, but of treatises and pamphlets, it happened as before that the threatened dangers, in the course of their repulse, did but afford fuller development and more exact delineation to the principles of which the University was the representative.

In the former of these two controversies the charge brought against its studies was their remoteness from the occupations and duties of life, to which they are the formal introduction, or, in other words, their *inutility*; in the latter, it was their connexion with a particular form of belief, or, in other words, their *religious exclusiveness*.

Living then so long as a witness, though hardly as an actor, in these scenes of intellectual conflict, I am able to bear witness to views of University Education, without authority indeed in themselves, but not without value to a Catholic, and less familiar to him, as I conceive, than they deserve to be. And, while an argument originating in the controversies to which I have referred, may be serviceable at this season to that great cause in which we are here so especially interested, to me personally it will afford satisfaction of a peculiar

kind; for, though it has been my lot for many years to take a prominent, sometimes a presumptuous, part in theological discussions, yet the natural turn of my mind carries me off to trains of thought like those which I am now about to open, which, important though they be for Catholic objects, and admitting of a Catholic treatment, are sheltered from the extreme delicacy and peril which attach to disputations directly bearing on the subject-matter of Divine Revelation.

2.

There are several reasons why I should open the discussion with a reference to the lessons with which past years have supplied me. One reason is this: It would concern me, Gentlemen, were I supposed to have got up my opinions for the occasion. This, indeed, would have been no reflection on me personally, supposing I were persuaded of their truth, when at length addressing myself to the inquiry; but it would have destroyed, of course, the force of my testimony, and deprived such arguments, as I might adduce, of that moral persuasiveness which attends on tried and sustained conviction. It would have made me seem the advocate, rather than the cordial and deliberate maintainer and witness, of the doctrines which I was to support; and, though it might be said to evidence the faith I reposed in the practical judgment of the Church, and the intimate concurrence of my own reason with the course she had authoritatively sanctioned, and the devotion with which I could promptly put myself at her disposal, it would have cast suspicion on the validity of reasonings and conclusions which rested on no independent inquiry, and appealed to no past experience. In that case it might have been plausibly objected by opponents that I was the serviceable expedient of an emergency, and never, after all, could be more than ingenious and adroit in the management of an argument which was not my own,

and which I was sure to forget again as readily as I had mastered it. But this is not so. The views to which I have referred have grown into my whole system of thought, and are, as it were, part of myself. Many changes has my mind gone through: here it has known no variation or vacillation of opinion, and though this by itself is no proof of the truth of my principles, it puts a seal upon conviction, and is a justification of earnestness and zeal. Those principles, which I am now to set forth under the sanction of the Catholic Church, were my profession at that early period of my life, when religion was to me more a matter of feeling and experience than of faith. They did but take greater hold upon me, as I was introduced to the records of Christian Antiquity, and approached in sentiment and desire to Catholicism; and my sense of their correctness has been increased with the events of every year since I have been brought within its pale.

And here I am brought to a second and more important reason for referring, on this occasion, to the conclusions at which Protestants have arrived on the subject of Liberal Education; and it is as follows: Let it be observed, then, that the principles on which I would conduct the inquiry are attainable, as I have already implied, by the mere experience of life. They do not come simply of theology; they imply no supernatural discernment; they have no special connexion with Revelation; they almost arise out of the nature of the case; they are dictated even by human prudence and wisdom, though a divine illumination be absent, and they are recognized by common sense, even where self-interest is not present to quicken it; and, therefore, though true, and just, and good in themselves, they imply nothing whatever as to the religious profession of those who maintain them. They may be held by Protestants as well as by Catholics; nay, there is reason to anticipate that in certain times and places they will be more thoroughly investigated, and better understood, and held more firmly by Protestants than by ourselves.

It is natural to expect this from the very circumstance that the philosophy of Education is founded on truths in the natural order. Where the sun shines bright, in the warm climate of the south, the natives of the place know little of safeguards against cold and wet. They have, indeed, bleak and piercing blasts; they have chill and pouring rain, but only now and then, for a day or a week; they bear the inconvenience as they best may, but they have not made it an art to repel it; it is not worth their while; the science of calefaction and ventilation is reserved for the north. It is in this way that Catholics stand relatively to Protestants in the science of Education; Protestants depending on human means mainly, are led to make the most of them: their sole resource is to use what they have; “Knowledge is” their “power” and nothing else; they are the anxious cultivators of a rugged soil. It is otherwise with us; “*funes ceciderunt mihi in præclaris.*” We have a goodly inheritance. This is apt to cause us—I do not mean to rely too much on prayer, and the Divine Blessing, for that is impossible; but we sometimes forget that we shall please Him best, and get most from Him, when, according to the Fable, we “put our shoulder to the wheel,” when we use what we have by nature to the utmost, at the same time that we look out for what is beyond nature in the confidence of faith and hope. However, we are sometimes tempted to let things take their course, as if they would in one way or another turn up right at last for certain; and so we go on, living from hand to mouth, getting into difficulties and getting out of them, succeeding certainly on the whole, but with failure in detail which might be avoided, and with much of imperfection or inferiority in our appointments and plans, and much disappointment, discouragement, and collision of opinion in consequence. If this be in any measure the state of the case, there is certainly so far a reason for availing ourselves of the investigations and experience of those who are not Catholics, when we have to address ourselves to the subject of Liberal

Education.

Nor is there surely any thing derogatory to the position of a Catholic in such a proceeding. The Church has ever appealed and deferred to witnesses and authorities external to herself, in those matters in which she thought they had means of forming a judgment: and that on the principle, *Cuique in arte sua credendum*. She has even used unbelievers and pagans in evidence of her truth, as far as their testimony went. She avails herself of scholars, critics, and antiquarians, who are not of her communion. She has worded her theological teaching in the phraseology of Aristotle; Aquila, Symmachus, Theodotion, Origen, Eusebius, and Apollinaris, all more or less heterodox, have supplied materials for primitive exegetics. St. Cyprian called Tertullian his master; St. Augustin refers to Ticonius; Bossuet, in modern times, complimented the labours of the Anglican Bull; the Benedictine editors of the Fathers are familiar with the labours of Fell, Ussher, Pearson, and Beveridge. Pope Benedict XIV. cites according to the occasion the works of Protestants without reserve, and the late French collection of Christian Apologists contains the writings of Locke, Burnet, Tillotson, and Paley. If, then, I come forward in any degree as borrowing the views of certain Protestant schools on the point which is to be discussed, I do so, Gentlemen, as believing, first, that the Catholic Church has ever, in the plenitude of her divine illumination, made use of whatever truth or wisdom she has found in their teaching or their measures; and next, that in particular places or times her children are likely to profit from external suggestions or lessons, which have not been provided for them by herself.

3.

And here I may mention a third reason for appealing at the outset to the proceedings of Protestant bodies in regard to Liberal Education.

It will serve to intimate the mode in which I propose to handle my subject altogether. Observe then, Gentlemen, I have no intention, in any thing I shall say, of bringing into the argument the authority of the Church, or any authority at all; but I shall consider the question simply on the grounds of human reason and human wisdom. I am investigating in the abstract, and am determining what is in itself right and true. For the moment I know nothing, so to say, of history. I take things as I find them; I have no concern with the past; I find myself here; I set myself to the duties I find here; I set myself to further, by every means in my power, doctrines and views, true in themselves, recognized by Catholics as such, familiar to my own mind; and to do this quite apart from the consideration of questions which have been determined without me and before me. I am here the advocate and the minister of a certain great principle; yet not merely advocate and minister, else had I not been here at all. It has been my previous keen sense and hearty reception of that principle, that has been at once the reason, as I must suppose, of my being selected for this office, and is the cause of my accepting it. I am told on authority that a principle is expedient, which I have ever felt to be true. And I argue in its behalf on its own merits, the authority, which brings me here, being my opportunity for arguing, but not the ground of my argument itself.

And a fourth reason is here suggested for consulting the history of Protestant institutions, when I am going to speak of the object and nature of University Education. It will serve to remind you, Gentlemen, that I am concerned with questions, not simply of immutable truth, but of practice and expedience. It would ill have become me to undertake a subject, on which points of dispute have arisen among persons so far above me in authority and name, in relation to a state of society, about which I have so much to learn, if it involved an appeal to sacred truths, or the determination of some imperative rule of conduct. It would have been presumptuous in me so

to have acted, nor am I so acting. Even the question of the union of Theology with the secular Sciences, which is its religious side, simple as it is of solution in the abstract, has, according to difference of circumstances, been at different times differently decided. Necessity has no law, and expedience is often one form of necessity. It is no principle with sensible men, of whatever cast of opinion, to do always what is abstractedly best. Where no direct duty forbids, we may be obliged to do, as being best under circumstances, what we murmur and rise against, while we do it. We see that to attempt more is to effect less; that we must accept so much, or gain nothing; and so perforce we reconcile ourselves to what we would have far otherwise, if we could. Thus a system of what is called secular Education, in which Theology and the Sciences are taught separately, may, in a particular place or time, be the least of evils; it may be of long standing; it may be dangerous to meddle with; it may be professedly a temporary arrangement; it may be under a process of improvement; its disadvantages may be neutralized by the persons by whom, or the provisions under which, it is administered.

Hence it was, that in the early ages the Church allowed her children to attend the heathen schools for the acquisition of secular accomplishments, where, as no one can doubt, evils existed, at least as great as can attend on Mixed Education now. The gravest Fathers recommended for Christian youth the use of Pagan masters; the most saintly Bishops and most authoritative Doctors had been sent in their adolescence by Christian parents to Pagan lecture halls. And, not to take other instances, at this very time, and in this very country, as regards at least the poorer classes of the community, whose secular acquirements ever must be limited, it has seemed best to the Irish Bishops, under the circumstances, to suffer the introduction into the country of a system of Mixed Education in the schools called National. Such a state of things, however, is passing away; as regards University

education at least, the highest authority has now decided that the plan, which is abstractedly best, is in this time and country also most expedient.

4.

And here I have an opportunity of recognizing once for all that higher view of approaching the subject of these Discourses, which, after this formal recognition, I mean to dispense with. Ecclesiastical authority, not argument, is the supreme rule and the appropriate guide for Catholics in matters of religion. It has always the right to interpose, and sometimes, in the conflict of parties and opinions, it is called on to exercise that right. It has lately exercised it in our own instance: it has interposed in favour of a pure University system for Catholic youth, forbidding compromise or accommodation of any kind. Of course its decision must be heartily accepted and obeyed, and that the more, because the decision proceeds, not simply from the Bishops of Ireland, great as their authority is, but the highest authority on earth, from the Chair of St. Peter.

Moreover, such a decision not only demands our submission, but has a claim upon our trust. It not only acts as a prohibition of any measures, but as an *ipso facto* confutation of any reasonings, inconsistent with it. It carries with it an earnest and an augury of its own expediency. For instance, I can fancy, Gentlemen, there may be some, among those who hear me, disposed to say that they are ready to acquit the principles of Education, which I am to advocate, of all fault whatever, except that of being impracticable. I can fancy them granting to me, that those principles are most correct and most obvious, simply irresistible on paper, but maintaining, nevertheless, that after all, they are nothing more than the dreams of men who live out of the world, and who do not see the difficulty of keeping Catholicism anyhow afloat on the bosom of this wonderful nineteenth

century. Proved, indeed, those principles are, to demonstration, but they will not work. Nay, it was my own admission just now, that, in a particular instance, it might easily happen, that what is only second best is best practically, because what is actually best is out of the question.

This, I hear you say to yourselves, is the state of things at present. You recount in detail the numberless impediments, great and small, formidable or only vexatious, which at every step embarrass the attempt to carry out ever so poorly a principle in itself so true and ecclesiastical. You appeal in your defence to wise and sagacious intellects, who are far from enemies to Catholicism, or to the Irish Hierarchy, and you have no hope, or rather you absolutely disbelieve, that Education can possibly be conducted, here and now, on a theological principle, or that youths of different religions can, under the circumstances of the country, be educated apart from each other. The more you think over the state of politics, the position of parties, the feelings of classes, and the experience of the past, the more chimerical does it seem to you to aim at a University, of which Catholicity is the fundamental principle. Nay, even if the attempt could accidentally succeed, would not the mischief exceed the benefit of it? How great the sacrifices, in how many ways, by which it would be preceded and followed! How many wounds, open and secret, would it inflict upon the body politic! And, if it fails, which is to be expected, then a double mischief will ensue from its recognition of evils which it has been unable to remedy. These are your deep misgivings; and, in proportion to the force with which they come to you, is the concern and anxiety which you feel, that there should be those whom you love, whom you revere, who from one cause or other refuse to enter into them.

This, I repeat, is what some good Catholics will say to me, and more than this. They will express themselves better than I can speak for them in their behalf,—with more earnestness and point, with more force of argument and fulness of detail; and I will frankly and at once acknowledge, that I shall insist on the high theological view of a University without attempting to give a direct answer to their arguments against its present practicability. I do not say an answer cannot be given; on the contrary, I have a confident expectation that, in proportion as those objections are looked in the face, they will fade away. But, however this may be, it would not become me to argue the matter with those who understand the circumstances of the problem so much better than myself. What do I know of the state of things in Ireland, that I should presume to put ideas of mine, which could not be right except by accident, by the side of theirs, who speak in the country of their birth and their home? No, Gentlemen, you are natural judges of the difficulties which beset us, and they are doubtless greater than I can even fancy or forbode. Let me, for the sake of argument, admit all you say against our enterprise, and a great deal more. Your proof of its intrinsic impossibility shall be to me as cogent as my own of its theological advisableness. Why, then, should I be so rash and perverse as to involve myself in trouble not properly mine? Why go out of my own place? Why so headstrong and reckless as to lay up for myself miscarriage and disappointment, as though I were not sure to have enough of personal trial anyhow without going about to seek for it?

Reflections such as these would be decisive even with the boldest and most capable minds, but for one consideration. In the midst of our difficulties I have one ground of hope, just one stay, but, as I think, a sufficient one, which serves me in the stead of all other argument whatever, which hardens me against criticism, which supports me if I begin to despond, and to which I ever come round, when the question

of the possible and the expedient is brought into discussion. It is the decision of the Holy See; St. Peter has spoken, it is he who has enjoined that which seems to us so unpromising. He has spoken, and has a claim on us to trust him. He is no recluse, no solitary student, no dreamer about the past, no doter upon the dead and gone, no projector of the visionary. He for eighteen hundred years has lived in the world; he has seen all fortunes, he has encountered all adversaries, he has shaped himself for all emergencies. If ever there was a power on earth who had an eye for the times, who has confined himself to the practicable, and has been happy in his anticipations, whose words have been facts, and whose commands prophecies, such is he in the history of ages, who sits from generation to generation in the Chair of the Apostles, as the Vicar of Christ, and the Doctor of His Church.

6.

These are not the words of rhetoric, Gentlemen, but of history. All who take part with the Apostle, are on the winning side. He has long since given warrants for the confidence which he claims. From the first he has looked through the wide world, of which he has the burden; and, according to the need of the day, and the inspirations of his Lord, he has set himself now to one thing, now to another; but to all in season, and to nothing in vain. He came first upon an age of refinement and luxury like our own, and, in spite of the persecutor, fertile in the resources of his cruelty, he soon gathered, out of all classes of society, the slave, the soldier, the high-born lady, and the sophist, materials enough to form a people to his Master's honour. The savage hordes come down in torrents from the north, and Peter went out to meet them, and by his very eye he sobered them, and backed them in their full career. They turned aside and flooded the whole earth, but only to be more surely civilized by him, and to be made ten times more his children even than the older populations which they

had overwhelmed. Lawless kings arose, sagacious as the Roman, passionate as the Hun, yet in him they found their match, and were shattered, and he lived on. The gates of the earth were opened to the east and west, and men poured out to take possession; but he went with them by his missionaries, to China, to Mexico, carried along by zeal and charity, as far as those children of men were led by enterprise, covetousness, or ambition. Has he failed in his successes up to this hour? Did he, in our fathers' day, fail in his struggle with Joseph of Germany and his confederates, with Napoleon, a greater name, and his dependent kings, that, though in another kind of fight, he should fail in ours? What grey hairs are on the head of Judah, whose youth is renewed like the eagle's, whose feet are like the feet of harts, and underneath the Everlasting arms?

In the first centuries of the Church all this practical sagacity of Holy Church was mere matter of faith, but every age, as it has come, has confirmed faith by actual sight; and shame on us, if, with the accumulated testimony of eighteen centuries, our eyes are too gross to see those victories which the Saints have ever seen by anticipation. Least of all can we, the Catholics of islands which have in the cultivation and diffusion of Knowledge heretofore been so singularly united under the auspices of the Apostolic See, least of all can we be the men to distrust its wisdom and to predict its failure, when it sends us on a similar mission now. I cannot forget that, at a time when Celt and Saxon were alike savage, it was the See of Peter that gave both of them, first faith, then civilization; and then again bound them together in one by the seal of a joint commission to convert and illuminate in their turn the pagan continent. I cannot forget how it was from Rome that the glorious St. Patrick was sent to Ireland, and did a work so great that he could not have a successor in it, the sanctity and learning and zeal and charity which followed on his death being but the result of the one impulse which he gave. I cannot

forget how, in no long time, under the fostering breath of the Vicar of Christ, a country of heathen superstitions became the very wonder and asylum of all people,—the wonder by reason of its knowledge, sacred and profane, and the asylum of religion, literature and science, when chased away from the continent by the barbarian invaders. I recollect its hospitality, freely accorded to the pilgrim; its volumes munificently presented to the foreign student; and the prayers, the blessings, the holy rites, the solemn chants, which sanctified the while both giver and receiver.

Nor can I forget either, how my own England had meanwhile become the solicitude of the same unwearied eye: how Augustine was sent to us by Gregory; how he fainted in the way at the tidings of our fierceness, and, but for the Pope, would have shrunk as from an impossible expedition; how he was forced on “in weakness and in fear and in much trembling,” until he had achieved the conquest of the island to Christ. Nor, again, how it came to pass that, when Augustine died and his work slackened, another Pope, unwearied still, sent three saints from Rome, to ennoble and refine the people Augustine had converted. Three holy men set out for England together, of different nations: Theodore, an Asiatic Greek, from Tarsus; Adrian, an African; Bennett alone a Saxon, for Peter knows no distinction of races in his ecumenical work. They came with theology and science in their train; with relics, with pictures, with manuscripts of the Holy Fathers and the Greek classics; and Theodore and Adrian founded schools, secular and monastic, all over England, while Bennett brought to the north the large library he had collected in foreign parts, and, with plans and ornamental work from France, erected a church of stone, under the invocation of St. Peter, after the Roman fashion, “which,” says the historian, “he most affected.” I call to mind how St. Wilfrid, St. John of Beverley, St. Bede, and other saintly men, carried on the good work in the following generations, and how from that time forth the two

islands, England and Ireland, in a dark and dreary age, were the two lights of Christendom, and had no claims on each other, and no thought of self, save in the interchange of kind offices and the rivalry of love.

7.

O memorable time, when St. Aidan and the Irish monks went up to Lindisfarne and Melrose, and taught the Saxon youth, and when a St. Cuthbert and a St. Eata repaid their charitable toil! O blessed days of peace and confidence, when the Celtic Mailduf penetrated to Malmesbury in the south, which has inherited his name, and founded there the famous school which gave birth to the great St. Aldhelm! O precious seal and testimony of Gospel unity, when, as Aldhelm in turn tells us, the English went to Ireland “numerous as bees;” when the Saxon St. Egbert and St. Willibrod, preachers to the heathen Frisons, made the voyage to Ireland to prepare themselves for their work; and when from Ireland went forth to Germany the two noble Ewalds, Saxons also, to earn the crown of martyrdom! Such a period, indeed, so rich in grace, in peace, in love, and in good works, could only last for a season; but, even when the light was to pass away from them, the sister islands were destined, not to forfeit, but to transmit it together. The time came when the neighbouring continental country was in turn to hold the mission which they had exercised so long and well; and when to it they made over their honourable office, faithful to the alliance of two hundred years, they made it a joint act. Alcuin was the pupil both of the English and of the Irish schools; and when Charlemagne would revive science and letters in his own France, it was Alcuin, the representative both of the Saxon and the Celt, who was the chief of those who went forth to supply the need of the great Emperor. Such was the foundation of the School of Paris, from which, in the course of centuries, sprang the famous University, the glory of

the middle ages.

The past never returns; the course of events, old in its texture, is ever new in its colouring and fashion. England and Ireland are not what they once were, but Rome is where it was, and St. Peter is the same: his zeal, his charity, his mission, his gifts are all the same. He of old made the two islands one by giving them joint work of teaching; and now surely he is giving us a like mission, and we shall become one again, while we zealously and lovingly fulfil it.

Discourse II

Theology—A Branch of Knowledge

There were two questions, to which I drew your attention, Gentlemen, in the beginning of my first Discourse, as being of especial importance and interest at this time: first, whether it is consistent with the idea of University teaching to exclude Theology from a place among the sciences which it embraces; next, whether it is consistent with that idea to make the useful arts and sciences its direct and principal concern, to the neglect of those liberal studies and exercises of mind, in which it has heretofore been considered mainly to consist. These are the questions which will form the subject of what I have to lay before you, and I shall now enter upon the former of the two.

1.

It is the fashion just now, as you very well know, to erect so-called Universities, without making any provision in them at all for Theological chairs. Institutions of this kind exist both here and in England. Such a procedure, though defended by writers of the generation just passed with much plausible argument and not a little wit, seems to me an intellectual absurdity; and my reason for saying so runs, with whatever abruptness, into the form of a syllogism:—A University, I should lay down, by its very name professes to teach universal knowledge: Theology is surely a branch of knowledge: how

then is it possible for it to profess all branches of knowledge, and yet to exclude from the subjects of its teaching one which, to say the least, is as important and as large as any of them? I do not see that either premiss of this argument is open to exception.

As to the range of University teaching, certainly the very name of University is inconsistent with restrictions of any kind. Whatever was the original reason of the adoption of that term, which is unknown, I am only putting on it its popular, its recognized sense, when I say that a University should teach universal knowledge. That there is a real necessity for this universal teaching in the highest schools of intellect, I will show by-and-by; here it is sufficient to say that such universality is considered by writers on the subject to be the very characteristic of a University, as contrasted with other seats of learning. Thus Johnson, in his Dictionary, defines it to be “a school where all arts and faculties are taught;” and Mosheim, writing as an historian, says that, before the rise of the University of Paris,—for instance, at Padua, or Salamanca, or Cologne,—“the whole circle of sciences then known was not taught;” but that the school of Paris, “which exceeded all others in various respects, as well as in the number of teachers and students, was the first to embrace all the arts and sciences, and therefore first became a University.”^[1]

If, with other authors, we consider the word to be derived from the invitation which is held out by a University to students of every kind, the result is the same; for, if certain branches of knowledge were excluded, those students of course would be excluded also, who desired to pursue them.

Is it, then, logically consistent in a seat of learning to call itself a University, and to exclude Theology from the number of its studies? And again, is it wonderful that Catholics, even in the view of reason, putting aside faith or religious duty, should be dissatisfied with existing institutions, which profess to be Universities, and refuse to

teach Theology; and that they should in consequence desire to possess seats of learning, which are, not only more Christian, but more philosophical in their construction, and larger and deeper in their provisions?

But this, of course, is to assume that Theology is a science, and an important one: so I will throw my argument into a more exact form. I say, then, that if a University be, from the nature of the case, a place of instruction, where universal knowledge is professed, and if in a certain University, so called, the subject of Religion is excluded, one of two conclusions is inevitable,—either, on the one hand, that the province of Religion is very barren of real knowledge, or, on the other hand, that in such University one special and important branch of knowledge is omitted. I say, the advocate of such an institution must say *this*, or he must say *that*; he must own, either that little or nothing is known about the Supreme Being, or that his seat of learning calls itself what it is not. This is the thesis which I lay down, and on which I shall insist as the subject of this Discourse. I repeat, such a compromise between religious parties, as is involved in the establishment of a University which makes no religious profession, implies that those parties severally consider,—not indeed that their own respective opinions are trifles in a moral and practical point of view—of course not; but certainly as much as this, that they are not knowledge. Did they in their hearts believe that their private views of religion, whatever they are, were absolutely and objectively true, it is inconceivable that they would so insult them as to consent to their omission in an Institution which is bound, from the nature of the case—from its very idea and its name—to make a profession of all sorts of knowledge whatever.

2.

I think this will be found to be no matter of words. I allow then

fully, that, when men combine together for any common object, they are obliged, as a matter of course, in order to secure the advantages accruing from united action, to sacrifice many of their private opinions and wishes, and to drop the minor differences, as they are commonly called, which exist between man and man. No two persons perhaps are to be found, however intimate, however congenial in tastes and judgments, however eager to have one heart and one soul, but must deny themselves, for the sake of each other, much which they like or desire, if they are to live together happily. Compromise, in a large sense of the word, is the first principle of combination; and any one who insists on enjoying his rights to the full, and his opinions without toleration for his neighbour's, and his own way in all things, will soon have all things altogether to himself, and no one to share them with him. But most true as this confessedly is, still there is an obvious limit, on the other hand, to these compromises, however necessary they be; and this is found in the *proviso*, that the differences surrendered should be *but* "minor," or that there should be no sacrifice of the main object of the combination, in the concessions which are mutually made. Any sacrifice which compromises that object is destructive of the principle of the combination, and no one who would be consistent can be a party to it.

Thus, for instance, if men of various religious denominations join together for the dissemination of what are called "evangelical" tracts, it is under the belief, that, the object of their uniting, as recognized on all hands, being the spiritual benefit of their neighbours, no religious exhortations, whatever be their character, can essentially interfere with that benefit, which faithfully insist upon the Lutheran doctrine of Justification. If, again, they agree together in printing and circulating the Protestant Bible, it is because they, one and all, hold to the principle, that, however serious be their differences of religious sentiment, such differences fade away before the one great principle,

which that circulation symbolizes—that the Bible, the whole Bible, and nothing but the Bible, is the religion of Protestants. On the contrary, if the committee of some such association inserted tracts into the copies of the said Bible which they sold, and tracts in recommendation of the Athanasian Creed or the merit of good works, I conceive any subscribing member would have a just right to complain of a proceeding, which compromised the principle of Private Judgment as the one true interpreter of Scripture. These instances are sufficient to illustrate my general position, that coalitions and comprehensions for an object, have their life in the prosecution of that object, and cease to have any meaning as soon as that object is compromised or disparaged.

When, then, a number of persons come forward, not as politicians, not as diplomatists, lawyers, traders, or speculators, but with the one object of advancing Universal Knowledge, much we may allow them to sacrifice.—ambition, reputation, leisure, comfort, party-interests, gold; one thing they may not sacrifice,—Knowledge itself. Knowledge being their object, they need not of course insist on their own private views about ancient or modern history, or national prosperity, or the balance of power; they need not of course shrink from the co-operation of those who hold the opposite views; but stipulate they must that Knowledge itself is not compromised;—and as to those views, of whatever kind, which they do allow to be dropped, it is plain they consider such to be opinions, and nothing more, however dear, however important to themselves personally; opinions ingenious, admirable, pleasurable, beneficial, expedient, but not worthy the name of Knowledge or Science. Thus no one would insist on the Malthusian teaching being a *sine quâ non* in a seat of learning, who did not think it simply ignorance not to be a Malthusian; and no one would consent to drop the Newtonian theory, who thought it to have been proved true, in the same sense as the existence of the sun

and moon is true. If, then, in an Institution which professes all knowledge, nothing is professed, nothing is taught about the Supreme Being, it is fair to infer that every individual in the number of those who advocate that Institution, supposing him consistent, distinctly holds that nothing is known for certain about the Supreme Being; nothing such, as to have any claim to be regarded as a material addition to the stock of general knowledge existing in the world. If on the other hand it turns out that something considerable is known about the Supreme Being, whether from Reason or Revelation, then the Institution in question professes every science, and yet leaves out the foremost of them. In a word, strong as may appear the assertion, I do not see how I can avoid making it, and bear with me, Gentlemen, while I do so, viz., such an Institution cannot be what it professes, if there be a God. I do not wish to declaim; but, by the very force of the terms, it is very plain, that a Divine Being and a University so circumstanced cannot co-exist.

3.

Still, however, this may seem to many an abrupt conclusion, and will not be acquiesced in: what answer, Gentlemen, will be made to it? Perhaps this:—It will be said, that there are different kinds or spheres of Knowledge, human, divine, sensible, intellectual, and the like; and that a University certainly takes in all varieties of Knowledge in its own line, but still that it has a line of its own. It contemplates, it occupies a certain order, a certain platform, of Knowledge. I understand the remark; but I own to you, I do not understand how it can be made to apply to the matter in hand. I cannot so construct my definition of the subject-matter of University Knowledge, and so draw my boundary lines around it, as to include therein the other sciences commonly studied at Universities, and to exclude the science of Religion. For instance, are we to limit our idea of University

Knowledge by the evidence of our senses? then we exclude ethics; by intuition? we exclude history; by testimony? we exclude metaphysics; by abstract reasoning? we exclude physics. Is not the being of a God reported to us by testimony, handed down by history, inferred by an inductive process, brought home to us by metaphysical necessity, urged on us by the suggestions of our conscience? It is a truth in the natural order, as well as in the supernatural. So much for its origin; and, when obtained, what is it worth? Is it a great truth or a small one? Is it a comprehensive truth? Say that no other religious idea whatever were given but it, and you have enough to fill the mind; you have at once a whole dogmatic system. The word "God" is a Theology in itself, indivisibly one, inexhaustibly various, from the vastness and the simplicity of its meaning. Admit a God, and you introduce among the subjects of your knowledge, a fact encompassing, closing in upon, absorbing, every other fact conceivable. How can we investigate any part of any order of Knowledge, and stop short of that which enters into every order? All true principles run over with it, all phenomena converge to it; it is truly the First and the Last. In word indeed, and in idea, it is easy enough to divide Knowledge into human and divine, secular and religious, and to lay down that we will address ourselves to the one without interfering with the other; but it is impossible in fact. Granting that divine truth differs in kind from human, so do human truths differ in kind one from another. If the knowledge of the Creator is in a different order from knowledge of the creature, so, in like manner, metaphysical science is in a different order from physical, physics from history, history from ethics. You will soon break up into fragments the whole circle of secular knowledge, if you begin the mutilation with divine.

I have been speaking simply of Natural Theology; my argument of course is stronger when I go on to Revelation. Let the doctrine of the Incarnation be true: is it not at once of the nature of an historical fact,

and of a metaphysical? Let it be true that there are Angels: how is not this a point of knowledge in the same sense as the naturalist's asseveration, that myriads of living things might co-exist on the point of a needle? That the Earth is to be burned by fire, is, if true, as large a fact as that huge monsters once played amid its depths; that Antichrist is to come, is as categorical a heading to a chapter of history, as that Nero or Julian was Emperor of Rome; that a divine influence moves the will, is a subject of thought not more mysterious than the result of volition on our muscles, which we admit as a fact in metaphysics.

I do not see how it is possible for a philosophical mind, first, to believe these religious facts to be true; next, to consent to ignore them; and thirdly, in spite of this, to go on to profess to be teaching all the while *de omni scibili*. No; if a man thinks in his heart that these religious facts are short of truth, that they are not true in the sense in which the general fact and the law of the fall of a stone to the earth is true, I understand his excluding Religion from his University, though he professes other reasons for its exclusion. In that case the varieties of religious opinion under which he shelters his conduct, are not only his apology for publicly disowning Religion, but a cause of his privately disbelieving it. He does not think that any thing is known or can be known for certain, about the origin of the world or the end of man.

4.

This, I fear, is the conclusion to which intellects, clear, logical, and consistent, have come, or are coming, from the nature of the case; and, alas! in addition to this *primâ-facie* suspicion, there are actual tendencies in the same direction in Protestantism, viewed whether in its original idea, or again in the so-called Evangelical movement in these islands during the last century. The religious world, as it is

styled, holds, generally speaking, that Religion consists, not in knowledge, but in feeling or sentiment. The old Catholic notion, which still lingers in the Established Church, was, that Faith was an intellectual act, its object truth, and its result knowledge. Thus if you look into the Anglican Prayer Book, you will find definite *credenda*, as well as definite *agenda*; but in proportion as the Lutheran leaven spread, it became fashionable to say that Faith was, not an acceptance of revealed doctrine, not an act of the intellect, but a feeling, an emotion, an affection, an appetency; and, as this view of Faith obtained, so was the connexion of Faith with Truth and Knowledge more and more either forgotten or denied. At length the identity of this (so-called) spirituality of heart and the virtue of Faith was acknowledged on all hands. Some men indeed disapproved the pietism in question, others admired it; but whether they admired or disapproved, both the one party and the other found themselves in agreement on the main point, viz.—in considering that this really was in substance Religion, and nothing else; that Religion was based, not on argument, but on taste and sentiment, that nothing was objective, every thing subjective, in doctrine. I say, even those who saw through the affectation in which the religious school of which I am speaking clad itself, still came to think that Religion, as such, consisted in something short of intellectual exercises, viz., in the affections, in the imagination, in inward persuasions and consolations, in pleasurable sensations, sudden changes, and sublime fancies. They learned to believe and to take it for granted, that Religion was nothing beyond a *supply* of the wants of human nature, not an external fact and a work of God. There was, it appeared, a demand for Religion, and therefore there was a supply; human nature could not do without Religion, any more than it could do without bread; a supply was absolutely necessary, good or bad, and, as in the case of the articles of daily sustenance, an article which was really inferior was better than none

at all. Thus Religion was useful, venerable, beautiful, the sanction of order, the stay of government, the curb of self-will and self-indulgence, which the laws cannot reach: but, after all, on what was it based? Why, that was a question delicate to ask, and imprudent to answer; but, if the truth must be spoken, however reluctantly, the long and the short of the matter was this, that Religion was based on custom, on prejudice, on law, on education, on habit, on loyalty, on feudalism, on enlightened expedience, on many, many things, but not at all on reason; reason was neither its warrant, nor its instrument, and science had as little connexion with it as with the fashions of the season, or the state of the weather.

You see, Gentlemen, how a theory or philosophy, which began with the religious changes of the sixteenth century, has led to conclusions, which the authors of those changes would be the first to denounce, and has been taken up by that large and influential body which goes by the name of Liberal or Latitudinarian; and how, where it prevails, it is as unreasonable of course to demand for Religion a chair in a University, as to demand one for fine feeling, sense of honour, patriotism, gratitude, maternal affection, or good companionship, proposals which would be simply unmeaning.

5.

Now, in illustration of what I have been saying, I will appeal, in the first place, to a statesman, but not merely so, to no mere politician, no trader in places, or in votes, or in the stock market, but to a philosopher, to an orator, to one whose profession, whose aim, has ever been to cultivate the fair, the noble, and the generous. I cannot forget the celebrated discourse of the celebrated man to whom I am referring; a man who is first in his peculiar walk; and who, moreover (which is much to my purpose), has had a share, as much as any one alive, in effecting the public recognition in these Islands of

the principle of separating secular and religious knowledge. This brilliant thinker, during the years in which he was exerting himself in behalf of this principle, made a speech or discourse, on occasion of a public solemnity; and in reference to the bearing of general knowledge upon religious belief, he spoke as follows:

“As men,” he said, “will no longer suffer themselves to be led blindfold in ignorance, so will they no more yield to the vile principle of judging and treating their fellow-creatures, not according to the intrinsic merit of their actions, but according to the accidental and involuntary coincidence of their opinions. The great truth has finally gone forth to all the ends of the earth,” and he prints it in capital letters, “that man shall no more render account to man for his belief, over which he has himself no control. Henceforward, nothing shall prevail upon us to praise or to blame any one for that which he can no more change, than he can the hue of his skin or the height of his stature.”^[2] You see, Gentlemen, if this philosopher is to decide the matter, religious ideas are just as far from being real, or representing anything beyond themselves, are as truly peculiarities, idiosyncracies, accidents of the individual, as his having the stature of a Patagonian, or the features of a Negro.

But perhaps this was the rhetoric of an excited moment. Far from it, Gentlemen, or I should not have fastened on the words of a fertile mind, uttered so long ago. What Mr. Brougham laid down as a principle in 1825, resounds on all sides of us, with ever-growing confidence and success, in 1852. I open the Minutes of the Committee of Council on Education for the years 1848—1850, presented to both Houses of Parliament by command of Her Majesty, and I find one of Her Majesty’s Inspectors of Schools, at p. 467 of the second volume, dividing “the topics usually embraced in the better class of primary schools” into four:—the knowledge of *signs*, as reading and writing; of *facts*, as geography and astronomy; of *relations and laws*, as

mathematics; and lastly *sentiment*, such as poetry and music. Now, on first catching sight of this division, it occurred to me to ask myself, before ascertaining the writer's own resolution of the matter, under which of these four heads would fall Religion, or whether it fell under any of them. Did he put it aside as a thing too delicate and sacred to be enumerated with earthly studies? or did he distinctly contemplate it when he made his division? Anyhow, I could really find a place for it under the first head, or the second, or the third; for it has to do with facts, since it tells of the Self-subsisting; it has to do with relations, for it tells of the Creator; it has to do with signs, for it tells of the due manner of speaking of Him. There was just one head of the division to which I could not refer it, viz., to *sentiment*; for, I suppose, music and poetry, which are the writer's own examples of sentiment, have not much to do with Truth, which is the main object of Religion. Judge then my surprise, Gentlemen, when I found the fourth was the very head selected by the writer of the Report in question, as the special receptacle of religious topics. "The inculcation of *sentiment*," he says, "embraces reading in its higher sense, poetry, music, together with moral and religious Education." I am far from introducing this writer for his own sake, because I have no wish to hurt the feelings of a gentleman, who is but exerting himself zealously in the discharge of anxious duties; but, taking him as an illustration of the wide-spreading school of thought to which he belongs, I ask what can more clearly prove than a candid avowal like this, that, in the view of his school, Religion is not knowledge, has nothing whatever to do with knowledge, and is excluded from a University course of instruction, not simply because the exclusion cannot be helped, from political or social obstacles, but because it has no business there at all, because it is to be considered a taste, sentiment, opinion, and nothing more?

The writer avows this conclusion himself, in the explanation into which he presently enters, in which he says: "According to the

classification proposed, the *essential idea* of all religious Education will consist in the direct cultivation of the *feelings*.” What we contemplate, then, what we aim at, when we give a religious Education, is, it seems, not to impart any knowledge whatever, but to satisfy anyhow desires after the Unseen which will arise in our minds in spite of ourselves, to provide the mind with a means of self-command, to impress on it the beautiful ideas which saints and sages have struck out, to embellish it with the bright hues of a celestial piety, to teach it the poetry of devotion, the music of well-ordered affections, and the luxury of doing good. As for the intellect, its exercise happens to be unavoidable, whenever moral impressions are made, from the constitution of the human mind, but it varies in the results of that exercise, in the conclusions which it draws from our impressions, according to the peculiarities of the individual.

Something like this seems to be the writer’s meaning, but we need not pry into its finer issues in order to gain a distinct view of its general bearing; and taking it, as I think we fairly may take it, as a specimen of the philosophy of the day, as adopted by those who are not conscious unbelievers, or open scoffers, I consider it amply explains how it comes to pass that this day’s philosophy sets up a system of universal knowledge, and teaches of plants, and earths, and creeping things, and beasts, and gases, about the crust of the earth and the changes of the atmosphere, about sun, moon, and stars, about man and his doings, about the history of the world, about sensation, memory, and the passions, about duty, about cause and effect, about all things imaginable, except one—and that is, about Him that made all these things, about God. I say the reason is plain because they consider knowledge, as regards the creature, is illimitable, but impossible or hopeless as regards the being and attributes and works of the Creator.

Here, however, it may be objected to me that this representation is certainly extreme, for the school in question does, in fact, lay great stress on the evidence afforded by the creation, to the Being and Attributes of the Creator. I may be referred, for instance, to the words of one of the speakers on a memorable occasion. At the very time of laying the first stone of the University of London, I confess it, a learned person, since elevated to the Protestant See of Durham, which he still fills, opened the proceedings with prayer. He addressed the Deity, as the authoritative Report informs us, “the whole surrounding assembly standing uncovered in solemn silence.” “Thou,” he said, in the name of all present, “thou hast constructed the vast fabric of the universe in so wonderful a manner, so arranged its motions, and so formed its productions, that the contemplation and study of thy works exercise at once the mind in the pursuit of human science, and lead it onwards to *Divine Truth*.” Here is apparently a distinct recognition that there is such a thing as Truth in the province of Religion; and, did the passage stand by itself, and were it the only means we possessed of ascertaining the sentiments of the powerful body whom this distinguished person there represented, it would, as far as it goes, be satisfactory. I admit it; and I admit also the recognition of the Being and certain Attributes of the Deity, contained in the writings of the gifted person whom I have already quoted, whose genius, versatile and multiform as it is, in nothing has been so constant, as in its devotion to the advancement of knowledge, scientific and literary. He then certainly, in his “Discourse of the objects, advantages, and pleasures of science,” after variously illustrating what he terms its “gratifying treats,” crowns the catalogue with mention of “the *highest* of *all* our gratifications in the contemplation of science,” which he proceeds to explain thus:

“We are raised by them,” says he, “to an understanding of the

infinite wisdom and goodness which the Creator has displayed in all His works. Not a step can be taken in any direction,” he continues, “without perceiving the most extraordinary traces of design; and the skill, every where conspicuous, is calculated in so vast a proportion of instances to promote the happiness of living creatures, and especially of ourselves, that we can feel no hesitation in concluding, that, if we knew the whole scheme of Providence, every part would be in harmony with a plan of absolute benevolence. Independent, however, of this most consoling inference, the delight is inexpressible, of being able to follow, as it were, with our eyes, the marvellous works of the Great Architect of Nature, to trace the unbounded power and exquisite skill which are exhibited in the most minute, as well as the mightiest parts of His system. The pleasure derived from this study is unceasing, and so various, that it never tires the appetite. But it is unlike the low gratifications of sense in another respect: it elevates and refines our nature, while those hurt the health, debase the understanding, and corrupt the feelings; it teaches us to look upon all earthly objects as insignificant and below our notice, except the pursuit of knowledge and the cultivation of virtue, that is to say, the strict performance of our duty in every relation of society; and it gives a dignity and importance to the enjoyment of life, which the frivolous and the grovelling cannot even comprehend.”

Such are the words of this prominent champion of Mixed Education. If logical inference be, as it undoubtedly is, an instrument of truth, surely, it may be answered to me, in admitting the possibility of inferring the Divine Being and Attributes *from* the phenomena of nature, he distinctly admits a basis of truth for the doctrines of Religion.

7.

I wish, Gentlemen, to give these representations their full weight,

both from the gravity of the question, and the consideration due to the persons whom I am arraigning; but, before I can feel sure I understand them, I must ask an abrupt question. When I am told, then, by the partisans of Universities without Theological teaching, that human science leads to belief in a Supreme Being, without denying the fact, nay, as a Catholic, with full conviction of it, nevertheless I am obliged to ask what the statement means in *their* mouths, what they, the speakers, understand by the word "God." Let me not be thought offensive, if I question, whether it means the same thing on the two sides of the controversy. With us Catholics, as with the first race of Protestants, as with Mahometans, and all Theists, the word contains, as I have already said, a theology in itself. At the risk of anticipating what I shall have occasion to insist upon in my next Discourse, let me say that, according to the teaching of Monotheism, God is an Individual, Self-dependent, All-perfect, Unchangeable Being; intelligent, living, personal, and present; almighty, all-seeing, all-remembering; between whom and His creatures there is an infinite gulf; who has no origin, who is all-sufficient for Himself; who created and upholds the universe; who will judge every one of us, sooner or later, according to that Law of right and wrong which He has written on our hearts. He is One who is sovereign over, operative amidst, independent of, the appointments which He has made; One in whose hands are all things, who has a purpose in every event, and a standard for every deed, and thus has relations of His own towards the subject-matter of each particular science which the book of knowledge unfolds; who has with an adorable, never-ceasing energy implicated Himself in all the history of creation, the constitution of nature, the course of the world, the origin of society, the fortunes of nations, the action of the human mind; and who thereby necessarily becomes the subject-matter of a science, far wider and more noble than any of those which are included in the circle of secular Education.

This is the doctrine which belief in a God implies in the mind of a Catholic: if it means any thing, it means all this, and cannot keep from meaning all this, and a great deal more; and, even though there were nothing in the religious tenets of the last three centuries to disparage dogmatic truth, still, even then, I should have difficulty in believing that a doctrine so mysterious, so peremptory, approved itself as a matter of course to educated men of this day, who gave their minds attentively to consider it. Rather, in a state of society such as ours, in which authority, prescription, tradition, habit, moral instinct, and the divine influences go for nothing, in which patience of thought, and depth and consistency of view, are scorned as subtle and scholastic, in which free discussion and fallible judgment are prized as the birthright of each individual, I must be excused if I exercise towards this age, as regards its belief in this doctrine, some portion of that scepticism which it exercises itself towards every received but unscrutinized assertion whatever. I cannot take it for granted, I must have it brought home to me by tangible evidence, that the spirit of the age means by the Supreme Being what Catholics mean. Nay, it would be a relief to my mind to gain some ground of assurance, that the parties influenced by that spirit had, I will not say, a true apprehension of God, but even so much as the idea of what a true apprehension is.

Nothing is easier than to use the word, and mean nothing by it. The heathens used to say, "God wills," when they meant "Fate;" "God provides," when they meant "Chance;" "God acts," when they meant "Instinct" or "Sense;" and "God is every where," when they meant "the Soul of Nature." The Almighty is something infinitely different from a principle, or a centre of action, or a quality, or a generalization of phenomena. If, then, by the word, you do but mean a Being who keeps the world in order, who acts in it, but only in the way of general Providence, who acts towards us but only through what are called

laws of Nature, who is more certain not to act at all than to act independent of those laws, who is known and approached indeed, but only through the medium of those laws; such a God it is not difficult for any one to conceive, not difficult for any one to endure. If, I say, as you would revolutionize society, so you would revolutionize heaven, if you have changed the divine sovereignty into a sort of constitutional monarchy, in which the Throne has honour and ceremonial enough, but cannot issue the most ordinary command except through legal forms and precedents, and with the counter-signature of a minister, then belief in a God is no more than an acknowledgment of existing, sensible powers and phenomena, which none but an idiot can deny. If the Supreme Being is powerful or skilful, just so far forth as the telescope shows power, and the microscope shows skill, if His moral law is to be ascertained simply by the physical processes of the animal frame, or His will gathered from the immediate issues of human affairs, if His Essence is just as high and deep and broad and long as the universe, and no more; if this be the fact, then will I confess that there is no specific science about God, that theology is but a name, and a protest in its behalf an hypocrisy. Then is He but coincident with the laws of the universe; then is He but a function, or correlative, or subjective reflection and mental impression, of each phenomenon of the material or moral world, as it flits before us. Then, pious as it is to think of Him, while the pageant of experiment or abstract reasoning passes by, still, such piety is nothing more than a poetry of thought or an ornament of language, and has not even an infinitesimal influence upon philosophy or science, of which it is rather the parasitical production.

I understand, in that case, why Theology should require no specific teaching, for there is nothing to mistake about; why it is powerless against scientific anticipations, for it merely is one of them; why it is simply absurd in its denunciations of heresy, for heresy does

not lie in the region of fact and experiment. I understand, in that case, how it is that the religious sense is but a “sentiment,” and its exercise a “gratifying treat,” for it is like the sense of the beautiful or the sublime. I understand how the contemplation of the universe “leads onwards to *divine* truth,” for divine truth is not something separate from Nature, but it is Nature with a divine glow upon it. I understand the zeal expressed for Physical Theology, for this study is but a mode of looking at Physical Nature, a certain view taken of Nature, private and personal, which one man has, and another has not, which gifted minds strike out, which others see to be admirable and ingenious, and which all would be the better for adopting. It is but the theology of Nature, just as we talk of the *philosophy* or the *romance* of history, or the *poetry* of childhood, or the picturesque, or the sentimental, or the humorous, or any other abstract quality, which the genius or the caprice of the individual, or the fashion of the day, or the consent of the world, recognizes in any set of objects which are subjected to its contemplation.

8.

Such ideas of religion seem to me short of Monotheism; I do not impute them to this or that individual who belongs to the school which gives them currency; but what I read about the “gratification” of keeping pace in our scientific researches with “the Architect of Nature;” about the said gratification “giving a dignity and importance to the enjoyment of life,” and teaching us that knowledge and our duties to society are the only earthly objects worth our notice, all this, I own it, Gentlemen, frightens me; nor is Dr. Maltby’s address to the Deity sufficient to reassure me. I do not see much difference between avowing that there is no God, and implying that nothing definite can for certain be known about Him; and when I find Religious Education treated as the cultivation of sentiment, and Religious Belief as the

accidental hue or posture of the mind, I am reluctantly but forcibly reminded of a very unpleasant page of Metaphysics, viz., of the relations between God and Nature insinuated by such philosophers as Hume. This acute, though most low-minded of speculators, in his inquiry concerning the Human Understanding, introduces, as is well known, Epicurus, that is, a teacher of atheism, delivering an harangue to the Athenian people, not indeed in defence, but in extenuation of that opinion. His object is to show that, whereas the atheistic view is nothing else than the repudiation of theory, and an accurate representation of phenomenon and fact, it cannot be dangerous, unless phenomenon and fact be dangerous. Epicurus is made to say, that the paralogism of philosophy has ever been that of arguing from Nature in behalf of something beyond Nature, greater than Nature; whereas, God, as he maintains, being known only through the visible world, our knowledge of Him is absolutely commensurate with our knowledge of it,—is nothing distinct from it,—is but a mode of viewing it. Hence it follows that, provided we admit, as we cannot help admitting, the phenomena of Nature and the world, it is only a question of words whether or not we go on to the hypothesis of a second Being, not visible but immaterial, parallel and coincident with Nature, to whom we give the name of God. “Allowing,” he says, “the gods to be the authors of the existence or order of the universe, it follows that they possess that precise degree of power, intelligence, and benevolence, which appears in their workmanship; but nothing farther can be proved, except we call in the assistance of exaggeration and flattery to supply the defects of argument and reasoning. So far as the traces of any attributes, at present, appear, so far may we conclude these attributes to exist. The supposition of farther attributes is mere hypothesis; much more the supposition that, in distant periods of place and time, there has been, or will be, a more magnificent display of these attributes, and a scheme of administration more suitable to

such imaginary virtues.”

Here is a reasoner, who would not hesitate to deny that there is any distinct science or philosophy possible concerning the Supreme Being; since every single thing we know of Him is this or that or the other phenomenon, material or moral, which already falls under this or that natural science. In him then it would be only consistent to drop Theology in a course of University Education: but how is it consistent in any one who shrinks from his companionship? I am glad to see that the author, several times mentioned, is in opposition to Hume, in one sentence of the quotation I have made from his Discourse upon Science, deciding, as he does, that the phenomena of the material world are insufficient for the full exhibition of the Divine Attributes, and implying that they require a supplemental process to complete and harmonize their evidence. But is not this supplemental process a science? and if so, why not acknowledge its existence? If God is more than Nature, Theology claims a place among the sciences: but, on the other hand, if you are not sure of as much as this, how do you differ from Hume or Epicurus?

9.

I end then as I began: religious doctrine is knowledge. This is the important truth, little entered into at this day, which I wish that all who have honoured me with their presence here would allow me to beg them to take away with them. I am not catching at sharp arguments, but laying down grave principles. Religious doctrine is knowledge, in as full a sense as Newton's doctrine is knowledge. University Teaching without Theology is simply unphilosophical. Theology has at least as good a right to claim a place there as Astronomy.

In my next Discourse it will be my object to show that its omission from the list of recognised sciences is not only indefensible

in itself, but prejudicial to all the rest.

[2] Mr. Brougham's Glasgow Discourse.

Discourse III

Bearing of Theology on Other Branches of Knowledge

1.

When men of great intellect, who have long and intently and exclusively given themselves to the study or investigation of some one particular branch of secular knowledge, whose mental life is concentrated and hidden in their chosen pursuit, and who have neither eyes nor ears for any thing which does not immediately bear upon it, when such men are at length made to realize that there is a clamour all around them, which must be heard, for what they have been so little accustomed to place in the category of knowledge as Religion, and that they themselves are accused of disaffection to it, they are impatient at the interruption; they call the demand tyrannical, and the requisitionists bigots or fanatics. They are tempted to say, that their only wish is to be let alone; for themselves, they are not dreaming of offending any one, or interfering with any one; they are pursuing their own particular line, they have never spoken a word against any one's religion, whoever he may be, and never mean to do so. It does not follow that they deny the existence of a God, because they are not found talking of it, when the topic would be utterly irrelevant. All they say is, that there are other beings in the world besides the Supreme Being; their business is with them. After all, the creation is not the Creator, nor things secular religious. Theology and

human science are two things, not one, and have their respective provinces, contiguous it may be and cognate to each other, but not identical. When we are contemplating earth, we are not contemplating heaven; and when we are contemplating heaven, we are not contemplating earth. Separate subjects should be treated separately. As division of labour, so division of thought is the only means of successful application. "Let us go our own way," they say, "and you go yours. We do not pretend to lecture on Theology, and you have no claim to pronounce upon Science."

With this feeling they attempt a sort of compromise, between their opponents who claim for Theology a free introduction into the Schools of Science, and themselves who would exclude it altogether, and it is this: viz., that it should remain indeed excluded from the public schools, but that it should be permitted in private, wherever a sufficient number of persons is found to desire it. Such persons, they seem to say, may have it all their own way, when they are by themselves, so that they do not attempt to disturb a comprehensive system of instruction, acceptable and useful to all, by the intrusion of opinions peculiar to their own minds.

I am now going to attempt a philosophical answer to this representation, that is, to the project of teaching secular knowledge in the University Lecture Room, and remanding religious knowledge to the parish priest, the catechism, and the parlour; and in doing so, you must pardon me, Gentlemen, if my subject should oblige me to pursue a lengthy and careful course of thought, which may be wearisome to the hearer:—I begin then thus:—

2.

Truth is the object of Knowledge of whatever kind; and when we inquire what is meant by Truth, I suppose it is right to answer that Truth means facts and their relations, which stand towards each other

pretty much as subjects and predicates in logic. All that exists, as contemplated by the human mind, forms one large system or complex fact, and this of course resolves itself into an indefinite number of particular facts, which, as being portions of a whole, have countless relations of every kind, one towards another. Knowledge is the apprehension of these facts, whether in themselves, or in their mutual positions and bearings. And, as all taken together form one integral subject for contemplation, so there are no natural or real limits between part and part; one is ever running into another; all, as viewed by the mind, are combined together, and possess a correlative character one with another, from the internal mysteries of the Divine Essence down to our own sensations and consciousness, from the most solemn appointments of the Lord of all down to what may be called the accident of the hour, from the most glorious seraph down to the vilest and most noxious of reptiles.

Now, it is not wonderful that, with all its capabilities, the human mind cannot take in this whole vast fact at a single glance, or gain possession of it at once. Like a short-sighted reader, its eye pores closely, and travels slowly, over the awful volume which lies open for its inspection. Or again, as we deal with some huge structure of many parts and sides, the mind goes round about it, noting down, first one thing, then another, as it best may, and viewing it under different aspects, by way of making progress towards mastering the whole. So by degrees and by circuitous advances does it rise aloft and subject to itself a knowledge of that universe into which it has been born.

These various partial views or abstractions, by means of which the mind looks out upon its object, are called sciences, and embrace respectively larger or smaller portions of the field of knowledge; sometimes extending far and wide, but superficially, sometimes with exactness over particular departments, sometimes occupied together on one and the same portion, sometimes holding one part in common,

and then ranging on this side or that in absolute divergence one from the other. Thus Optics has for its subject the whole visible creation, so far forth as it is simply visible; Mental Philosophy has a narrower province, but a richer one. Astronomy, plane and physical, each has the same subject-matter, but views it or treats it differently; lastly, Geology and Comparative Anatomy have subject-matters partly the same, partly distinct. Now these views or sciences, as being abstractions, have far more to do with the relations of things than with things themselves. They tell us what things are, only or principally by telling us their relations, or assigning predicates to subjects; and therefore they never tell us all that can be said about a thing, even when they tell something, nor do they bring it before us, as the senses do. They arrange and classify facts; they reduce separate phenomena under a common law; they trace effects to a cause. Thus they serve to transfer our knowledge from the custody of memory to the surer and more abiding protection of philosophy, thereby providing both for its spread and its advance:—for, inasmuch as sciences are forms of knowledge, they enable the intellect to master and increase it; and, inasmuch as they are instruments, to communicate it readily to others. Still, after all, they proceed on the principle of a division of labour, even though that division is an abstraction, not a literal separation into parts; and, as the maker of a bridle or an epaulet has not, on that account, any idea of the science of tactics or strategy, so in a parallel way, it is not every science which equally, nor any one which fully, enlightens the mind in the knowledge of things, as they are, or brings home to it the external object on which it wishes to gaze. Thus they differ in importance; and according to their importance will be their influence, not only on the mass of knowledge to which they all converge and contribute, but on each other.

Since then sciences are the results of mental processes about one

and the same subject-matter, viewed under its various aspects, and are true results, as far as they go, yet at the same time separate and partial, it follows that on the one hand they need external assistance, one by one, by reason of their incompleteness, and on the other that they are able to afford it to each other, by reason, first, of their independence in themselves, and then of their connexion in their subject-matter. Viewed altogether, they approximate to a representation or subjective reflection of the objective truth, as nearly as is possible to the human mind, which advances towards the accurate apprehension of that object, in proportion to the number of sciences which it has mastered; and which, when certain sciences are away, in such a case has but a defective apprehension, in proportion to the value of the sciences which are thus wanting, and the importance of the field on which they are employed.

3.

Let us take, for instance, man himself as our object of contemplation; then at once we shall find we can view him in a variety of relations; and according to those relations are the sciences of which he is the subject-matter, and according to our acquaintance with them is our possession of a true knowledge of him. We may view him in relation to the material elements of his body, or to his mental constitution, or to his household and family, or to the community in which he lives, or to the Being who made him; and in consequence we treat of him respectively as physiologists, or as moral philosophers, or as writers of economics, or of politics, or as theologians. When we think of him in all these relations together, or as the subject at once of all the sciences I have named, then we may be said to reach unto and rest in the idea of man as an object or external fact, similar to that which the eye takes of his outward form. On the other hand, according as we are only physiologists, or only politicians, or only

moralists, so is our idea of man more or less unreal; we do not take in the whole of him, and the defect is greater or less, in proportion as the relation is, or is not, important, which is omitted, whether his relation to God, or to his king, or to his children, or to his own component parts. And if there be one relation, about which we know nothing at all except that it exists, then is our knowledge of him, confessedly and to our own consciousness, deficient and partial, and that, I repeat, in proportion to the importance of the relation.

That therefore is true of sciences in general which we are apt to think applies only to pure mathematics, though to pure mathematics it applies especially, viz., that they cannot be considered as simple representations or informants of things as they are. We are accustomed to say, and say truly, that the conclusions of pure mathematics are applied, corrected, and adapted, by mixed; but so too the conclusions of Anatomy, Chemistry, Dynamics, and other sciences, are revised and completed by each other. Those several conclusions do not represent whole and substantive things, but views, true, so far as they go; and in order to ascertain how far they do go, that is, how far they correspond to the object to which they belong, we must compare them with the views taken out of that object by other sciences. Did we proceed upon the abstract theory of forces, we should assign a much more ample range to a projectile than in fact the resistance of the air allows it to accomplish. Let, however, that resistance be made the subject of scientific analysis, and then we shall have a new science, assisting, and to a certain point completing, for the benefit of questions of fact, the science of projection. On the other hand, the science of projection itself, considered as belonging to the forces it contemplates, is not more perfect, as such, by this supplementary investigation. And in like manner, as regards the whole circle of sciences, one corrects another for purposes of fact, and one without the other cannot dogmatize, except hypothetically and upon its own

abstract principles. For instance, the Newtonian philosophy requires the admission of certain metaphysical postulates, if it is to be more than a theory or an hypothesis; as, for instance, that what happened yesterday will happen tomorrow; that there is such a thing as matter, that our senses are trustworthy, that there is a logic of induction, and so on. Now to Newton metaphysicians grant all that he asks; but, if so be, they may not prove equally accommodating to another who asks something else, and then all his most logical conclusions in the science of physics would remain hopelessly on the stocks, though finished, and never could be launched into the sphere of fact.

Again, did I know nothing about the movement of bodies, except what the theory of gravitation supplies, were I simply absorbed in that theory so as to make it measure all motion on earth and in the sky, I should indeed come to many right conclusions, I should hit off many important facts, ascertain many existing relations, and correct many popular errors: I should scout and ridicule with great success the old notion, that light bodies flew up and heavy bodies fell down; but I should go on with equal confidence to deny the phenomenon of capillary attraction. Here I should be wrong, but only because I carried out my science irrespectively of other sciences. In like manner, did I simply give myself to the investigation of the external action of body upon body, I might scoff at the very idea of chemical affinities and combinations, and reject it as simply unintelligible. Were I a mere chemist, I should deny the influence of mind upon bodily health; and so on, as regards the devotees of any science, or family of sciences, to the exclusion of others; they necessarily become bigots and quacks, scorning all principles and reported facts which do not belong to their own pursuit, and thinking to effect everything without aid from any other quarter. Thus, before now, chemistry has been substituted for medicine; and again, political economy, or intellectual enlightenment, or the reading of the Scriptures, has been cried up as a panacea

against vice, malevolence, and misery.

4.

Summing up, Gentlemen, what I have said, I lay it down that all knowledge forms one whole, because its subject-matter is one; for the universe in its length and breadth is so intimately knit together, that we cannot separate off portion from portion, and operation from operation, except by a mental abstraction; and then again, as to its Creator, though He of course in His own Being is infinitely separate from it, and Theology has its departments towards which human knowledge has no relations, yet He has so implicated Himself with it, and taken it into His very bosom, by His presence in it, His providence over it, His impressions upon it, and His influences through it, that we cannot truly or fully contemplate it without in some main aspects contemplating Him. Next, sciences are the results of that mental abstraction, which I have spoken of, being the logical record of this or that aspect of the whole subject-matter of knowledge. As they all belong to one and the same circle of objects, they are one and all connected together; as they are but aspects of things, they are severally incomplete in their relation to the things themselves, though complete in their own idea and for their own respective purposes; on both accounts they at once need and subserve each other. And further, the comprehension of the bearings of one science on another, and the use of each to each, and the location and limitation and adjustment and due appreciation of them all, one with another, this belongs, I conceive, to a sort of science distinct from all of them, and in some sense a science of sciences, which is my own conception of what is meant by Philosophy, in the true sense of the word, and of a philosophical habit of mind, and which in these Discourses I shall call by that name. This is what I have to say about knowledge and philosophical knowledge generally; and now I proceed to apply it to

the particular science, which has led me to draw it out.

I say, then, that the systematic omission of any one science from the catalogue prejudices the accuracy and completeness of our knowledge altogether, and that, in proportion to its importance. Not even Theology itself, though it comes from heaven, though its truths were given once for all at the first, though they are more certain on account of the Giver than those of mathematics, not even Theology, so far as it is relative to us, or is the Science of Religion, do I exclude from the law to which every mental exercise is subject, viz., from that imperfection, which ever must attend the abstract, when it would determine the concrete. Nor do I speak only of Natural Religion; for even the teaching of the Catholic Church, in certain of its aspects, that is, its religious teaching, is variously influenced by the other sciences. Not to insist on the introduction of the Aristotelic philosophy into its phraseology, its explanation of dogmas is influenced by ecclesiastical acts or events; its interpretations of prophecy are directly affected by the issues of history; its comments upon Scripture by the conclusions of the astronomer and the geologist; and its casuistical decisions by the various experience, political, social, and psychological, with which times and places are ever supplying it.

What Theology gives, it has a right to take; or rather, the interests of Truth oblige it to take. If we would not be beguiled by dreams, if we would ascertain facts as they are, then, granting Theology is a real science, we cannot exclude it, and still call ourselves philosophers. I have asserted nothing as yet as to the pre-eminent dignity of Religious Truth; I only say, if there be Religious Truth at all, we cannot shut our eyes to it without prejudice to truth of every kind, physical, metaphysical, historical, and moral; for it bears upon all truth. And thus I answer the objection with which I opened this Discourse. I supposed the question put to me by a philosopher of the day, "Why cannot you go your way, and let us go ours?" I answer, in the name of

the Science of Religion, “When Newton can dispense with the metaphysician, then may you dispense with us.” So much at first sight; now I am going on to claim a little more for Theology, by classing it with branches of knowledge which may with greater decency be compared to it.

5.

Let us see, then, how this supercilious treatment of so momentous a science, for momentous it must be, if there be a God, runs in a somewhat parallel case. The great philosopher of antiquity, when he would enumerate the causes of the things that take place in the world, after making mention of those which he considered to be physical and material, adds, “and the mind and everything which is by means of man.”^[1] Certainly; it would have been a preposterous course, when he would trace the effects he saw around him to their respective sources, had he directed his exclusive attention upon some one class or order of originating principles, and ascribed to these everything which happened anywhere. It would indeed have been unworthy a genius so curious, so penetrating, so fertile, so analytical as Aristotle’s, to have laid it down that everything on the face of the earth could be accounted for by the material sciences, without the hypothesis of moral agents. It is incredible that in the investigation of physical results he could ignore so influential a being as man, or forget that, not only brute force and elemental movement, but knowledge also is power. And this so much the more, inasmuch as moral and spiritual agents belong to another, not to say a higher, order than physical; so that the omission supposed would not have been merely an oversight in matters of detail, but a philosophical error, and a fault in division.

However, we live in an age of the world when the career of science and literature is little affected by what was done, or would have been done, by this venerable authority; so, we will suppose, in

England or Ireland, in the middle of the nineteenth century, a set of persons of name and celebrity to meet together, in spite of Aristotle, in order to adopt a line of proceeding which they conceive the circumstances of the time render imperative. We will suppose that a difficulty just now besets the enunciation and discussion of all matters of science, in consequence of the extreme sensitiveness of large classes of the community, clergy and laymen, on the subjects of necessity, responsibility, the standard of morals, and the nature of virtue. Parties run so high, that the only way of avoiding constant quarrelling in defence of this or that side of the question is, in the judgment of the persons I am supposing, to shut up the subject of anthropology altogether. This is accordingly done. Henceforth man is to be as if he were not, in the general course of Education; the moral and mental sciences are to have no professorial chairs, and the treatment of them is to be simply left as a matter of private judgment, which each individual may carry out as he will. I can just fancy such a prohibition abstractedly possible; but one thing I cannot fancy possible, viz., that the parties in question, after this sweeping act of exclusion, should forthwith send out proposals on the basis of such exclusion for publishing an Encyclopædia, or erecting a National University.

It is necessary, however, Gentlemen, for the sake of the illustration which I am setting before you, to imagine what cannot be. I say, let us imagine a project for organizing a system of scientific teaching, in which the agency of man in the material world cannot allowably be recognized, and may allowably be denied. Physical and mechanical causes are exclusively to be treated of; volition is a forbidden subject. A prospectus is put out, with a list of sciences, we will say, Astronomy, Optics, Hydrostatics, Galvanism, Pneumatics, Statics, Dynamics, Pure Mathematics, Geology, Botany, Physiology, Anatomy, and so forth; but not a word about the mind and its powers, except what is said in explanation of the omission. That explanation is to the

effect that the parties concerned in the undertaking have given long and anxious thought to the subject, and have been reluctantly driven to the conclusion that it is simply impracticable to include in the list of University Lectures the Philosophy of Mind. What relieves, however, their regret is the reflection, that domestic feelings and polished manners are best cultivated in the family circle and in good society, in the observance of the sacred ties which unite father, mother, and child, in the correlative claims and duties of citizenship, in the exercise of disinterested loyalty and enlightened patriotism. With this apology, such as it is, they pass over the consideration of the human mind and its powers and works, "in solemn silence," in their scheme of University Education.

Let a charter be obtained for it; let professors be appointed, lectures given, examinations passed, degrees awarded:—what sort of exactness or trustworthiness, what philosophical largeness, will attach to views formed in an intellectual atmosphere thus deprived of some of the constituent elements of daylight? What judgment will foreign countries and future times pass on the labours of the most acute and accomplished of the philosophers who have been parties to so portentous an unreality? Here are professors gravely lecturing on medicine, or history, or political economy, who, so far from being bound to acknowledge, are free to scoff at the action of mind upon matter, or of mind upon mind, or the claims of mutual justice and charity. Common sense indeed and public opinion set bounds at first to so intolerable a licence; yet, as time goes on, an omission which was originally but a matter of expedience, commends itself to the reason; and at length a professor is found, more hardy than his brethren, still however, as he himself maintains, with sincere respect for domestic feelings and good manners, who takes on him to deny psychology *in toto*, to pronounce the influence of mind in the visible world a superstition, and to account for every effect which is found in

the world by the operation of physical causes. Hitherto intelligence and volition were accounted real powers; the muscles act, and their action cannot be represented by any scientific expression; a stone flies out of the hand and the propulsive force of the muscle resides in the will; but there has been a revolution, or at least a new theory in philosophy, and our Professor, I say, after speaking with the highest admiration of the human intellect, limits its independent action to the region of speculation, and denies that it can be a motive principle, or can exercise a special interference, in the material world. He ascribes every work, every external act of man, to the innate force or soul of the physical universe. He observes that spiritual agents are so mysterious and unintelligible, so uncertain in their laws, so vague in their operation, so sheltered from experience, that a wise man will have nothing to say to them. They belong to a different order of causes, which he leaves to those whose profession it is to investigate them, and he confines himself to the tangible and sure. Human exploits, human devices, human deeds, human productions, all that comes under the scholastic terms of “genius” and “art,” and the metaphysical ideas of “duty,” “right,” and “heroism,” it is his office to contemplate all these merely in their place in the eternal system of physical cause and effect. At length he undertakes to show how the whole fabric of material civilization has arisen from the constructive powers of physical elements and physical laws. He descants upon palaces, castles, temples, exchanges, bridges, causeways, and shows that they never could have grown into the imposing dimensions which they present to us, but for the laws of gravitation and the cohesion of part with part. The pillar would come down, the loftier the more speedily, did not the centre of gravity fall within its base; and the most admired dome of Palladio or of Sir Christopher would give way, were it not for the happy principle of the arch. He surveys the complicated machinery of a single day’s arrangements in a private

family; our dress, our furniture, our hospitable board; what would become of them, he asks, but for the laws of physical nature? Those laws are the causes of our carpets, our furniture, our travelling, and our social intercourse. Firm stitches have a natural power, in proportion to the toughness of the material adopted, to keep together separate portions of cloth; sofas and chairs could not turn upside down, even if they would; and it is a property of caloric to relax the fibres of animal matter, acting through water in one way, through oil in another, and this is the whole mystery of the most elaborate *cuisine*:—but I should be tedious if I continued the illustration.

6.

Now, Gentlemen, pray understand how it is to be here applied. I am not supposing that the principles of Theology and Psychology are the same, or arguing from the works of man to the works of God, which Paley has done, which Hume has protested against. I am not busying myself to prove the existence and attributes of God, by means of the Argument from design. I am not proving anything at all about the Supreme Being. On the contrary, I am assuming His existence, and I do but say this:—that, man existing, no University Professor, who had suppressed in physical lectures the idea of volition, who did not take volition for granted, could escape a one-sided, a radically false view of the things which he discussed; not indeed that his own definitions, principles, and laws would be wrong, or his abstract statements, but his considering his own study to be the key of everything that takes place on the face of the earth, and his passing over anthropology, this would be his error. I say, it would not be his science which was untrue, but his so-called knowledge which was unreal. He would be deciding on facts by means of theories. The various busy world, spread out before our eyes, is physical, but it is more than physical; and, in making its actual system identical with his

scientific analysis, formed on a particular aspect, such a Professor as I have imagined was betraying a want of philosophical depth, and an ignorance of what an University Teaching ought to be. He was no longer a teacher of liberal knowledge, but a narrow-minded bigot. While his doctrines professed to be conclusions formed upon an hypothesis or partial truth, they were undeniable; not so if they professed to give results in facts which he could grasp and take possession of. Granting, indeed, that a man's arm is moved by a simple physical cause, then of course we may dispute about the various external influences which, when it changes its position, sway it to and fro, like a scarecrow in a garden; but to assert that the motive cause is physical, this is an assumption in a case, when our question is about a matter of fact, not about the logical consequences of an assumed premiss. And, in like manner, if a people prays, and the wind changes, the rain ceases, the sun shines, and the harvest is safely housed, when no one expected it, our Professor may, if he will, consult the barometer, discourse about the atmosphere, and throw what has happened into an equation, ingenious, even though it be not true; but, should he proceed to rest the phenomenon, in matter of fact, simply upon a physical cause, to the exclusion of a divine, and to say that the given case actually belongs to his science because other like cases do, I must tell him, *Ne sutor ultra crepidam*: he is making his particular craft usurp and occupy the universe. This then is the drift of my illustration. If the creature is ever setting in motion an endless series of physical causes and effects, much more is the Creator; and as our excluding volition from our range of ideas is a denial of the soul, so our ignoring Divine Agency is a virtual denial of God. Moreover, supposing man can will and act of himself in spite of physics, to shut up this great truth, though one, is to put our whole encyclopædia of knowledge out of joint; and supposing God can will and act of Himself in this world which He has made, and we deny or slur it over, then we

are throwing the circle of universal science into a like, or a far worse confusion.

Worse incomparably, for the idea of God, if there be a God, is infinitely higher than the idea of man, if there be man. If to plot out man's agency is to deface the book of knowledge, on the supposition of that agency existing, what must it be, supposing it exists, to blot out the agency of God? I have hitherto been engaged in showing that all the sciences come to us as one, that they all relate to one and the same integral subject-matter, that each separately is more or less an abstraction, wholly true as an hypothesis, but not wholly trustworthy in the concrete, conversant with relations more than with facts, with principles more than with agents, needing the support and guarantee of its sister sciences, and giving in turn while it takes:—from which it follows, that none can safely be omitted, if we would obtain the exactest knowledge possible of things as they are, and that the omission is more or less important, in proportion to the field which each covers, and the depth to which it penetrates, and the order to which it belongs; for its loss is a positive privation of an influence which exerts itself in the correction and completion of the rest. This is a general statement; but now as to Theology in particular, what, in matter of fact, are its pretensions, what its importance, what its influence upon other branches of knowledge, supposing there be a God, which it would not become me to set about proving? Has it vast dimensions, or does it lie in a nutshell? Will its omission be imperceptible, or will it destroy the equilibrium of the whole system of Knowledge? This is the inquiry to which I proceed.

7.

Now what is Theology? First, I will tell you what it is not. And here, in the first place (though of course I speak on the subject as a Catholic), observe that, strictly speaking, I am not assuming that

Catholicism is true, while I make myself the champion of Theology. Catholicism has not formally entered into my argument hitherto, nor shall I just now assume any principle peculiar to it, for reasons which will appear in the sequel, though of course I shall use Catholic language. Neither, secondly, will I fall into the fashion of the day, of identifying Natural Theology with Physical Theology; which said Physical Theology is a most jejune study, considered as a science, and really is no science at all, for it is ordinarily nothing more than a series of pious or polemical remarks upon the physical world viewed religiously, whereas the word "Natural" properly comprehends man and society, and all that is involved therein, as the great Protestant writer, Dr. Butler, shows us. Nor, in the third place, do I mean by Theology polemics of any kind; for instance, what are called "the Evidences of Religion," or "the Christian Evidences;" for, though these constitute a science supplemental to Theology and are necessary in their place, they are not Theology itself, unless an army is synonymous with the body politic. Nor, fourthly, do I mean by Theology that vague thing called "Christianity," or "our common Christianity," or "Christianity the law of the land," if there is any man alive who can tell what it is. I discard it, for the very reason that it cannot throw itself into a proposition. Lastly, I do not understand by Theology, acquaintance with the Scriptures; for, though no person of religious feelings can read Scripture but he will find those feelings roused, and gain much knowledge of history into the bargain, yet historical reading and religious feeling are not science. I mean none of these things by Theology, I simply mean the Science of God, or the truths we know about God put into system; just as we have a science of the stars, and call it astronomy, or of the crust of the earth, and call it geology.

For instance, I mean, for this is the main point, that, as in the human frame there is a living principle, acting upon it and through it

by means of volition, so, behind the veil of the visible universe, there is an invisible, intelligent Being, acting on and through it, as and when He will. Further, I mean that this invisible Agent is in no sense a soul of the world, after the analogy of human nature, but, on the contrary, is absolutely distinct from the world, as being its Creator, Upholder, Governor, and Sovereign Lord. Here we are at once brought into the circle of doctrines which the idea of God embodies. I mean then by the Supreme Being, one who is simply self-dependent, and the only Being who is such; moreover, that He is without beginning or Eternal, and the only Eternal; that in consequence He has lived a whole eternity by Himself; and hence that He is all-sufficient, sufficient for His own blessedness, and all-blessed, and ever-blessed. Further, I mean a Being, who, having these prerogatives, has the Supreme Good, or rather is the Supreme Good, or has all the attributes of Good in infinite intenseness; all wisdom, all truth, all justice, all love, all holiness, all beautifulness; who is omnipotent, omniscient, omnipresent; ineffably one, absolutely perfect; and such, that what we do not know and cannot even imagine of Him, is far more wonderful than what we do and can. I mean One who is sovereign over His own will and actions, though always according to the eternal Rule of right and wrong, which is Himself. I mean, moreover, that He created all things out of nothing, and preserves them every moment, and could destroy them as easily as He made them; and that, in consequence, He is separated from them by an abyss, and is incommunicable in all His attributes. And further, He has stamped upon all things, in the hour of their creation, their respective natures, and has given them their work and mission and their length of days, greater or less, in their appointed place. I mean, too, that He is ever present with His works, one by one, and confronts every thing He has made by His particular and most loving Providence, and manifests Himself to each according to its needs: and has on rational beings imprinted the moral law, and

given them power to obey it, imposing on them the duty of worship and service, searching and scanning them through and through with His omniscient eye, and putting before them a present trial and a judgment to come.

Such is what Theology teaches about God, a doctrine, as the very idea of its subject-matter presupposes, so mysterious as in its fulness to lie beyond any system, and in particular aspects to be simply external to nature, and to seem in parts even to be irreconcilable with itself, the imagination being unable to embrace what the reason determines. It teaches of a Being infinite, yet personal; all-blessed, yet ever operative; absolutely separate from the creature, yet in every part of the creation at every moment; above all things, yet under every thing. It teaches of a Being who, though the highest, yet in the work of creation, conservation, government, retribution, makes Himself, as it were, the minister and servant of all; who, though inhabiting eternity, allows Himself to take an interest, and to have a sympathy, in the matters of space and time. His are all beings, visible and invisible, the noblest and the vilest of them. His are the substance, and the operation, and the results of that system of physical nature into which we are born. His too are the powers and achievements of the intellectual essences, on which He has bestowed an independent action and the gift of origination. The laws of the universe, the principles of truth, the relation of one thing to another, their qualities and virtues, the order and harmony of the whole, all that exists, is from Him; and, if evil is not from Him, as assuredly it is not, this is because evil has no substance of its own, but is only the defect, excess, perversion, or corruption of that which has substance. All we see, hear, and touch, the remote sidereal firmament, as well as our own sea and land, and the elements which compose them, and the ordinances they obey, are His. The primary atoms of matter, their properties, their mutual action, their disposition and collocation,

electricity, magnetism, gravitation, light, and whatever other subtle principles or operations the wit of man is detecting or shall detect, are the work of His hands. From Him has been every movement which has convulsed and re-fashioned the surface of the earth. The most insignificant or unsightly insect is from Him, and good in its kind; the ever-teeming, inexhaustible swarms of animalculæ, the myriads of living motes invisible to the naked eye, the restless ever-spreading vegetation which creeps like a garment over the whole earth, the lofty cedar, the umbrageous banana, are His. His are the tribes and families of birds and beasts, their graceful forms, their wild gestures, and their passionate cries.

And so in the intellectual, moral, social, and political world. Man, with his motives and works, his languages, his propagation, his diffusion, is from Him. Agriculture, medicine, and the arts of life, are His gifts. Society, laws, government, He is their sanction. The pageant of earthly royalty has the semblance and the benediction of the Eternal King. Peace and civilization, commerce and adventure, wars when just, conquest when humane and necessary, have His co-operation, and His blessing upon them. The course of events, the revolution of empires, the rise and fall of states, the periods and eras, the progresses and the retrogressions of the world's history, not indeed the incidental sin, over-abundant as it is, but the great outlines and the results of human affairs, are from His disposition. The elements and types and seminal principles and constructive powers of the moral world, in ruins though it be, are to be referred to Him. He "enlighteneth every man that cometh into this world." His are the dictates of the moral sense, and the retributive reproaches of conscience. To Him must be ascribed the rich endowments of the intellect, the irradiation of genius, the imagination of the poet, the sagacity of the politician, the wisdom (as Scripture calls it), which now rears and decorates the Temple, now manifests itself in proverb

or in parable. The old saws of nations, the majestic precepts of philosophy, the luminous maxims of law, the oracles of individual wisdom, the traditionary rules of truth, justice, and religion, even though imbedded in the corruption, or alloyed with the pride, of the world, betoken His original agency, and His long-suffering presence. Even where there is habitual rebellion against Him, or profound far-spreading social depravity, still the undercurrent, or the heroic outburst, of natural virtue, as well as the yearnings of the heart after what it has not, and its presentiment of its true remedies, are to be ascribed to the Author of all good. Anticipations or reminiscences of His glory haunt the mind of the self-sufficient sage, and of the pagan devotee; His writing is upon the wall, whether of the Indian fane, or of the porticoes of Greece. He introduces Himself, He all but concurs, according to His good pleasure, and in His selected season, in the issues of unbelief, superstition, and false worship, and He changes the character of acts by His overruling operation. He condescends, though He gives no sanction, to the altars and shrines of imposture, and He makes His own fiat the substitute for its sorceries. He speaks amid the incantations of Balaam, raises Samuel's spirit in the witch's cavern, prophesies of the Messiah by the tongue of the Sibyl, forces Python to recognize His ministers, and baptizes by the hand of the misbeliever. He is with the heathen dramatist in his denunciations of injustice and tyranny, and his auguries of divine vengeance upon crime. Even on the unseemly legends of a popular mythology He casts His shadow, and is dimly discerned in the ode or the epic, as in troubled water or in fantastic dreams. All that is good, all that is true, all that is beautiful, all that is beneficent, be it great or small, be it perfect or fragmentary, natural as well as supernatural, moral as well as material, comes from Him.

If this be a sketch, accurate in substance and as far as it goes, of the doctrines proper to Theology, and especially of the doctrine of a particular Providence, which is the portion of it most on a level with human sciences, I cannot understand at all how, supposing it to be true, it can fail, considered as knowledge, to exert a powerful influence on philosophy, literature, and every intellectual creation or discovery whatever. I cannot understand how it is possible, as the phrase goes, to blink the question of its truth or falsehood. It meets us with a profession and a proffer of the highest truths of which the human mind is capable; it embraces a range of subjects the most diversified and distant from each other. What science will not find one part or other of its province traversed by its path? What results of philosophic speculation are unquestionable, if they have been gained without inquiry as to what Theology had to say to them? Does it cast no light upon history? has it no influence upon the principles of ethics? is it without any sort of bearing on physics, metaphysics, and political science? Can we drop it out of the circle of knowledge, without allowing, either that that circle is thereby mutilated, or on the other hand, that Theology is really no science?

And this dilemma is the more inevitable, because Theology is so precise and consistent in its intellectual structure. When I speak of Theism or Monotheism, I am not throwing together discordant doctrines; I am not merging belief, opinion, persuasion, of whatever kind, into a shapeless aggregate, by the help of ambiguous words, and dignifying this medley by the name of Theology. I speak of one idea unfolded in its just proportions, carried out upon an intelligible method, and issuing in necessary and immutable results; understood indeed at one time and place better than at another, held here and there with more or less of inconsistency, but still, after all, in all times and places, where it is found, the evolution, not of half-a-dozen ideas, but of one.

And here I am led to another and most important point in the argument in its behalf,—I mean its wide reception. Theology, as I have described it, is no accident of particular minds, as are certain systems, for instance, of prophetic interpretation. It is not the sudden birth of a crisis, as the Lutheran or Wesleyan doctrine. It is not the splendid development of some uprising philosophy, as the Cartesian or Platonic. It is not the fashion of a season, as certain medical treatments may be considered. It has had a place, if not possession, in the intellectual world from time immemorial; it has been received by minds the most various, and in systems of religion the most hostile to each other. It has *primâ facie* claims upon us, so imposing, that it can only be rejected on the ground of those claims being nothing more than imposing, that is, being false. As to our own countries, it occupies our language, it meets us at every turn in our literature, it is the secret assumption, too axiomatic to be distinctly professed, of all our writers; nor can we help assuming it ourselves, except by the most unnatural vigilance. Whoever philosophizes, starts with it, and introduces it, when he will, without any apology. Bacon, Hooker, Taylor, Cudworth, Locke, Newton, Clarke, Berkeley, and Butler, and it would be as easy to find more, as difficult to find greater names among English authors, inculcate or comment upon it. Men the most opposed, in creed or cast of mind, Addison and Johnson, Shakespeare and Milton, Lord Herbert and Baxter, herald it forth. Nor is it an English or a Protestant notion only; you track it across the Continent, you pursue it into former ages. When was the world without it? Have the systems of Atheism or Pantheism, as sciences, prevailed in the literature of nations, or received a formation or attained a completeness such as Monotheism? We find it in old Greece, and even in Rome, as well as in Judea and the East. We find it in popular literature, in philosophy, in poetry, as a positive and settled

teaching, differing not at all in the appearance it presents, whether in Protestant England, or in schismatical Russia, or in the Mahometan populations, or in the Catholic Church. If ever there was a subject of thought, which had earned by prescription to be received among the studies of a University, and which could not be rejected except on the score of convicted imposture, as astrology or alchemy; if there be a science anywhere, which at least could claim not to be ignored, but to be entertained, and either distinctly accepted or distinctly reprobated, or rather, which cannot be passed over in a scheme of universal instruction, without involving a positive denial of its truth, it is this ancient, this far-spreading philosophy.

10.

And now, Gentlemen, I may bring a somewhat tedious discussion to a close. It will not take many words to sum up what I have been urging. I say then, if the various branches of knowledge, which are the matter of teaching in a University, so hang together, that none can be neglected without prejudice to the perfection of the rest, and if Theology be a branch of knowledge, of wide reception, of philosophical structure, of unutterable importance, and of supreme influence, to what conclusion are we brought from these two premisses but this? that to withdraw Theology from the public schools is to impair the completeness and to invalidate the trustworthiness of all that is actually taught in them.

But I have been insisting simply on Natural Theology, and that, because I wished to carry along with me those who were not Catholics, and, again, as being confident, that no one can really set himself to master and to teach the doctrine of an intelligent Creator in its fulness, without going on a great deal farther than he at present dreams. I say, then, secondly:—if this Science, even as human reason may attain to it, has such claims on the regard, and enters so variously

into the objects, of the Professor of Universal Knowledge, how can any Catholic imagine that it is possible for him to cultivate Philosophy and Science with due attention to their ultimate end, which is Truth, supposing that system of revealed facts and principles, which constitutes the Catholic Faith, which goes so far beyond nature, and which he knows to be most true, be omitted from among the subjects of his teaching?

In a word, Religious Truth is not only a portion, but a condition of general knowledge. To blot it out is nothing short, if I may so speak, of unravelling the web of University Teaching. It is, according to the Greek proverb, to take the Spring from out of the year; it is to imitate the preposterous proceeding of those tragedians who represented a drama with the omission of its principal part.

[1] Arist. Ethic. Nicom., iii. 3.

Discourse IV

Bearing of Other Branches of Knowledge on Theology

1.

Nothing is more common in the world at large than to consider the resistance, made on the part of religious men, especially Catholics, to the separation of Secular Education from Religion, as a plain token that there is some real contrariety between human science and Revelation. To the multitude who draw this inference, it matters not whether the protesting parties avow their belief in this contrariety or not; it is borne in upon the many, as if it were self-evident, that religious men would not thus be jealous and alarmed about Science, did they not feel instinctively, though they may not recognize it, that knowledge is their born enemy, and that its progress, if it is not arrested, will be certain to destroy all that they hold venerable and dear. It looks to the world like a misgiving on our part similar to that which is imputed to our refusal to educate by means of the Bible only; why should you dread the sacred text, men say, if it be not against you? And in like manner, why should you dread secular education, except that it is against you? Why impede the circulation of books which take religious views opposite to your own? Why forbid your children and scholars the free perusal of poems or tales or essays or other light literature which you fear would unsettle their minds? Why oblige them to know these persons and to shun those, if you think that

your friends have reason on their side as fully as your opponents? Truth is bold and unsuspicious; want of self-reliance is the mark of falsehood.

Now, as far as this objection relates to any supposed opposition between secular science and divine, which is the subject on which I am at present engaged, I made a sufficient answer to it in my foregoing Discourse. In it I said, that, in order to have possession of truth at all, we must have the whole truth; and no one science, no two sciences, no one family of sciences, nay, not even all secular science, is the whole truth; that revealed truth enters to a very great extent into the province of science, philosophy, and literature, and that to put it on one side, in compliment to secular science, is simply, under colour of a compliment, to do science a great damage. I do not say that every science will be equally affected by the omission; pure mathematics will not suffer at all; chemistry will suffer less than politics, politics than history, ethics, or metaphysics; still, that the various branches of science are intimately connected with each other, and form one whole, which whole is impaired, and to an extent which it is difficult to limit, by any considerable omission of knowledge, of whatever kind, and that revealed knowledge is very far indeed from an inconsiderable department of knowledge, this I consider undeniable. As the written and unwritten word of God make up Revelation as a whole, and the written, taken by itself, is but a part of that whole, so in turn Revelation itself may be viewed as one of the constituent parts of human knowledge, considered as a whole, and its omission is the omission of one of those constituent parts. Revealed Religion furnishes facts to the other sciences, which those sciences, left to themselves, would never reach; and it invalidates apparent facts, which, left to themselves, they would imagine. Thus, in the science of history, the preservation of our race in Noah's ark is an historical fact, which history never would arrive at without Revelation; and, in the province

of physiology and moral philosophy, our race's progress and perfectibility is a dream, because Revelation contradicts it, whatever may be plausibly argued in its behalf by scientific inquirers. It is not then that Catholics are afraid of human knowledge, but that they are proud of divine knowledge, and that they think the omission of any kind of knowledge whatever, human or divine, to be, as far as it goes, not knowledge, but ignorance.

2.

Thus I anticipated the objection in question last week: now I am going to make it the introduction to a further view of the relation of secular knowledge to divine. I observe, then, that, if you drop any science out of the circle of knowledge, you cannot keep its place vacant for it; that science is forgotten; the other sciences close up, or, in other words, they exceed their proper bounds, and intrude where they have no right. For instance, I suppose, if ethics were sent into banishment, its territory would soon disappear, under a treaty of partition, as it may be called, between law, political economy, and physiology; what, again, would become of the province of experimental science, if made over to the Antiquarian Society; or of history, if surrendered out and out to Metaphysicians? The case is the same with the subject-matter of Theology; it would be the prey of a dozen various sciences, if Theology were put out of possession; and not only so, but those sciences would be plainly exceeding their rights and their capacities in seizing upon it. They would be sure to teach wrongly, where they had no mission to teach at all. The enemies of Catholicism ought to be the last to deny this:—for they have never been blind to a like usurpation, as they have called it, on the part of theologians; those who accuse us of wishing, in accordance with Scripture language, to make the sun go round the earth, are not the men to deny that a science which exceeds its limits falls into error.

I neither then am able nor care to deny, rather I assert the fact, and to-day I am going on to account for it, that any secular science, cultivated exclusively, may become dangerous to Religion; and I account for it on this broad principle, that no science whatever, however comprehensive it may be, but will fall largely into error, if it be constituted the sole exponent of all things in heaven and earth, and that, for the simple reason that it is encroaching on territory not its own, and undertaking problems which it has no instruments to solve. And I set off thus:

3.

One of the first acts of the human mind is to take hold of and appropriate what meets the senses, and herein lies a chief distinction between man's and a brute's use of them. Brutes gaze on sights, they are arrested by sounds; and what they see and what they hear are mainly sights and sounds only. The intellect of man, on the contrary, energizes as well as his eye or ear, and perceives in sights and sounds something beyond them. It seizes and unites what the senses present to it; it grasps and forms what need not have been seen or heard except in its constituent parts. It discerns in lines and colours, or in tones, what is beautiful and what is not. It gives them a meaning, and invests them with an idea. It gathers up a succession of notes into the expression of a whole, and calls it a melody; it has a keen sensibility towards angles and curves, lights and shadows, tints and contours. It distinguishes between rule and exception, between accident and design. It assigns phenomena to a general law, qualities to a subject, acts to a principle, and effects to a cause. In a word, it philosophizes; for I suppose Science and Philosophy, in their elementary idea, are nothing else but this habit of *viewing*, as it may be called, the objects which sense conveys to the mind, of throwing them into system, and uniting and stamping them with one form.

This method is so natural to us, as I have said, as to be almost spontaneous; and we are impatient when we cannot exercise it, and in consequence we do not always wait to have the means of exercising it aright, but we often put up with insufficient or absurd views or interpretations of what we meet with, rather than have none at all. We refer the various matters which are brought home to us, material or moral, to causes which we happen to know of, or to such as are simply imaginary, sooner than refer them to nothing; and according to the activity of our intellect do we feel a pain and begin to fret, if we are not able to do so. Here we have an explanation of the multitude of off-hand sayings, flippant judgments, and shallow generalizations, with which the world abounds. Not from self-will only, nor from malevolence, but from the irritation which suspense occasions, is the mind forced on to pronounce, without sufficient data for pronouncing. Who does not form some view or other, for instance, of any public man, or any public event, nay, even so far in some cases as to reach the mental delineation of his appearance or of its scene? yet how few have a right to form any view. Hence the misconceptions of character, hence the false impressions and reports of words or deeds, which are the rule, rather than the exception, in the world at large; hence the extravagances of undisciplined talent, and the narrowness of conceited ignorance; because, though it is no easy matter to view things correctly, nevertheless the busy mind will ever be viewing. We cannot do without a view, and we put up with an illusion, when we cannot get a truth.

弗朗西斯·培根（1561—1626），英国散文家，哲学家。

4.

Now, observe how this impatience acts in matters of research and speculation. What happens to the ignorant and hotheaded, will take place in the case of every person whose education or pursuits are contracted, whether they be merely professional, merely scientific, or of whatever other peculiar complexion. Men, whose life lies in the cultivation of one science, or the exercise of one method of thought, have no more right, though they have often more ambition, to generalize upon the basis of their own pursuit but beyond its range, than the schoolboy or the ploughman to judge of a Prime Minister. But they must have something to say on every subject; habit, fashion, the public require it of them: and, if so, they can only give sentence according to their knowledge. You might think this ought to make such a person modest in his enunciations; not so: too often it happens that, in proportion to the narrowness of his knowledge, is, not his distrust of it, but the deep hold it has upon him, his absolute conviction of his own conclusions, and his positiveness in maintaining them. He has the obstinacy of the bigot, whom he scorns, without the bigot's apology, that he has been taught, as he thinks, his doctrine from heaven. Thus he becomes, what is commonly called, a man of one idea; which properly means a man of one science, and of the view, partly true, but subordinate, partly false, which is all that can proceed out of any thing so partial. Hence it is that we have the principles of utility, of combination, of progress, of philanthropy, or, in material sciences, comparative anatomy, phrenology, electricity, exalted into leading ideas, and keys, if not of all knowledge, at least of many things more than belong to them,—principles, all of them true to a certain point, yet all degenerating into error and quackery, because they are carried to excess, viz. at the point where they require interpretation and restraint from other quarters, and because they are

employed to do what is simply too much for them, inasmuch as a little science is not deep philosophy.

Lord Bacon has set down the abuse, of which I am speaking, among the impediments to the Advancement of the Sciences, when he observes that “men have used to infect their meditations, opinions, and doctrines, with some conceits which they have most admired, or *some Sciences which they have most applied*; and give all things else a *tincture* according to them *utterly untrue and improper*.... So have the alchemists made a philosophy out of a few experiments of the furnace; and Gilbertus, our countryman, hath made a philosophy out of the observations of a lodestone. So Cicero, when, reciting the several opinions of the nature of the soul, he found a musician that held the soul was but a harmony, saith pleasantly, ‘hic ab arte suâ non recessit,’ ‘he was true to his art.’ But of these conceits Aristotle speaketh seriously and wisely when he saith, ‘Qui respiciunt ad pauca, de facili pronunciant,’ ‘they who contemplate a few things have no difficulty in deciding.’”

5.

And now I have said enough to explain the inconvenience which I conceive necessarily to result from a refusal to recognize theological truth in a course of Universal Knowledge;—it is not only the loss of Theology, it is the perversion of other sciences. What it unjustly forfeits, others unjustly seize. They have their own department, and, in going out of it, attempt to do what they really cannot do; and that the more mischievously, because they do teach what in its place is true, though when out of its place, perverted or carried to excess, it is not true. And, as every man has not the capacity of separating truth from falsehood, they persuade the world of what is false by urging upon it what is true. Nor is it open enemies alone who encounter us here, sometimes it is friends, sometimes persons who, if not friends, at

least have no wish to oppose Religion, and are not conscious they are doing so; and it will carry out my meaning more fully if I give some illustrations of it.

As to friends, I may take as an instance the cultivation of the Fine Arts, Painting, Sculpture, Architecture, to which I may add Music. These high ministers of the Beautiful and the Noble are, it is plain, special attendants and handmaids of Religion; but it is equally plain that they are apt to forget their place, and, unless restrained with a firm hand, instead of being servants, will aim at becoming principals. Here lies the advantage, in an ecclesiastical point of view, of their more rudimental state, I mean of the ancient style of architecture, of Gothic sculpture and painting, and of what is called Gregorian music, that these inchoate sciences have so little innate vigour and life in them, that they are in no danger of going out of their place, and giving the law to Religion. But the case is very different when genius has breathed upon their natural elements, and has developed them into what I may call intellectual powers. When Painting, for example, grows into the fulness of its function as a simply imitative art, it at once ceases to be a dependant on the Church. It has an end of its own, and that of earth: Nature is its pattern, and the object it pursues is the beauty of Nature, even till it becomes an ideal beauty, but a natural beauty still. It cannot imitate that beauty of Angels and Saints which it has never seen. At first, indeed, by outlines and emblems it shadowed out the Invisible, and its want of skill became the instrument of reverence and modesty; but as time went on and it attained its full dimensions as an art, it rather subjected Religion to its own ends than ministered to the ends of Religion, and in its long galleries and stately chambers, did but mingle adorable figures and sacred histories with a multitude of earthly, not to say unseemly forms, which the Art had created, borrowing withal a colouring and a character from that bad company. Not content with neutral ground for its development, it was

attracted by the sublimity of divine subjects to ambitious and hazardous essays. Without my saying a word more, you will clearly understand, Gentlemen, that under these circumstances Religion was bound to exert itself, that the world might not gain an advantage over it. Put out of sight the severe teaching of Catholicism in the schools of Painting, as men now would put it aside in their philosophical studies, and in no long time you would have the hierarchy of the Church, the Anchorite and Virgin-martyr, the Confessor and the Doctor, the Angelic Hosts, the Mother of God, the Crucifix, the Eternal Trinity, supplanted by a sort of pagan mythology in the guise of sacred names, by a creation indeed of high genius, of intense, and dazzling, and soul-absorbing beauty, in which, however, there was nothing which subserved the cause of Religion, nothing on the other hand which did not directly or indirectly minister to corrupt nature and the powers of darkness.

6.

The art of Painting, however, is peculiar: Music and Architecture are more ideal, and their respective archetypes, even if not supernatural, at least are abstract and unearthly; and yet what I have been observing about Painting, holds, I think, analogously, in the marvellous development which Musical Science has undergone in the last century. Doubtless here too the highest genius may be made subservient to Religion; here too, still more simply than in the case of Painting, the Science has a field of its own, perfectly innocent, into which Religion does not and need not enter; on the other hand here also, in the case of Music as of Painting, it is certain that Religion must be alive and on the defensive, for, if its servants sleep, a potent enchantment will steal over it. Music, I suppose, though this is not the place to enlarge upon it, has an object of its own; as mathematical science also, it is the expression of ideas greater and more profound

than any in the visible world, ideas, which centre indeed in Him whom Catholicism manifests, who is the seat of all beauty, order, and perfection whatever, still ideas after all which are not those on which Revelation directly and principally fixes our gaze. If then a great master in this mysterious science (if I may speak of matters which seem to lie out of my own province) throws himself on his own gift, trusts its inspirations, and absorbs himself in those thoughts which, though they come to him in the way of nature, belong to things above nature, it is obvious he will neglect everything else. Rising in his strength, he will break through the trammels of words, he will scatter human voices, even the sweetest, to the winds; he will be borne upon nothing less than the fullest flood of sounds which art has enabled him to draw from mechanical contrivances; he will go forth as a giant, as far as ever his instruments can reach, starting from their secret depths fresh and fresh elements of beauty and grandeur as he goes, and pouring them together into still more marvellous and rapturous combinations;—and well indeed and lawfully, while he keeps to that line which is his own; but, should he happen to be attracted, as he well may, by the sublimity, so congenial to him, of the Catholic doctrine and ritual, should he engage in sacred themes, should he resolve by means of his art to do honour to the Mass, or the Divine Office,—(he cannot have a more pious, a better purpose, and Religion will gracefully accept what he gracefully offers; but)—is it not certain, from the circumstances of the case, that he will be carried on rather to use Religion than to minister to it, unless Religion is strong on its own ground, and reminds him that, if he would do honour to the highest of subjects, he must make himself its scholar, must humbly follow the thoughts given him, and must aim at the glory, not of his own gift, but of the Great Giver?

As to Architecture, it is a remark, if I recollect aright both of Fénelon and Berkeley, men so different, that it carries more with it even than the names of those celebrated men, that the Gothic style is not as *simple* as befits ecclesiastical structures. I understand this to be a similar judgment to that which I have been passing on the cultivation of Painting and Music. For myself, certainly I think that that style which, whatever be its origin, is called Gothic, is endowed with a profound and a commanding beauty, such as no other style possesses with which we are acquainted, and which probably the Church will not see surpassed till it attain to the Celestial City. No other architecture, now used for sacred purposes, seems to be the growth of an idea, whereas the Gothic style is as harmonious and as intellectual as it is graceful. But this feeling should not blind us, rather it should awaken us, to the danger lest what is really a divine gift be incautiously used as an end rather than as a means. It is surely quite within the bounds of possibility, that, as the *renaissance* three centuries ago carried away its own day, in spite of the Church, into excesses in literature and art, so that revival of an almost forgotten architecture, which is at present taking place in our own countries, in France, and in Germany, may in some way or other run away with us into this or that error, unless we keep a watch over its course. I am not speaking of Ireland; but to English Catholics at least it would be a serious evil, if it came as the emblem and advocate of a past ceremonial or an extinct nationalism. We are not living in an age of wealth and loyalty, of pomp and stateliness, of time-honoured establishments, of pilgrimage and penance, of hermitages and convents in the wild, and of fervent populations supplying the want of education by love, and apprehending in form and symbol what they cannot read in books. Our rules and our rubrics have been altered now to meet the times, and hence an obsolete discipline may be a present heresy.

I have been pointing out how the Fine Arts may prejudice Religion, by laying down the law in cases where they should be subservient. The illustration is analogous rather than strictly proper to my subject, yet I think it is to the point. If then the most loyal and dutiful children of the Church must deny themselves, and do deny themselves, when they would sanctify to a heavenly purpose sciences as sublime and as divine as any which are cultivated by fallen man, it is not wonderful, when we turn to sciences of a different character, of which the object is tangible and material, and the principles belong to the Reason, not to the Imagination, that we should find their disciples, if disinclined to the Catholic Faith, acting the part of opponents to it, and that, as may often happen, even against their will and intention. Many men there are, who, devoted to one particular subject of thought, and making its principles the measure of all things, become enemies to Revealed Religion before they know it, and, only as time proceeds, are aware of their own state of mind. These, if they are writers or lecturers, while in this state of unconscious or semi-conscious unbelief, scatter infidel principles under the garb and colour of Christianity; and this, simply because they have made their own science, whatever it is, Political Economy, or Geology, or Astronomy, to the neglect of Theology, the centre of all truth, and view every part or the chief parts of knowledge as if developed from it, and to be tested and determined by its principles. Others, though conscious to themselves of their anti-christian opinions, have too much good feeling and good taste to obtrude them upon the world. They neither wish to shock people, nor to earn for themselves a confessorship which brings with it no gain. They know the strength of prejudice, and the penalty of innovation; they wish to go through life quietly; they scorn polemics; they shrink, as from a real humiliation, from being mixed up in religious controversy; they are ashamed of the very

name. However, they have had occasion at some time to publish on some literary or scientific subject; they have wished to give no offence; but after all, to their great annoyance, they find when they least expect it, or when they have taken considerable pains to avoid it, that they have roused by their publication what they would style the bigoted and bitter hostility of a party. This misfortune is easily conceivable, and has befallen many a man. Before he knows where he is, a cry is raised on all sides of him; and so little does he know what we may call the *lie* of the land, that his attempts at apology perhaps only make matters worse. In other words, an exclusive line of study has led him, whether he will or no, to run counter to the principles of Religion; which principles he has never made his landmarks, and which, whatever might be their effect upon himself, at least would have warned him against practising upon the faith of others, had they been authoritatively held up before him.

9.

Instances of this kind are far from uncommon. Men who are old enough, will remember the trouble which came upon a person, eminent as a professional man in London even at that distant day, and still more eminent since, in consequence of his publishing a book in which he so treated the subject of Comparative Anatomy as to seem to deny the immateriality of the soul. I speak here neither as excusing nor reprobating sentiments about which I have not the means of forming a judgment; all indeed I have heard of him makes me mention him with interest and respect; anyhow of this I am sure, that if there be a calling which feels its position and its dignity to lie in abstaining from controversy and in cultivating kindly feelings with men of all opinions, it is the medical profession, and I cannot believe that the person in question would purposely have raised the indignation and incurred the censure of the religious public. What then must have

been his fault or mistake, but that he unsuspectingly threw himself upon his own particular science, which is of a material character, and allowed it to carry him forward into a subject-matter, where it had no right to give the law, viz., that of spiritual beings, which directly belongs to the science of Theology?

Another instance occurred at a later date. A living dignitary of the Established Church wrote a History of the Jews; in which, with what I consider at least bad judgment, he took an external view of it, and hence was led to assimilate it as nearly as possible to secular history. A great sensation was the consequence among the members of his own communion, from which he still suffers. Arguing from the dislike and contempt of polemical demonstrations which that accomplished writer has ever shown, I must conclude that he was simply betrayed into a false step by the treacherous fascination of what is called the Philosophy of History, which is good in its place, but can scarcely be applied in cases where the Almighty has superseded the natural laws of society and history. From this he would have been saved, had he been a Catholic; but in the Establishment he knew of no teaching, to which he was bound to defer, which might rule that to be false which attracted him by its speciousness.

10.

I will now take an instance from another science, and will use more words about it. Political Economy is the science, I suppose, of wealth,—a science simply lawful and useful, for it is no sin to make money, any more than it is a sin to seek honour; a science at the same time dangerous and leading to occasions of sin, as is the pursuit of honour too; and in consequence, if studied by itself, and apart from the control of Revealed Truth, sure to conduct a speculator to unchristian conclusions. Holy Scripture tells us distinctly, that “covetousness,” or more literally the love of money, “is the root of all

evils;" and that "they that would become rich fall into temptation;" and that "hardly shall they that have riches enter into the kingdom of God;" and after drawing the picture of a wealthy and flourishing people, it adds, "They have called the people happy that hath these things; but happy is that people whose God is the Lord:"—while on the other hand it says with equal distinctness, "If any will not work, neither let him eat;" and, "If any man have not care of his own, and especially of those of his house, he hath denied the faith, and is worse than an infidel." These opposite injunctions are summed up in the wise man's prayer, who says, "Give me neither beggary nor riches, give me only the necessities of life." With this most precise view of a Christian's duty, viz., to labour indeed, but to labour for a competency for himself and his, and to be jealous of wealth, whether personal or national, the holy Fathers are, as might be expected, in simple accordance. "Judas," says St. Chrysostom, "was with Him who knew not where to lay His head, yet could not restrain himself; and how canst thou hope to escape the contagion without anxious effort?" "It is ridiculous," says St. Jerome, "to call it idolatry to offer to the creature the grains of incense that are due to God, and not to call it so, to offer the whole service of one's life to the creature." "There is not a trace of justice in that heart," says St. Leo, "in which the love of gain has made itself a dwelling." The same thing is emphatically taught us by the counsels of perfection, and by every holy monk and nun anywhere, who has ever embraced them; but it is needless to collect testimonies, when Scripture is so clear.

Now, observe, Gentlemen, my drift in setting Scripture and the Fathers over against Political Economy. Of course if there is a science of wealth, it must give rules for gaining wealth and disposing of wealth, and can do nothing more; it cannot itself declare that it is a subordinate science, that its end is not the ultimate end of all things, and that its conclusions are only hypothetical, depending on its

premisses, and liable to be overruled by a higher teaching. I do not then blame the Political Economist for anything which follows from the very idea of his science, from the very moment that it is recognized as a science. He must of course direct his inquiries towards his end; but then at the same time it must be recollected, that so far he is not practical, but only pursues an abstract study, and is busy himself in establishing logical conclusions from indisputable premisses. Given that wealth is to be sought, this and that is the method of gaining it. This is the extent to which a Political Economist has a right to go; he has no right to determine that wealth is at any rate to be sought, or that it is the way to be virtuous and the price of happiness; I say, this is to pass the bounds of his science, independent of the question whether he be right or wrong in so determining, for he is only concerned with an hypothesis.

To take a parallel case:—a physician may tell you, that if you are to preserve your health, you must give up your employment and retire to the country. He distinctly says “if;” that is all in which he is concerned, he is no judge whether there are objects dearer to you, more urgent upon you, than the preservation of your health; he does not enter into your circumstances, your duties, your liabilities, the persons dependent on you; he knows nothing about what is advisable or what is not; he only says, “I speak as a physician; if you would be well, give up your profession, your trade, your office, whatever it is.” However he may wish it, it would be impertinent in him to say more, unless indeed he spoke, not as a physician but as a friend; and it would be extravagant, if he asserted that bodily health was the *summum bonum*, and that no one could be virtuous whose animal system was not in good order.

11.

But now let us turn to the teaching of the actual Political

Economist, in his present fashionable shape. I will take a very favourable instance of him: he shall be represented by a gentleman of high character, whose religious views are sufficiently guaranteed to us by his being the special choice, in this department of science, of a University removed more than any other Protestant body of the day from sordid or unchristian principles on the subject of money-making. I say, if there be a place where Political Economy would be kept in order, and would not be suffered to leave the high road and ride across the pastures and the gardens dedicated to other studies, it is the University of Oxford. And if a man could anywhere be found who would have too much good taste to offend the religious feeling of the place, or to say any thing which he would himself allow to be inconsistent with Revelation, I conceive it is the person whose temperate and well-considered composition, as it would be generally accounted, I am going to offer to your notice. Nor did it occasion any excitement whatever on the part of the academical or the religious public, as did the instances which I have hitherto been adducing. I am representing then the science of Political Economy, in its independent or unbridled action, to great advantage, when I select, as its specimen, the Inaugural Lecture upon it, delivered in the University in question, by its first Professor. Yet with all these circumstances in its favour, you will soon see, Gentlemen, into what extravagance, for so I must call it, a grave lawyer is led in praise of his chosen science, merely from the circumstance that he has fixed his mind upon it, till he has forgotten there are subjects of thought higher and more heavenly than it. You will find beyond mistake, that it is his object to recommend the science of wealth, by claiming for it an *ethical* quality, viz., by extolling it as the road to virtue and happiness, whatever Scripture and holy men may say to the contrary.

He begins by predicting of Political Economy, that in the course of a very few years, "it will rank in public estimation among the first

of *moral* sciences in interest and in utility.” Then he explains most lucidly its objects and duties, considered as “the science which teaches in what wealth consists, by what agents it is produced, and according to what laws it is distributed, and what are the institutions and customs by which production may be facilitated and distribution regulated, so as to give the largest possible amount of wealth to each individual.” And he dwells upon the interest which attaches to the inquiry, “whether England has run her full career of wealth and improvement, but stands safe where she is, or whether to remain stationary is impossible.” After this he notices a certain objection, which I shall set before you in his own words, as they will furnish me with the illustration I propose.

This objection, he says, is, that, “as the pursuit of wealth is one of the humblest of human occupations, far inferior to the pursuit of virtue, or of knowledge, or even of reputation, and as the possession of wealth is not necessarily joined,—perhaps it will be said, is not conducive,—to happiness, a science, of which the only subject is wealth, cannot claim to rank as the first, or nearly the first, of moral sciences.”^[1] Certainly, to an enthusiast in behalf of any science whatever, the temptation is great to meet an objection urged against its dignity and worth; however, from the very form of it, such an objection cannot receive a satisfactory answer by means of the science itself. It is an objection external to the science, and reminds us of the truth of Lord Bacon’s remark, “No perfect discovery can be made upon a flat or a level; neither is it possible to discover the more remote and deeper parts of any science, if you stand upon the level of the science, and ascend not to a higher science.”^[2] The objection that Political Economy is inferior to the science of virtue, or does not conduce to happiness, is an ethical or theological objection; the question of its “rank” belongs to that Architectonic Science or Philosophy, whatever it be, which is itself the arbiter of all truth, and which disposes of the

claims and arranges the places of all the departments of knowledge which man is able to master. I say, when an opponent of a particular science asserts that it does not conduce to happiness, and much more when its champion contends in reply that it certainly does conduce to virtue, as this author proceeds to contend, the obvious question which occurs to one to ask is, what does Religion, what does Revelation, say on the point? Political Economy must not be allowed to give judgment in its own favour, but must come before a higher tribunal. The objection is an appeal to the Theologian; however, the Professor does not so view the matter; he does not consider it a question for Philosophy; nor indeed on the other hand a question for Political Economy; not a question for Science at all; but for Private Judgment,—so he answers it himself, and as follows:

12.

“My answer,” he says, “is, first, that the pursuit of wealth, that is, the endeavour to accumulate the means of future subsistence and enjoyment, is, to the mass of mankind, the great source of *moral* improvement.” Now observe, Gentlemen, how exactly this bears out what I have been saying. It is just so far true, as to be able to instil what is false, far as the author was from any such design. I grant, then, that, ordinarily, beggary is not the means of moral improvement; and that the orderly habits which attend upon the hot pursuit of gain, not only may effect an external decency, but may at least shelter the soul from the temptations of vice. Moreover, these habits of good order guarantee regularity in a family or household, and thus are accidentally the means of good; moreover, they lead to the education of its younger branches, and they thus accidentally provide the rising generation with a virtue or a truth which the present has not: but without going into these considerations, further than to allow them generally, and under circumstances, let us rather contemplate what

the author's direct assertion is. He says, "the endeavour to *accumulate*," the words should be weighed, and for what? "for *enjoyment*;"—"to accumulate the means of future subsistence and enjoyment, is, to the mass of mankind, *the great* source," not merely a source, but *the great* source, and of what? of social and political progress?—such an answer would have been more within the limits of his art,—no, but of something individual and personal, "of *moral improvement*." The soul, in the case of "the mass of mankind," improves in moral excellence from this more than any thing else, viz., from heaping up the means of enjoying this world in time to come! I really should on every account be sorry, Gentlemen, to exaggerate, but indeed one is taken by surprise, one is startled, on meeting with so very categorical a contradiction of our Lord, St. Paul, St. Chrysostom, St. Leo, and all Saints.

"No institution," he continues, "could be more beneficial to the morals of the lower orders, that is, to at least nine-tenths of the whole body of any people, than one which should increase their power and their wish to accumulate; none more mischievous than one which should diminish their motives and means to save." No institution more beneficial than one which should increase the *wish to accumulate*! then Christianity is not one of such beneficial institutions, for it expressly says, "*Lay not up to yourselves treasures on earth ... for where thy treasure is, there is thy heart also*;"—no institution more mischievous than one which should diminish the *motives to save*! then Christianity is one of such mischiefs, for the inspired text proceeds, "*Lay up to yourselves treasures in heaven, where neither the rust nor the moth doth consume, and where thieves do not dig through, nor steal*."

But it is not enough that morals and happiness are made to depend on gain and accumulation; the practice of Religion is ascribed to these causes also, and in the following way. Wealth depends upon the pursuit of wealth; education depends upon wealth; knowledge

depends on education; and Religion depends on knowledge; therefore Religion depends on the pursuit of wealth. He says, after speaking of a poor and savage people, "Such a population must be grossly ignorant. The desire of knowledge is one of the last results of refinement; it requires in general to have been implanted in the mind during childhood; and it is absurd to suppose that persons thus situated would have the power or the will to devote much to the education of their children. A further consequence is the *absence of all real religion*; for the religion of the grossly ignorant, if they have any, scarcely ever amounts to more than a debasing superstition."^[3] The pursuit of gain then is the basis of virtue, religion, happiness; though it is all the while, as a Christian knows, the "root of all evils," and the "poor on the contrary are blessed, for theirs is the kingdom of God."

As to the argument contained in the logical *Sorites* which I have been drawing out, I anticipated just now what I should say to it in reply. I repeat, doubtless "beggary," as the wise man says, is not desirable; doubtless, if men will not work, they should not eat; there is doubtless a sense in which it may be said that mere social or political virtue tends to moral and religious excellence; but the sense needs to be defined and the statement to be kept within bounds. This is the very point on which I am all along insisting. I am not denying, I am granting, I am assuming, that there is reason and truth in the "leading ideas," as they are called, and "large views" of scientific men; I only say that, though they speak truth, they do not speak the whole truth; that they speak a narrow truth, and think it a broad truth; that their deductions must be compared with other truths, which are acknowledged to be truths, in order to verify, complete, and correct them. They say what is true, *exceptis excipiendis*; what is true, but requires guarding; true, but must not be ridden too hard, or made what is called a *hobby*; true, but not the measure of all things; true, but if thus inordinately, extravagantly, ruinously carried out, in spite

of other sciences, in spite of Theology, sure to become but a great bubble, and to burst.

13.

I am getting to the end of this Discourse, before I have noticed one tenth part of the instances with which I might illustrate the subject of it. Else I should have wished especially to have dwelt upon the not unfrequent perversion which occurs of antiquarian and historical research, to the prejudice of Theology. It is undeniable that the records of former ages are of primary importance in determining Catholic doctrine; it is undeniable also that there is a silence or a contrariety abstractedly conceivable in those records, as to an alleged portion of that doctrine, which would be sufficient to invalidate its claims on our acceptance; but it is quite as undeniable that the existing documentary testimony to Catholicism and Christianity may be so unduly valued as to be made the absolute measure of Revelation, as if no part of theological teaching were true which cannot bring its express text, as it is called, from Scripture, and authorities from the Fathers or profane writers,—whereas there are numberless facts in past times which we cannot deny, for they are indisputable, though history is silent about them. I suppose, on this score, we ought to deny that the round towers of this country had any origin, because history does not disclose it; or that any individual came from Adam who cannot produce the table of his ancestry. Yet Gibbon argues against the darkness at the Passion, from the accident that it is not mentioned by Pagan historians:—as well might he argue against the existence of Christianity itself in the first century, because Seneca, Pliny, Plutarch, the Jewish Mishna, and other authorities are silent about it. Protestants argue in a parallel way against Transubstantiation, and Arians against our Lord's Divinity, viz., on the ground that extant writings of certain Fathers do not witness those

doctrines to their satisfaction:—as well might they say that Christianity was not spread by the Twelve Apostles, because we know so little of their labours. The evidence of History, I say, is invaluable in its place; but, if it assumes to be the sole means of gaining Religious Truth, it goes beyond its place. We are putting it to a larger office than it can undertake, if we countenance the usurpation; and we are turning a true guide and blessing into a source of inexplicable difficulty and interminable doubt.

And so of other sciences: just as Comparative Anatomy, Political Economy, the Philosophy of History, and the Science of Antiquities may be and are turned against Religion, by being taken by themselves, as I have been showing, so a like mistake may befall any other. Grammar, for instance, at first sight does not appear to admit of a perversion; yet Horne Tooke made it the vehicle of his peculiar scepticism. Law would seem to have enough to do with its own clients, and their affairs; and yet Mr. Bentham made a treatise on Judicial Proofs a covert attack upon the miracles of Revelation. And in like manner Physiology may deny moral evil and human responsibility; Geology may deny Moses; and Logic may deny the Holy Trinity; and other sciences, now rising into notice, are or will be victims of a similar abuse.

14.

And now to sum up what I have been saying in a few words. My object, it is plain, has been—not to show that Secular Science in its various departments may take up a position hostile to Theology;—this is rather the basis of the objection with which I opened this Discourse;—but to point out the cause of an hostility to which all parties will bear witness. I have been insisting then on this, that the hostility in question, when it occurs, is coincident with an evident deflection or exorbitance of Science from its proper course; and that this

exorbitance is sure to take place, almost from the necessity of the case, if Theology be not present to defend its own boundaries and to hinder the encroachment. The human mind cannot keep from speculating and systematizing; and if Theology is not allowed to occupy its own territory, adjacent sciences, nay, sciences which are quite foreign to Theology, will take possession of it. And this occupation is proved to be a usurpation by this circumstance, that these foreign sciences will assume certain principles as true, and act upon them, which they neither have authority to lay down themselves, nor appeal to any other higher science to lay down for them. For example, it is a mere unwarranted assumption if the Antiquarian says, "Nothing has ever taken place but is to be found in historical documents;" or if the Philosophic Historian says, "There is nothing in Judaism different from other political institutions;" or if the Anatomist, "There is no soul beyond the brain;" or if the Political Economist, "Easy circumstances make men virtuous." These are enunciations, not of Science, but of Private Judgment; and it is Private Judgment that infects every science which it touches with a hostility to Theology, a hostility which properly attaches to no science in itself whatever.

If then, Gentlemen, I now resist such a course of acting as unphilosophical, what is this but to do as men of Science do when the interests of their own respective pursuits are at stake? If they certainly would resist the divine who determined the orbit of Jupiter by the Pentateuch, why am I to be accused of cowardice or illiberality, because I will not tolerate their attempt in turn to theologize by means of astronomy? And if experimentalists would be sure to cry out, did I attempt to install the Thomist philosophy in the schools of astronomy and medicine, why may not I, when Divine Science is ostracized, and La Place, or Buffon, or Humboldt, sits down in its chair, why may not I fairly protest against their exclusiveness, and demand the emancipation of Theology?

And now I consider I have said enough in proof of the first point, which I undertook to maintain, viz., the claim of Theology to be represented among the Chairs of a University. I have shown, I think, that exclusiveness really attaches, not to those who support that claim, but to those who dispute it. I have argued in its behalf, first, from the consideration that, whereas it is the very profession of a University to teach all sciences, on this account it cannot exclude Theology without being untrue to its profession. Next, I have said that, all sciences being connected together, and having bearings one on another, it is impossible to teach them all thoroughly, unless they all are taken into account, and Theology among them. Moreover, I have insisted on the important influence, which Theology in matter of fact does and must exercise over a great variety of sciences, completing and correcting them; so that, granting it to be a real science occupied upon truth, it cannot be omitted without great prejudice to the teaching of the rest. And lastly, I have urged that, supposing Theology be not taught, its province will not simply be neglected, but will be actually usurped by other sciences, which will teach, without warrant, conclusions of their own in a subject-matter which needs its own proper principles for its due formation and disposition.

Abstract statements are always unsatisfactory; these, as I have already observed, could be illustrated at far greater length than the time allotted to me for the purpose has allowed. Let me hope that I have said enough upon the subject to suggest thoughts, which those who take an interest in it may pursue for themselves.

亚里士多德（公元前384—公元前322，伟大的哲学家、科学家和教育家）

Discourse V

Knowledge Its Own End

A University may be considered with reference either to its Students or to its Studies; and the principle, that all Knowledge is a whole and the separate Sciences parts of one, which I have hitherto been using in behalf of its studies, is equally important when we direct our attention to its students. Now then I turn to the students, and shall consider the education which, by virtue of this principle, a University will give them; and thus I shall be introduced, Gentlemen, to the second question, which I proposed to discuss, viz, whether and in what sense its teaching, viewed relatively to the taught, carries the attribute of Utility along with it.

1.

I have said that all branches of knowledge are connected together, because the subject-matter of knowledge is intimately united in itself, as being the acts and the work of the Creator. Hence it is that the Sciences, into which our knowledge may be said to be cast, have multiplied bearings one on another, and an internal sympathy, and admit, or rather demand, comparison and adjustment. They complete, correct, balance each other. This consideration, if well-founded, must be taken into account, not only as regards the attainment of truth, which is their common end, but as regards the influence which they exercise upon those whose education consists in the study of them. I have said already, that to give undue prominence to one is to be

unjust to another; to neglect or supersede these is to divert those from their proper object. It is to unsettle the boundary lines between science and science, to disturb their action, to destroy the harmony which binds them together. Such a proceeding will have a corresponding effect when introduced into a place of education. There is no science but tells a different tale, when viewed as a portion of a whole, from what it is likely to suggest when taken by itself, without the safeguard, as I may call it, of others.

Let me make use of an illustration. In the combination of colours, very different effects are produced by a difference in their selection and juxta-position; red, green, and white, change their shades, according to the contrast to which they are submitted. And, in like manner, the drift and meaning of a branch of knowledge varies with the company in which it is introduced to the student. If his reading is confined simply to one subject, however such division of labour may favour the advancement of a particular pursuit, a point into which I do not here enter, certainly it has a tendency to contract his mind. If it is incorporated with others, it depends on those others as to the kind of influence which it exerts upon him. Thus the Classics, which in England are the means of refining the taste, have in France subserved the spread of revolutionary and deistical doctrines. In Metaphysics, again, Butler's Analogy of Religion, which has had so much to do with the conversion to the Catholic faith of members of the University of Oxford, appeared to Pitt and others, who had received a different training, to operate only in the direction of infidelity. And so again, Watson, Bishop of Llandaff, as I think he tells us in the narrative of his life, felt the science of Mathematics to indispose the mind to religious belief, while others see in its investigations the best parallel, and thereby defence, of the Christian Mysteries. In like manner, I suppose, Arcesilas would not have handled logic as Aristotle, nor Aristotle have criticized poets as Plato; yet reasoning and poetry are subject to

scientific rules.

It is a great point then to enlarge the range of studies which a University professes, even for the sake of the students; and, though they cannot pursue every subject which is open to them, they will be the gainers by living among those and under those who represent the whole circle. This I conceive to be the advantage of a seat of universal learning, considered as a place of education. An assemblage of learned men, zealous for their own sciences, and rivals of each other, are brought, by familiar intercourse and for the sake of intellectual peace, to adjust together the claims and relations of their respective subjects of investigation. They learn to respect, to consult, to aid each other. Thus is created a pure and clear atmosphere of thought, which the student also breathes, though in his own case he only pursues a few sciences out of the multitude. He profits by an intellectual tradition, which is independent of particular teachers, which guides him in his choice of subjects, and duly interprets for him those which he chooses. He apprehends the great outlines of knowledge, the principles on which it rests, the scale of its parts, its lights and its shades, its great points and its little, as he otherwise cannot apprehend them. Hence it is that his education is called "Liberal." A habit of mind is formed which lasts through life, of which the attributes are, freedom, equitableness, calmness, moderation, and wisdom; or what in a former Discourse I have ventured to call a philosophical habit. This then I would assign as the special fruit of the education furnished at a University, as contrasted with other places of teaching or modes of teaching. This is the main purpose of a University in its treatment of its students.

And now the question is asked me, What is the *use* of it? and my answer will constitute the main subject of the Discourses which are to follow.

Cautious and practical thinkers, I say, will ask of me, what, after all, is the gain of this Philosophy, of which I make such account, and from which I promise so much. Even supposing it to enable us to exercise the degree of trust exactly due to every science respectively, and to estimate precisely the value of every truth which is anywhere to be found, how are we better for this master view of things, which I have been extolling? Does it not reverse the principle of the division of labour? will practical objects be obtained better or worse by its cultivation? to what then does it lead? where does it end? what does it do? how does it profit? what does it promise? Particular sciences are respectively the basis of definite arts, which carry on to results tangible and beneficial the truths which are the subjects of the knowledge attained; what is the Art of this science of sciences? what is the fruit of such a Philosophy? what are we proposing to effect, what inducements do we hold out to the Catholic community, when we set about the enterprise of founding a University?

I am asked what is the end of University Education, and of the Liberal or Philosophical Knowledge which I conceive it to impart: I answer, that what I have already said has been sufficient to show that it has a very tangible, real, and sufficient end, though the end cannot be divided from that knowledge itself. Knowledge is capable of being its own end. Such is the constitution of the human mind, that any kind of knowledge, if it be really such, is its own reward. And if this is true of all knowledge, it is true also of that special Philosophy, which I have made to consist in a comprehensive view of truth in all its branches, of the relations of science to science, of their mutual bearings, and their respective values. What the worth of such an acquirement is, compared with other objects which we seek,—wealth or power or honour or the conveniences and comforts of life, I do not profess here to discuss; but I would maintain, and mean to show, that

it is an object, in its own nature so really and undeniably good, as to be the compensation of a great deal of thought in the compassing, and a great deal of trouble in the attaining.

Now, when I say that Knowledge is, not merely a means to something beyond it, or the preliminary of certain arts into which it naturally resolves, but an end sufficient to rest in and to pursue for its own sake, surely I am uttering no paradox, for I am stating what is both intelligible in itself, and has ever been the common judgment of philosophers and the ordinary feeling of mankind. I am saying what at least the public opinion of this day ought to be slow to deny, considering how much we have heard of late years, in opposition to Religion, of entertaining, curious, and various knowledge. I am but saying what whole volumes have been written to illustrate, viz., by a “selection from the records of Philosophy, Literature, and Art, in all ages and countries, of a body of examples, to show how the most unpropitious circumstances have been unable to conquer an ardent desire for the acquisition of knowledge.”^[1] That further advantages accrue to us and redound to others by its possession, over and above what it is in itself, I am very far indeed from denying; but, independent of these, we are satisfying a direct need of our nature in its very acquisition; and, whereas our nature, unlike that of the inferior creation, does not at once reach its perfection, but depends, in order to it, on a number of external aids and appliances, Knowledge, as one of the principal of these, is valuable for what its very presence in us does for us after the manner of a habit, even though it be turned to no further account, nor subserve any direct end.

3.

Hence it is that Cicero, in enumerating the various heads of mental excellence, lays down the pursuit of Knowledge for its own sake, as the first of them. “This pertains most of all to human nature,”

he says, “for we are all of us drawn to the pursuit of Knowledge; in which to excel we consider excellent, whereas to mistake, to err, to be ignorant, to be deceived, is both an evil and a disgrace.” And he considers Knowledge the very first object to which we are attracted, after the supply of our physical wants. After the calls and duties of our animal existence, as they may be termed, as regards ourselves, our family, and our neighbours, follows, he tells us, “the search after truth. Accordingly, as soon as we escape from the pressure of necessary cares, forthwith we desire to see, to hear, and to learn; and consider the knowledge of what is hidden or is wonderful a condition of our happiness.”

This passage, though it is but one of many similar passages in a multitude of authors, I take for the very reason that it is so familiarly known to us; and I wish you to observe, Gentlemen, how distinctly it separates the pursuit of Knowledge from those ulterior objects to which certainly it can be made to conduce, and which are, I suppose, solely contemplated by the persons who would ask of me the use of a University or Liberal Education. So far from dreaming of the cultivation of Knowledge directly and mainly in order to our physical comfort and enjoyment, for the sake of life and person, of health, of the conjugal and family union, of the social tie and civil security, the great Orator implies, that it is only after our physical and political needs are supplied, and when we are “free from necessary duties and cares,” that we are in a condition for “desiring to see, to hear, and to learn.” Nor does he contemplate in the least degree the reflex or subsequent action of Knowledge, when acquired, upon those material goods which we set out by securing before we seek it; on the contrary, he expressly denies its bearing upon social life altogether, strange as such a procedure is to those who live after the rise of the Baconian philosophy, and he cautions us against such a cultivation of it as will interfere with our duties to our fellow-creatures. “All these methods,”

he says, "are engaged in the investigation of truth; by the pursuit of which to be carried off from public occupations is a transgression of duty. For the praise of virtue lies altogether in action; yet intermissions often occur, and then we recur to such pursuits; not to say that the incessant activity of the mind is vigorous enough to carry us on in the pursuit of knowledge, even without any exertion of our own." The idea of benefiting society by means of "the pursuit of science and knowledge" did not enter at all into the motives which he would assign for their cultivation.

This was the ground of the opposition which the elder Cato made to the introduction of Greek Philosophy among his countrymen, when Carneades and his companions, on occasion of their embassy, were charming the Roman youth with their eloquent expositions of it. The fit representative of a practical people, Cato estimated every thing by what it produced; whereas the Pursuit of Knowledge promised nothing beyond Knowledge itself. He despised that refine-ment or enlargement of mind of which he had no experience.

4.

Things, which can bear to be cut off from every thing else and yet persist in living, must have life in themselves; pursuits, which issue in nothing, and still maintain their ground for ages, which are regarded as admirable, though they have not as yet proved themselves to be useful, must have their sufficient end in themselves, whatever it turn out to be. And we are brought to the same conclusion by considering the force of the epithet, by which the knowledge under consideration is popularly designated. It is common to speak of "*liberal* knowledge," of the "*liberal* arts and studies," and of a "*liberal* education," as the especial characteristic or property of a University and of a gentleman; what is really meant by the word? Now, first, in its grammatical sense it is opposed to *servile*; and by "servile work" is understood, as our

catechisms inform us, bodily labour, mechanical employment, and the like, in which the mind has little or no part. Parallel to such servile works are those arts, if they deserve the name, of which the poet speaks, which owe their origin and their method to hazard, not to skill; as, for instance, the practice and operations of an empiric. As far as this contrast may be considered as a guide into the meaning of the word, liberal education and liberal pursuits are exercises of mind, of reason, of reflection.

But we want something more for its explanation, for there are bodily exercises which are liberal, and mental exercises which are not so. For instance, in ancient times the practitioners in medicine were commonly slaves; yet it was an art as intellectual in its nature, in spite of the pretence, fraud, and quackery with which it might then, as now, be debased, as it was heavenly in its aim. And so in like manner, we contrast a liberal education with a commercial education or a professional; yet no one can deny that commerce and the professions afford scope for the highest and most diversified powers of mind. There is then a great variety of intellectual exercises, which are not technically called "liberal;" on the other hand, I say, there are exercises of the body which do receive that appellation. Such, for instance, was the palæstra, in ancient times; such the Olympic games, in which strength and dexterity of body as well as of mind gained the prize. In Xenophon we read of the young Persian nobility being taught to ride on horseback and to speak the truth; both being among the accomplishments of a gentleman. War, too, however rough a profession, has ever been accounted liberal, unless in cases when it becomes heroic, which would introduce us to another subject.

Now comparing these instances together, we shall have no difficulty in determining the principle of this apparent variation in the application of the term which I am examining. Manly games, or games of skill, or military prowess, though bodily, are, it seems, accounted

liberal; on the other hand, what is merely professional, though highly intellectual, nay, though liberal in comparison of trade and manual labour, is not simply called liberal, and mercantile occupations are not liberal at all. Why this distinction? because that alone is liberal knowledge, which stands on its own pretensions, which is independent of sequel, expects no complement, refuses to be *informed* (as it is called) by any end, or absorbed into any art, in order duly to present itself to our contemplation. The most ordinary pursuits have this specific character, if they are self-sufficient and complete; the highest lose it, when they minister to something beyond them. It is absurd to balance, in point of worth and importance, a treatise on reducing fractures with a game of cricket or a fox-chase; yet of the two the bodily exercise has that quality which we call “liberal,” and the intellectual has it not. And so of the learned professions altogether, considered merely as professions; although one of them be the most popularly beneficial, and another the most politically important, and the third the most intimately divine of all human pursuits, yet the very greatness of their end, the health of the body, or of the commonwealth, or of the soul, diminishes, not increases, their claim to the appellation “liberal,” and that still more, if they are cut down to the strict exigencies of that end. If, for instance, Theology, instead of being cultivated as a contemplation, be limited to the purposes of the pulpit or be represented by the catechism, it loses,—not its usefulness, not its divine character, not its meritoriousness (rather it gains a claim upon these titles by such charitable condescension),—but it does lose the particular attribute which I am illustrating; just as a face worn by tears and fasting loses its beauty, or a labourer’s hand loses its delicateness;—for Theology thus exercised is not simple knowledge, but rather is an art or a business making use of Theology. And thus it appears that even what is supernatural need not be liberal, nor need a hero be a gentleman, for the plain reason

that one idea is not another idea. And in like manner the Baconian Philosophy, by using its physical sciences in the service of man, does thereby transfer them from the order of Liberal Pursuits to, I do not say the inferior, but the distinct class of the Useful. And, to take a different instance, hence again, as is evident, whenever personal gain is the motive, still more distinctive an effect has it upon the character of a given pursuit; thus racing, which was a liberal exercise in Greece, forfeits its rank in times like these, so far as it is made the occasion of gambling.

All that I have been now saying is summed up in a few characteristic words of the great Philosopher. “Of possessions,” he says, “those rather are useful, which bear fruit; those *liberal*, which tend to enjoyment. By fruitful, I mean, which yield revenue; by enjoyable, where *nothing accrues of consequence beyond the using.*”^[2]

5.

Do not suppose, that in thus appealing to the ancients, I am throwing back the world two thousand years, and fettering Philosophy with the reasonings of paganism. While the world lasts, will Aristotle’s doctrine on these matters last, for he is the oracle of nature and of truth. While we are men, we cannot help, to a great extent, being Aristotelians, for the great Master does but analyze the thoughts, feelings, views, and opinions of human kind. He has told us the meaning of our own words and ideas, before we were born. In many subject-matters, to think correctly, is to think like Aristotle, and we are his disciples whether we will or no, though we may not know it. Now, as to the particular instance before us, the word “liberal” as applied to Knowledge and Education, expresses a specific idea, which ever has been, and ever will be, while the nature of man is the same, just as the idea of the Beautiful is specific, or of the Sublime, or of the Ridiculous, or of the Sordid. It is in the world now, it was in the world

then; and, as in the case of the dogmas of faith, it is illustrated by a continuous historical tradition, and never was out of the world, from the time it came into it. There have indeed been differences of opinion from time to time, as to what pursuits and what arts came under that idea, but such differences are but an additional evidence of its reality. That idea must have a substance in it, which has maintained its ground amid these conflicts and changes, which has ever served as a standard to measure things withal, which has passed from mind to mind unchanged, when there was so much to colour, so much to influence any notion or thought whatever, which was not founded in our very nature. Were it a mere generalization, it would have varied with the subjects from which it was generalized; but though its subjects vary with the age, it varies not itself. The palæstra may seem a liberal exercise to Lysurgus, and illiberal to Seneca; coach-driving and prize-fighting may be recognized in Elis, and be condemned in England; music may be despicable in the eyes of certain moderns, and be in the highest place with Aristotle and Plato,—(and the case is the same in the particular application of the idea of Beauty, or of Goodness, or of Moral Virtue, there is a difference of tastes, a difference of judgments)—still these variations imply, instead of discrediting, the archetypal idea, which is but a previous hypothesis or condition, by means of which issue is joined between contending opinions, and without which there would be nothing to dispute about.

I consider, then, that I am chargeable with no paradox, when I speak of a Knowledge which is its own end, when I call it liberal knowledge, or a gentleman's knowledge, when I educate for it, and make it the scope of a University. And still less am I incurring such a charge, when I make this acquisition consist, not in Knowledge in a vague and ordinary sense, but in that Knowledge which I have especially called Philosophy or, in an extended sense of the word, Science; for whatever claims Knowledge has to be considered as a

good, these it has in a higher degree when it is viewed not vaguely, not popularly, but precisely and transcendently as Philosophy. Knowledge, I say, is then especially liberal, or sufficient for itself, apart from every external and ulterior object, when and so far as it is philosophical, and this I proceed to show.

6.

Now bear with me, Gentlemen, if what I am about to say, has at first sight a fanciful appearance. Philosophy, then, or Science, is related to Knowledge in this way:—Knowledge is called by the name of Science or Philosophy, when it is acted upon, informed, or if I may use a strong figure, impregnated by Reason. Reason is the principle of that intrinsic fecundity of Knowledge, which, to those who possess it, is its especial value, and which dispenses with the necessity of their looking abroad for any end to rest upon external to itself. Knowledge, indeed, when thus exalted into a scientific form, is also power; not only is it excellent in itself, but whatever such excellence may be, it is something more, it has a result beyond itself. Doubtless; but that is a further consideration, with which I am not concerned. I only say that, prior to its being a power, it is a good; that it is, not only an instrument, but an end. I know well it may resolve itself into an art, and terminate in a mechanical process, and in tangible fruit; but it also may fall back upon that Reason which informs it, and resolve itself into Philosophy. In one case it is called Useful Knowledge, in the other Liberal. The same person may cultivate it in both ways at once; but this again is a matter foreign to my subject; here I do but say that there are two ways of using Knowledge, and in matter of fact those who use it in one way are not likely to use it in the other, or at least in a very limited measure. You see, then, here are two methods of Education; the end of the one is to be philosophical, of the other to be mechanical; the one rises towards general ideas, the other is

exhausted upon what is particular and external. Let me not be thought to deny the necessity, or to decry the benefit, of such attention to what is particular and practical, as belongs to the useful or mechanical arts; life could not go on without them; we owe our daily welfare to them; their exercise is the duty of the many, and we owe to the many a debt of gratitude for fulfilling that duty. I only say that Knowledge, in proportion as it tends more and more to be particular, ceases to be Knowledge. It is a question whether Knowledge can in any proper sense be predicated of the brute creation; without pretending to metaphysical exactness of phraseology, which would be unsuitable to an occasion like this, I say, it seems to me improper to call that passive sensation, or perception of things, which brutes seem to possess, by the name of Knowledge. When I speak of Knowledge, I mean something intellectual, something which grasps what it perceives through the senses; something which takes a view of things; which sees more than the senses convey; which reasons upon what it sees, and while it sees; which invests it with an idea. It expresses itself, not in a mere enunciation, but by an enthymeme: it is of the nature of science from the first, and in this consists its dignity. The principle of real dignity in Knowledge, its worth, its desirableness, considered irrespectively of its results, is this germ within it of a scientific or a philosophical process. This is how it comes to be an end in itself; this is why it admits of being called Liberal. Not to know the relative disposition of things is the state of slaves or children; to have mapped out the Universe is the boast, or at least the ambition, of Philosophy.

Moreover, such knowledge is not a mere extrinsic or accidental advantage, which is ours to-day and another's to-morrow, which may be got up from a book, and easily forgotten again, which we can command or communicate at our pleasure, which we can borrow for the occasion, carry about in our hand, and take into the market; it is

an acquired illumination, it is a habit, a personal possession, and an inward endowment. And this is the reason, why it is more correct, as well as more usual, to speak of a University as a place of education, than of instruction, though, when knowledge is concerned, instruction would at first sight have seemed the more appropriate word. We are instructed, for instance, in manual exercises, in the fine and useful arts, in trades, and in ways of business; for these are methods, which have little or no effect upon the mind itself, are contained in rules committed to memory, to tradition, or to use, and bear upon an end external to themselves. But education is a higher word; it implies an action upon our mental nature, and the formation of a character; it is something individual and permanent, and is commonly spoken of in connexion with religion and virtue. When, then, we speak of the communication of Knowledge as being Education, we thereby really imply that that Knowledge is a state or condition of mind; and since cultivation of mind is surely worth seeking for its own sake, we are thus brought once more to the conclusion, which the word “Liberal” and the word “Philosophy” have already suggested, that there is a Knowledge, which is desirable, though nothing come of it, as being of itself a treasure, and a sufficient remuneration of years of labour.

7.

This, then, is the answer which I am prepared to give to the question with which I opened this Discourse. Before going on to speak of the object of the Church in taking up Philosophy, and the uses to which she puts it, I am prepared to maintain that Philosophy is its own end, and, as I conceive, I have now begun the proof of it. I am prepared to maintain that there is a knowledge worth possessing for what it is, and not merely for what it does; and what minutes remain to me to-day I shall devote to the removal of some portion of the indistinctness and confusion with which the subject may in some

minds be surrounded.

It may be objected then, that, when we profess to seek Knowledge for some end or other beyond itself, whatever it be, we speak intelligibly; but that, whatever men may have said, however obstinately the idea may have kept its ground from age to age, still it is simply unmeaning to say that we seek Knowledge for its own sake, and for nothing else; for that it ever leads to something beyond itself, which therefore is its end, and the cause why it is desirable;—moreover, that this end is twofold, either of this world or of the next; that all knowledge is cultivated either for secular objects or for eternal; that if it is directed to secular objects, it is called Useful Knowledge, if to eternal, Religious or Christian Knowledge;—in consequence, that if, as I have allowed, this Liberal Knowledge does not benefit the body or estate, it ought to benefit the soul; but if the fact be really so, that it is neither a physical or a secular good on the one hand, nor a moral good on the other, it cannot be a good at all, and is not worth the trouble which is necessary for its acquisition.

And then I may be reminded that the professors of this Liberal or Philosophical Knowledge have themselves, in every age, recognized this exposition of the matter, and have submitted to the issue in which it terminates; for they have ever been attempting to make men virtuous; or, if not, at least have assumed that refinement of mind was virtue, and that they themselves were the virtuous portion of mankind. This they have professed on the one hand; and on the other, they have utterly failed in their professions, so as ever to make themselves a proverb among men, and a laughing-stock both to the grave and the dissipated portion of mankind, in consequence of them. Thus they have furnished against themselves both the ground and the means of their own exposure, without any trouble at all to any one else. In a word, from the time that Athens was the University of the world, what has Philosophy taught men, but to promise without

practising, and to aspire without attaining? What has the deep and lofty thought of its disciples ended in but eloquent words? Nay, what has its teaching ever meditated, when it was boldest in its remedies for human ill, beyond charming us to sleep by its lessons, that we might feel nothing at all? like some melodious air, or rather like those strong and transporting perfumes, which at first spread their sweetness over every thing they touch, but in a little while do but offend in proportion as they once pleased us. Did Philosophy support Cicero under the disfavour of the fickle populace, or nerve Seneca to oppose an imperial tyrant? It abandoned Brutus, as he sorrowfully confessed, in his greatest need, and it forced Cato, as his panegyrist strangely boasts, into the false position of defying heaven. How few can be counted among its professors, who, like Polemo, were thereby converted from a profligate course, or like Anaxagoras, thought the world well lost in exchange for its possession? The philosopher in Rasselas taught a superhuman doctrine, and then succumbed without an effort to a trial of human affection.

“He discoursed,” we are told, “with great energy on the government of the passions. His look was venerable, his action graceful, his pronunciation clear, and his diction elegant. He showed, with great strength of sentiment and variety of illustration, that human nature is degraded and debased, when the lower faculties predominate over the higher. He communicated the various precepts given, from time to time, for the conquest of passion, and displayed the happiness of those who had obtained the important victory, after which man is no longer the slave of fear, nor the fool of hope.... He enumerated many examples of heroes immoveable by pain or pleasure, who looked with indifference on those modes or accidents to which the vulgar give the names of good and evil.”

Rasselas in a few days found the philosopher in a room half darkened, with his eyes misty, and his face pale. “Sir,” said he, “you

have come at a time when all human friendship is useless; what I suffer cannot be remedied, what I have lost cannot be supplied. My daughter, my only daughter, from whose tenderness I expected all the comforts of my age, died last night of a fever.” “Sir,” said the prince, “mortality is an event by which a wise man can never be surprised; we know that death is always near, and it should therefore always be expected.” “Young man,” answered the philosopher, “you speak like one who has never felt the pangs of separation.” “Have you, then, forgot the precept,” said Rasselas, “which you so powerfully enforced?... consider that external things are naturally variable, but truth and reason are always the same.” “What comfort,” said the mourner, “can truth and reason afford me? Of what effect are they now, but to tell me that my daughter will not be restored?”

8.

Better, far better, to make no professions, you will say, than to cheat others with what we are not, and to scandalize them with what we are. The sensualist, or the man of the world, at any rate is not the victim of fine words, but pursues a reality and gains it. The Philosophy of Utility, you will say, Gentlemen, has at least done its work; and I grant it,—it aimed low, but it has fulfilled its aim. If that man of great intellect who has been its Prophet in the conduct of life played false to his own professions, he was not bound by his philosophy to be true to his friend or faithful in his trust. Moral virtue was not the line in which he undertook to instruct men; and though, as the poet calls him, he were the “meanest” of mankind, he was so in what may be called his private capacity and without any prejudice to the theory of induction. He had a right to be so, if he chose, for any thing that the Idols of the den or the theatre had to say to the contrary. His mission was the increase of physical enjoyment and social comfort; and most wonderfully, most awfully has he fulfilled his

conception and his design. Almost day by day have we fresh and fresh shoots, and buds, and blossoms, which are to ripen into fruit, on that magical tree of Knowledge which he planted, and to which none of us perhaps, except the very poor, but owes, if not his present life, at least his daily food, his health, and general well-being. He was the divinely provided minister of temporal benefits to all of us so great, that, whatever I am forced to think of him as a man, I have not the heart, from mere gratitude, to speak of him severely. And, in spite of the tendencies of his philosophy, which are, as we see at this day, to depreciate, or to trample on Theology, he has himself, in his writings, gone out of his way, as if with a prophetic misgiving of those tendencies, to insist on it as the instrument of that beneficent Father, who, when He came on earth in visible form, took on Him first and most prominently the office of assuaging the bodily wounds of human nature. And truly, like the old mediciner in the tale, “he sat diligently at his work, and hummed, with cheerful countenance, a pious song;” and then in turn “went out singing into the meadows so gaily, that those who had seen him from afar might well have thought it was a youth gathering flowers for his beloved, instead of an old physician gathering healing herbs in the morning dew.”^[3]

Alas, that men, in the action of life or in their heart of hearts, are not what they seem to be in their moments of excitement, or in their trances or intoxications of genius,—so good, so noble, so serene! Alas, that Bacon too in his own way should after all be but the fellow of those heathen philosophers who in their disadvantages had some excuse for their inconsistency, and who surprise us rather in what they did say than in what they did not do! Alas, that he too, like Socrates or Seneca, must be stripped of his holy-day coat, which looks so fair, and should be but a mockery amid his most majestic gravity of phrase; and, for all his vast abilities, should, in the littleness of his own moral being, but typify the intellectual narrowness of his school! However,

granting all this, heroism after all was not his philosophy:—I cannot deny he has abundantly achieved what he proposed. His is simply a Method whereby bodily discomforts and temporal wants are to be most effectually removed from the greatest number; and already, before it has shown any signs of exhaustion, the gifts of nature, in their most artificial shapes and luxurious profusion and diversity, from all quarters of the earth, are, it is undeniable, by its means brought even to our doors, and we rejoice in them.

9.

Useful Knowledge then, I grant, has done its work; and Liberal Knowledge as certainly has not done its work,—that is, supposing, as the objectors assume, its direct end, like Religious Knowledge, is to make men better; but this I will not for an instant allow, and, unless I allow it, those objectors have said nothing to the purpose. I admit, rather I maintain, what they have been urging, for I consider Knowledge to have its end in itself. For all its friends, or its enemies, may say, I insist upon it, that it is as real a mistake to burden it with virtue or religion as with the mechanical arts. Its direct business is not to steel the soul against temptation or to console it in affliction, any more than to set the loom in motion, or to direct the steam carriage; be it ever so much the means or the condition of both material and moral advancement, still, taken by and in itself, it as little mends our hearts as it improves our temporal circumstances. And if its eulogists claim for it such a power, they commit the very same kind of encroachment on a province not their own as the political economist who should maintain that his science educated him for casuistry or diplomacy. Knowledge is one thing, virtue is another; good sense is not conscience, refinement is not humility, nor is largeness and justness of view faith. Philosophy, however enlightened, however profound, gives no command over the passions, no influential motives,

no vivifying principles. Liberal Education makes not the Christian, not the Catholic, but the gentleman. It is well to be a gentlemen, it is well to have a cultivated intellect, a delicate taste, a candid, equitable, dispassionate mind, a noble and courteous bearing in the conduct of life;—these are the connatural qualities of a large knowledge; they are the objects of a University; I am advocating, I shall illustrate and insist upon them; but still, I repeat, they are no guarantee for sanctity or even for conscientiousness, they may attach to the man of the world, to the profligate, to the heartless,—pleasant, alas, and attractive as he shows when decked out in them. Taken by themselves, they do but seem to be what they are not; they look like virtue at a distance, but they are detected by close observers, and on the long run; and hence it is that they are popularly accused of pretence and hypocrisy, not, I repeat, from their own fault, but because their professors and their admirers persist in taking them for what they are not, and are officious in arrogating for them a praise to which they have no claim. Quarry the granite rock with razors, or moor the vessel with a thread of silk; then may you hope with such keen and delicate instruments as human knowledge and human reason to contend against those giants, the passion and the pride of man.

Surely we are not driven to theories of this kind, in order to vindicate the value and dignity of Liberal Knowledge. Surely the real grounds on which its pretensions rest are not so very subtle or abstruse, so very strange or improbable. Surely it is very intelligible to say, and that is what I say here, that Liberal Education, viewed in itself, is simply the cultivation of the intellect, as such, and its object is nothing more or less than intellectual excellence. Every thing has its own perfection, be it higher or lower in the scale of things; and the perfection of one is not the perfection of another. Things animate, inanimate, visible, invisible, all are good in their kind, and have a *best* of themselves, which is an object of pursuit. Why do you take such

pains with your garden or your park? You see to your walks and turf and shrubberies; to your trees and drives; not as if you meant to make an orchard of the one, or corn or pasture land of the other, but because there is a special beauty in all that is goodly in wood, water, plain, and slope, brought all together by art into one shape, and grouped into one whole. Your cities are beautiful, your palaces, your public buildings, your territorial mansions, your churches; and their beauty leads to nothing beyond itself. There is a physical beauty and a moral: there is a beauty of person, there is a beauty of our moral being, which is natural virtue; and in like manner there is a beauty, there is a perfection, of the intellect. There is an ideal perfection in these various subject-matters, towards which individual instances are seen to rise, and which are the standards for all instances whatever. The Greek divinities and demigods, as the statuary has moulded them, with their symmetry of figure, and their high forehead and their regular features, are the perfection of physical beauty. The heroes, of whom history tells, Alexander, or Cæsar, or Scipio, or Saladin, are the representatives of that magnanimity or self-mastery which is the greatness of human nature. Christianity too has its heroes, and in the supernatural order, and we call them Saints. The artist puts before him beauty of feature and form; the poet, beauty of mind; the preacher, the beauty of grace: then intellect too, I repeat, has its beauty, and it has those who aim at it. To open the mind, to correct it, to refine it, to enable it to know, and to digest, master, rule, and use its knowledge, to give it power over its own faculties, application, flexibility, method, critical exactness, sagacity, resource, address, eloquent expression, is an object as intelligible (for here we are inquiring, not what the object of a Liberal Education is worth, nor what use the Church makes of it, but what it is in itself), I say, an object as intelligible as the cultivation of virtue, while, at the same time, it is absolutely distinct from it.

This indeed is but a temporal object, and a transitory possession; but so are other things in themselves which we make much of and pursue. The moralist will tell us that man, in all his functions, is but a flower which blossoms and fades, except so far as a higher principle breathes upon him, and makes him and what he is immortal. Body and mind are carried on into an eternal state of being by the gifts of Divine Munificence; but at first they do but fail in a failing world; and if the powers of intellect decay, the powers of the body have decayed before them, and, as an Hospital or an Almshouse, though its end be ephemeral, may be sanctified to the service of religion, so surely may a University, even were it nothing more than I have as yet described it. We attain to heaven by using this world well, though it is to pass away; we perfect our nature, not by undoing it, but by adding to it what is more than nature, and directing it towards aims higher than its own.

Discourse VI

Knowledge Viewed in Relation to Learning

1.

It were well if the English, like the Greek language, possessed some definite word to express, simply and generally, intellectual proficiency or perfection, such as “health,” as used with reference to the animal frame, and “virtue,” with reference to our moral nature. I am not able to find such a term;—talent, ability, genius, belong distinctly to the raw material, which is the subject-matter, not to that excellence which is the result of exercise and training. When we turn, indeed, to the particular kinds of intellectual perfection, words are forthcoming for our purpose, as, for instance, judgment, taste, and skill; yet even these belong, for the most part, to powers or habits bearing upon practice or upon art, and not to any perfect condition of the intellect, considered in itself. Wisdom, again, is certainly a more comprehensive word than any other, but it has a direct relation to conduct, and to human life. Knowledge, indeed, and Science express purely intellectual ideas, but still not a state or quality of the intellect; for knowledge, in its ordinary sense, is but one of its circumstances, denoting a possession or a habit; and science has been appropriated to the subject-matter of the intellect, instead of belonging in English, as it ought to do, to the intellect itself. The consequence is that, on an occasion like this, many words are necessary, in order, first, to bring

out and convey what surely is no difficult idea in itself,—that of the cultivation of the intellect as an end; next, in order to recommend what surely is no unreasonable object; and lastly, to describe and make the mind realize the particular perfection in which that object consists. Every one knows practically what are the constituents of health or of virtue; and every one recognizes health and virtue as ends to be pursued; it is otherwise with intellectual excellence, and this must be my excuse, if I seem to any one to be bestowing a good deal of labour on a preliminary matter.

In default of a recognized term, I have called the perfection or virtue of the intellect by the name of philosophy, philosophical knowledge, enlargement of mind, or illumination; terms which are not uncommonly given to it by writers of this day: but, whatever name we bestow on it, it is, I believe, as a matter of history, the business of a University to make this intellectual culture its direct scope, or to employ itself in the education of the intellect,—just as the work of a Hospital lies in healing the sick or wounded, of a Riding or Fencing School, or of a Gymnasium, in exercising the limbs, of an Almshouse, in aiding and solacing the old, of an Orphanage, in protecting innocence, of a Penitentiary, in restoring the guilty. I say, a University, taken in its bare idea, and before we view it as an instrument of the Church, has this object and this mission; it contemplates neither moral impression nor mechanical production; it professes to exercise the mind neither in art nor in duty; its function is intellectual culture; here it may leave its scholars, and it has done its work when it has done as much as this. It educates the intellect to reason well in all matters, to reach out towards truth, and to grasp it.

2.

This, I said in my foregoing Discourse, was the object of a University, viewed in itself, and apart from the Catholic Church, or

from the State, or from any other power which may use it; and I illustrated this in various ways. I said that the intellect must have an excellence of its own, for there was nothing which had not its specific good; that the word “educate” would not be used of intellectual culture, as it is used, had not the intellect had an end of its own; that, had it not such an end, there would be no meaning in calling certain intellectual exercises “liberal,” in contrast with “useful,” as is commonly done; that the very notion of a philosophical temper implied it, for it threw us back upon research and system as ends in themselves, distinct from effects and works of any kind; that a philosophical scheme of knowledge, or system of sciences, could not, from the nature of the case, issue in any one definite art or pursuit, as its end; and that, on the other hand, the discovery and contemplation of truth, to which research and systematizing led, were surely sufficient ends, though nothing beyond them were added, and that they had ever been accounted sufficient by mankind.

Here then I take up the subject; and, having determined that the cultivation of the intellect is an end distinct and sufficient in itself, and that, so far as words go it is an enlargement or illumination, I proceed to inquire what this mental breadth, or power, or light, or philosophy consists in. A Hospital heals a broken limb or cures a fever: what does an Institution effect, which professes the health, not of the body, not of the soul, but of the intellect? What is this good, which in former times, as well as our own, has been found worth the notice, the appropriation, of the Catholic Church?

I have then to investigate, in the Discourses which follow, those qualities and characteristics of the intellect in which its cultivation issues or rather consists; and, with a view of assisting myself in this undertaking, I shall recur to certain questions which have already been touched upon. These questions are three: viz. the relation of intellectual culture, first, to *mere* knowledge; secondly, to *professional*

knowledge; and thirdly, to *religious* knowledge. In other words, are *acquirements* and *attainments* the scope of a University Education? or *expertness in particular arts and pursuits*? or *moral and religious proficiency*? or something besides these three? These questions I shall examine in succession, with the purpose I have mentioned; and I hope to be excused, if, in this anxious undertaking, I am led to repeat what, either in these Discourses or elsewhere, I have already put upon paper. And first, of *Mere Knowledge*, or Learning, and its connexion with intellectual illumination or Philosophy.

3.

I suppose the *primâ-facie* view which the public at large would take of a University, considering it as a place of Education, is nothing more or less than a place for acquiring a great deal of knowledge on a great many subjects. Memory is one of the first developed of the mental faculties; a boy's business when he goes to school is to learn, that is, to store up things in his memory. For some years his intellect is little more than an instrument for taking in facts, or a receptacle for storing them: he welcomes them as fast as they come to him; he lives on what is without; he has his eyes ever about him; he has a lively susceptibility of impressions; he imbibes information of every kind; and little does he make his own in a true sense of the word, living rather upon his neighbours all around him. He has opinions, religious, political, and literary, and, for a boy, is very positive in them and sure about them; but he gets them from his schoolfellows, or his masters, or his parents, as the case may be. Such as he is in his other relations, such also is he in his school exercises; his mind is observant, sharp, ready, retentive; he is almost passive in the acquisition of knowledge. I say this in no disparagement of the idea of a clever boy. Geography, chronology, history, language, natural history, he heaps up the matter of these studies as treasures for a future day. It is the seven years of

plenty with him: he gathers in by handfuls, like the Egyptians, without counting; and though, as time goes on, there is exercise for his argumentative powers in the Elements of Mathematics, and for his taste in the Poets and Orators, still, while at school, or at least, till quite the last years of his time, he acquires, and little more; and when he is leaving for the University, he is mainly the creature of foreign influences and circumstances, and made up of accidents, homogeneous or not, as the case may be. Moreover, the moral habits, which are a boy's praise, encourage and assist this result; that is, diligence, assiduity, regularity, despatch, persevering application; for these are the direct conditions of acquisition, and naturally lead to it. Acquirements, again, are emphatically producible, and at a moment; they are a something to show, both for master and scholar; an audience, even though ignorant themselves of the subjects of an examination, can comprehend when questions are answered and when they are not. Here again is a reason why mental culture is in the minds of men identified with the acquisition of knowledge.

The same notion possesses the public mind, when it passes on from the thought of a school to that of a University: and with the best of reasons so far as this, that there is no true culture without acquirements, and that philosophy presupposes knowledge. It requires a great deal of reading, or a wide range of information, to warrant us in putting forth our opinions on any serious subject; and without such learning the most original mind may be able indeed to dazzle, to amuse, to refute, to perplex, but not to come to any useful result or any trustworthy conclusion. There are indeed persons who profess a different view of the matter, and even act upon it. Every now and then you will find a person of vigorous or fertile mind, who relies upon his own resources, despises all former authors, and gives the world, with the utmost fearlessness, his views upon religion, or history, or any other popular subject. And his works may sell for a while; he may get

a name in his day; but this will be all. His readers are sure to find on the long run that his doctrines are mere theories, and not the expression of facts, that they are chaff instead of bread, and then his popularity drops as suddenly as it rose.

Knowledge then is the indispensable condition of expansion of mind, and the instrument of attaining to it; this cannot be denied, it is ever to be insisted on; I begin with it as a first principle; however, the very truth of it carries men too far, and confirms to them the notion that it is the whole of the matter. A narrow mind is thought to be that which contains little knowledge; and an enlarged mind, that which holds a great deal; and what seems to put the matter beyond dispute is, the fact of the great number of studies which are pursued in a University, by its very profession. Lectures are given on every kind of subject; examinations are held; prizes awarded. There are moral, metaphysical, physical Professors; Professors of languages, of history, of mathematics, of experimental science. Lists of questions are published, wonderful for their range and depth, variety and difficulty; treatises are written, which carry upon their very face the evidence of extensive reading or multifarious information; what then is wanting for mental culture to a person of large reading and scientific attainments? what is grasp of mind but acquirement? where shall philosophical repose be found, but in the consciousness and enjoyment of large intellectual possessions?

And yet this notion is, I conceive, a mistake, and my present business is to show that it is one, and that the end of a Liberal Education is not mere knowledge, or knowledge considered in its *matter*; and I shall best attain my object, by actually setting down some cases, which will be generally granted to be instances of the process of enlightenment or enlargement of mind, and others which are not, and thus, by the comparison, you will be able to judge for yourselves, Gentlemen, whether Knowledge, that is, acquirement, is

after all the real principle of the enlargement, or whether that principle is not rather something beyond it.

4.

For instance, let a person, whose experience has hitherto been confined to the more calm and unpretending scenery of these islands, whether here or in England, go for the first time into parts where physical nature puts on her wilder and more awful forms, whether at home or abroad, as into mountainous districts; or let one, who has ever lived in a quiet village, go for the first time to a great metropolis, —then I suppose he will have a sensation which perhaps he never had before. He has a feeling not in addition or increase of former feelings, but of something different in its nature. He will perhaps be borne forward, and find for a time that he has lost his bearings. He has made a certain progress, and he has a consciousness of mental enlargement; he does not stand where he did, he has a new centre, and a range of thoughts to which he was before a stranger.

Again, the view of the heavens which the telescope opens upon us, if allowed to fill and possess the mind, may almost whirl it round and make it dizzy. It brings in a flood of ideas, and is rightly called an intellectual enlargement, whatever is meant by the term.

And so again, the sight of beasts of prey and other foreign animals, their strangeness, the originality (if I may use the term) of their forms and gestures and habits and their variety and independence of each other, throw us out of ourselves into another creation, and as if under another Creator, if I may so express the temptation which may come on the mind. We seem to have new faculties, or a new exercise for our faculties, by this addition to our knowledge; like a prisoner, who, having been accustomed to wear manacles or fetters, suddenly finds his arms and legs free.

Hence Physical Science generally, in all its departments, as

bringing before us the exuberant riches and resources, yet the orderly course, of the Universe, elevates and excites the student, and at first, I may say, almost takes away his breath, while in time it exercises a tranquilizing influence upon him.

Again, the study of history is said to enlarge and enlighten the mind, and why? because, as I conceive, it gives it a power of judging of passing events, and of all events, and a conscious superiority over them, which before it did not possess.

And in like manner, what is called seeing the world, entering into active life, going into society, travelling, gaining acquaintance with the various classes of the community, coming into contact with the principles and modes of thought of various parties, interests, and races, their views, aims, habits and manners, their religious creeds and forms of worship,—gaining experience how various yet how alike men are, how low-minded, how bad, how opposed, yet how confident in their opinions; all this exerts a perceptible influence upon the mind, which it is impossible to mistake, be it good or be it bad, and is popularly called its enlargement.

And then again, the first time the mind comes across the arguments and speculations of unbelievers, and feels what a novel light they cast upon what he has hitherto accounted sacred; and still more, if it gives in to them and embraces them, and throws off as so much prejudice what it has hitherto held, and, as if waking from a dream, begins to realize to its imagination that there is now no such thing as law and the transgression of law, that sin is a phantom, and punishment a bugbear, that it is free to sin, free to enjoy the world and the flesh; and still further, when it does enjoy them, and reflects that it may think and hold just what it will, that “the world is all before it where to choose,” and what system to build up as its own private persuasion; when this torrent of wilful thoughts rushes over and inundates it, who will deny that the fruit of the tree of knowledge,

or what the mind takes for knowledge, has made it one of the gods, with a sense of expansion and elevation,—an intoxication in reality, still, so far as the subjective state of the mind goes, an illumination? Hence the fanaticism of individuals or nations, who suddenly cast off their Maker. Their eyes are opened; and, like the judgment-stricken king in the Tragedy, they see two suns, and a magic universe, out of which they look back upon their former state of faith and innocence with a sort of contempt and indignation, as if they were then but fools, and the dupes of imposture.

On the other hand, Religion has its own enlargement, and an enlargement, not of tumult, but of peace. It is often remarked of uneducated persons, who have hitherto thought little of the unseen world, that, on their turning to God, looking into themselves, regulating their hearts, reforming their conduct, and meditating on death and judgment, heaven and hell, they seem to become, in point of intellect, different beings from what they were. Before, they took things as they came, and thought no more of one thing than another. But now every event has a meaning; they have their own estimate of whatever happens to them; they are mindful of times and seasons, and compare the present with the past; and the world, no longer dull, monotonous, unprofitable, and hopeless, is a various and complicated drama, with parts and an object, and an awful moral.

5.

Now from these instances, to which many more might be added, it is plain, first, that the communication of knowledge certainly is either a condition or the means of that sense of enlargement or enlightenment, of which at this day we hear so much in certain quarters: this cannot be denied; but next, it is equally plain, that such communication is not the whole of the process. The enlargement consists, not merely in the passive reception into the mind of a

number of ideas hitherto unknown to it, but in the mind's energetic and simultaneous action upon and towards and among those new ideas, which are rushing in upon it. It is the action of a formative power, reducing to order and meaning the matter of our acquirements; it is a making the objects of our knowledge subjectively our own, or, to use a familiar word, it is a digestion of what we receive, into the substance of our previous state of thought; and without this no enlargement is said to follow. There is no enlargement, unless there be a comparison of ideas one with another, as they come before the mind, and a systematizing of them. We feel our minds to be growing and expanding *then*, when we not only learn, but refer what we learn to what we know already. It is not the mere addition to our knowledge that is the illumination; but the locomotion, the movement onwards, of that mental centre, to which both what we know, and what we are learning, the accumulating mass of our acquirements, gravitates. And therefore a truly great intellect, and recognized to be such by the common opinion of mankind, such as the intellect of Aristotle, or of St. Thomas, or of Newton, or of Goethe, (I purposely take instances within and without the Catholic pale, when I would speak of the intellect as such,) is one which takes a connected view of old and new, past and present, far and near, and which has an insight into the influence of all these one on another; without which there is no whole, and no centre. It possesses the knowledge, not only of things, but also of their mutual and true relations; knowledge, not merely considered as acquirement, but as philosophy.

Accordingly, when this analytical, distributive, harmonizing process is away, the mind experiences no enlargement, and is not reckoned as enlightened or comprehensive, whatever it may add to its knowledge. For instance, a great memory, as I have already said, does not make a philosopher, any more than a dictionary can be called a

grammar. There are men who embrace in their minds a vast multitude of ideas, but with little sensibility about their real relations towards each other. These may be antiquarians, annalists, naturalists; they may be learned in the law; they may be versed in statistics; they are most useful in their own place; I should shrink from speaking disrespectfully of them; still, there is nothing in such attainments to guarantee the absence of narrowness of mind. If they are nothing more than well-read men, or men of information, they have not what specially deserves the name of culture of mind, or fulfils the type of Liberal Education.

In like manner, we sometimes fall in with persons who have seen much of the world, and of the men who, in their day, have played a conspicuous part in it, but who generalize nothing, and have no observation, in the true sense of the word. They abound in information in detail, curious and entertaining, about men and things; and, having lived under the influence of no very clear or settled principles, religious or political, they speak of every one and every thing, only as so many phenomena, which are complete in themselves, and lead to nothing, not discussing them, or teaching any truth, or instructing the hearer, but simply talking. No one would say that these persons, well informed as they are, had attained to any great culture of intellect or to philosophy.

The case is the same still more strikingly where the persons in question are beyond dispute men of inferior powers and deficient education. Perhaps they have been much in foreign countries, and they receive, in a passive, otiose, unfruitful way, the various facts which are forced upon them there. Seafaring men, for example, range from one end of the earth to the other; but the multiplicity of external objects, which they have encountered, forms no symmetrical and consistent picture upon their imagination; they see the tapestry of human life, as it were on the wrong side, and it tells no story. They

sleep, and they rise up, and they find themselves, now in Europe, now in Asia; they see visions of great cities and wild regions; they are in the marts of commerce, or amid the islands of the South; they gaze on Pompey's Pillar, or on the Andes; and nothing which meets them carries them forward or backward, to any idea beyond itself. Nothing has a drift or relation; nothing has a history or a promise. Every thing stands by itself, and comes and goes in its turn, like the shifting scenes of a show, which leave the spectator where he was. Perhaps you are near such a man on a particular occasion, and expect him to be shocked or perplexed at something which occurs; but one thing is much the same to him as another, or, if he is perplexed, it is as not knowing what to say, whether it is right to admire, or to ridicule, or to disapprove, while conscious that some expression of opinion is expected from him; for in fact he has no standard of judgment at all, and no landmarks to guide him to a conclusion. Such is mere acquisition, and, I repeat, no one would dream of calling it philosophy.

6.

Instances, such as these, confirm, by the contrast, the conclusion I have already drawn from those which preceded them. That only is true enlargement of mind which is the power of viewing many things at once as one whole, of referring them severally to their true place in the universal system, of understanding their respective values, and determining their mutual dependence. Thus is that form of Universal Knowledge, of which I have on a former occasion spoken, set up in the individual intellect, and constitutes its perfection. Possessed of this real illumination, the mind never views any part of the extended subject-matter of Knowledge without recollecting that it is but a part, or without the associations which spring from this recollection. It makes every thing in some sort lead to every thing else; it would

communicate the image of the whole to every separate portion, till that whole becomes in imagination like a spirit, every where pervading and penetrating its component parts, and giving them one definite meaning. Just as our bodily organs, when mentioned, recall their function in the body, as the word “creation” suggests the Creator, and “subjects” a sovereign, so, in the mind of the Philosopher, as we are abstractedly conceiving of him, the elements of the physical and moral world, sciences, arts, pursuits, ranks, offices, events, opinions, individualities, are all viewed as one, with correlative functions, and as gradually by successive combinations converging, one and all, to the true centre.

To have even a portion of this illuminative reason and true philosophy is the highest state to which nature can aspire, in the way of intellect; it puts the mind above the influences of chance and necessity, above anxiety, suspense, unsettlement, and superstition, which is the lot of the many. Men, whose minds are possessed with some one object, take exaggerated views of its importance, are feverish in the pursuit of it, make it the measure of things which are utterly foreign to it, and are startled and despond if it happens to fail them. They are ever in alarm or in transport. Those on the other hand who have no object or principle whatever to hold by, lose their way, every step they take. They are thrown out, and do not know what to think or say, at every fresh juncture; they have no view of persons, or occurrences, or facts, which come suddenly upon them, and they hang upon the opinion of others, for want of internal resources. But the intellect, which has been disciplined to the perfection of its powers, which knows, and thinks while it knows, which has learned to leaven the dense mass of facts and events with the elastic force of reason, such an intellect cannot be partial, cannot be exclusive, cannot be impetuous, cannot be at a loss, cannot but be patient, collected, and majestically calm, because it discerns the end in every beginning, the

origin in every end, the law in every interruption, the limit in each delay; because it ever knows where it stands, and how its path lies from one point to another. It is the $\chi\phi\tau\acute{\alpha}\varsigma\sim\omicron\upsilon\varsigma$ of the Peripatetic, and has the “nil admirari” of the Stoic,—

Felix qui potuit rerum cognoscere causas, Atque metus
omnes, et inexorabile fatum Subjecit pedibus, strepitumque
Acherontis avari.

There are men who, when in difficulties, originate at the moment vast ideas or dazzling projects; who, under the influence of excitement, are able to cast a light, almost as if from inspiration, on a subject or course of action which comes before them; who have a sudden presence of mind equal to any emergency, rising with the occasion, and an undaunted magnanimous bearing, and an energy and keenness which is but made intense by opposition. This is genius, this is heroism; it is the exhibition of a natural gift, which no culture can teach, at which no Institution can aim; here, on the contrary, we are concerned, not with mere nature, but with training and teaching. That perfection of the Intellect, which is the result of Education, and its *beau ideal*, to be imparted to individuals in their respective measures, is the clear, calm, accurate vision and comprehension of all things, as far as the finite mind can embrace them, each in its place, and with its own characteristics upon it. It is almost prophetic from its knowledge of history; it is almost heart-searching from its knowledge of human nature; it has almost supernatural charity from its freedom from littleness and prejudice; it has almost the repose of faith, because nothing can startle it; it has almost the beauty and harmony of heavenly contemplation, so intimate is it with the eternal order of things and the music of the spheres.

And now, if I may take for granted that the true and adequate end of intellectual training and of a University is not Learning or Acquirement, but rather, is Thought or Reason exercised upon Knowledge, or what may be called Philosophy, I shall be in a position to explain the various mistakes which at the present day beset the subject of University Education.

I say then, if we would improve the intellect, first of all, we must ascend; we cannot gain real knowledge on a level; we must generalize, we must reduce to method, we must have a grasp of principles, and group and shape our acquisitions by means of them. It matters not whether our field of operation be wide or limited; in every case, to command it, is to mount above it. Who has not felt the irritation of mind and impatience created by a deep, rich country, visited for the first time, with winding lanes, and high hedges, and green steepes, and tangled woods, and every thing smiling indeed, but in a maze? The same feeling comes upon us in a strange city, when we have no map of its streets. Hence you hear of practised travellers, when they first come into a place, mounting some high hill or church tower, by way of reconnoitring its neighbourhood. In like manner, you must be above your knowledge, not under it, or it will oppress you; and the more you have of it, the greater will be the load. The learning of a Salmasius or a Burman, unless you are its master, will be your tyrant. "Imperat aut servit;" if you can wield it with a strong arm, it is a great weapon; otherwise,

Vis consili expers

Mole ruit suâ.

You will be overwhelmed, like Tarpeia, by the heavy wealth

which you have exacted from tributary generations.

Instances abound; there are authors who are as pointless as they are inexhaustible in their literary resources. They measure knowledge by bulk, as it lies in the rude block, without symmetry, without design. How many commentators are there on the Classics, how many on Holy Scripture, from whom we rise up, wondering at the learning which has passed before us, and wondering why it passed! How many writers are there of Ecclesiastical History, such as Mosheim or Du Pin, who, breaking up their subject into details, destroy its life, and defraud us of the whole by their anxiety about the parts! The Sermons, again, of the English Divines in the seventeenth century, how often are they mere repertories of miscellaneous and officious learning! Of course Catholics also may read without thinking; and in their case, equally as with Protestants, it holds good, that such knowledge is unworthy of the name, knowledge which they have not thought through, and thought out. Such readers are only possessed by their knowledge, not possessed of it; nay, in matter of fact they are often even carried away by it, without any volition of their own. Recollect, the Memory can tyrannize, as well as the Imagination. Derangement, I believe, has been considered as a loss of control over the sequence of ideas. The mind, once set in motion, is henceforth deprived of the power of initiation, and becomes the victim of a train of associations, one thought suggesting another, in the way of cause and effect, as if by a mechanical process, or some physical necessity. No one, who has had experience of men of studious habits, but must recognize the existence of a parallel phenomenon in the case of those who have over-stimulated the Memory. In such persons Reason acts almost as feebly and as impotently as in the madman; once fairly started on any subject whatever, they have no power of self-control; they passively endure the succession of impulses which are evolved out of the original exciting cause; they are passed on from one idea to another

and go steadily forward, plodding along one line of thought in spite of the amplest concessions of the hearer, or wandering from it in endless digression in spite of his remonstrances. Now, if, as is very certain, no one would envy the madman the glow and originality of his conceptions, why must we extol the cultivation of that intellect, which is the prey, not indeed of barren fancies but of barren facts, of random intrusions from without, though not of morbid imaginations from within? And in thus speaking, I am not denying that a strong and ready memory is in itself a real treasure; I am not disparaging a well-stored mind, though it be nothing besides, provided it be sober, any more than I would despise a bookseller's shop:—it is of great value to others, even when not so to the owner. Nor am I banishing, far from it, the possessors of deep and multifarious learning from my ideal University; they adorn it in the eyes of men; I do but say that they constitute no type of the results at which it aims; that it is no great gain to the intellect to have enlarged the memory at the expense of faculties which are indisputably higher.

8.

Nor indeed am I supposing that there is any great danger, at least in this day, of over-education; the danger is on the other side. I will tell you, Gentlemen, what has been the practical error of the last twenty years,—not to load the memory of the student with a mass of undigested knowledge, but to force upon him so much that he has rejected all. It has been the error of distracting and enfeebling the mind by an unmeaning profusion of subjects; of implying that a smattering in a dozen branches of study is not shallowness, which it really is, but enlargement, which it is not; of considering an acquaintance with the learned names of things and persons, and the possession of clever duodecimos, and attendance on eloquent lecturers, and membership with scientific institutions, and the sight of

the experiments of a platform and the specimens of a museum, that all this was not dissipation of mind, but progress. All things now are to be learned at once, not first one thing, then another, not one well, but many badly. Learning is to be without exertion, without attention, without toil; without grounding, without advance, without finishing. There is to be nothing individual in it; and this, forsooth, is the wonder of the age. What the steam engine does with matter, the printing press is to do with mind; it is to act mechanically, and the population is to be passively, almost unconsciously enlightened, by the mere multiplication and dissemination of volumes. Whether it be the school boy, or the school girl, or the youth at college, or the mechanic in the town, or the politician in the senate, all have been the victims in one way or other of this most preposterous and pernicious of delusions. Wise men have lifted up their voices in vain; and at length, lest their own institutions should be outshone and should disappear in the folly of the hour, they have been obliged, as far as they could with a good conscience, to humour a spirit which they could not withstand, and make temporizing concessions at which they could not but inwardly smile.

It must not be supposed that, because I so speak, therefore I have some sort of fear of the education of the people: on the contrary, the more education they have, the better, so that it is really education. Nor am I an enemy to the cheap publication of scientific and literary works, which is now in vogue: on the contrary, I consider it a great advantage, convenience, and gain; that is, to those to whom education has given a capacity for using them. Further, I consider such innocent recreations as science and literature are able to furnish will be a very fit occupation of the thoughts and the leisure of young persons, and may be made the means of keeping them from bad employments and bad companions. Moreover, as to that superficial acquaintance with chemistry, and geology, and astronomy, and political economy, and

modern history, and biography, and other branches of knowledge, which periodical literature and occasional lectures and scientific institutions diffuse through the community, I think it a graceful accomplishment, and a suitable, nay, in this day a necessary accomplishment, in the case of educated men. Nor, lastly, am I disparaging or discouraging the thorough acquisition of any one of these studies, or denying that, as far as it goes, such thorough acquisition is a real education of the mind. All I say is, call things by their right names, and do not confuse together ideas which are essentially different. A thorough knowledge of one science and a superficial acquaintance with many, are not the same thing; a smattering of a hundred things or a memory for detail, is not a philosophical or comprehensive view. Recreations are not education; accomplishments are not education. Do not say, the people must be educated, when, after all, you only mean, amused, refreshed, soothed, put into good spirits and good humour, or kept from vicious excesses. I do not say that such amusements, such occupations of mind, are not a great gain; but they are not education. You may as well call drawing and fencing education, as a general knowledge of botany or conchology. Stuffing birds or playing stringed instruments is an elegant pastime, and a resource to the idle, but it is not education; it does not form or cultivate the intellect. Education is a high word; it is the preparation for knowledge, and it is the imparting of knowledge in proportion to that preparation. We require intellectual eyes to know withal, as bodily eyes for sight. We need both objects and organs intellectual; we cannot gain them without setting about it; we cannot gain them in our sleep, or by hap-hazard. The best telescope does not dispense with eyes; the printing press or the lecture room will assist us greatly, but we must be true to ourselves, we must be parties in the work. A University is, according to the usual designation, an Alma Mater, knowing her children one by one, not a foundry, or a mint, or a

treadmill.

9.

I protest to you, Gentlemen, that if I had to choose between a so-called University, which dispensed with residence and tutorial superintendence, and gave its degrees to any person who passed an examination in a wide range of subjects, and a University which had no professors or examinations at all, but merely brought a number of young men together for three or four years, and then sent them away as the University of Oxford is said to have done some sixty years since, if I were asked which of these two methods was the better discipline of the intellect,—mind, I do not say which is *morally* the better, for it is plain that compulsory study must be a good and idleness an intolerable mischief,—but if I must determine which of the two courses was the more successful in training, moulding, enlarging the mind, which sent out men the more fitted for their secular duties, which produced better public men, men of the world, men whose names would descend to posterity, I have no hesitation in giving the preference to that University which did nothing, over that which exacted of its members an acquaintance with every science under the sun. And, paradox as this may seem, still if results be the test of systems, the influence of the public schools and colleges of England, in the course of the last century, at least will bear out one side of the contrast as I have drawn it. What would come, on the other hand, of the ideal systems of education which have fascinated the imagination of this age, could they ever take effect, and whether they would not produce a generation frivolous, narrow-minded, and resourceless, intellectually considered, is a fair subject for debate; but so far is certain, that the Universities and scholastic establishments, to which I refer, and which did little more than bring together first boys and then youths in large numbers, these institutions, with miserable deformities

on the side of morals, with a hollow profession of Christianity, and a heathen code of ethics,—I say, at least they can boast of a succession of heroes and statesmen, of literary men and philosophers, of men conspicuous for great natural virtues, for habits of business, for knowledge of life, for practical judgment, for cultivated tastes, for accomplishments, who have made England what it is,—able to subdue the earth, able to domineer over Catholics.

How is this to be explained? I suppose as follows: When a multitude of young men, keen, open-hearted, sympathetic, and observant, as young men are, come together and freely mix with each other, they are sure to learn one from another, even if there be no one to teach them; the conversation of all is a series of lectures to each, and they gain for themselves new ideas and views, fresh matter of thought, and distinct principles for judging and acting, day by day. An infant has to learn the meaning of the information which its senses convey to it, and this seems to be its employment. It fancies all that the eye presents to it to be close to it, till it actually learns the contrary, and thus by practice does it ascertain the relations and uses of those first elements of knowledge which are necessary for its animal existence. A parallel teaching is necessary for our social being, and it is secured by a large school or a college; and this effect may be fairly called in its own department an enlargement of mind. It is seeing the world on a small field with little trouble; for the pupils or students come from very different places, and with widely different notions, and there is much to generalize, much to adjust, much to eliminate, there are inter-relations to be defined, and conventional rules to be established, in the process, by which the whole assemblage is moulded together, and gains one tone and one character.

Let it be clearly understood, I repeat it, that I am not taking into account moral or religious considerations; I am but saying that that youthful community will constitute a whole, it will embody a specific

idea, it will represent a doctrine, it will administer a code of conduct, and it will furnish principles of thought and action. It will give birth to a living teaching, which in course of time will take the shape of a self-perpetuating tradition, or a *genius loci*, as it is sometimes called; which haunts the home where it has been born, and which imbues and forms, more or less, and one by one, every individual who is successively brought under its shadow. Thus it is that, independent of direct instruction on the part of Superiors, there is a sort of self-education in the academic institutions of Protestant England; a characteristic tone of thought, a recognized standard of judgment is found in them, which, as developed in the individual who is submitted to it, becomes a twofold source of strength to him, both from the distinct stamp it impresses on his mind, and from the bond of union which it creates between him and others,—effects which are shared by the authorities of the place, for they themselves have been educated in it, and at all times are exposed to the influence of its ethical atmosphere. Here then is a real teaching, whatever be its standards and principles, true or false; and it at least tends towards cultivation of the intellect; it at least recognizes that knowledge is something more than a sort of passive reception of scraps and details; it is a something, and it does a something, which never will issue from the most strenuous efforts of a set of teachers, with no mutual sympathies and no intercommunion, of a set of examiners with no opinions which they dare profess, and with no common principles, who are teaching or questioning a set of youths who do not know them, and do not know each other, on a large number of subjects, different in kind, and connected by no wide philosophy, three times a week, or three times a year, or once in three years, in chill lecture-rooms or on a pompous anniversary.

Nay, self-education in any shape, in the most restricted sense, is preferable to a system of teaching which, professing so much, really does so little for the mind. Shut your College gates against the votary of knowledge, throw him back upon the searchings and the efforts of his own mind; he will gain by being spared an entrance into your Babel. Few indeed there are who can dispense with the stimulus and support of instructors, or will do any thing at all, if left to themselves. And fewer still (though such great minds are to be found), who will not, from such unassisted attempts, contract a self-reliance and a self-esteem, which are not only moral evils, but serious hindrances to the attainment of truth. And next to none, perhaps, or none, who will not be reminded from time to time of the disadvantage under which they lie, by their imperfect grounding, by the breaks, deficiencies, and irregularities of their knowledge, by the eccentricity of opinion and the confusion of principle which they exhibit. They will be too often ignorant of what every one knows and takes for granted, of that multitude of small truths which fall upon the mind like dust, impalpable and ever accumulating; they may be unable to converse, they may argue perversely, they may pride themselves on their worst paradoxes or their grossest truisms, they may be full of their own mode of viewing things, unwilling to be put out of their way, slow to enter into the minds of others;—but, with these and whatever other liabilities upon their heads, they are likely to have more thought, more mind, more philosophy, more true enlargement, than those earnest but ill-used persons, who are forced to load their minds with a score of subjects against an examination, who have too much on their hands to indulge themselves in thinking or investigation, who devour premiss and conclusion together with indiscriminate greediness, who hold whole sciences on faith, and commit demonstrations to memory, and who too often, as might be expected, when their period of education is passed, throw up all they have learned in disgust, having

gained nothing really by their anxious labours, except perhaps the habit of application.

Yet such is the better specimen of the fruit of that ambitious system which has of late years been making way among us: for its result on ordinary minds, and on the common run of students, is less satisfactory still; they leave their place of education simply dissipated and relaxed by the multiplicity of subjects, which they have never really mastered, and so shallow as not even to know their shallowness. How much better, I say, is it for the active and thoughtful intellect, where such is to be found, to eschew the College and the University altogether, than to submit to a drudgery so ignoble, a mockery so contumelious! How much more profitable for the independent mind, after the mere rudiments of education, to range through a library at random, taking down books as they meet him, and pursuing the trains of thought which his mother wit suggests! How much healthier to wander into the fields, and there with the exiled Prince to find “tongues in the trees, books in the running brooks!” How much more genuine an education is that of the poor boy in the Poem—a Poem, whether in conception or in execution, one of the most touching in our language—who, not in the wide world, but ranging day by day around his widowed mother’s home, “a dexterous gleaner” in a narrow field, and with only such slender outfit

“as the village school and books a few
Supplied,”

contrived from the beach, and the quay, and the fisher’s boat, and the inn’s fireside, and the tradesman’s shop, and the shepherd’s walk, and the smuggler’s hut, and the mossy moor, and the screaming gulls, and the restless waves, to fashion for himself a philosophy and a poetry of

his own!

But in a large subject, I am exceeding my necessary limits. Gentlemen, I must conclude abruptly; and postpone any summing up of my argument, should that be necessary, to another day.

Discourse VII

Knowledge Viewed in Relation to Professional Skill

1.

I have been insisting, in my two preceding Discourses, first, on the cultivation of the intellect, as an end which may reasonably be pursued for its own sake; and next, on the nature of that cultivation, or what that cultivation consists in. Truth of whatever kind is the proper object of the intellect; its cultivation then lies in fitting it to apprehend and contemplate truth. Now the intellect in its present state, with exceptions which need not here be specified, does not discern truth intuitively, or as a whole. We know, not by a direct and simple vision, not at a glance, but, as it were, by piecemeal and accumulation, by a mental process, by going round an object, by the comparison, the combination, the mutual correction, the continual adaptation, of many partial notions, by the employment, concentration, and joint action of many faculties and exercises of mind. Such a union and concert of the intellectual powers, such an enlargement and development, such a comprehensiveness, is necessarily a matter of training. And again, such a training is a matter of rule; it is not mere application, however exemplary, which introduces the mind to truth, nor the reading many books, nor the getting up many subjects, nor the witnessing many experiments, nor the attending many lectures. All this is short of enough; a man may

have done it all, yet be lingering in the vestibule of knowledge:—he may not realize what his mouth utters; he may not see with his mental eye what confronts him; he may have no grasp of things as they are; or at least he may have no power at all of advancing one step forward of himself, in consequence of what he has already acquired, no power of discriminating between truth and falsehood, of sifting out the grains of truth from the mass, of arranging things according to their real value, and, if I may use the phrase, of building up ideas. Such a power is the result of a scientific formation of mind; it is an acquired faculty of judgment, of clear-sightedness, of sagacity, of wisdom, of philosophical reach of mind, and of intellectual self-possession and repose,—qualities which do not come of mere acquirement. The bodily eye, the organ for apprehending material objects, is provided by nature; the eye of the mind, of which the object is truth, is the work of discipline and habit.

This process of training, by which the intellect, instead of being formed or sacrificed to some particular or accidental purpose, some specific trade or profession, or study or science, is disciplined for its own sake, for the perception of its own proper object, and for its own highest culture, is called Liberal Education; and though there is no one in whom it is carried as far as is conceivable, or whose intellect would be a pattern of what intellects should be made, yet there is scarcely any one but may gain an idea of what real training is, and at least look towards it, and make its true scope and result, not something else, his standard of excellence; and numbers there are who may submit themselves to it, and secure it to themselves in good measure. And to set forth the right standard, and to train according to it, and to help forward all students towards it according to their various capacities, this I conceive to be the business of a University.

Now this is what some great men are very slow to allow; they insist that Education should be confined to some particular and narrow end, and should issue in some definite work, which can be weighed and measured. They argue as if every thing, as well as every person, had its price; and that where there has been a great outlay, they have a right to expect a return in kind. This they call making Education and Instruction “useful,” and “Utility” becomes their watchword. With a fundamental principle of this nature, they very naturally go on to ask, what there is to show for the expense of a University; what is the real worth in the market of the article called “a Liberal Education,” on the supposition that it does not teach us definitely how to advance our manufactures, or to improve our lands, or to better our civil economy; or again, if it does not at once make this man a lawyer, that an engineer, and that a surgeon; or at least if it does not lead to discoveries in chemistry, astronomy, geology, magnetism, and science of every kind.

This question, as might have been expected, has been keenly debated in the present age, and formed one main subject of the controversy, to which I referred in the Introduction to the present Discourses, as having been sustained in the first decade of this century by a celebrated Northern Review on the one hand, and defenders of the University of Oxford on the other. Hardly had the authorities of that ancient seat of learning, waking from their long neglect, set on foot a plan for the education of the youth committed to them, than the representatives of science and literature in the city, which has sometimes been called the Northern Athens, remonstrated, with their gravest arguments and their most brilliant satire, against the direction and shape which the reform was taking. Nothing would content them, but that the University should be set to rights on the basis of the philosophy of Utility; a philosophy, as they seem to have thought, which needed but to be proclaimed in order to be embraced. In truth,

they were little aware of the depth and force of the principles on which the academical authorities were proceeding, and, this being so, it was not to be expected that they would be allowed to walk at leisure over the field of controversy which they had selected. Accordingly they were encountered in behalf of the University by two men of great name and influence in their day, of very different minds, but united, as by Collegiate ties, so in the clear-sighted and large view which they took of the whole subject of Liberal Education; and the defence thus provided for the Oxford studies has kept its ground to this day.

3.

Let me be allowed to devote a few words to the memory of distinguished persons, under the shadow of whose name I once lived, and by whose doctrine I am now profiting. In the heart of Oxford there is a small plot of ground, hemmed in by public thoroughfares, which has been the possession and the home of one Society for above five hundred years. In the old time of Boniface the Eighth and John the Twenty-second, in the age of Scotus and Occam and Dante, before Wiclif or Huss had kindled those miserable fires which are still raging to the ruin of the highest interests of man, an unfortunate king of England, Edward the Second, flying from the field of Bannockburn, is said to have made a vow to the Blessed Virgin to found a religious house in her honour, if he got back in safety. Prompted and aided by his Almoner, he decided on placing this house in the city of Alfred; and the Image of our Lady, which is opposite its entrance-gate, is to this day the token of the vow and its fulfilment. King and Almoner have long been in the dust, and strangers have entered into their inheritance, and their creed has been forgotten, and their holy rites disowned; but day by day a memento is still made in the holy Sacrifice by at least one Catholic Priest, once a member of that College, for the

souls of those Catholic benefactors who fed him there for so many years. The visitor, whose curiosity has been excited by its present fame, gazes perhaps with something of disappointment on a collection of buildings which have with them so few of the circumstances of dignity or wealth. Broad quadrangles, high halls and chambers, ornamented cloisters, stately walks, or umbrageous gardens, a throng of students, ample revenues, or a glorious history, none of these things were the portion of that old Catholic foundation; nothing in short which to the common eye sixty years ago would have given tokens of what it was to be. But it had at that time a spirit working within it, which enabled its inmates to do, amid its seeming insignificance, what no other body in the place could equal; not a very abstruse gift or extraordinary boast, but a rare one, the honest purpose to administer the trust committed to them in such a way as their conscience pointed out as best. So, whereas the Colleges of Oxford are self-electing bodies, the fellows in each perpetually filling up for themselves the vacancies which occur in their number, the members of this foundation determined, at a time when, either from evil custom or from ancient statute, such a thing was not known elsewhere, to throw open their fellowships to the competition of all comers, and, in the choice of associates henceforth, to cast to the winds every personal motive and feeling, family connexion, and friendship, and patronage, and political interest, and local claim, and prejudice, and party jealousy, and to elect solely on public and patriotic grounds. Nay, with a remarkable independence of mind, they resolved that even the table of honours, awarded to literary merit by the University in its new system of examination for degrees, should not fetter their judgment as electors; but that at all risks, and whatever criticism it might cause, and whatever odium they might incur, they would select the men, whoever they were, to be children of their Founder, whom they thought in their consciences to be most likely from their intellectual

and moral qualities to please him, if (as they expressed it) he were still upon earth, most likely to do honour to his College, most likely to promote the objects which they believed he had at heart. Such persons did not promise to be the disciples of a low Utilitarianism; and consequently, as their collegiate reform synchronized with that reform of the Academical body, in which they bore a principal part, it was not unnatural that, when the storm broke upon the University from the North, their Alma Mater, whom they loved, should have found her first defenders within the walls of that small College, which had first put itself into a condition to be her champion.

These defenders, I have said, were two, of whom the more distinguished was the late Dr. Copleston, then a Fellow of the College, successively its Provost, and Protestant Bishop of Llandaff. In that Society, which owes so much to him, his name lives, and ever will live, for the distinction which his talents bestowed on it, for the academical importance to which he raised it, for the generosity of spirit, the liberality of sentiment, and the kindness of heart, with which he adorned it, and which even those who had least sympathy with some aspects of his mind and character could not but admire and love. Men come to their meridian at various periods of their lives; the last years of the eminent person I am speaking of were given to duties which, I am told, have been the means of endearing him to numbers, but which afforded no scope for that peculiar vigour and keenness of mind which enabled him, when a young man, single-handed, with easy gallantry, to encounter and overthrow the charge of three giants of the North combined against him. I believe I am right in saying that, in the progress of the controversy, the most scientific, the most critical, and the most witty, of that literary company, all of them now, as he himself, removed from this visible scene, Professor Playfair, Lord Jeffrey, and the Rev. Sydney Smith, threw together their several efforts into one article of their Review, in order to crush and pound to

dust the audacious controvertist who had come out against them in defence of his own Institutions. To have even contended with such men was a sufficient voucher for his ability, even before we open his pamphlets, and have actual evidence of the good sense, the spirit, the scholar-like taste, and the purity of style, by which they are distinguished.

He was supported in the controversy, on the same general principles, but with more of method and distinctness, and, I will add, with greater force and beauty and perfection, both of thought and of language, by the other distinguished writer, to whom I have already referred, Mr. Davison; who, though not so well known to the world in his day, has left more behind him than the Provost of Oriel, to make his name remembered by posterity. This thoughtful man, who was the admired and intimate friend of a very remarkable person, whom, whether he wish it or not, numbers revere and love as the first author of the subsequent movement in the Protestant Church towards Catholicism, this grave and philosophical writer, whose works I can never look into without sighing that such a man was lost to the Catholic Church, as Dr. Butler before him, by some early bias or some fault of self-education—he, in a review of a work by Mr. Edgeworth on Professional Education, which attracted a good deal of attention in its day, goes leisurely over the same ground, which had already been rapidly traversed by Dr. Copleston, and, though professedly employed upon Mr. Edgeworth, is really replying to the northern critic who had brought that writer's work into notice, and to a far greater author than either of them, who in a past age had argued on the same side.

4.

The author to whom I allude is no other than Locke. That celebrated philosopher has preceded the Edinburgh Reviewers in condemning the ordinary subjects in which boys are instructed at

school, on the ground that they are not needed by them in after life; and before quoting what his disciples have said in the present century, I will refer to a few passages of the master. "'Tis matter of astonishment," he says in his work on Education, "that men of quality and parts should suffer themselves to be so far misled by custom and implicit faith. Reason, if consulted with, would advise, that their children's time should be spent in acquiring what might be *useful* to them, when they come to be men, rather than that their heads should be stuffed with a deal of trash, a great part whereof they usually never do ('tis certain they never need to) think on again as long as they live; and so much of it as does stick by them they are only the worse for."

And so again, speaking of verse-making, he says, "I know not what reason a father can have to wish his son a poet, who does not desire him to *bid defiance to all other callings and business*; which is not yet the worst of the case; for, if he proves a successful rhymers, and gets once the reputation of a wit, I desire it to be considered, what company and places he is likely to spend his time in, nay, and estate too; for it is very seldom seen that any one discovers *mines of gold or silver in Parnassus*. 'Tis a pleasant air, but a barren soil."

In another passage he distinctly limits utility in education to its bearing on the future profession or trade of the pupil, that is, he scorns the idea of any education of the intellect, simply as such. "Can there be any thing more ridiculous," he asks, "than that a father should waste his own money, and his son's time, in setting him to *learn the Roman language*, when at the same time he *designs him for a trade*, wherein he, having no use of Latin, fails not to forget that little which he brought from school, and which 'tis ten to one he abhors for the ill-usage it procured him? Could it be believed, unless we have every where amongst us examples of it, that a child should be forced to learn the rudiments of a language, which *he is never to use in the course of life that he is designed to*, and neglect all the while the writing

a good hand, and casting accounts, which are of great advantage in all conditions of life, and to most trades indispensably necessary?" Nothing of course can be more absurd than to neglect in education those matters which are necessary for a boy's future calling; but the tone of Locke's remarks evidently implies more than this, and is condemnatory of any teaching which tends to the general cultivation of the mind.

Now to turn to his modern disciples. The study of the Classics had been made the basis of the Oxford education, in the reforms which I have spoken of, and the Edinburgh Reviewers protested, after the manner of Locke, that no good could come of a system which was not based upon the principle of Utility.

"Classical Literature," they said, "is the great object at Oxford. Many minds, so employed, have produced many works and much fame in that department; but if all liberal arts and sciences, *useful to human life*, had been taught there, if *some* had dedicated themselves to *chemistry*, *some* to *mathematics*, *some* to *experimental philosophy*, and if *every* attainment had been honoured in the mixt ratio of its difficulty and *utility*, the system of such a University would have been much more valuable, but the splendour of its name something less."

Utility may be made the end of education, in two respects: either as regards the individual educated, or the community at large. In which light do these writers regard it? in the latter. So far they differ from Locke, for they consider the advancement of science as the supreme and real end of a University. This is brought into view in the sentences which follow.

"When a University has been doing *useless* things for a long time, it appears at first degrading to them to be *useful*. A set of Lectures on Political Economy would be discouraged in Oxford, probably despised, probably not permitted. To discuss the inclosure of commons, and to dwell upon imports and exports, to come so near to common life,

would seem to be undignified and contemptible. In the same manner, the Parr or the Bentley of the day would be scandalized, in a University, to be put on a level with the discoverer of a neutral salt; and yet, *what other measure is there of dignity in intellectual labour but usefulness?* And what ought the term University to mean, but a place where every science is taught which is liberal, and at the same time useful to mankind? Nothing would so much tend to bring classical literature within proper bounds as a *steady and invariable appeal to utility* in our appreciation of all human knowledge.... *Looking always to real utility as our guide*, we should see, with equal pleasure, a studious and inquisitive mind arranging the productions of nature, investigating the qualities of bodies, or mastering the difficulties of the learned languages. We should not care whether he was chemist, naturalist, or scholar, because we know it to be as *necessary* that matter should be studied and subdued *to the use of man*, as that taste should be gratified, and imagination inflamed.”

Such then is the enunciation, as far as words go, of the theory of Utility in Education; and both on its own account, and for the sake of the able men who have advocated it, it has a claim on the attention of those whose principles I am here representing. Certainly it is specious to contend that nothing is worth pursuing but what is useful; and that life is not long enough to expend upon interesting, or curious, or brilliant trifles. Nay, in one sense, I will grant it is more than specious, it is true; but, if so, how do I propose directly to meet the objection? Why, Gentlemen, I have really met it already, viz., in laying down, that intellectual culture is its own end; for what has its *end* in itself, has its *use* in itself also. I say, if a Liberal Education consists in the culture of the intellect, and if that culture be in itself a good, here, without going further, is an answer to Locke’s question; for if a healthy body is a good in itself, why is not a healthy intellect? and if a College of Physicians is a useful institution, because it contemplates

bodily health, why is not an Academical Body, though it were simply and solely engaged in imparting vigour and beauty and grasp to the intellectual portion of our nature? And the Reviewers I am quoting seem to allow this in their better moments, in a passage which, putting aside the question of its justice in fact, is sound and true in the principles to which it appeals:—

“The present state of classical education,” they say, “cultivates the *imagination* a great deal too much, and other *habits of mind* a great deal too little, and trains up many young men in a style of elegant imbecility, utterly unworthy of the talents with which nature has endowed them.... The matter of fact is, that a classical scholar of twenty-three or twenty-four is a man principally conversant with works of imagination. His feelings are quick, his fancy lively, and his taste good. Talents for *speculation* and *original inquiry* he has none, nor has he formed the invaluable *habit of pushing things up to their first principles*, or of collecting dry and unamusing facts as the materials for reasoning. All the solid and masculine parts of his *understanding* are left wholly without *cultivation*; he hates the pain of thinking, and suspects every man whose boldness and originality call upon him to defend his opinions and prove his assertions.”

5.

Now, I am not at present concerned with the specific question of classical education; else, I might reasonably question the justice of calling an intellectual discipline, which embraces the study of Aristotle, Thucydides, and Tacitus, which involves Scholarship and Antiquities, *imaginative*; still so far I readily grant, that the cultivation of the “understanding,” of a “talent for speculation and original inquiry,” and of “the habit of pushing things up to their first principles,” is a principal portion of a *good* or *liberal* education. If then the Reviewers consider such cultivation the characteristic of a *useful*

education, as they seem to do in the foregoing passage, it follows, that what they mean by “useful” is just what I mean by “good” or “liberal:” and Locke’s question becomes a verbal one. Whether youths are to be taught Latin or verse-making will depend on the *fact*, whether these studies tend to mental culture; but, however this is determined, so far is clear, that in that mental culture consists what I have called a liberal or non-professional, and what the Reviewers call a useful education.

This is the obvious answer which may be made to those who urge upon us the claims of Utility in our plans of Education; but I am not going to leave the subject here: I mean to take a wider view of it. Let us take “useful,” as Locke takes it, in its proper and popular sense, and then we enter upon a large field of thought, to which I cannot do justice in one Discourse, though to-day’s is all the space that I can give to it. I say, let us take “useful” to mean, not what is simply good, but what *tends* to good, or is the *instrument* of good; and in this sense also, Gentlemen, I will show you how a liberal education is truly and fully a useful, though it be not a professional, education. “Good” indeed means one thing, and “useful” means another; but I lay it down as a principle, which will save us a great deal of anxiety, that, though the useful is not always good, the good is always useful. Good is not only good, but reproductive of good; this is one of its attributes; nothing is excellent, beautiful, perfect, desirable for its own sake, but it overflows, and spreads the likeness of itself all around it. Good is prolific; it is not only good to the eye, but to the taste; it not only attracts us, but it communicates itself; it excites first our admiration and love, then our desire and our gratitude, and that, in proportion to its intenseness and fulness in particular instances. A great good will impart great good. If then the intellect is so excellent a portion of us, and its cultivation so excellent, it is not only beautiful, perfect, admirable, and noble in itself, but in a true and high sense it must be

useful to the possessor and to all around him; not useful in any low, mechanical, mercantile sense, but as diffusing good, or as a blessing, or a gift, or power, or a treasure, first to the owner, then through him to the world. I say then, if a liberal education be good, it must necessarily be useful too.

6.

You will see what I mean by the parallel of bodily health. Health is a good in itself, though nothing came of it, and is especially worth seeking and cherishing; yet, after all, the blessings which attend its presence are so great, while they are so close to it and so redound back upon it and encircle it, that we never think of it except as useful as well as good, and praise and prize it for what it does, as well as for what it is, though at the same time we cannot point out any definite and distinct work or production which it can be said to effect. And so as regards intellectual culture, I am far from denying utility in this large sense as the end of Education, when I lay it down, that the culture of the intellect is a good in itself and its own end; I do not exclude from the idea of intellectual culture what it cannot but be, from the very nature of things; I only deny that we must be able to point out, before we have any right to call it useful, some art, or business, or profession, or trade, or work, as resulting from it, and as its real and complete end. The parallel is exact:—As the body may be sacrificed to some manual or other toil, whether moderate or oppressive, so may the intellect be devoted to some specific profession; and I do not call *this* the culture of the intellect. Again, as some member or organ of the body may be inordinately used and developed, so may memory, or imagination, or the reasoning faculty; and *this* again is not intellectual culture. On the other hand, as the body may be tended, cherished, and exercised with a simple view to its general health, so may the intellect also be generally exercised in

order to its perfect state; and this is its cultivation.

Again, as health ought to precede labour of the body, and as a man in health can do what an unhealthy man cannot do, and as of this health the properties are strength, energy, agility, graceful carriage and action, manual dexterity, and endurance of fatigue, so in like manner general culture of mind is the best aid to professional and scientific study, and educated men can do what illiterate cannot; and the man who has learned to think and to reason and to compare and to discriminate and to analyze, who has refined his taste, and formed his judgment, and sharpened his mental vision, will not indeed at once be a lawyer, or a pleader, or an orator, or a statesman, or a physician, or a good landlord, or a man of business, or a soldier, or an engineer, or a chemist, or a geologist, or an antiquarian, but he will be placed in that state of intellect in which he can take up any one of the sciences or callings I have referred to, or any other for which he has a taste or special talent, with an ease, a grace, a versatility, and a success, to which another is a stranger. In this sense then, and as yet I have said but a very few words on a large subject, mental culture is emphatically *useful*.

If then I am arguing, and shall argue, against Professional or Scientific knowledge as the sufficient end of a University Education, let me not be supposed, Gentlemen, to be disrespectful towards particular studies, or arts, or vocations, and those who are engaged in them. In saying that Law or Medicine is not the end of a University course, I do not mean to imply that the University does not teach Law or Medicine. What indeed can it teach at all, if it does not teach something particular? It teaches *all* knowledge by teaching all *branches* of knowledge, and in no other way. I do but say that there will be this distinction as regards a Professor of Law, or of Medicine, or of Geology, or of Political Economy, in a University and out of it, that out of a University he is in danger of being absorbed and

narrowed by his pursuit, and of giving Lectures which are the Lectures of nothing more than a lawyer, physician, geologist, or political economist; whereas in a University he will just know where he and his science stand, he has come to it, as it were, from a height, he has taken a survey of all knowledge, he is kept from extravagance by the very rivalry of other studies, he has gained from them a special illumination and largeness of mind and freedom and self-possession, and he treats his own in consequence with a philosophy and a resource, which belongs not to the study itself, but to his liberal education.

This then is how I should solve the fallacy, for so I must call it, by which Locke and his disciples would frighten us from cultivating the intellect, under the notion that no education is useful which does not teach us some temporal calling, or some mechanical art, or some physical secret. I say that a cultivated intellect, because it is a good in itself, brings with it a power and a grace to every work and occupation which it undertakes, and enables us to be more useful, and to a greater number. There is a duty we owe to human society as such, to the state to which we belong, to the sphere in which we move, to the individuals towards whom we are variously related, and whom we successively encounter in life; and that philosophical or liberal education, as I have called it, which is the proper function of a University, if it refuses the foremost place to professional interests, does but postpone them to the formation of the citizen, and, while it subserves the larger interests of philanthropy, prepares also for the successful prosecution of those merely personal objects, which at first sight it seems to disparage.

7.

And now, Gentlemen, I wish to be allowed to enforce in detail what I have been saying, by some extracts from the writings to which

I have already alluded, and to which I am so greatly indebted.

“It is an undisputed maxim in Political Economy,” says Dr. Copleston, “that the separation of professions and the division of labour tend to the perfection of every art, to the wealth of nations, to the general comfort and well-being of the community. This principle of division is in some instances pursued so far as to excite the wonder of people to whose notice it is for the first time pointed out. There is no saying to what extent it may not be carried; and the more the powers of each individual are concentrated in one employment, the greater skill and quickness will he naturally display in performing it. But, while he thus contributes more effectually to the accumulation of national wealth, he becomes himself more and more degraded as a rational being. In proportion as his sphere of action is narrowed his mental powers and habits become contracted; and he resembles a subordinate part of some powerful machinery, useful in its place, but insignificant and worthless out of it. If it be necessary, as it is beyond all question necessary, that society should be split into divisions and subdivisions, in order that its several duties may be well performed, yet we must be careful not to yield up ourselves wholly and exclusively to the guidance of this system; we must observe what its evils are, and we should modify and restrain it, by bringing into action other principles, which may serve as a check and counterpoise to the main force.

“There can be no doubt that every art is improved by confining the professor of it to that single study. But, *although the art itself is advanced by this concentration of mind in its service, the individual who is confined to it goes back.* The advantage of the community is nearly in an inverse ratio with his own.

“Society itself requires some other contribution from each individual, besides the particular duties of his profession. And, if no such liberal intercourse be established, it is the common failing of human

nature, to be engrossed with petty views and interests, to underrate the importance of all in which we are not concerned, and to carry our partial notions into cases where they are inapplicable, to act, in short, as so many unconnected units, displacing and repelling one another.

“In the cultivation of literature is found that common link, which, among the higher and middling departments of life, unites the jarring sects and subdivisions into one interest, which supplies common topics, and kindles common feelings, unmixed with those narrow prejudices with which all professions are more or less infected. The knowledge, too, which is thus acquired, expands and enlarges the mind, excites its faculties, and calls those limbs and muscles into freer exercise which, by too constant use in one direction, not only acquire an illiberal air, but are apt also to lose somewhat of their native play and energy. And thus, without directly qualifying a man for any of the employments of life, it enriches and ennobles all. Without teaching him the peculiar business of any one office or calling, it enables him to act his part in each of them with better grace and more elevated carriage; and, if happily planned and conducted, is a main ingredient in that complete and generous education which fits a man ‘to perform justly, skilfully, and magnanimously, all the offices, both private and public, of peace and war.’ ”^[1]

8.

The view of Liberal Education, advocated in these extracts, is expanded by Mr. Davison in the Essay to which I have already referred. He lays more stress on the “usefulness” of Liberal Education in the larger sense of the word than his predecessor in the controversy. Instead of arguing that the Utility of knowledge to the individual varies inversely with its Utility to the public, he chiefly employs himself on the suggestions contained in Dr. Copleston’s last sentences. He shows, first, that a Liberal Education is something far

higher, even in the scale of Utility, than what is commonly called a Useful Education, and next, that it is necessary or useful for the purposes even of that Professional Education which commonly engrosses the title of Useful. The former of these two theses he recommends to us in an argument from which the following passages are selected:—

“It is to take a very contracted view of life,” he says, “to think with great anxiety how persons may be educated to superior skill in their department, comparatively neglecting or excluding the more liberal and enlarged cultivation. In his (Mr. Edgeworth’s) system, the value of every attainment is to be measured by its subserviency to a calling. The specific duties of that calling are exalted at the cost of those free and independent tastes and virtues which come in to sustain the common relations of society, and raise the individual in them. In short, a man is to be usurped by his profession. He is to be clothed in its garb from head to foot. His virtues, his science, and his ideas are all to be put into a gown or uniform, and the whole man to be shaped, pressed, and stiffened, in the exact mould of his technical character. Any interloping accomplishments, or a faculty which cannot be taken into public pay, if they are to be indulged in him at all, must creep along under the cloak of his more serviceable privileged merits. Such is the state of perfection to which the spirit and general tendency of this system would lead us.

“But the professional character is not the only one which a person engaged in a profession has to support. He is not always upon duty. There are services he owes, which are neither parochial, nor forensic, nor military, nor to be described by any such epithet of civil regulation, and yet are in no wise inferior to those that bear these authoritative titles; inferior neither in their intrinsic value, nor their moral import, nor their impression upon society. As a friend, as a companion, as a citizen at large; in the connections of domestic life; in

the improvement and embellishment of his leisure, he has a sphere of action, revolving, if you please, within the sphere of his profession, but not clashing with it; in which if he can show none of the advantages of an improved understanding, whatever may be his skill or proficiency in the other, he is no more than an ill-educated man.

“There is a certain faculty in which all nations of any refinement are great practitioners. It is not taught at school or college as a distinct science; though it deserves that what is taught there should be made to have some reference to it; nor is it endowed at all by the public; everybody being obliged to exercise it for himself in person, which he does to the best of his skill. But in nothing is there a greater difference than in the manner of doing it. The advocates of professional learning will smile when we tell them that this same faculty which we would have encouraged, is simply that of speaking good sense in English, without fee or reward, in common conversation. They will smile when we lay some stress upon it; but in reality it is no such trifle as they imagine. Look into the huts of savages, and see, for there is nothing to listen to, the dismal blank of their stupid hours of silence; their professional avocations of war and hunting are over; and, having nothing to do, they have nothing to say. Turn to improved life, and you find conversation in all its forms the medium of something more than an idle pleasure; indeed, a very active agent in circulating and forming the opinions, tastes, and feelings of a whole people. It makes of itself a considerable affair. Its topics are the most promiscuous—all those which do not belong to any particular province. As for its power and influence, we may fairly say that it is of just the same consequence to a man’s immediate society, how he talks, as how he acts. Now of all those who furnish their share to rational conversation, a mere adept in his own art is universally admitted to be the worst. The sterility and uninterestingness of such a person’s social hours are quite proverbial. Or if he escape being dull, it is only by launching

into ill-timed, learned loquacity. We do not desire of him lectures or speeches; and he has nothing else to give. Among benches he may be powerful; but seated on a chair he is quite another person. On the other hand, we may affirm, that one of the best companions is a man who, to the accuracy and research of a profession, has joined a free excursive acquaintance with various learning, and caught from it the spirit of general observation.”

9.

Having thus shown that a liberal education is a real benefit to the subjects of it, as members of society, in the various duties and circumstances and accidents of life, he goes on, in the next place, to show that, over and above those direct services which might fairly be expected of it, it actually subserves the discharge of those particular functions, and the pursuit of those particular advantages, which are connected with professional exertion, and to which Professional Education is directed.

“We admit,” he observes, “that when a person makes a business of one pursuit, he is in the right way to eminence in it; and that divided attention will rarely give excellence in many. But our assent will go no further. For, to think that the way to prepare a person for excelling in any one pursuit (and that is the only point in hand), is to fetter his early studies, and cramp the first development of his mind, by a reference to the exigencies of that pursuit barely, is a very different notion, and one which, we apprehend, deserves to be exploded rather than received. Possibly a few of the abstract, insulated kinds of learning might be approached in that way. The exceptions to be made are very few, and need not be recited. But for the acquisition of professional and practical ability such maxims are death to it. The main ingredients of that ability are requisite knowledge and cultivated faculties; but, of the two, the latter is by far the chief. A man of well

improved faculties has the command of another's knowledge. A man without them, has not the command of his own.

“Of the intellectual powers, the judgment is that which takes the foremost lead in life. How to form it to the two habits it ought to possess, of exactness and vigour, is the problem. It would be ignorant presumption so much as to hint at any routine of method by which these qualities may with certainty be imparted to every or any understanding. Still, however, we may safely lay it down that they are not to be got ‘by a gatherer of simples,’ but are the combined essence and extracts of many different things, drawn from much varied reading and discipline, first, and observation afterwards. For if there be a single intelligible point on this head, it is that a man who has been trained to think upon one subject or for one subject only, will never be a good judge even in that one: whereas the enlargement of his circle gives him increased knowledge and power in a rapidly increasing ratio. So much do ideas act, not as solitary units, but by grouping and combination; and so clearly do all the things that fall within the proper province of the same faculty of the mind, intertwine with and support each other. Judgment lives as it were by comparison and discrimination. Can it be doubted, then, whether the range and extent of that assemblage of things upon which it is practised in its first essays are of use to its power?

“To open our way a little further on this matter, we will define what we mean by the power of judgment; and then try to ascertain among what kind of studies the improvement of it may be expected at all.

“Judgment does not stand here for a certain homely, useful quality of intellect, that guards a person from committing mistakes to the injury of his fortunes or common reputation; but for that master-principle of business, literature, and talent, which gives him strength in any subject he chooses to grapple with, and enables him to *seize the*

strong point in it. Whether this definition be metaphysically correct or not, it comes home to the substance of our inquiry. It describes the power that every one desires to possess when he comes to act in a profession, or elsewhere; and corresponds with our best idea of a cultivated mind.

“Next, it will not be denied, that in order to do any good to the judgment, the mind must be employed upon such subjects as come within the cognizance of that faculty, and give some real exercise to its perceptions. Here we have a rule of selection by which the different parts of learning may be classed for our purpose. Those which belong to the province of the judgment are religion (in its evidences and interpretation), ethics, history, eloquence, poetry, theories of general speculation, the fine arts, and works of wit. Great as the variety of these large divisions of learning may appear, they are all held in union by two capital principles of connexion. First, they are all quarried out of one and the same great subject of man’s moral, social, and feeling nature. And secondly, they are all under the control (more or less strict) of the same power of moral reason.”

“If these studies,” he continues, “be such as give a direct play and exercise to the faculty of the judgment, then they are the true basis of education for the active and inventive powers, whether destined for a profession or any other use. Miscellaneous as the assemblage may appear, of history, eloquence, poetry, ethics, etc., blended together, they will all conspire in an union of effect. They are necessary mutually to explain and interpret each other. The knowledge derived from them all will amalgamate, and the habits of a mind versed and practised in them by turns will join to produce a richer vein of thought and of more general and practical application than could be obtained of any single one, as the fusion of the metals into Corinthian brass gave the artist his most ductile and perfect material. Might we venture to imitate an author (whom indeed it is much safer to take as

an authority than to attempt to copy), Lord Bacon, in some of his concise illustrations of the comparative utility of the different studies, we should say that history would give fulness, moral philosophy strength, and poetry elevation to the understanding. Such in reality is the natural force and tendency of the studies; but there are few minds susceptible enough to derive from them any sort of virtue adequate to those high expressions. We must be contented therefore to lower our panegyric to this, that a person cannot avoid receiving some infusion and tincture, at least, of those several qualities, from that course of diversified reading. One thing is unquestionable, that the elements of general reason are not to be found fully and truly expressed in any one kind of study; and that he who would wish to know her idiom, must read it in many books.

“If different studies are useful for aiding, they are still more useful for correcting each other; for as they have their particular merits severally, so they have their defects, and the most extensive acquaintance with one can produce only an intellect either too flashy or too jejune, or infected with some other fault of confined reading. History, for example, shows things as they are, that is, the morals and interests of men disfigured and perverted by all their imperfections of passion, folly, and ambition; philosophy strips the picture too much; poetry adorns it too much; the concentrated lights of the three correct the false peculiar colouring of each, and show us the truth. The right mode of thinking upon it is to be had from them taken all together, as every one must know who has seen their united contributions of thought and feeling expressed in the masculine sentiment of our immortal statesman, Mr. Burke, whose eloquence is inferior only to his more admirable wisdom. If any mind improved like his, is to be our instructor, we must go to the fountain head of things as he did, and study not his works but his method; by the one we may become feeble imitators, by the other arrive at some ability of our own. But, as

all biography assures us, he, and every other able thinker, has been formed, not by a parsimonious admeasurement of studies to some definite future object (which is Mr. Edgeworth's maxim), but by taking a wide and liberal compass, and thinking a great deal on many subjects with no better end in view than because the exercise was one which made them more rational and intelligent beings."

10.

But I must bring these extracts to an end. To-day I have confined myself to saying that that training of the intellect, which is best for the individual himself, best enables him to discharge his duties to society. The Philosopher, indeed, and the man of the world differ in their very notion, but the methods, by which they are respectively formed, are pretty much the same. The Philosopher has the same command of matters of thought, which the true citizen and gentleman has of matters of business and conduct. If then a practical end must be assigned to a University course, I say it is that of training good members of society. Its art is the art of social life, and its end is fitness for the world. It neither confines its views to particular professions on the one hand, nor creates heroes or inspires genius on the other. Works indeed of genius fall under no art; heroic minds come under no rule; a University is not a birthplace of poets or of immortal authors, of founders of schools, leaders of colonies, or conquerors of nations. It does not promise a generation of Aristotles or Newtons, of Napoleons or Washingtons, of Raphaels or Shakespeares, though such miracles of nature it has before now contained within its precincts. Nor is it content on the other hand with forming the critic or the experimentalist, the economist or the engineer, though such too it includes within its scope. But a University training is the great ordinary means to a great but ordinary end; it aims at raising the intellectual tone of society, at cultivating the public mind, at purifying

the national taste, at supplying true principles to popular enthusiasm and fixed aims to popular aspiration, at giving enlargement and sobriety to the ideas of the age, at facilitating the exercise of political power, and refining the intercourse of private life. It is the education which gives a man a clear conscious view of his own opinions and judgments, a truth in developing them, an eloquence in expressing them, and a force in urging them. It teaches him to see things as they are, to go right to the point, to disentangle a skein of thought, to detect what is sophistical, and to discard what is irrelevant. It prepares him to fill any post with credit, and to master any subject with facility. It shows him how to accommodate himself to others, how to throw himself into their state of mind, how to bring before them his own, how to influence them, how to come to an understanding with them, how to bear with them. He is at home in any society, he has common ground with every class; he knows when to speak and when to be silent; he is able to converse, he is able to listen; he can ask a question pertinently, and gain a lesson seasonably, when he has nothing to impart himself; he is ever ready, yet never in the way; he is a pleasant companion, and a comrade you can depend upon; he knows when to be serious and when to trifle, and he has a sure tact which enables him to trifle with gracefulness and to be serious with effect. He has the repose of a mind which lives in itself, while it lives in the world, and which has resources for its happiness at home when it cannot go abroad. He has a gift which serves him in public, and supports him in retirement, without which good fortune is but vulgar, and with which failure and disappointment have a charm. The art which tends to make a man all this, is in the object which it pursues as useful as the art of wealth or the art of health, though it is less susceptible of method, and less tangible, less certain, less complete in its result.

[1] Vid. Milton on Education.

Discourse VIII

Knowledge Viewed in Relation to Religion

1.

We shall be brought, Gentlemen, today, to the termination of the investigation which I commenced three Discourses back, and which, I was well aware, from its length, if for no other reason, would make demands upon the patience even of indulgent hearers.

First I employed myself in establishing the principle that Knowledge is its own reward; and I showed that, when considered in this light, it is called Liberal Knowledge, and is the scope of Academical Institutions.

Next, I examined what is meant by Knowledge, when it is said to be pursued for its own sake; and I showed that, in order satisfactorily to fulfil this idea, Philosophy must be its *form*; or, in other words, that its matter must not be admitted into the mind passively, as so much acquirement, but must be mastered and appropriated as a system consisting of parts, related one to the other, and interpretative of one another in the unity of a whole.

Further, I showed that such a philosophical contemplation of the field of Knowledge as a whole, leading, as it did, to an understanding of its separate departments, and an appreciation of them respectively, might in consequence be rightly called an illumination; also, it was rightly called an enlargement of mind, because it was a distinct

location of things one with another, as if in space; while it was moreover its proper cultivation and its best condition, both because it secured to the intellect the sight of things as they are, or of truth, in opposition to fancy, opinion, and theory; and again, because it presupposed and involved the perfection of its various powers.

Such, I said, was that Knowledge, which deserves to be sought for its own sake, even though it promised no ulterior advantage. But, when I had got as far as this, I went farther, and observed that, from the nature of the case, what was so good in itself could not but have a number of external uses, though it did not promise them, simply because it was good; and that it was necessarily the source of benefits to society, great and diversified in proportion to its own intrinsic excellence. Just as in morals, honesty is the best policy, as being profitable in a secular aspect, though such profit is not the measure of its worth, so too as regards what may be called the virtues of the Intellect, their very possession indeed is a substantial good, and is enough, yet still that substance has a shadow, inseparable from it, viz., its social and political usefulness. And this was the subject to which I devoted the preceding Discourse.

One portion of the subject remains:—this intellectual culture, which is so exalted in itself, not only has a bearing upon social and active duties, but upon Religion also. The educated mind may be said to be in a certain sense religious; that is, it has what may be considered a religion of its own, independent of Catholicism, partly co-operating with it, partly thwarting it; at once a defence yet a disturbance to the Church in Catholic countries,—and in countries beyond her pale, at one time in open warfare with her, at another in defensive alliance. The history of Schools and Academies, and of Literature and Science generally, will, I think, justify me in thus speaking. Since, then, my aim in these Discourses is to ascertain the function and the action of a University, viewed in itself, and its

relations to the various instruments of teaching and training which are round about it, my survey of it would not be complete unless I attempted, as I now propose to do, to exhibit its general bearings upon Religion.

2.

Right Reason, that is, Reason rightly exercised, leads the mind to the Catholic Faith, and plants it there, and teaches it in all its religious speculations to act under its guidance. But Reason, considered as a real agent in the world, and as an operative principle in man's nature, with an historical course and with definite results, is far from taking so straight and satisfactory a direction. It considers itself from first to last independent and supreme; it requires no external authority; it makes a religion for itself. Even though it accepts Catholicism, it does not go to sleep; it has an action and development of its own, as the passions have, or the moral sentiments, or the principle of self-interest. Divine grace, to use the language of Theology, does not by its presence supersede nature; nor is nature at once brought into simple concurrence and coalition with grace. Nature pursues its course, now coincident with that of grace, now parallel to it, now across, now divergent, now counter, in proportion to its own imperfection and to the attraction and influence which grace exerts over it. And what takes place as regards other principles of our nature and their developments is found also as regards the Reason. There is, we know, a Religion of enthusiasm, of superstitious ignorance of statecraft; and each has that in it which resembles Catholicism, and that again which contradicts Catholicism. There is the Religion of a warlike people, and of a pastoral people; there is a Religion of rude times, and in like manner there is a Religion of civilized times, of the cultivated intellect, of the philosopher, scholar, and gentleman. This is that Religion of Reason, of which I speak. Viewed in itself, however near it

comes to Catholicism, it is of course simply distinct from it; for Catholicism is one whole, and admits of no compromise or modification. Yet this is to view it in the abstract; in matter of fact, and in reference to individuals, we can have no difficulty in conceiving this philosophical Religion present in a Catholic country, as a spirit influencing men to a certain extent, for good or for bad or for both,—a spirit of the age, which again may be found, as among Catholics, so with still greater sway and success in a country not Catholic, yet specifically the same in such a country as it exists in a Catholic community. The problem then before us to-day, is to set down some portions of the outline, if we can ascertain them, of the Religion of Civilization, and to determine how they lie relatively to those principles, doctrines, and rules, which Heaven has given us in the Catholic Church.

And here again, when I speak of Revealed Truth, it is scarcely necessary to say that I am not referring to the main articles and prominent points of faith, as contained in the Creed. Had I undertaken to delineate a philosophy, which directly interfered with the Creed, I could not have spoken of it as compatible with the profession of Catholicism. The philosophy I speak of, whether it be viewed within or outside the Church, does not necessarily take cognizance of the Creed. Where the country is Catholic, the educated mind takes its articles for granted, by a sort of implicit faith; where it is not, it simply ignores them and the whole subject-matter to which they relate, as not affecting social and political interests. Truths about God's Nature, about His dealings towards the human race, about the Economy of Redemption,—in the one case it humbly accepts them, and passes on; in the other it passes them over, as matters of simple opinion, which never can be decided, and which can have no power over us to make us morally better or worse. I am not speaking then of belief in the great objects of faith, when I speak of Catholicism, but I

am contemplating Catholicism chiefly as a system of pastoral instruction and moral duty; and I have to do with its doctrines mainly as they are subservient to its direction of the conscience and the conduct. I speak of it, for instance, as teaching the ruined state of man; his utter inability to gain Heaven by any thing he can do himself; the moral certainty of his losing his soul if left to himself; the simple absence of all rights and claims on the part of the creature in the presence of the Creator; the illimitable claims of the Creator on the service of the creature; the imperative and obligatory force of the voice of conscience; and the inconceivable evil of sensuality. I speak of it as teaching, that no one gains Heaven except by the free grace of God, or without a regeneration of nature; that no one can please Him without faith; that the heart is the seat both of sin and of obedience; that charity is the fulfilling of the Law; and that incorporation into the Catholic Church is the ordinary instrument of salvation. These are the lessons which distinguish Catholicism as a popular religion, and these are the subjects to which the cultivated intellect will practically be turned;—I have to compare and contrast, not the doctrinal, but the moral and social teaching of Philosophy on the one hand, and Catholicism on the other.

3.

Now, on opening the subject, we see at once a momentous benefit which the philosopher is likely to confer on the pastors of the Church. It is obvious that the first step which they have to effect in the conversion of man and the renovation of his nature, is his rescue from that fearful subjection to sense which is his ordinary state. To be able to break through the meshes of that thralldom, and to disentangle and to disengage its ten thousand holds upon the heart, is to bring it, I might almost say, half way to Heaven. Here, even divine grace, to speak of things according to their appearances, is ordinarily baffled,

and retires, without expedient or resource, before this giant fascination. Religion seems too high and unearthly to be able to exert a continued influence upon us: its effort to rouse the soul, and the soul's effort to co-operate, are too violent to last. It is like holding out the arm at full length, or supporting some great weight, which we manage to do for a time, but soon are exhausted and succumb. Nothing can act beyond its own nature; when then we are called to what is supernatural, though those extraordinary aids from Heaven are given us, with which obedience becomes possible, yet even with them it is of transcendent difficulty. We are drawn down to earth every moment with the ease and certainty of a natural gravitation, and it is only by sudden impulses and, as it were, forcible plunges that we attempt to mount upwards. Religion indeed enlightens, terrifies, subdues; it gives faith, it inflicts remorse, it inspires resolutions, it draws tears, it inflames devotion, but only for the occasion. I repeat, it imparts an inward power which ought to effect more than this; I am not forgetting either the real sufficiency of its aids, nor the responsibility of those in whom they fail. I am not discussing theological questions at all, I am looking at phenomena as they lie before me, and I say that, in matter of fact, the sinful spirit repents, and protests it will never sin again, and for a while is protected by disgust and abhorrence from the malice of its foe. But that foe knows too well that such seasons of repentance are wont to have their end: he patiently waits, till nature faints with the effort of resistance, and lies passive and hopeless under the next access of temptation. What we need then is some expedient or instrument, which at least will obstruct and stave off the approach of our spiritual enemy, and which is sufficiently congenial and level with our nature to maintain as firm a hold upon us as the inducements of sensual gratification. It will be our wisdom to employ nature against itself. Thus sorrow, sickness, and care are providential antagonists to our inward disorders; they come

upon us as years pass on, and generally produce their natural effects on us, in proportion as we are subjected to their influence. These, however, are God's instruments, not ours; we need a similar remedy, which we can make our own, the object of some legitimate faculty, or the aim of some natural affection, which is capable of resting on the mind, and taking up its familiar lodging with it, and engrossing it, and which thus becomes a match for the besetting power of sensuality, and a sort of homœopathic medicine for the disease. Here then I think is the important aid which intellectual cultivation furnishes to us in rescuing the victims of passion and self-will. It does not supply religious motives; it is not the cause or proper antecedent of any thing supernatural; it is not meritorious of heavenly aid or reward; but it does a work, at least *materially* good (as theologians speak), whatever be its real and formal character. It expels the excitements of sense by the introduction of those of the intellect.

This then is the *primâ facie* advantage of the pursuit of Knowledge; it is the drawing the mind off from things which will harm it to subjects which are worthy a rational being; and, though it does not raise it above nature, nor has any tendency to make us pleasing to our Maker, yet is it nothing to substitute what is in itself harmless for what is, to say the least, inexpressibly dangerous? is it a little thing to exchange a circle of ideas which are certainly sinful, for others which are certainly not so? You will say, perhaps, in the words of the Apostle, "Knowledge puffeth up:" and doubtless this mental cultivation, even when it is successful for the purpose for which I am applying it, may be from the first nothing more than the substitution of pride for sensuality. I grant it, I think I shall have something to say on this point presently; but this is not a necessary result, it is but an incidental evil, a danger which may be realized or may be averted, whereas we may in most cases predicate guilt, and guilt of a heinous kind, where the mind is suffered to run wild and indulge its thoughts

without training or law of any kind; and surely to turn away a soul from mortal sin is a good and a gain so far, whatever comes of it. And therefore, if a friend in need is twice a friend, I conceive that intellectual employments, though they do no more than occupy the mind with objects naturally noble or innocent, have a special claim upon our consideration and gratitude.

4.

Nor is this all: Knowledge, the discipline by which it is gained, and the tastes which it forms, have a natural tendency to refine the mind, and to give it an indisposition, simply natural, yet real, nay, more than this, a disgust and abhorrence, towards excesses and enormities of evil, which are often or ordinarily reached at length by those who are not careful from the first to set themselves against what is vicious and criminal. It generates within the mind a fastidiousness, analogous to the delicacy or daintiness which good nurture or a sickly habit induces in respect of food; and this fastidiousness, though arguing no high principle, though no protection in the case of violent temptation, nor sure in its operation, yet will often or generally be lively enough to create an absolute loathing of certain offences, or a detestation and scorn of them as ungentlemanlike, to which ruder natures, nay, such as have far more of real religion in them, are tempted, or even betrayed. Scarcely can we exaggerate the value, in its place, of a safeguard such as this, as regards those multitudes who are thrown upon the open field of the world, or are withdrawn from its eye and from the restraint of public opinion. In many cases, where it exists, sins, familiar to those who are otherwise circumstanced, will not even occur to the mind: in others, the sense of shame and the quickened apprehension of detection will act as a sufficient obstacle to them, when they do present themselves before it. Then, again, the fastidiousness I am speaking of will create a simple hatred of that

miserable tone of conversation which, obtaining as it does in the world, is a constant fuel of evil, heaped up round about the soul: moreover, it will create an irresolution and indecision in doing wrong, which will act as a *remora* till the danger is past away. And though it has no tendency, I repeat, to mend the heart, or to secure it from the dominion in other shapes of those very evils which it repels in the particular modes of approach by which they prevail over others, yet cases may occur when it gives birth, after sins have been committed, to so keen a remorse and so intense a self-hatred, as are even sufficient to cure the particular moral disorder, and to prevent its accesses ever afterwards;—as the spendthrift in the story, who, after gazing on his lost acres from the summit of an eminence, came down a miser, and remained a miser to the end of his days.

And all this holds good in a special way, in an age such as ours, when, although pain of body and mind may be rife as heretofore, yet other counteractions of evil, of a penal character, which are present at other times, are away. In rude and semi-barbarous periods, at least in a climate such as our own, it is the daily, nay, the principal business of the senses, to convey feelings of discomfort to the mind, as far as they convey feelings at all. Exposure to the elements, social disorder and lawlessness, the tyranny of the powerful, and the inroads of enemies, are a stern discipline, allowing brief intervals, or awarding a sharp penance, to sloth and sensuality. The rude food, the scanty clothing, the violent exercise, the vagrant life, the military constraint, the imperfect pharmacy, which now are the trials of only particular classes of the community, were once the lot more or less of all. In the deep woods or the wild solitudes of the medieval era, feelings of religion or superstition were naturally present to the population, which in various ways co-operated with the missionary or pastor, in retaining it in a noble simplicity of manners. But, when in the advancement of society men congregate in towns, and multiply in

contracted spaces, and law gives them security, and art gives them comforts, and good government robs them of courage and manliness, and monotony of life throws them back upon themselves, who does not see that diversion or protection from evil they have none, that vice is the mere reaction of unhealthy toil, and sensual excess the holyday of resourceless ignorance? This is so well understood by the practical benevolence of the day, that it has especially busied itself in plans for supplying the masses of our town population with intellectual and honourable recreations. Cheap literature, libraries of useful and entertaining knowledge, scientific lectureships, museums, zoological collections, buildings and gardens to please the eye and to give repose to the feelings, external objects of whatever kind, which may take the mind off itself, and expand and elevate it in liberal contemplations, these are the human means, wisely suggested, and good as far as they go, for at least parrying the assaults of moral evil, and keeping at bay the enemies, not only of the individual soul, but of society at large.

Such are the instruments by which an age of advanced civilization combats those moral disorders, which Reason as well as Revelation denounces; and I have not been backward to express my sense of their serviceableness to Religion. Moreover, they are but the foremost of a series of influences, which intellectual culture exerts upon our moral nature, and all upon the type of Christianity, manifesting themselves in veracity, probity, equity, fairness, gentleness, benevolence, and amiableness; so much so, that a character more noble to look at, more beautiful, more winning, in the various relations of life and in personal duties, is hardly conceivable, than may, or might be, its result, when that culture is bestowed upon a soil naturally adapted to virtue. If you would obtain a picture for contemplation which may seem to fulfil the ideal, which the Apostle has delineated under the name of charity, in its sweetness and harmony, its generosity, its courtesy to others, and its depreciation of

self, you could not have recourse to a better furnished *studio* than to that of Philosophy, with the specimens of it, which with greater or less exactness are scattered through society in a civilized age. It is enough to refer you, Gentlemen, to the various Biographies and Remains of contemporaries and others, which from time to time issue from the press, to see how striking is the action of our intellectual upon our moral nature, where the moral material is rich, and the intellectual cast is perfect. Individuals will occur to all of us, who deservedly attract our love and admiration, and whom the world almost worships as the work of its own hands. Religious principle, indeed,—that is, faith,—is, to all appearance, simply away; the work is as certainly not supernatural as it is certainly noble and beautiful. This must be insisted on, that the Intellect may have its due; but it also must be insisted on for the sake of conclusions to which I wish to conduct our investigation. The radical difference indeed of this mental refinement from genuine religion, in spite of its seeming relationship, is the very cardinal point on which my present discussion turns; yet, on the other hand, such refinement may readily be assigned to a Christian origin by hasty or distant observers, or by those who view it in a particular light. And as this is the case, I think it advisable, before proceeding with the delineation of its characteristic features, to point out to you distinctly the elementary principles on which its morality is based.

5.

You will bear in mind then, Gentlemen, that I spoke just now of the scorn and hatred which a cultivated mind feels for some kinds of vice, and the utter disgust and profound humiliation which may come over it, if it should happen in any degree to be betrayed into them. Now this feeling may have its root in faith and love, but it may not; there is nothing really religious in it, considered by itself. Conscience indeed is implanted in the breast by nature, but it inflicts upon us fear

as well as shame; when the mind is simply angry with itself and nothing more, surely the true import of the voice of nature and the depth of its intimations have been forgotten, and a false philosophy has misinterpreted emotions which ought to lead to God. Fear implies the transgression of a law, and a law implies a lawgiver and judge; but the tendency of intellectual culture is to swallow up the fear in the self-reproach, and self-reproach is directed and limited to our mere sense of what is fitting and becoming. Fear carries us out of ourselves, whereas shame may act upon us only within the round of our own thoughts. Such, I say, is the danger which awaits a civilized age; such is its besetting sin (not inevitable, God forbid! or we must abandon the use of God's own gifts), but still the ordinary sin of the Intellect; conscience tends to become what is called a moral sense; the command of duty is a sort of taste; sin is not an offence against God, but against human nature.

The less amiable specimens of this spurious religion are those which we meet not unfrequently in my own country. I can use with all my heart the poet's words,

“England, with all thy faults, I love thee still;”

but to those faults no Catholic can be blind. We find there men possessed of many virtues, but proud, bashful, fastidious, and reserved. Why is this? it is because they think and act as if there were really nothing objective in their religion; it is because conscience to them is not the word of a lawgiver, as it ought to be, but the dictate of their own minds and nothing more; it is because they do not look out of themselves, because they do not look through and beyond their own minds to their Maker, but are engrossed in notions of what is due to themselves, to their own dignity and their own consistency. Their

conscience has become a mere self-respect. Instead of doing one thing and then another, as each is called for, in faith and obedience, careless of what may be called the *keeping* of deed with deed, and leaving Him who gives the command to blend the portions of their conduct into a whole, their one object, however unconscious to themselves, is to paint a smooth and perfect surface, and to be able to say to themselves that they have done their duty. When they do wrong, they feel, not contrition, of which God is the object, but remorse, and a sense of degradation. They call themselves fools, not sinners; they are angry and impatient, not humble. They shut themselves up in themselves; it is misery to them to think or to speak of their own feelings; it is misery to suppose that others see them, and their shyness and sensitiveness often become morbid. As to confession, which is so natural to the Catholic, to them it is impossible; unless indeed, in cases where they have been guilty, an apology is due to their own character, is expected of them, and will be satisfactory to look back upon. They are victims of an intense self-contemplation.

There are, however, far more pleasing and interesting forms of this moral malady than that which I have been depicting: I have spoken of the effect of intellectual culture on proud natures; but it will show to greater advantage, yet with as little approximation to religious faith, in amiable and unaffected minds. Observe, Gentlemen, the heresy, as it may be called, of which I speak, is the substitution of a moral sense or taste for conscience in the true meaning of the word; now this error may be the foundation of a character of far more elasticity and grace than ever adorned the persons whom I have been describing. It is especially congenial to men of an imaginative and poetical cast of mind, who will readily accept the notion that virtue is nothing more than the graceful in conduct. Such persons, far from tolerating fear, as a principle, in their apprehension of religious and moral truth, will not be slow to call it simply gloom and superstition.

Rather a philosopher's, a gentleman's religion, is of a liberal and generous character; it is based upon honour; vice is evil, because it is unworthy, despicable, and odious. This was the quarrel of the ancient heathen with Christianity, that, instead of simply fixing the mind on the fair and the pleasant, it intermingled other ideas with them of a sad and painful nature; that it spoke of tears before joy, a cross before a crown; that it laid the foundation of heroism in penance; that it made the soul tremble with the news of Purgatory and Hell; that it insisted on views and a worship of the Deity, which to their minds was nothing else than mean, servile, and cowardly. The notion of an All-perfect, Ever-present God, in whose sight we are less than atoms, and who, while He deigns to visit us, can punish as well as bless, was abhorrent to them; they made their own minds their sanctuary, their own ideas their oracle, and conscience in morals was but parallel to genius in art, and wisdom in philosophy.

6.

Had I room for all that might be said upon the subject, I might illustrate this intellectual religion from the history of the Emperor Julian, the apostate from Christian Truth, the foe of Christian education. He, in whom every Catholic sees the shadow of the future Anti-Christ, was all but the pattern-man of philosophical virtue. Weak points in his character he had, it is true, even in a merely poetical standard; but, take him all in all, and I cannot but recognize in him a specious beauty and nobleness of moral deportment, which combines in it the rude greatness of Fabricius or Regulus with the accomplishments of Pliny or Antoninus. His simplicity of manners, his frugality, his austerity of life, his singular disdain of sensual pleasure, his military heroism, his application to business, his literary diligence, his modesty, his clemency, his accomplishments, as I view them, go to make him one of the most eminent specimens of pagan virtue which

the world has ever seen. Yet how shallow, how meagre, nay, how unamiable is that virtue after all, when brought upon its critical trial by his sudden summons into the presence of his Judge! His last hours form a *unique* passage in history, both as illustrating the helplessness of philosophy under the stern realities of our being, and as being reported to us on the evidence of an eye-witness. "Friends and fellow-soldiers," he said, to use the words of a writer, well fitted, both from his literary tastes and from his hatred of Christianity, to be his panegyrist, "the seasonable period of my departure is now arrived, and I discharge, with the cheerfulness of a ready debtor, the demands of nature.... I die without remorse, as I have lived without guilt. I am pleased to reflect on the innocence of my private life; and I can affirm with confidence that the supreme authority, that emanation of the divine Power, has been preserved in my hands pure and immaculate. ... I now offer my tribute of gratitude to the Eternal Being, who has not suffered me to perish by the cruelty of a tyrant, by the secret dagger of conspiracy, or by the slow tortures of lingering disease. He has given me, in the midst of an honourable career, a splendid and glorious departure from this world, and I hold it equally absurd, equally base, to solicit, or to decline, the stroke of fate...

"He reproved the immoderate grief of the spectators, and conjured them not to disgrace, by unmanly tears, the fate of a prince who in a few moments would be united with Heaven and with the stars. The spectators were silent; and Julian entered into a metaphysical argument with the philosophers Priscus and Maximus on the nature of the soul. The efforts which he made, of mind as well as body, most probably hastened his death. His wound began to bleed with great violence; his respiration was embarrassed by the swelling of the veins; he called for a draught of cold water, and as soon as he had drank it expired without pain, about the hour of midnight."^[1] Such, Gentlemen, is the final exhibition of the Religion of Reason: in

the insensibility of conscience, in the ignorance of the very idea of sin, in the contemplation of his own moral consistency, in the simple absence of fear, in the cloudless self-confidence, in the serene self-possession, in the cold self-satisfaction, we recognize the mere Philosopher.

7.

Gibbon paints with pleasure what, conformably with the sentiments of a godless intellectualism, was an historical fulfilment of his own idea of moral perfection; Lord Shaftesbury had already drawn out that idea in a theoretical form, in his celebrated collection of Treatises which he has called “Characteristics of men, manners, opinions, views;” and it will be a further illustration of the subject before us, if you will allow me, Gentlemen, to make some extracts from this work.

One of his first attacks is directed against the doctrine of reward and punishment, as if it introduced a notion into religion inconsistent with the true apprehension of the beauty of virtue, and with the liberality and nobleness of spirit in which it should be pursued. “Men have not been content,” he says, “to show the natural advantages of honesty and virtue. They have rather lessened these, the better, as they thought, to advance another foundation. They have made virtue so mercenary a thing, and have talked so much of its rewards, that one can hardly tell what there is in it, after all, which can be worth rewarding. For to be *bribed* only or *terrified* into an honest practice, bespeaks little of real honesty or worth.” “If,” he says elsewhere, insinuating what he dare not speak out, “if through hope merely of reward, or fear of punishment, the creature be inclined to do the good he hates, or restrained from doing the ill to which he is not otherwise in the least degree averse there is in this case no virtue or goodness whatever. There is no more of rectitude, piety, or sanctity, in a

creature thus reformed, than there is meekness or gentleness in a tiger strongly chained, or innocence and sobriety in a monkey under the discipline of the whip.... While the will is neither gained, nor the inclination wrought upon, but awe alone prevails and forces obedience, the obedience is servile, and all which is done through it merely servile.” That is, he says that Christianity is the enemy of moral virtue, as influencing the mind by fear of God, not by love of good.

The motives then of hope and fear being, to say the least, put far into the background, and nothing being morally good but what springs simply or mainly from a love of virtue for its own sake, this love-inspiring quality in virtue is its beauty, while a bad conscience is not much more than the sort of feeling which makes us shrink from an instrument out of tune. “Some by mere nature,” he says, “others by art and practice, are masters of an ear in music, an eye in painting, a fancy in the ordinary things of ornament and grace, a judgment in proportions of all kinds, and a general good taste in most of those subjects which make the amusement and delight of the ingenious people of the world. Let such gentlemen as these be as extravagant as they please, or as irregular in their morals, they must at the same time discover their *inconsistency*, live at *variance* with themselves, and in *contradiction* to that principle on which they ground their highest pleasure and entertainment. Of all other *beauties* which virtuosos pursue, poets celebrate, musicians sing, and architects or artists of whatever kind describe or form, the most delightful, the most engaging and pathetic, is that which is drawn from real life and from the passions. Nothing affects the heart like that which is purely from itself, and of its own nature: such as the beauty of sentiments, the grace of actions, the turn of characters, and the *proportions and features* of a human mind. This lesson of philosophy, even a romance, a poem, or a play may teach us.... Let poets or the men of harmony

deny, if they can, this force of nature, or withstand this *moral magic*.... Every one is a virtuoso of a higher or lower degree; every one pursues a grace ... of one kind or other. The *venustum*, the *honestum*, the *decorum* of things will force its way.... The most natural beauty in the world is honesty and moral truth; for all beauty is truth.”

Accordingly, virtue being only one kind of beauty, the principle which determines what is virtuous is, not conscience, but *taste*. “Could we once convince ourselves,” he says, “of what is in itself so evident, viz., that in the very nature of things there must of necessity be the foundation of a right and wrong *taste*, as well in respect of inward character of features as of outward person, behaviour, and action, we should be far more ashamed of ignorance and wrong judgment in the former than in the latter of these subjects.... One who aspires to the character of a man of breeding and politeness is careful to form his judgment of arts and sciences upon right models of perfection.... He takes particular care to turn his eye from every thing which is gaudy, luscious, and of false taste. Nor is he less careful to turn his ear from every sort of music, besides that which is of the best manner and truest harmony. ’Twere to be wished we had the same regard to a *right taste in life and manners*.... If civility and humanity be a taste; if brutality, insolence, riot, be in the same manner a taste, ... who would not endeavour to force nature as well in this respect as in what relates to a taste or judgment in other arts and sciences?”

Sometimes he distinctly contrasts this taste with principle and conscience, and gives it the preference over them. “After all,” he says, “*’tis not merely what we call principle*, but a *taste*, which governs men. They may think for certain, ‘This is right,’ or ‘that wrong;’ they may believe ‘this is a virtue,’ or ‘that a sin;’ ‘this is punishable by man,’ or ‘that by God;’ yet if the savour of things lies cross to honesty, if the fancy be florid, and the appetite high towards the subaltern beauties and lower orders of worldly symmetries and proportions, the conduct

will infallibly turn this latter way.” Thus, somewhat like a Jansenist, he makes the superior pleasure infallibly conquer, and implies that, neglecting principle, we have but to train the taste to a kind of beauty higher than sensual. He adds: “*Even conscience*, I fear, such as is owing to religious discipline, will make but a slight figure, when this taste is set amiss.”

And hence the well-known doctrine of this author, that ridicule is the test of truth; for truth and virtue being beauty, and falsehood and vice deformity, and the feeling inspired by deformity being that of derision, as that inspired by beauty is admiration, it follows that vice is not a thing to weep about, but to laugh at. “Nothing is ridiculous,” he says, “but what is deformed; nor is any thing proof against raillery but what is handsome and just. And therefore ’tis the hardest thing in the world to deny fair honesty the use of this weapon, which can never bear an edge against herself, and bears against every thing contrary.”

And hence again, conscience, which intimates a Law-giver, being superseded by a moral taste or sentiment, which has no sanction beyond the constitution of our nature, it follows that our great rule is to contemplate ourselves, if we would gain a standard of life and morals. Thus he has entitled one of his Treatises a “Soliloquy,” with the motto, “*Nec te quæsiveris extra;*” and he observes, “The chief interest of ambition, avarice, corruption, and every sly insinuating vice, is to prevent this interview and familiarity of discourse, which is consequent upon close retirement and inward recess. ’Tis the grand artifice of villainy and lewdness, *as well as of superstition and bigotry*, to put us upon terms of greater distance and formality with ourselves, and evade our *proving* method of soliloquy.... A passionate lover, whatever solitude he may affect, can never be truly by himself.... ’Tis the same reason which keeps the imaginary saint or mystic from being capable of this entertainment. Instead of looking narrowly into his

own nature and mind, that he may be no longer a mystery to himself, he is taken up with *the contemplation of other mysterious natures*, which he never can explain or comprehend.”

8.

Taking these passages as specimens of what I call the Religion of Philosophy, it is obvious to observe that there is no doctrine contained in them which is not in a certain sense true; yet, on the other hand, that almost every statement is perverted and made false, because it is not the whole truth. They are exhibitions of truth under one aspect, and therefore insufficient; conscience is most certainly a moral sense, but it is more; vice again, is a deformity, but it is worse. Lord Shaftesbury may insist, if he will, that simple and solitary fear cannot effect a moral conversion, and we are not concerned to answer him; but he will have a difficulty in proving that any real conversion follows from a doctrine which makes virtue a mere point of good taste, and vice vulgar and ungentlemanlike.

Such a doctrine is essentially superficial, and such will be its effects. It has no better measure of right and wrong than that of visible beauty and tangible fitness. Conscience indeed inflicts an acute pang, but that pang, forsooth, is irrational, and to reverence it is an illiberal superstition. But, if we will make light of what is deepest within us, nothing is left but to pay homage to what is more upon the surface. To *seem* becomes to *be*; what looks fair will be good, what causes offence will be evil; virtue will be what pleases, vice what pains. As well may we measure virtue by utility as by such a rule. Nor is this an imaginary apprehension; we all must recollect the celebrated sentiment into which a great and wise man was betrayed, in the glowing eloquence of his valediction to the spirit of chivalry. “It is gone,” cries Mr. Burke; “that sensibility of principle, that chastity of honour, which felt a stain like a wound; which inspired courage, while

it mitigated ferocity; which ennobled whatever it touched, and under which *vice lost half its evil by losing all its grossness.*" In the last clause of this beautiful sentence we have too apt an illustration of the ethical temperament of a civilized age. It is detection, not the sin, which is the crime; private life is sacred, and inquiry into it is intolerable; and decency is virtue. Scandals, vulgarities, whatever shocks, whatever disgusts, are offences of the first order. Drinking and swearing, squalid poverty, improvidence, laziness, slovenly disorder, make up the idea of profligacy: poets may say any thing, however wicked, with impunity; works of genius may be read without danger or shame, whatever their principles; fashion, celebrity, the beautiful, the heroic, will suffice to force any evil upon the community. The splendours of a court, and the charms of good society, wit, imagination, taste, and high breeding, the *prestige* of rank, and the resources of wealth, are a screen, an instrument, and an apology for vice and irreligion. And thus at length we find, surprising as the change may be, that that very refinement of Intellectualism, which began by repelling sensuality, ends by excusing it. Under the shadow indeed of the Church, and in its due development, Philosophy does service to the cause of morality; but, when it is strong enough to have a will of its own, and is lifted up with an idea of its own importance, and attempts to form a theory, and to lay down a principle, and to carry out a system of ethics, and undertakes the moral education of the man, then it does but abet evils to which at first it seemed instinctively opposed. True Religion is slow in growth, and, when once planted, is difficult of dislodgement; but its intellectual counterfeit has no root in itself: it springs up suddenly, it suddenly withers. It appeals to what is in nature, and it falls under the dominion of the old Adam. Then, like dethroned princes, it keeps up a state and majesty, when it has lost the real power. Deformity is its abhorrence; accordingly, since it cannot dissuade men from vice, therefore in order to escape the sight of its deformity, it embellishes it.

It “skins and films the ulcerous place,” which it cannot probe or heal,

“Whiles rank corruption, mining all within, Infects
unseen.”

And from this shallowness of philosophical Religion it comes to pass that its disciples seem able to fulfil certain precepts of Christianity more readily and exactly than Christians themselves. St. Paul, as I have said, gives us a pattern of evangelical perfection; he draws the Christian character in its most graceful form, and its most beautiful hues. He discourses of that charity which is patient and meek, humble and single-minded, disinterested, contented, and persevering. He tells us to prefer each the other before himself, to give way to each other, to abstain from rude words and evil speech, to avoid self-conceit, to be calm and grave, to be cheerful and happy, to observe peace with all men, truth and justice, courtesy and gentleness, all that is modest, amiable, virtuous, and of good repute. Such is St. Paul's exemplar of the Christian in his external relations; and, I repeat, the school of the world seems to send out living copies of this typical excellence with greater success than the Church. At this day the “gentleman” is the creation, not of Christianity, but of civilization. But the reason is obvious. The world is content with setting right the surface of things; the Church aims at regenerating the very depths of the heart. She ever begins with the beginning; and, as regards the multitude of her children, is never able to get beyond the beginning, but is continually employed in laying the foundation. She is engaged with what is essential, as previous and as introductory to the ornamental and the attractive. She is curing men and keeping them clear of mortal sin; she is “treating of justice and chastity, and the judgment to come:” she is insisting on faith and hope, and devotion,

and honesty, and the elements of charity; and has so much to do with precept, that she almost leaves it to inspirations from Heaven to suggest what is of counsel and perfection. She aims at what is necessary rather than at what is desirable. She is for the many as well as for the few. She is putting souls in the way of salvation, that they may then be in a condition, if they shall be called upon, to aspire to the heroic, and to attain the full proportions, as well as the rudiments, of the beautiful.

9.

Such is the method, or the policy (so to call it), of the Church; but Philosophy looks at the matter from a very different point of view: what have Philosophers to do with the terror of judgment or the saving of the soul? Lord Shaftesbury calls the former a sort of “panic fear.” Of the latter he scoffingly complains that “the saving of souls is now the heroic passion of exalted spirits.” Of course he is at liberty, on his principles, to pick and choose out of Christianity what he will; he discards the theological, the mysterious, the spiritual; he makes selection of the morally or esthetically beautiful. To him it matters not at all that he begins his teaching where he should end it; it matters not that, instead of planting the tree, he merely crops its flowers for his banquet; he only aims at the present life, his philosophy dies with him; if his flowers do but last to the end of his revel, he has nothing more to seek. When night comes, the withered leaves may be mingled with his own ashes; he and they will have done their work, he and they will be no more. Certainly, it costs little to make men virtuous on conditions such as these; it is like teaching them a language or an accomplishment, to write Latin or to play on an instrument,—the profession of an artist, not the commission of an Apostle.

This embellishment of the exterior is almost the beginning and the end of philosophical morality. This is why it aims at being modest

rather than humble; this is how it can be proud at the very time that it is unassuming. To humility indeed it does not even aspire; humility is one of the most difficult of virtues both to attain and to ascertain. It lies close upon the heart itself, and its tests are exceedingly delicate and subtle. Its counterfeits abound; however, we are little concerned with them here, for, I repeat, it is hardly professed even by name in the code of ethics which we are reviewing. As has been often observed, ancient civilization had not the idea, and had no word to express it: or rather, it had the idea, and considered it a defect of mind, not a virtue, so that the word which denoted it conveyed a reproach. As to the modern world, you may gather its ignorance of it by its perversion of the somewhat parallel term “condescension.” Humility or condescension, viewed as a virtue of conduct, may be said to consist, as in other things, so in our placing ourselves in our thoughts on a level with our inferiors; it is not only a voluntary relinquishment of the privileges of our own station, but an actual participation or assumption of the condition of those to whom we stoop. This is true humility, to feel and to behave as if we were low; not, to cherish a notion of our importance, while we affect a low position. Such was St. Paul’s humility, when he called himself “the least of the saints;” such the humility of those many holy men who have considered themselves the greatest of sinners. It is an abdication, as far as their own thoughts are concerned, of those prerogatives or privileges to which others deem them entitled. Now it is not a little instructive to contrast with this idea, Gentlemen,—with this theological meaning of the word “condescension,”—its proper English sense; put them in juxtaposition, and you will at once see the difference between the world’s humility and the humility of the Gospel. As the world uses the word, “condescension” is a stooping indeed of the person, but a bending forward, unattended with any the slightest effort to leave by a single inch the seat in which it is so firmly

established. It is the act of a superior, who protests to himself, while he commits it, that he is superior still, and that he is doing nothing else but an act of grace towards those on whose level, in theory, he is placing himself. And this is the nearest idea which the philosopher can form of the virtue of self-abasement; to do more than this is to his mind a meanness or an hypocrisy, and at once excites his suspicion and disgust. What the world is, such it has ever been; we know the contempt which the educated pagans had for the martyrs and confessors of the Church; and it is shared by the anti-Catholic bodies of this day.

Such are the ethics of Philosophy, when faithfully represented; but an age like this, not pagan, but professedly Christian, cannot venture to reprobate humility in set terms, or to make a boast of pride. Accordingly, it looks out for some expedient by which it may blind itself to the real state of the case. Humility, with its grave and self-denying attributes, it cannot love; but what is more beautiful, what more winning, than modesty? what virtue, at first sight, simulates humility so well? though what in fact is more radically distinct from it? In truth, great as is its charm, modesty is not the deepest or the most religious of virtues. Rather it is the advanced guard or sentinel of the soul militant, and watches continually over its nascent intercourse with the world about it. It goes the round of the senses; it mounts up into the countenance; it protects the eye and ear; it reigns in the voice and gesture. Its province is the outward deportment, as other virtues have relation to matters theological, others to society, and others to the mind itself. And being more superficial than other virtues, it is more easily disjoined from their company; it admits of being associated with principles or qualities naturally foreign to it, and is often made the cloak of feelings or ends for which it was never given to us. So little is it the necessary index of humility, that it is even compatible with pride. The better for the

purpose of Philosophy; humble it cannot be, so forthwith modesty becomes its humility.

Pride, under such training, instead of running to waste in the education of the mind, is turned to account; it gets a new name; it is called self-respect; and ceases to be the disagreeable, uncompanionable quality which it is in itself. Though it be the motive principle of the soul, it seldom comes to view; and when it shows itself, then delicacy and gentleness are its attire, and good sense and sense of honour direct its motions. It is no longer a restless agent, without definite aim; it has a large field of exertion assigned to it, and it subserves those social interests which it would naturally trouble. It is directed into the channel of industry, frugality, honesty, and obedience; and it becomes the very staple of the religion and morality held in honour in a day like our own. It becomes the safeguard of chastity, the guarantee of veracity, in high and low; it is the very household god of society, as at present constituted, inspiring neatness and decency in the servant girl, propriety of carriage and refined manners in her mistress, uprightness, manliness, and generosity in the head of the family. It diffuses a light over town and country; it covers the soil with handsome edifices and smiling gardens; it tills the field, it stocks and embellishes the shop. It is the stimulating principle of providence on the one hand, and of free expenditure on the other; of an honourable ambition, and of elegant enjoyment. It breathes upon the face of the community, and the hollow sepulchre is forthwith beautiful to look upon.

Refined by the civilization which has brought it into activity, this self-respect infuses into the mind an intense horror of exposure, and a keen sensitiveness of notoriety and ridicule. It becomes the enemy of extravagances of any kind; it shrinks from what are called scenes; it has no mercy on the mock-heroic, on pretence or egotism, on verbosity in language, or what is called prosiness in conversation. It

detests gross adulation; not that it tends at all to the eradication of the appetite to which the flatterer ministers, but it sees the absurdity of indulging it, it understands the annoyance thereby given to others, and if a tribute must be paid to the wealthy or the powerful, it demands greater subtlety and art in the preparation. Thus vanity is changed into a more dangerous self-conceit, as being checked in its natural eruption. It teaches men to suppress their feelings, and to control their tempers, and to mitigate both the severity and the tone of their judgments. As Lord Shaftesbury would desire, it prefers playful wit and satire in putting down what is objectionable, as a more refined and good-natured, as well as a more effectual method, than the expedient which is natural to uneducated minds. It is from this impatience of the tragic and the bombastic that it is now quietly but energetically opposing itself to the unchristian practice of duelling, which it brands as simply out of taste, and as the remnant of a barbarous age; and certainly it seems likely to effect what Religion has aimed at abolishing in vain.

10.

Hence it is that it is almost a definition of a gentleman to say he is one who never inflicts pain. This description is both refined and, as far as it goes, accurate. He is mainly occupied in merely removing the obstacles which hinder the free and unembarrassed action of those about him; and he concurs with their movements rather than takes the initiative himself. His benefits may be considered as parallel to what are called comforts or conveniences in arrangements of a personal nature: like an easy chair or a good fire, which do their part in dispelling cold and fatigue, though nature provides both means of rest and animal heat without them. The true gentleman in like manner carefully avoids whatever may cause a jar or a jolt in the minds of those with whom he is cast;—all clashing of opinion, or collision of

feeling, all restraint, or suspicion, or gloom, or resentment; his great concern being to make every one at their ease and at home. He has his eyes on all his company; he is tender towards the bashful, gentle towards the distant, and merciful towards the absurd; he can recollect to whom he is speaking; he guards against unseasonable allusions, or topics which may irritate; he is seldom prominent in conversation, and never wearisome. He makes light of favours while he does them, and seems to be receiving when he is conferring. He never speaks of himself except when compelled, never defends himself by a mere retort, he has no ears for slander or gossip, is scrupulous in imputing motives to those who interfere with him, and interprets every thing for the best. He is never mean or little in his disputes, never takes unfair advantage, never mistakes personalities or sharp sayings for arguments, or insinuates evil which he dare not say out. From a long-sighted prudence, he observes the maxim of the ancient sage, that we should ever conduct ourselves towards our enemy as if he were one day to be our friend. He has too much good sense to be affronted at insults, he is too well employed to remember injuries, and too indolent to bear malice. He is patient, forbearing, and resigned, on philosophical principles; he submits to pain, because it is inevitable, to bereavement, because it is irreparable, and to death, because it is his destiny. If he engages in controversy of any kind, his disciplined intellect preserves him from the blundering discourtesy of better, perhaps, but less educated minds; who, like blunt weapons, tear and hack instead of cutting clean, who mistake the point in argument, waste their strength on trifles, misconceive their adversary, and leave the question more involved than they find it. He may be right or wrong in his opinion, but he is too clear-headed to be unjust; he is as simple as he is forcible, and as brief as he is decisive. Nowhere shall we find greater candour, consideration, indulgence: he throws himself into the minds of his opponents, he accounts for their mistakes. He

knows the weakness of human reason as well as its strength, its province and its limits. If he be an unbeliever, he will be too profound and large-minded to ridicule religion or to act against it; he is too wise to be a dogmatist or fanatic in his infidelity. He respects piety and devotion; he even supports institutions as venerable, beautiful, or useful, to which he does not assent; he honours the ministers of religion, and it contents him to decline its mysteries without assailing or denouncing them. He is a friend of religious toleration, and that, not only because his philosophy has taught him to look on all forms of faith with an impartial eye, but also from the gentleness and effeminacy of feeling, which is the attendant on civilization.

Not that he may not hold a religion too, in his own way, even when he is not a Christian. In that case his religion is one of imagination and sentiment; it is the embodiment of those ideas of the sublime, majestic, and beautiful, without which there can be no large philosophy. Sometimes he acknowledges the being of God, sometimes he invests an unknown principle or quality with the attributes of perfection. And this deduction of his reason, or creation of his fancy, he makes the occasion of such excellent thoughts, and the starting-point of so varied and systematic a teaching, that he even seems like a disciple of Christianity itself. From the very accuracy and steadiness of his logical powers, he is able to see what sentiments are consistent in those who hold any religious doctrine at all, and he appears to others to feel and to hold a whole circle of theological truths, which exist in his mind no otherwise than as a number of deductions.

Such are some of the lineaments of the ethical character, which the cultivated intellect will form, apart from religious principle. They are seen within the pale of the Church and without it, in holy men, and in profligate; they form the *beau-ideal* of the world; they partly assist and partly distort the development of the Catholic. They may

subserve the education of a St. Francis de Sales or a Cardinal Pole; they may be the limits of the contemplation of a Shaftesbury or a Gibbon. Basil and Julian were fellow-students at the schools of Athens; and one became the Saint and Doctor of the Church, the other her scoffing and relentless foe.

[1] Gibbon, Hist., ch. 24.

Discourse IX

Duties of the Church Towards Knowledge

1.

I have to congratulate myself, Gentlemen, that at length I have accomplished, with whatever success, the difficult and anxious undertaking to which I have been immediately addressing myself. Difficult and anxious it has been in truth, though the main subject of University Teaching has been so often and so ably discussed already; for I have attempted to follow out a line of thought more familiar to Protestants just now than to Catholics, upon Catholic grounds. I declared my intention, when I opened the subject, of treating it as a philosophical and practical, rather than as a theological question, with an appeal to common sense, not to ecclesiastical rules; and for this very reason, while my argument has been less ambitious, it has been deprived of the lights and supports which another mode of handling it would have secured.

No anxiety, no effort of mind is more severe than his, who in a difficult matter has it seriously at heart to investigate without error and to instruct without obscurity; as to myself, if the past discussion has at any time tried the patience of the kind persons who have given it their attention, I can assure them that on no one can it have inflicted so great labour and fatigue as on myself. Happy they who are engaged in provinces of thought, so familiarly traversed and so

thoroughly explored, that they see every where the footprints, the paths, the landmarks, and the remains of former travellers, and can never step wrong; but for myself, Gentlemen, I have felt like a navigator on a strange sea, who is out of sight of land, is surprised by night, and has to trust mainly to the rules and instruments of his science for reaching the port. The everlasting mountains, the high majestic cliffs, of the opposite coast, radiant in the sunlight, which are our ordinary guides, fail us in an excursion such as this; the lessons of antiquity, the determinations of authority, are here rather the needle, chart, and plummet, than great objects, with distinct and continuous outlines and completed details, which stand up and confront and occupy our gaze, and relieve us from the tension and suspense of our personal observation. And thus, in spite of the pains we may take to consult others and avoid mistakes, it is not till the morning comes and the shore greets us, and we see our vessel making straight for harbour, that we relax our jealous watch, and consider anxiety irrational. Such in a measure has been my feeling in the foregoing inquiry; in which indeed I have been in want neither of authoritative principles nor distinct precedents, but of treatises *in extenso* on the subject on which I have written,—the finished work of writers, who, by their acknowledged judgment and erudition, might furnish me for my private guidance with a running instruction on each point which successively came under review.

I have spoken of the arduousness of my “immediate” undertaking, because what I have been attempting has been of a preliminary nature, not contemplating the duties of the Church towards a University, nor the characteristics of a University which is Catholic, but inquiring what a University is, what is its aim, what its nature, what its bearings. I have accordingly laid down first, that all branches of knowledge are, at least implicitly, the subject-matter of its teaching; that these branches are not isolated and independent one of another,

but form together a whole or system; that they run into each other, and complete each other, and that, in proportion to our view of them as a whole, is the exactness and trustworthiness of the knowledge which they separately convey; that the process of imparting knowledge to the intellect in this philosophical way is its true culture; that such culture is a good in itself; that the knowledge which is both its instrument and result is called Liberal Knowledge; that such culture, together with the knowledge which effects it, may fitly be sought for its own sake; that it is, however, in addition, of great secular utility, as constituting the best and highest formation of the intellect for social and political life; and lastly, that, considered in a religious aspect, it concurs with Christianity a certain way, and then diverges from it; and consequently proves in the event, sometimes its serviceable ally, sometimes, from its very resemblance to it, an insidious and dangerous foe.

Though, however, these Discourses have only professed to be preliminary, being directed to the investigation of the object and nature of the Education which a University professes to impart, at the same time I do not like to conclude without making some remarks upon the duties of the Church towards it, or rather on the ground of those duties. If the Catholic Faith is true, a University cannot exist externally to the Catholic pale, for it cannot teach Universal Knowledge if it does not teach Catholic theology. This is certain; but still, though it had ever so many theological Chairs, that would not suffice to make it a Catholic University; for theology would be included in its teaching only as a branch of knowledge, only as one out of many constituent portions, however important a one, of what I have called Philosophy. Hence a direct and active jurisdiction of the Church over it and in it is necessary, lest it should become the rival of the Church with the community at large in those theological matters which to the Church are exclusively committed,—acting as the

representative of the intellect, as the Church is the representative of the religious principle. The illustration of this proposition shall be the subject of my concluding Discourse.

2.

I say then, that, even though the case could be so that the whole system of Catholicism was recognized and professed, without the direct presence of the Church, still this would not at once make such a University a Catholic Institution, nor be sufficient to secure the due weight of religious considerations in its philosophical studies. For it may easily happen that a particular bias or drift may characterize an Institution, which no rules can reach, nor officers remedy, nor professions or promises counteract. We have an instance of such a case in the Spanish Inquisition;—here was a purely Catholic establishment, devoted to the maintenance, or rather the ascendancy of Catholicism, keenly zealous for theological truth, the stern foe of every anti-Catholic idea, and administered by Catholic theologians; yet it in no proper sense belonged to the Church. It was simply and entirely a State institution, it was an expression of that very Church-and-King spirit which has prevailed in these islands; nay, it was an instrument of the State, according to the confession of the acutest Protestant historians, in its warfare against the Holy See. Considered "*materially*," it was nothing but Catholic; but its spirit and form were earthly and secular, in spite of whatever faith and zeal and sanctity and charity were to be found in the individuals who from time to time had a share in its administration. And in like manner, it is no sufficient security for the Catholicity of a University, even that the whole of Catholic theology should be professed in it, unless the Church breathes her own pure and unearthly spirit into it, and fashions and moulds its organization, and watches over its teaching, and knits together its pupils, and superintends its action. The Spanish

Inquisition came into collision with the supreme Catholic authority, and that, from the fact that its immediate end was of a secular character; and for the same reason, whereas Academical Institutions (as I have been so long engaged in showing) are in their very nature directed to social, national, temporal objects in the first instance, and since they are living and energizing bodies, if they deserve the name of University at all, and of necessity have some one formal and definite ethical character, good or bad, and do of a certainty imprint that character on the individuals who direct and who frequent them, it cannot but be that, if left to themselves, they will, in spite of their profession of Catholic Truth, work out results more or less prejudicial to its interests.

Nor is this all: such Institutions may become hostile to Revealed Truth, in consequence of the circumstances of their teaching as well as of their end. They are employed in the pursuit of Liberal Knowledge, and Liberal Knowledge has a special tendency, not necessary or rightful, but a tendency in fact, when cultivated by beings such as we are, to impress us with a mere philosophical theory of life and conduct, in the place of Revelation. I have said much on this subject already. Truth has two attributes—beauty and power; and while Useful Knowledge is the possession of truth as powerful, Liberal Knowledge is the apprehension of it as beautiful. Pursue it, either as beauty or as power, to its furthest extent and its true limit, and you are led by either road to the Eternal and Infinite, to the intimations of conscience and the announcements of the Church. Satisfy yourself with what is only visibly or intelligibly excellent, as you are likely to do, and you will make present utility and natural beauty the practical test of truth, and the sufficient object of the intellect. It is not that you will at once reject Catholicism, but you will measure and proportion it by an earthly standard. You will throw its highest and most momentous disclosures into the background, you will deny its

principles, explain away its doctrines, re-arrange its precepts, and make light of its practices, even while you profess it. Knowledge, viewed as Knowledge, exerts a subtle influence in throwing us back on ourselves, and making us our own centre, and our minds the measure of all things. This then is the tendency of that Liberal Education, of which a University is the school, viz., to view Revealed Religion from an aspect of its own,—to fuse and recast it,—to tune it, as it were, to a different key, and to reset its harmonies,—to circumscribe it by a circle which unwarrantably amputates here, and unduly develops there; and all under the notion, conscious or unconscious, that the human intellect, self-educated and self-supported, is more true and perfect in its ideas and judgments than that of Prophets and Apostles, to whom the sights and sounds of Heaven were immediately conveyed. A sense of propriety, order, consistency, and completeness gives birth to a rebellious stirring against miracle and mystery, against the severe and the terrible.

This Intellectualism first and chiefly comes into collision with precept, then with doctrine, then with the very principle of dogmatism;—a perception of the Beautiful becomes the substitute for faith. In a country which does not profess the faith, it at once runs, if allowed, into scepticism or infidelity; but even within the pale of the Church, and with the most unqualified profession of her Creed, it acts, if left to itself, as an element of corruption and debility. Catholicism, as it has come down to us from the first, seems to be mean and illiberal; it is a mere popular religion; it is the religion of illiterate ages or servile populations or barbarian warriors; it must be treated with discrimination and delicacy, corrected, softened, improved, if it is to satisfy an enlightened generation. It must be stereotyped as the patron of arts, or the pupil of speculation, or the protégé of science; it must play the literary academician, or the empirical philanthropist, or the political partisan; it must keep up with the age; some or other

expedient it must devise, in order to explain away, or to hide, tenets under which the intellect labours and of which it is ashamed—its doctrine, for instance, of grace, its mystery of the Godhead, its preaching of the Cross, its devotion to the Queen of Saints, or its loyalty to the Apostolic See. Let this spirit be freely evolved out of that philosophical condition of mind, which in former Discourses I have so highly, so justly extolled, and it is impossible but, first indifference, then laxity of belief, then even heresy will be the successive results.

Here then are two injuries which Revelation is likely to sustain at the hands of the Masters of human reason unless the Church, as in duty bound, protects the sacred treasure which is in jeopardy. The first is a simple ignoring of Theological Truth altogether, under the pretence of not recognising differences of religious opinion;—which will only take place in countries or under governments which have abjured Catholicism. The second, which is of a more subtle character, is a recognition indeed of Catholicism, but (as if in pretended mercy to it) an adulteration of its spirit. I will now proceed to describe the dangers I speak of more distinctly, by a reference to the general subject-matter of instruction which a University undertakes.

There are three great subjects on which Human Reason employs itself:—God, Nature, and Man: and theology being put aside in the present argument, the physical and social worlds remain. These, when respectively subjected to Human Reason, form two books: the book of nature is called Science, the book of man is called Literature. Literature and Science, thus considered, nearly constitute the subject-matter of Liberal Education; and, while Science is made to subserve the former of the two injuries, which Revealed Truth sustains,—its exclusion, Literature subserves the latter,—its corruption. Let us consider the influence of each upon Religion separately.

I. As to Physical Science, of course there can be no real collision between it and Catholicism. Nature and Grace, Reason and Revelation, come from the same Divine Author, whose works cannot contradict each other. Nevertheless, it cannot be denied that, in matter of fact, there always has been a sort of jealousy and hostility between Religion and physical philosophers. The name of Galileo reminds us of it at once. Not content with investigating and reasoning in his own province, it is said, he went out of his way directly to insult the received interpretation of Scripture; theologians repelled an attack which was wanton and arrogant; and Science, affronted in her minister, has taken its full revenge upon Theology since. A vast multitude of its teachers, I fear it must be said, have been either unbelievers or sceptics, or at least have denied to Christianity any teaching, distinctive or special, over the Religion of Nature. There have indeed been most illustrious exceptions; some men protected by their greatness of mind, some by their religious profession, some by the fear of public opinion; but I suppose the run of experimentalists, external to the Catholic Church, have more or less inherited the positive or negative unbelief of Laplace, Buffon, Franklin, Priestley, Cuvier, and Humboldt. I do not of course mean to say that there need be in every case a resentful and virulent opposition made to Religion on the part of scientific men; but their emphatic silence or phlegmatic inadvertence as to its claims have implied, more eloquently than any words, that in their opinion it had no voice at all in the subject-matter, which they had appropriated to themselves. The same antagonism shows itself in the middle ages. Friar Bacon was popularly regarded with suspicion as a dealer in unlawful arts; Pope Sylvester the Second has been accused of magic for his knowledge of natural secrets; and the geographical ideas of St. Virgil, Bishop of Saltzburg, were regarded with anxiety by the great St. Boniface, the glory of England, the Martyr-Apostle of Germany. I suppose, in matter of fact,

magical superstition and physical knowledge did commonly go together in those ages: however, the hostility between experimental science and theology is far older than Christianity. Lord Bacon traces it to an era prior to Socrates; he tells us that, among the Greeks, the atheistic was the philosophy most favourable to physical discoveries, and he does not hesitate to imply that the rise of the religious schools was the ruin of science.

Now, if we would investigate the reason of this opposition between Theology and Physics, I suppose we must first take into account Lord Bacon's own explanation of it. It is common in judicial inquiries to caution the parties on whom the verdict depends to put out of their minds whatever they have heard out of court on the subject to which their attention is to be directed. They are to judge by the evidence; and this is a rule which holds in other investigations as far as this, that nothing of an adventitious nature ought to be introduced into the process. In like manner, from religious investigations, as such, physics must be excluded, and from physical, as such, religion; and if we mix them, we shall spoil both. The theologian, speaking of Divine Omnipotence, for the time simply ignores the laws of nature as existing restraints upon its exercise; and the physical philosopher, on the other hand, in his experiments upon natural phenomena, is simply ascertaining those laws, putting aside the question of that Omnipotence. If the theologian, in tracing the ways of Providence, were stopped with objections grounded on the impossibility of physical miracles, he would justly protest against the interruption; and were the philosopher, who was determining the motion of the heavenly bodies, to be questioned about their Final or their First Cause, he too would suffer an illogical interruption. The latter asks the cause of volcanoes, and is impatient at being told it is "the divine vengeance;" the former asks the cause of the overthrow of the guilty cities, and is preposterously referred to the volcanic action

still visible in their neighbourhood. The inquiry into final causes for the moment passes over the existence of established laws; the inquiry into physical, passes over for the moment the existence of God. In other words, physical science is in a certain sense atheistic, for the very reason it is not theology.

This is Lord Bacon's justification, and an intelligible one, for considering that the fall of atheistic philosophy in ancient times was a blight upon the hopes of physical science. "Aristotle," he says, "Galen, and others frequently introduce such causes as these:—the hairs of the eyelids are for a fence to the sight; the bones for pillars whence to build the bodies of animals; the leaves of trees are to defend the fruit from the sun and wind; the clouds are designed for watering the earth. All which are properly alleged in metaphysics; but in physics, are impertinent, and as *remoras* to the ship, that hinder the sciences from holding on their course of improvement, and as introducing a neglect of searching after physical causes."^[1] Here then is one reason for the prejudice of physical philosophers against Theology:—on the one hand, their deep satisfaction in the laws of nature indisposes them towards the thought of a Moral Governor, and makes them sceptical of His interposition; on the other hand, the occasional interference of religious criticism in a province not religious, has made them sore, suspicious, and resentful.

4.

Another reason of a kindred nature is to be found in the difference of method by which truths are gained in theology and in physical science. Induction is the instrument of Physics, and deduction only is the instrument of Theology. There the simple question is, What is revealed? all doctrinal knowledge flows from one fountain head. If we are able to enlarge our view and multiply our propositions, it must be merely by the comparison and adjustment of the original truths; if

we would solve new questions, it must be by consulting old answers. The notion of doctrinal knowledge absolutely novel, and of simple addition from without, is intolerable to Catholic ears, and never was entertained by any one who was even approaching to an understanding of our creed. Revelation is all in all in doctrine; the Apostles its sole depository, the inferential method its sole instrument, and ecclesiastical authority its sole sanction. The Divine Voice has spoken once for all, and the only question is about its meaning. Now this process, as far as it was reasoning, was the very mode of reasoning which, as regards physical knowledge, the school of Bacon has superseded by the inductive method:—no wonder, then, that that school should be irritated and indignant to find that a subject-matter remains still, in which their favourite instrument has no office; no wonder that they rise up against this memorial of an antiquated system, as an eyesore and an insult; and no wonder that the very force and dazzling success of their own method in its own departments should sway or bias unduly the religious sentiments of any persons who come under its influence. They assert that no new truth can be gained by deduction; Catholics assent, but add that, as regards religious truth, they have not to seek at all, for they have it already. Christian Truth is purely of revelation; that revelation we can but explain, we cannot increase, except relatively to our own apprehensions; without it we should have known nothing of its contents, with it we know just as much as its contents, and nothing more. And, as it was given by a divine act independent of man, so will it remain in spite of man. Niebuhr may revolutionize history, Lavoisier chemistry, Newton astronomy; but God Himself is the author as well as the subject of theology. When Truth can change, its Revelation can change; when human reason can outreason the Omniscient, then may it supersede His work.

Avowals such as these fall strange upon the ear of men whose

first principle is the search after truth, and whose starting-points of search are things material and sensible. They scorn any process of inquiry not founded on experiment; the Mathematics indeed they endure, because that science deals with ideas, not with facts, and leads to conclusions hypothetical rather than real; “Metaphysics” they even use as a by-word of reproach; and Ethics they admit only on condition that it gives up conscience as its scientific ground, and bases itself on tangible utility: but as to Theology, they cannot deal with it, they cannot master it, and so they simply outlaw it and ignore it. Catholicism, forsooth, “confines the intellect,” because it holds that God’s intellect is greater than theirs, and that what He has done, man cannot improve. And what in some sort justifies them to themselves in this extravagance is the circumstance that there is a religion close at their doors which, discarding so severe a tone, has actually adopted their own principle of inquiry. Protestantism treats Scripture just as they deal with Nature; it takes the sacred text as a large collection of phenomena, from which, by an inductive process, each individual Christian may arrive at just those religious conclusions which approve themselves to his own judgment. It considers faith a mere modification of reason, as being an acquiescence in certain probable conclusions till better are found. Sympathy, then, if no other reason, throws experimental philosophers into alliance with the enemies of Catholicism.

5.

I have another consideration to add, not less important than any I have hitherto adduced. The physical sciences, Astronomy, Chemistry, and the rest, are doubtless engaged upon divine works, and cannot issue in untrue religious conclusions. But at the same time it must be recollected that Revelation has reference to circumstances which did not arise till after the heavens and the earth were made. They were

made before the introduction of moral evil into the world: whereas the Catholic Church is the instrument of a remedial dispensation to meet that introduction. No wonder then that her teaching is simply distinct, though not divergent, from the theology which Physical Science suggests to its followers. She sets before us a number of attributes and acts on the part of the Divine Being, for which the material and animal creation gives no scope; power, wisdom, goodness are the burden of the physical world, but it does not and could not speak of mercy, long-suffering, and the economy of human redemption, and but partially of the moral law and moral goodness. "Sacred Theology," says Lord Bacon, "must be drawn from the words and the oracles of God: not from the light of nature or the dictates of reason. It is written, that 'the Heavens declare the glory of God;' but we nowhere find it that the Heavens declare the will of God; which is pronounced a law and a testimony, that men should do according to it. Nor does this hold only in the great mysteries of the Godhead, of the creation, of the redemption.... We cannot doubt that a large part of the moral law is too sublime to be attained by the light of nature; though it is still certain that men, even with the light and law of nature, have some notions of virtue, vice, justice, wrong, good, and evil."^[2] That the new and further manifestations of the Almighty, made by Revelation, are in perfect harmony with the teaching of the natural world, forms indeed one subject of the profound work of the Anglican Bishop Butler; but they cannot in any sense be gathered from nature, and the silence of nature concerning them may easily seduce the imagination, though it has no force to persuade the reason, to revolt from doctrines which have not been authenticated by facts, but are enforced by authority. In a scientific age, then, there will naturally be a parade of what is called Natural Theology, a wide-spread profession of the Unitarian creed, an impatience of mystery, and a scepticism about miracles.

And to all this must be added the ample opportunity which physical science gives to the indulgence of those sentiments of beauty, order, and congruity, of which I have said so much as the ensigns and colours (as they may be called) of a civilized age in its warfare against Catholicism.

It being considered, then, that Catholicism differs from physical science, in drift, in method of proof, and in subject-matter, how can it fail to meet with unfair usage from the philosophers of any Institution in which there is no one to take its part? That Physical Science itself will be ultimately the loser by such ill treatment of Theology, I have insisted on at great length in some preceding Discourses; for to depress unduly, to encroach upon any science, and much more on an important one, is to do an injury to all. However, this is not the concern of the Church; the Church has no call to watch over and protect Science: but towards Theology she has a distinct duty: it is one of the special trusts committed to her keeping. Where Theology is, there she must be; and if a University cannot fulfil its name and office without the recognition of Revealed Truth, she must be there to see that it is a *bonâ fide* recognition, sincerely made and consistently acted on.

6.

II. And if the interposition of the Church is necessary in the Schools of Science, still more imperatively is it demanded in the other main constituent portion of the subject-matter of Liberal Education,—Literature. Literature stands related to Man as Science stands to Nature; it is his history. Man is composed of body and soul; he thinks and he acts; he has appetites, passions, affections, motives, designs; he has within him the lifelong struggle of duty with inclination; he has an intellect fertile and capacious; he is formed for society, and society multiplies and diversifies in endless combinations his personal

characteristics, moral and intellectual. All this constitutes his life; of all this Literature is the expression; so that Literature is to man in some sort what autobiography is to the individual; it is his Life and Remains. Moreover, he is this sentient, intelligent, creative, and operative being, quite independent of any extraordinary aid from Heaven, or any definite religious belief; and *as such*, as he is in himself, does Literature represent him; it is the Life and Remains of the *natural* man, innocent or guilty. I do not mean to say that it is impossible in its very notion that Literature should be tinged by a religious spirit; Hebrew Literature, as far as it can be called Literature, certainly is simply theological, and has a character imprinted on it which is above nature; but I am speaking of what is to be expected without any extraordinary dispensation; and I say that, in matter of fact, as Science is the reflection of Nature, so is Literature also—the one, of Nature physical, the other, of Nature moral and social. Circumstances, such as locality, period, language, seem to make little or no difference in the character of Literature, as such; on the whole, all Literatures are one; they are the voices of the natural man.

I wish this were all that had to be said to the disadvantage of Literature; but while Nature physical remains fixed in its laws, Nature moral and social has a will of its own, is self-governed, and never remains any long while in that state from which it started into action. Man will never continue in a mere state of innocence; he is sure to sin, and his literature will be the expression of his sin, and this whether he be heathen or Christian. Christianity has thrown gleams of light on him and his literature; but as it has not converted him, but only certain choice specimens of him, so it has not changed the characters of his mind or of his history; his literature is either what it was, or worse than what it was, in proportion as there has been an abuse of knowledge granted and a rejection of truth. On the whole, then, I think it will be found, and ever found, as a matter of course, that

Literature, as such, no matter of what nation, is the science or history, partly and at best of the natural man, partly of man in rebellion.

7.

Here then, I say, you are involved in a difficulty greater than that which besets the cultivation of Science; for, if Physical Science be dangerous, as I have said, it is dangerous, because it necessarily ignores the idea of moral evil; but Literature is open to the more grievous imputation of recognizing and understanding it too well. Some one will say to me perhaps: "Our youth shall not be corrupted. We will dispense with all general or national Literature whatever, if it be so exceptionable; we will have a Christian Literature of our own, as pure, as true, as the Jewish." You cannot have it:—I do not say you cannot form a select literature for the young, nay, even for the middle or lower classes; this is another matter altogether: I am speaking of University Education, which implies an extended range of reading, which has to deal with standard works of genius, or what are called the *classics* of a language: and I say, from the nature of the case, if Literature is to be made a study of human nature, you cannot have a Christian Literature. It is a contradiction in terms to attempt a sinless Literature of sinful man. You may gather together something very great and high, something higher than any Literature ever was; and when you have done so, you will find that it is not Literature at all. You will have simply left the delineation of man, as such, and have substituted for it, as far as you have had any thing to substitute, that of man, as he is or might be, under certain special advantages. Give up the study of man, as such, if so it must be; but say you do so. Do not say you are studying him, his history, his mind and his heart, when you are studying something else. Man is a being of genius, passion, intellect, conscience, power. He exercises these various gifts in various ways, in great deeds, in great thoughts, in heroic acts, in hateful

crimes. He founds states, he fights battles, he builds cities, he ploughs the forest, he subdues the elements, he rules his kind. He creates vast ideas, and influences many generations. He takes a thousand shapes, and undergoes a thousand fortunes. Literature records them all to the life,

Quicquid agunt homines, votum, timor, ira, voluptas,
Gaudia, discursus.

He pours out his fervid soul in poetry; he sways to and fro, he soars, he dives, in his restless speculations; his lips drop eloquence; he touches the canvas, and it glows with beauty; he sweeps the strings, and they thrill with an ecstatic meaning. He looks back into himself, and he reads his own thoughts, and notes them down; he looks out into the universe, and tells over and celebrates the elements and principles of which it is the product.

Such is man: put him aside, keep him before you; but, whatever you do, do not take him for what he is not, for something more divine and sacred, for man regenerate. Nay, beware of showing God's grace and its work at such disadvantage as to make the few whom it has thoroughly influenced compete in intellect with the vast multitude who either have it not, or use it ill. The elect are few to choose out of, and the world is inexhaustible. From the first, Jabel and Tubalcain, Nimrod "the stout hunter," the learning of the Pharaohs, and the wisdom of the East country, are of the world. Every now and then they are rivalled by a Solomon or a Beseleel, but the *habitat* of natural gifts is the natural man. The Church may use them, she cannot at her will originate them. Not till the whole human race is made new will its literature be pure and true. Possible of course it is in idea, for nature, inspired by heavenly grace, to exhibit itself on a large scale, in an originality of thought or action, even far beyond what the world's

literature has recorded or exemplified; but, if you would in fact have a literature of saints, first of all have a nation of them.

What is a clearer proof of the truth of all this than the structure of the Inspired Word itself? It is undeniably *not* the reflection or picture of the many, but of the few; it is no picture of life, but an anticipation of death and judgment. Human literature is about all things, grave or gay, painful or pleasant; but the Inspired Word views them only in one aspect, and as they tend to one scope. It gives us little insight into the fertile developments of mind; it has no terms in its vocabulary to express with exactness the intellect and its separate faculties: it knows nothing of genius, fancy, wit, invention, presence of mind, resource. It does not discourse of empire, commerce, enterprise, learning, philosophy, or the fine arts. Slightly too does it touch on the more simple and innocent courses of nature and their reward. Little does it say of those temporal blessings which rest upon our worldly occupations, and make them easy, of the blessings which we derive from the sunshine day and the serene night, from the succession of the seasons, and the produce of the earth. Little about our recreations and our daily domestic comforts; little about the ordinary occasions of festivity and mirth, which sweeten human life; and nothing at all about various pursuits or amusements, which it would be going too much into detail to mention. We read indeed of the feast when Isaac was weaned, and of Jacob's courtship, and of the religious merry-makings of holy Job; but exceptions, such as these, do but remind us what might be in Scripture, and is not. If then by Literature is meant the manifestation of human nature in human language, you will seek for it in vain except in the world. Put up with it, as it is, or do not pretend to cultivate it; take things as they are, not as you could wish them.

Nay, I am obliged to go further still; even if we could, still we should be shrinking from our plain duty, Gentlemen, did we leave out Literature from Education. For why do we educate, except to prepare for the world? Why do we cultivate the intellect of the many beyond the first elements of knowledge, except for this world? Will it be much matter in the world to come whether our bodily health or whether our intellectual strength was more or less, except of course as this world is in all its circumstances a trial for the next? If then a University is a direct preparation for this world, let it be what it professes. It is not a Convent, it is not a Seminary; it is a place to fit men of the world for the world. We cannot possibly keep them from plunging into the world, with all its ways and principles and maxims, when their time comes; but we can prepare them against what is inevitable; and it is not the way to learn to swim in troubled waters, never to have gone into them. Proscribe (I do not merely say particular authors, particular works, particular passages) but Secular Literature as such; cut out from your class books all broad manifestations of the natural man; and those manifestations are waiting for your pupil's benefit at the very doors of your lecture room in living and breathing substance. They will meet him there in all the charm of novelty, and all the fascination of genius or of amiableness. To-day a pupil, to-morrow a member of the great world: to-day confined to the Lives of the Saints, to-morrow thrown upon Babel;—thrown on Babel, without the honest indulgence of wit and humour and imagination having ever been permitted to him, without any fastidiousness of taste wrought into him, without any rule given him for discriminating “the precious from the vile,” beauty from sin, the truth from the sophistry of nature, what is innocent from what is poison. You have refused him the masters of human thought, who would in some sense have educated him, because of their incidental corruption: you have shut up from him those whose thoughts strike home to our hearts, whose words are

proverbs, whose names are indigenous to all the world, who are the standard of their mother tongue, and the pride and boast of their countrymen, Homer, Ariosto, Cervantes, Shakespeare, because the old Adam smelt rank in them; and for what have you reserved him? You have given him “a liberty unto” the multitudinous blasphemy of his day; you have made him free of its newspapers, its reviews, its magazines, its novels, its controversial pamphlets, of its Parliamentary debates, its law proceedings, its platform speeches, its songs, its drama, its theatre, of its enveloping, stifling atmosphere of death. You have succeeded but in this,—in making the world his University.

Difficult then as the question may be, and much as it may try the judgments and even divide the opinions of zealous and religious Catholics, I cannot feel any doubt myself, Gentlemen, that the Church’s true policy is not to aim at the exclusion of Literature from Secular Schools, but at her own admission into them. Let her do for Literature in one way what she does for Science in another; each has its imperfection, and she has her remedy for each. She fears no knowledge, but she purifies all; she represses no element of our nature, but cultivates the whole. Science is grave, methodical, logical; with Science then she argues, and opposes reason to reason. Literature does not argue, but declaims and insinuates; it is multiform and versatile: it persuades instead of convincing, it seduces, it carries captive; it appeals to the sense of honour, or to the imagination, or to the stimulus of curiosity; it makes its way by means of gaiety, satire, romance, the beautiful, the pleasurable. Is it wonderful that with an agent like this the Church should claim to deal with a vigour corresponding to its restlessness, to interfere in its proceedings with a higher hand, and to wield an authority in the choice of its studies and of its books which would be tyrannical, if reason and fact were the only instruments of its conclusions? But, any how, her principle is one and the same throughout: not to prohibit truth of any kind, but to see

that no doctrines pass under the name of Truth but those which claim it rightfully.

9.

Such at least is the lesson which I am taught by all the thought which I have been able to bestow upon the subject; such is the lesson which I have gained from the history of my own special Father and Patron, St. Philip Neri. He lived in an age as traitorous to the interests of Catholicism as any that preceded it, or can follow it. He lived at a time when pride mounted high, and the senses held rule; a time when kings and nobles never had more of state and homage, and never less of personal responsibility and peril; when medieval winter was receding, and the summer sun of civilization was bringing into leaf and flower a thousand forms of luxurious enjoyment; when a new world of thought and beauty had opened upon the human mind, in the discovery of the treasures of classic literature and art. He saw the great and the gifted, dazzled by the Enchantress, and drinking in the magic of her song; he saw the high and the wise, the student and the artist, painting, and poetry and sculpture, and music, and architecture, drawn within her range, and circling round the abyss: he saw heathen forms mounting thence, and forming in the thick air:—all this he saw, and he perceived that the mischief was to be met, not with argument, not with science, not with protests and warnings, not by the recluse or the preacher, but by means of the great counter-fascination of purity and truth. He was raised up to do a work almost peculiar in the Church,—not to be a Jerome Savonarola, though Philip had a true devotion towards him and a tender memory of his Florentine house; not to be a St. Charles, though in his beaming countenance Philip had recognized the aureole of a saint; not to be a St. Ignatius, wrestling with the foe, though Philip was termed the Society's bell of call, so many subjects did he send to it; not to be a St. Francis Xavier, though

Philip had longed to shed his blood for Christ in India with him; not to be a St. Caietan, or hunter of souls, for Philip preferred, as he expressed it, tranquilly to cast in his net to gain them; he preferred to yield to the stream, and direct the current, which he could not stop, of science, literature, art, and fashion, and to sweeten and to sanctify what God had made very good and man had spoilt.

And so he contemplated as the idea of his mission, not the propagation of the faith, nor the exposition of doctrine, nor the catechetical schools; whatever was exact and systematic pleased him not; he put from him monastic rule and authoritative speech, as David refused the armour of his king. No; he would be but an ordinary individual priest as others: and his weapons should be but unaffected humility and unpretending love. All he did was to be done by the light, and fervour, and convincing eloquence of his personal character and his easy conversation. He came to the Eternal City and he sat himself down there, and his home and his family gradually grew up around him, by the spontaneous accession of materials from without. He did not so much seek his own as draw them to him. He sat in his small room, and they in their gay worldly dresses, the rich and the wellborn, as well as the simple and the illiterate, crowded into it. In the mid-heats of summer, in the frosts of winter, still was he in that low and narrow cell at San Girolamo, reading the hearts of those who came to him, and curing their souls' maladies by the very touch of his hand. It was a vision of the Magi worshipping the infant Saviour, so pure and innocent, so sweet and beautiful was he; and so loyal and so dear to the gracious Virgin Mother. And they who came remained gazing and listening, till at length, first one and then another threw off their bravery, and took his poor cassock and girdle instead: or, if they kept it, it was to put haircloth under it, or to take on them a rule of life, while to the world they looked as before.

In the words of his biographer, "he was all things to all men. He

suited himself to noble and ignoble, young and old, subjects and prelates, learned and ignorant; and received those who were strangers to him with singular benignity, and embraced them with as much love and charity as if he had been a long while expecting them. When he was called upon to be merry he was so; if there was a demand upon his sympathy he was equally ready. He gave the same welcome to all: caressing the poor equally with the rich, and wearying himself to assist all to the utmost limits of his power. In consequence of his being so accessible and willing to receive all comers, many went to him every day, and some continued for the space of thirty, nay forty years, to visit him very often both morning and evening, so that his room went by the agreeable nickname of the Home of Christian mirth. Nay, people came to him, not only from all parts of Italy, but from France, Spain, Germany, and all Christendom; and even the infidels and Jews, who had ever any communication with him, revered him as a holy man.”^[3] The first families of Rome, the Massimi, the Aldobrandini, the Colonnas, the Altieri, the Vitelleschi, were his friends and his penitents. Nobles of Poland, Grandees of Spain, Knights of Malta, could not leave Rome without coming to him. Cardinals, Archbishops, and Bishops were his intimates; Federigo Borromeo haunted his room and got the name of “Father Philip’s soul.” The Cardinal-Archbishops of Verona and Bologna wrote books in his honour. Pope Pius the Fourth died in his arms. Lawyers, painters, musicians, physicians, it was the same too with them. Baronius, Zazzara, and Ricci, left the law at his bidding, and joined his congregation, to do its work, to write the annals of the Church, and to die in the odour of sanctity. Palestrina had Father Philip’s ministrations in his last moments. Animuccia hung about him during life, sent him a message after death, and was conducted by him through Purgatory to Heaven. And who was he, I say, all the while, but an humble priest, a stranger in Rome, with no distinction of family or letters, no claim of station or of

office, great simply in the attraction with which a Divine Power had gifted him? and yet thus humble, thus unennobled, thus empty-handed, he has achieved the glorious title of Apostle of Rome.

10.

Well were it for his clients and children, Gentlemen, if they could promise themselves the very shadow of his special power, or could hope to do a miserable fraction of the sort of work in which he was pre-eminently skilled. But so far at least they may attempt,—to take his position, and to use his method, and to cultivate the arts of which he was so bright a pattern. For me, if it be God's blessed will that in the years now coming I am to have a share in the great undertaking, which has been the occasion and the subject of these Discourses, so far I can say for certain that, whether or not I can do any thing at all in St. Philip's way, at least I can do nothing in any other. Neither by my habits of life, nor by vigour of age, am I fitted for the task of authority, or of rule, or of initiation. I do but aspire, if strength is given me, to be your minister in a work which must employ younger minds and stronger lives than mine. I am but fit to bear my witness, to proffer my suggestions, to express my sentiments, as has in fact been my occupation in these discussions; to throw such light upon general questions, upon the choice of objects, upon the import of principles, upon the tendency of measures, as past reflection and experience enable me to contribute. I shall have to make appeals to your consideration, your friendliness, your confidence, of which I have had so many instances, on which I so tranquilly repose; and after all, neither you nor I must ever be surprised, should it so happen that the Hand of Him, with whom are the springs of life and death, weighs heavy on me, and makes me unequal to anticipations in which you have been too kind, and to hopes in which I may have been too sanguine.

University Subjects

—Discussed in Occasional Lectures and Essays

Introductory Letter

To the Right Honourable WILLIAM MONSELL, M.P., ETC., ETC. ^[1]

MY DEAR MONSELL,

I seem to have some claim for asking leave of you to prefix your name to the following small Volume, since it is a memorial of work done in a country which you so dearly love, and in behalf of an undertaking in which you feel so deep an interest.

Nor do I venture on the step without some hope that it is worthy of your acceptance, at least on account of those portions of it which have already received the approbation of the learned men to whom they were addressed, and which have been printed at their desire.

But, even though there were nothing to recommend it except that it came from me, I know well that you would kindly welcome it as a token of the truth and constancy with which I am,

MY DEAR MONSELL,

Yours very affectionately,

[*November 1858.*]

JOHN H. NEWMAN.

^[1] Now LORD EMLY.

Lecture I

Christianity and Letters—A Lecture in the School of Philosophy and Letters

1.

It seems but natural, Gentlemen, now that we are opening the School of Philosophy and Letters, or, as it was formerly called, of Arts, in this new University, that we should direct our attention to the question, what are the subjects generally included under that name, and what place they hold, and how they come to hold that place, in a University, and in the education which a University provides. This would be natural on such an occasion, even though the Faculty of Arts held but a secondary place in the academical system; but it seems to be even imperative on us, considering that the studies which that Faculty embraces are almost the direct subject-matter and the staple of the mental exercises proper to a University.

It is indeed not a little remarkable that, in spite of the special historical connexion of University Institutions with the Sciences of Theology, Law, and Medicine, a University, after all, should be formally based (as it really is), and should emphatically live in, the Faculty of Arts; but such is the deliberate decision of those who have most deeply and impartially considered the subject. Arts existed before other Faculties; the Masters of Arts were the ruling and directing body; the success and popularity of the Faculties of Law and

Medicine were considered to be in no slight measure an encroachment and a usurpation, and were met with jealousy and resistance. When Colleges arose and became the medium and instrument of University action, they did but confirm the ascendancy of the Faculty of Arts; and thus, even down to this day, in those academical corporations which have more than others retained the traces of their medieval origin,—I mean the Universities of Oxford and Cambridge,—we hear little of Theology, Medicine, or Law, and almost exclusively of Arts.

Now, considering the reasonable association, to which I have already referred, which exists in our minds between Universities and the three learned professions, here is a phenomenon which has to be contemplated for its own sake and accounted for, as well as a circumstance enhancing the significance and importance of the act in which we have been for some weeks engaged; and I consider that I shall not be employing our time unprofitably, if I am able to make a suggestion, which, while it illustrates the fact, is able to explain the difficulty.

2.

Here I must go back, Gentlemen, a very great way, and ask you to review the course of Civilization since the beginning of history. When we survey the stream of human affairs for the last three thousand years, we find it to run thus:—At first sight there is so much fluctuation, agitation, ebbing and flowing, that we may despair to discern any law in its movements, taking the earth as its bed, and mankind as its contents; but, on looking more closely and attentively, we shall discern, in spite of the heterogeneous materials and the various histories and fortunes which are found in the race of man during the long period I have mentioned, a certain formation amid the chaos,—one and one only,—and extending, though not over the whole earth, yet through a very considerable portion of it. Man is a social

being and can hardly exist without society, and in matter of fact societies have ever existed all over the habitable earth. The greater part of these associations have been political or religious, and have been comparatively limited in extent, and temporary. They have been formed and dissolved by the force of accidents or by inevitable circumstances; and, when we have enumerated them one by one, we have made of them all that can be made. But there is one remarkable association which attracts the attention of the philosopher, not political nor religious, or at least only partially and not essentially such, which began in the earliest times and grew with each succeeding age, till it reached its complete development, and then continued on, vigorous and unwearied, and which still remains as definite and as firm as ever it was. Its bond is a common civilization; and, though there are other civilizations in the world, as there are other societies, yet this civilization, together with the society which is its creation and its home, is so distinctive and luminous in its character, so imperial in its extent, so imposing in its duration, and so utterly without rival upon the face of the earth, that the association may fitly assume to itself the title of "Human Society," and its civilization the abstract term "Civilization."

There are indeed great outlying portions of mankind which are not, perhaps never have been, included in this Human Society; still they are outlying portions and nothing else, fragmentary, unsociable, solitary, and unmeaning, protesting and revolting against the grand central formation of which I am speaking, but not uniting with each other into a second whole. I am not denying of course the civilization of the Chinese, for instance, though it be not our civilization; but it is a huge, stationary, unattractive, morose civilization. Nor do I deny a civilization to the Hindoos, nor to the ancient Mexicans, nor to the Saracens, nor (in a certain sense) to the Turks; but each of these races has its own civilization, as separate from one another as from ours. I

do not see how they can be all brought under one idea. Each stands by itself, as if the other were not; each is local; many of them are temporary; none of them will bear a comparison with the Society and the Civilization which I have described as alone having a claim to those names, and on which I am going to dwell.

Gentlemen, let me here observe that I am not entering upon the question of races, or upon their history. I have nothing to do with ethnology. I take things as I find them on the surface of history, and am but classing phenomena. Looking, then, at the countries which surround the Mediterranean Sea as a whole, I see them to be, from time immemorial, the seat of an association of intellect and mind, such as to deserve to be called the Intellect and the Mind of the Human Kind. Starting as it does and advancing from certain centres, till their respective influences intersect and conflict, and then at length intermingle and combine, a common Thought has been generated, and a common Civilization defined and established. Egypt is one such starting point, Syria another, Greece a third, Italy a fourth, and North Africa a fifth,—afterwards France and Spain. As time goes on, and as colonization and conquest work their changes, we see a great association of nations formed, of which the Roman empire is the maturity and the most intelligible expression; an association, however, not political, but mental, based on the same intellectual ideas, and advancing by common intellectual methods. And this association or social commonwealth, with whatever reverses, changes, and momentary dissolutions, continues down to this day; not, indeed, precisely on the same territory, but with such only partial and local disturbances, and on the other hand, with so combined and harmonious a movement, and such a visible continuity, that it would be utterly unreasonable to deny that it is throughout all that interval but one and the same.

In its earliest age it included far more of the eastern world than it

has since; in these later times it has taken into its compass a new hemisphere; in the middle ages it lost Africa, Egypt, and Syria, and extended itself to Germany, Scandinavia, and the British Isles. At one time its territory was flooded by strange and barbarous races, but the existing civilization was vigorous enough to vivify what threatened to stifle it, and to assimilate to the old social forms what came to expel them; and thus the civilization of modern times remains what it was of old, not Chinese, or Hindoo, or Mexican, or Saracenic, or of any new description hitherto unknown, but the lineal descendant, or rather the continuation, *mutatis mutandis*, of the civilization which began in Palestine and Greece.

Considering, then, the characteristics of this great civilized Society, which I have already insisted on, I think it has a claim to be considered as the representative Society and Civilization of the human race, as its perfect result and limit, in fact;—those portions of the race which do not coalesce with it being left to stand by themselves as anomalies, unaccountable indeed, but for that very reason not interfering with what on the contrary has been turned to account and has grown into a whole. I call then this commonwealth pre-eminently and emphatically Human Society, and its intellect the Human Mind, and its decisions the sense of mankind, and its disciplined and cultivated state Civilization in the abstract, and the territory on which it lies the *orbis terrarum*, or the World. For, unless the illustration be fanciful, the object which I am contemplating is like the impression of a seal upon the wax; which rounds off and gives form to the greater portion of the soft material, and presents something definite to the eye, and preoccupies the space against any second figure, so that we overlook and leave out of our thoughts the jagged outline or unmeaning lumps outside of it, intent upon the harmonious circle which fills the imagination within it.

3.

Now, before going on to speak of the education, and the standards of education, which the Civilized World, as I may now call it, has enjoined and requires, I wish to draw your attention, Gentlemen, to the circumstance that this same *orbis terrarum*, which has been the seat of Civilization, will be found, on the whole, to be the seat also of that supernatural society and system which our Maker has given us directly from Himself, the Christian Polity. The natural and divine associations are not indeed exactly coincident, nor ever have been. As the territory of Civilization has varied with itself in different ages, while on the whole it has been the same, so, in like manner, Christianity has fallen partly outside Civilization, and Civilization partly outside Christianity; but, on the whole, the two have occupied one and the same *orbis terrarum*. Often indeed they have even moved *pari passu*, and at all times there has been found the most intimate connexion between them. Christianity waited till the *orbis terrarum* attained its most perfect form before it appeared; and it soon coalesced, and has ever since co-operated, and often seemed identical, with the Civilization which is its companion.

There are certain analogies, too, which hold between Civilization and Christianity. As Civilization does not cover the whole earth, neither does Christianity; but there is nothing else like the one, and nothing else like the other. Each is the only thing of its kind. Again, there are, as I have already said, large outlying portions of the world in a certain sense cultivated and educated, which, if they could exist together in one, would go far to constitute a second *orbis terrarum*, the home of a second distinct civilization; but every one of these is civilized on its own principle and idea, or at least they are separated from each other, and have not run together, while the Civilization and Society which I have been describing is one organized whole. And, in like manner, Christianity coalesces into one vast body, based upon

common ideas; yet there are large outlying organizations of religion independent of each other and of it. Moreover, Christianity, as is the case in the parallel instance of Civilization, continues on in the world without interruption from the date of its rise, while other religious bodies, huge, local, and isolated, are rising and falling, or are helplessly stationary, from age to age, on all sides of it.

There is another remarkable analogy between Christianity and Civilization, and the mention of it will introduce my proper subject, to which what I have hitherto said is merely a preparation. We know that Christianity is built upon definite ideas, principles, doctrines, and writings, which were given at the time of its first introduction, and have never been superseded, and admit of no addition. I am not going to parallel any thing which is the work of man, and in the natural order, with what is from heaven, and in consequence infallible, and irreversible, and obligatory; but, after making this reserve, lest I should possibly be misunderstood, still I would remark that, in matter of fact, looking at the state of the case historically, Civilization too has its common principles, and views, and teaching, and especially its books, which have more or less been given from the earliest times, and are, in fact, in equal esteem and respect, in equal use now, as they were when they were received in the beginning. In a word, the Classics, and the subjects of thought and the studies to which they give rise, or, to use the term most to our present purpose, the Arts, have ever, on the whole, been the instruments of education which the civilized *orbis terrarum* has adopted; just as inspired works, and the lives of saints, and the articles of faith, and the catechism, have ever been the instrument of education in the case of Christianity. And this consideration, you see, Gentlemen (to drop down at once upon the subject proper to the occasion which has brought us together), invests the opening of the School in Arts with a solemnity and moment of a peculiar kind, for we are but reiterating an old tradition, and carrying

on those august methods of enlarging the mind, and cultivating the intellect, and refining the feelings, in which the process of Civilization has ever consisted.

4.

In the country which has been the fountain head of intellectual gifts, in the age which preceded or introduced the first formations of Human Society, in an era scarcely historical, we may dimly discern an almost mythical personage, who, putting out of consideration the actors in Old Testament history, may be called the first Apostle of Civilization. Like an Apostle in a higher order of things, he was poor and a wanderer, and feeble in the flesh, though he was to do such great things, and to live in the mouths of a hundred generations and a thousand tribes. A blind old man; whose wanderings were such that, when he became famous, his birth-place could not be ascertained, so that it was said,—

“Seven famous towns contend for Homer dead,
Through which the living Homer begged his bread.”

Yet he had a name in his day; and, little guessing in what vast measures his wish would be answered, he supplicated, with a tender human sentiment, as he wandered over the islands of the Ægean and the Asian coasts, that those who had known and loved him would cherish his memory when he was away. Unlike the proud boast of the Roman poet, if he spoke it in earnest, “*Exegi monumentum ære perennius*,” he did but indulge the hope that one, whose coming had been expected with pleasure, might excite regret when he had departed, and be rewarded by the sympathy and praise of his friends

even in the presence of other minstrels. A set of verses remains, which is ascribed to him, in which he addresses the Delian women in the tone of feeling which I have described. "Farewell to you all," he says, "and remember me in time to come, and when any one of men on earth, a stranger from far, shall inquire of you, O maidens, who is the sweetest of minstrels here about, and in whom do you most delight? then make answer modestly, It is a blind man, and he lives in steep Chios."

荷马（约公元前9世纪—公元前8世纪），相传为古希腊的游吟诗人，创作了《荷马史诗》。

The great poet remained unknown for some centuries,—that is, unknown to what we call fame. His verses were cherished by his countrymen, they might be the secret delight of thousands, but they were not collected into a volume, nor viewed as a whole, nor made a subject of criticism. At length an Athenian Prince took upon him the task of gathering together the scattered fragments of a genius which had not aspired to immortality, of reducing them to writing, and of fitting them to be the text-book of ancient education. Henceforth the vagrant ballad-singer, as he might be thought, was submitted, to his surprise, to a sort of literary canonization, and was invested with the office of forming the young mind of Greece to noble thoughts and bold deeds. To be read in Homer soon became the education of a gentleman; and a rule, recognized in her free age, remained as a tradition even in the times of her degradation. Xenophon introduces to us a youth who knew both *Iliad* and *Odyssey* by heart; Dio witnesses that they were some of the first books put into the hands of boys; and Horace decided that they taught the science of life better than Stoic or Academic. Alexander the Great nourished his imagination by the scenes of the *Iliad*. As time went on, other poets were associated with Homer in the work of education, such as Hesiod and the Tragedians. The majestic lessons concerning duty and religion, justice and providence, which occur in *Æschylus* and *Sophocles*, belong to a higher school than that of Homer; and the verses of *Euripides*, even in his lifetime, were so familiar to Athenian lips and so dear to foreign ears, that, as is reported, the captives of Syracuse gained their freedom at the price of reciting them to their conquerors.

Such poetry may be considered oratory also, since it has so great a power of persuasion; and the alliance between these two gifts had existed from the time that the verses of *Orpheus* had, according to the fable, made woods and streams and wild animals to follow him about.

Soon, however, Oratory became the subject of a separate art, which was called Rhetoric, and of which the Sophists were the chief masters. Moreover, as Rhetoric was especially political in its nature, it presupposed or introduced the cultivation of History; and thus the pages of Thucydides became one of the special studies by which Demosthenes rose to be the first orator of Greece.

But it is needless to trace out further the formation of the course of liberal education; it is sufficient to have given some specimens in illustration of it. The studies, which it was found to involve, were four principal ones, Grammar, Rhetoric, Logic, and Mathematics; and the science of Mathematics, again, was divided into four, Geometry, Arithmetic, Astronomy, and Music; making in all seven, which are known by the name of the Seven Liberal Arts. And thus a definite school of intellect was formed, founded on ideas and methods of a distinctive character, and (as we may say) of the highest and truest character, as far as they went, and which gradually associated in one, and assimilated, and took possession of, that multitude of nations which I have considered to represent mankind, and to possess the *orbis terrarum*.

When we pass from Greece to Rome, we are met with the common remark, that Rome produced little that was original, but borrowed from Greece. It is true; Terence copied from Menander, Virgil from Homer, Hesiod, and Theocritus; and Cicero professed merely to reproduce the philosophy of Greece. But, granting its truth ever so far, I do but take it as a proof of the sort of instinct which has guided the course of Civilization. The world was to have certain intellectual teachers, and no others; Homer and Aristotle, with the poets and philosophers who circle round them, were to be the schoolmasters of all generations, and therefore the Latins, falling into the law on which the world's education was to be carried on, so added to the classical library as not to reverse or interfere with what had

already been determined. And there was the more meaning in this arrangement, when it is considered that Greek was to be forgotten during many centuries, and the tradition of intellectual training to be conveyed through Latin; for thus the world was secured against the consequences of a loss which would have changed the character of its civilization. I think it very remarkable, too, how soon the Latin writers became text-books in the boys' schools. Even to this day Shakespeare and Milton are not studied in our course of education; but the poems of Virgil and Horace, as those of Homer and the Greek authors in an earlier age, were in schoolboys' satchels not much more than a hundred years after they were written.

I need not go on to show at length that they have preserved their place in the system of education in the *orbis terrarum*, and the Greek writers with them or through them, down to this day. The induction of centuries has often been made. Even in the lowest state of learning the tradition was kept up. St. Gregory the Great, whose era, not to say whose influence, is often considered especially unfavourable to the old literature, was himself well versed in it, encouraged purity of Latinity in his court, and is said figuratively by the contemporary historian of his life to have supported the hall of the Apostolic See upon the columns of the Seven Liberal Arts. In the ninth century, when the dark age was close at hand, we still hear of the cultivation, with whatever success (according of course to the opportunities of the times, but I am speaking of the nature of the studies, not of the proficiency of the students), the cultivation of Music, Dialectics, Rhetoric, Grammar, Mathematics, Astronomy, Physics, and Geometry; of the supremacy of Horace in the schools, "and the great Virgil, Sallust, and Statius." In the thirteenth or following centuries, of "Virgil, Lucian, Statius, Ovid, Livy, Sallust, Cicero, and Quintilian;" and after the revival of literature in the commencement of the modern era, we find St. Carlo Borromeo enjoining the use of works of Cicero, Ovid, Virgil, and Horace.

I pass thus cursorily over the series of informations which history gives us on the subject, merely with a view of recalling to your memory, Gentlemen, and impressing upon you the fact, that the literature of Greece, continued into, and enriched by, the literature of Rome, together with the studies which it involves, has been the instrument of education, and the food of civilization, from the first times of the world down to this day;—and now we are in a condition to answer the question which thereupon arises, when we turn to consider, by way of contrast, the teaching which is characteristic of Universities. How has it come to pass that, although the genius of Universities is so different from that of the schools which preceded them, nevertheless the course of study pursued in those schools was not superseded in the middle ages by those more brilliant sciences which Universities introduced? It might have seemed as if Scholastic Theology, Law, and Medicine would have thrown the Seven Liberal Arts into the shade, but in the event they failed to do so. I consider the reason to be, that the authority and function of the monastic and secular schools, as supplying to the young the means of education, lay deeper than in any appointment of Charlemagne, who was their nominal founder, and were based in the special character of that civilization which is so intimately associated with Christianity, that it may even be called the soil out of which Christianity grew. The medieval sciences, great as is their dignity and utility, were never intended to supersede that more real and proper cultivation of the mind which is effected by the study of the liberal Arts; and, when certain of these sciences did in fact go out of their province and did attempt to prejudice the traditional course of education, the encroachment was in matter of fact resisted. There were those in the middle age, as John of Salisbury, who vigorously protested against the extravagances and usurpations which ever attend the introduction of

any great good whatever, and which attended the rise of the peculiar sciences of which Universities were the seat; and, though there were times when the old traditions seemed to be on the point of failing, somehow it has happened that they have never failed; for the instinct of Civilization and the common sense of Society prevailed, and the danger passed away, and the studies which seemed to be going out gained their ancient place, and were acknowledged, as before, to be the best instruments of mental cultivation, and the best guarantees for intellectual progress.

And this experience of the past we may apply to the circumstances in which we find ourselves at present; for, as there was a movement against the Classics in the middle age, so has there been now. The truth of the Baconian method for the purposes for which it was created, and its inestimable services and inexhaustible applications in the interests of our material well-being, have dazzled the imaginations of men, somewhat in the same way as certain new sciences carried them away in the age of Abelard; and since that method does such wonders in its own province, it is not unfrequently supposed that it can do as much in any other province also. Now, Bacon himself never would have so argued; he would not have needed to be reminded that to advance the useful arts is one thing, and to cultivate the mind another. The simple question to be considered is, how best to strengthen, refine, and enrich the intellectual powers; the perusal of the poets, historians, and philosophers of Greece and Rome will accomplish this purpose, as long experience has shown; but that the study of the experimental sciences will do the like, is proved to us as yet by no experience whatever.

Far indeed am I from denying the extreme attractiveness, as well as the practical benefit to the world at large, of the sciences of Chemistry, Electricity, and Geology; but the question is not what department of study contains the more wonderful facts, or promises

the more brilliant discoveries, and which is in the higher and which in an inferior rank; but simply which out of all provides the most robust and invigorating discipline for the unformed mind. And I conceive it is as little disrespectful to Lord Bacon to prefer the Classics in this point of view to the sciences which have grown out of his philosophy as it would be disrespectful to St. Thomas in the middle ages to have hindered the study of the Summa from doing prejudice to the Faculty of Arts. Accordingly, I anticipate that, as in the middle ages both the teaching and the government of the University remained in the Faculty of Arts, in spite of the genius which created or illustrated Theology and Law, so now too, whatever be the splendour of the modern philosophy, the marvellousness of its disclosures, the utility of its acquisitions, and the talent of its masters, still it will not avail in the event, to detrude classical literature and the studies connected with it from the place which they have held in all ages in education.

Such, then, is the course of reflection obviously suggested by the act in which we have been lately engaged, and which we are now celebrating. In the nineteenth century, in a country which looks out upon a new world, and anticipates a coming age, we have been engaged in opening the Schools dedicated to the studies of polite literature and liberal science, or what are called the Arts, as a first step towards the establishment on Catholic ground of a Catholic University. And while we thus recur to Greece and Athens with pleasure and affection, and recognize in that famous land the source and the school of intellectual culture, it would be strange indeed if we forgot to look further south also, and there to bow before a more glorious luminary, and a more sacred oracle of truth, and the source of another sort of knowledge, high and supernatural, which is seated in Palestine. Jerusalem is the fountain-head of religious knowledge, as Athens is of secular. In the ancient world we see two centres of illumination, acting independently of each other, each with its own

movement, and at first apparently without any promise of convergence. Greek civilization spreads over the East, conquering in the conquests of Alexander, and, when carried captive into the West, subdues the conquerors who brought it thither. Religion, on the other hand, is driven from its own aboriginal home to the North and West by reason of the sins of the people who were in charge of it, in a long course of judgments and plagues and persecutions. Each by itself pursues its career and fulfils its mission; neither of them recognizes, nor is recognized by the other. At length the Temple of Jerusalem is rooted up by the armies of Titus, and the effete schools of Athens are stifled by the edict of Justinian. So pass away the ancient Voices of religion and learning; but they are silenced only to revive more gloriously and perfectly elsewhere. Hitherto they came from separate sources, and performed separate works. Each leaves an heir and successor in the West, and that heir and successor is one and the same. The grace stored in Jerusalem, and the gifts which radiate from Athens, are made over and concentrated in Rome. This is true as a matter of history. Rome has inherited both sacred and profane learning; she has perpetuated and dispensed the traditions of Moses and David in the supernatural order, and of Homer and Aristotle in the natural. To separate those distinct teachings, human and divine, which meet in Rome, is to retrograde; it is to rebuild the Jewish Temple and to plant anew the groves of Academus.

6.

On this large subject, however, on which I might say much, time does not allow me to enter. To show how sacred learning and profane are dependent on each other, correlative and mutually complementary, how faith operates by means of reason, and reason is directed and corrected by faith, is really the subject of a distinct lecture. I would conclude, then, with merely congratulating you,

Gentlemen, on the great undertaking which we have so auspiciously commenced. Whatever be its fortunes, whatever its difficulties, whatever its delays, I cannot doubt at all that the encouragement which it has already received, and the measure of success which it has been allotted, are but a presage and an anticipation of a gradual advance towards its completion, in such times and such manner as Providence shall appoint. For myself, I have never had any misgiving about it, because I had never known anything of it before the time when the Holy See had definitely decided upon its prosecution. It is my happiness to have no cognizance of the anxieties and perplexities of venerable and holy prelates, or the discussions of experienced and prudent men, which preceded its definitive recognition on the part of the highest ecclesiastical authority. It is my happiness to have no experience of the time when good Catholics despaired of its success, distrusted its expediency, or even felt an obligation to oppose it. It has been my happiness that I have never been in controversy with persons in this country external to the Catholic Church, nor have been forced into any direct collision with institutions or measures which rest on a foundation hostile to Catholicism. No one can accuse me of any disrespect towards those whose principles or whose policy I disapprove; nor am I conscious of any other aim than that of working in my own place, without going out of my way to offend others. If I have taken part in the undertaking which has now brought us together, it has been because I believed it was a great work, great in its conception, great in its promise, and great in the authority from which it proceeds. I felt it to be so great that I did not dare to incur the responsibility of refusing to take part in it.

How far indeed, and how long, I am to be connected with it, is another matter altogether. It is enough for one man to lay only one stone of so noble and grand an edifice; it is enough, more than enough for me, if I do so much as merely begin, what others may more

hopefully continue. One only among the sons of men has carried out a perfect work, and satisfied and exhausted the mission on which He came. One alone has with His last breath said "Consummatum est." But all who set about their duties in faith and hope and love, with a resolute heart and a devoted will, are able, weak though they be, to do what, though incomplete, is imperishable. Even their failures become successes, as being necessary steps in a course, and as terms (so to say) in a long series, which will at length fulfil the object which they propose. And they will unite themselves in spirit, in their humble degree, with those real heroes of Holy Writ and ecclesiastical history, Moses, Elias, and David, Basil, Athanasius, and Chrysostom, Gregory the Seventh, St. Thomas of Canterbury, and many others, who did most when they fancied themselves least prosperous, and died without being permitted to see the fruit of their labours.

Lecture II

Literature

—A Lecture in the School of Philosophy and Letters

1.

Wishing to address you, Gentlemen, at the commencement of a new Session, I tried to find a subject for discussion, which might be at once suitable to the occasion, yet neither too large for your time, nor too minute or abstruse for your attention. I think I see one for my purpose in the very title of your Faculty. It is the Faculty of Philosophy and Letters. Now the question may arise as to what is meant by “Philosophy,” and what is meant by “Letters.” As to the other Faculties, the subject-matter which they profess is intelligible, as soon as named, and beyond all dispute. We know what Science is, what Medicine, what Law, and what Theology; but we have not so much ease in determining what is meant by Philosophy and Letters. Each department of that twofold province needs explanation: it will be sufficient, on an occasion like this, to investigate one of them. Accordingly I shall select for remark the latter of the two, and attempt to determine what we are to understand by Letters or Literature, in what Literature consists, and how it stands relatively to Science. We speak, for instance, of ancient and modern literature, the literature of the day, sacred literature, light literature; and our lectures in this place are devoted to classical literature and English literature. Are

Letters, then, synonymous with books? This cannot be, or they would include in their range Philosophy, Law, and, in short, the teaching of all the other Faculties. Far from confusing these various studies, we view the works of Plato or Cicero sometimes as philosophy, sometimes as literature; on the other hand, no one would ever be tempted to speak of Euclid as literature, or of Matthiæ's Greek Grammar. Is, then, literature synonymous with composition? with books written with an attention to style? is literature fine writing? again, is it studied and artificial writing?

There are excellent persons who seem to adopt this last account of Literature as their own idea of it. They depreciate it, as if it were the result of a mere art or trick of words. Professedly indeed, they are aiming at the Greek and Roman classics, but their criticisms have quite as great force against all literature as against any. I think I shall be best able to bring out what I have to say on the subject by examining the statements which they make in defence of their own view of it. They contend then, 1. that fine writing, as exemplified in the Classics, is mainly a matter of conceits, fancies, and prettinesses, decked out in choice words; 2. that this is the proof of it, that the classics will not bear translating;—(and this is why I have said that the real attack is upon literature altogether, not the classical only; for, to speak generally, all literature, modern as well as ancient, lies under this disadvantage. This, however, they will not allow; for they maintain,) 3. that Holy Scripture presents a remarkable contrast to secular writings on this very point, viz., in that Scripture does easily admit of translation, though it is the most sublime and beautiful of all writings.

2.

Now I will begin by stating these three positions in the words of a writer, who is cited by the estimable Catholics in question as a

witness, or rather as an advocate, in their behalf, though he is far from being able in his own person to challenge the respect which is inspired by themselves.

“There are two sorts of eloquence,” says this writer, “the one indeed scarce deserves the name of it, which consists chiefly in laboured and polished periods, an over-curious and artificial arrangement of figures, tinselled over with a gaudy embellishment of words, which glitter, but convey little or no light to the understanding. This kind of writing is for the most part much affected and admired by the people of weak judgment and vicious taste; but it is a piece of affectation and formality the sacred writers are utter strangers to. It is a vain and boyish eloquence; and, as it has always been esteemed below the great geniuses of all ages, so much more so with respect to those writers who were actuated by the spirit of Infinite Wisdom, and therefore wrote with that force and majesty with which never man writ. The other sort of eloquence is quite the reverse to this, and which may be said to be the true characteristic of the Holy Scriptures; where the excellence does not arise from a laboured and far-fetched elocution, but from a surprising mixture of simplicity and majesty, which is a double character, so difficult to be united that it is seldom to be met with in compositions merely human. We see nothing in Holy Writ of affectation and superfluous ornament.... Now, it is observable that the most excellent profane authors, whether Greek or Latin, lose most of their graces whenever we find them literally translated. Homer’s famed representation of Jupiter—his cried-up description of a tempest, his relation of Neptune’s shaking the earth and opening it to its centre, his description of Pallas’s horses, with numbers of other long-since admired passages, flag, and almost vanish away, in the vulgar Latin translation.

“Let any one but take the pains to read the common Latin interpretations of Virgil, Theocritus, or even of Pindar, and one may

venture to affirm he will be able to trace out but few remains of the graces which charmed him so much in the original. The natural conclusion from hence is, that in the classical authors, the expression, the sweetness of the numbers, occasioned by a musical placing of words, constitute a great part of their beauties; whereas, in the sacred writings, they consist more in the greatness of the things themselves than in the words and expressions. The ideas and conceptions are so great and lofty in their own nature that they necessarily appear magnificent in the most artless dress. Look but into the Bible, and we see them shine through the most simple and literal translations. That glorious description which Moses gives of the creation of the heavens and the earth, which Longinus ... was so greatly taken with, has not lost the least whit of its intrinsic worth, and though it has undergone so many translations, yet triumphs over all, and breaks forth with as much force and vehemence as in the original.... In the history of Joseph, where Joseph makes himself known, and weeps aloud upon the neck of his dear brother Benjamin, that all the house of Pharaoh heard him, at that instant none of his brethren are introduced as uttering aught, either to express their present joy or palliate their former injuries to him. On all sides there immediately ensues a deep and solemn silence; a silence infinitely more eloquent and expressive than anything else that could have been substituted in its place. Had Thucydides, Herodotus, Livy, or any of the celebrated classical historians, been employed in writing this history, when they came to this point they would doubtless have exhausted all their fund of eloquence in furnishing Joseph's brethren with laboured and studied harangues, which, however fine they might have been in themselves, would nevertheless have been unnatural, and altogether improper on the occasion."

This is eloquently written, but it contains, I consider, a mixture of truth and falsehood, which it will be my business to discriminate from

each other. Far be it from me to deny the unapproachable grandeur and simplicity of Holy Scripture; but I shall maintain that the classics are, as human compositions, simple and majestic and natural too. I grant that Scripture is concerned with things, but I will not grant that classical literature is simply concerned with words. I grant that human literature is often elaborate, but I will maintain that elaborate composition is not unknown to the writers of Scripture. I grant that human literature cannot easily be translated out of the particular language to which it belongs; but it is not at all the rule that Scripture can easily be translated either;—and now I address myself to my task:

—

3.

Here, then, in the first place, I observe, Gentlemen, that Literature, from the derivation of the word, implies writing, not speaking; this, however, arises from the circumstance of the copiousness, variety, and public circulation of the matters of which it consists. What is spoken cannot outrun the range of the speaker's voice, and perishes in the uttering. When words are in demand to express a long course of thought, when they have to be conveyed to the ends of the earth, or perpetuated for the benefit of posterity, they must be written down, that is, reduced to the shape of literature; still, properly speaking, the terms, by which we denote this characteristic gift of man, belong to its exhibition by means of the voice, not of handwriting. It addresses itself, in its primary idea, to the ear, not to the eye. We call it the power of speech, we call it language, that is, the use of the tongue; and, even when we write, we still keep in mind what was its original instrument, for we use freely such terms in our books as “saying,” “speaking,” “telling,” “talking,” “calling;” we use the terms “phraseology” and “diction;” as if we were still addressing ourselves to the ear.

Now I insist on this, because it shows that speech, and therefore literature, which is its permanent record, is essentially a personal work. It is not some production or result, attained by the partnership of several persons, or by machinery, or by any natural process, but in its very idea it proceeds, and must proceed, from some one given individual. Two persons cannot be the authors of the sounds which strike our ear; and, as they cannot be speaking one and the same speech, neither can they be writing one and the same lecture or discourse,—which must certainly belong to some one person or other, and is the expression of that one person's ideas and feelings,—ideas and feelings personal to himself, though others may have parallel and similar ones,—proper to himself, in the same sense as his voice, his air, his countenance, his carriage, and his action, are personal. In other words, Literature expresses, not objective truth, as it is called, but subjective; not things, but thoughts.

Now this doctrine will become clearer by considering another use of words, which does relate to objective truth, or to things; which relates to matters, not personal, not subjective to the individual, but which, even were there no individual man in the whole world to know them or to talk about them, would exist still. Such objects become the matter of Science, and words indeed are used to express them, but such words are rather symbols than language, and however many we use, and however we may perpetuate them by writing, we never could make any kind of literature out of them, or call them by that name. Such, for instance, would be Euclid's Elements; they relate to truths universal and eternal; they are not mere thoughts, but things: they exist in themselves, not by virtue of our understanding them, not in dependence upon our will, but in what is called the *nature* of things, or at least on conditions external to us. The words, then, in which they are set forth are not language, speech, literature, but rather, as I have said, symbols. And, as a proof of it, you will recollect that it is

possible, nay usual, to set forth the propositions of Euclid in algebraical notation, which, as all would admit, has nothing to do with literature. What is true of mathematics is true also of every study, so far forth as it is scientific; it makes use of words as the mere vehicle of things, and is thereby withdrawn from the province of literature. Thus metaphysics, ethics, law, political economy, chemistry, theology, cease to be literature in the same degree as they are capable of a severe scientific treatment. And hence it is that Aristotle's works on the one hand, though at first sight literature, approach in character, at least a great number of them, to mere science; for even though the things which he treats of and exhibits may not always be real and true, yet he treats them as if they were, not as if they were the thoughts of his own mind; that is, he treats them scientifically. On the other hand, Law or Natural History has before now been treated by an author with so much of colouring derived from his own mind as to become a sort of literature; this is especially seen in the instance of Theology, when it takes the shape of Pulpit Eloquence. It is seen too in historical composition, which becomes a mere specimen of chronology, or a chronicle, when divested of the philosophy, the skill, or the party and personal feelings of the particular writer. Science, then, has to do with things, literature with thoughts; science is universal, literature is personal; science uses words merely as symbols, but literature uses language in its full compass, as including phraseology, idiom, style, composition, rhythm, eloquence, and whatever other properties are included in it.

Let us then put aside the scientific use of words, when we are to speak of language and literature. Literature is the personal use or exercise of language. That this is so is further proved from the fact that one author uses it so differently from another. Language itself in its very origination would seem to be traceable to individuals. Their peculiarities have given it its character. We are often able in fact to

trace particular phrases or idioms to individuals; we know the history of their rise. Slang surely, as it is called, comes of, and breathes of the personal. The connection between the force of words in particular languages and the habits and sentiments of the nations speaking them has often been pointed out. And, while the many use language as they find it, the man of genius uses it indeed, but subjects it withal to his own purposes, and moulds it according to his own peculiarities. The throng and succession of ideas, thoughts, feelings, imaginations, aspirations, which pass within him, the abstractions, the juxtapositions, the comparisons, the discriminations, the conceptions, which are so original in him, his views of external things, his judgments upon life, manners, and history, the exercises of his wit, of his humour, of his depth, of his sagacity, all these innumerable and incessant creations, the very pulsation and throbbing of his intellect, does he image forth, to all does he give utterance, in a corresponding language, which is as multiform as this inward mental action itself and analogous to it, the faithful expression of his intense personality, attending on his own inward world of thought as its very shadow: so that we might as well say that one man's shadow is another's as that the style of a really gifted mind can belong to any but himself. It follows him about *as* a shadow. His thought and feeling are personal, and so his language is personal.

4.

Thought and speech are inseparable from each other. Matter and expression are parts of one: style is a thinking out into language. This is what I have been laying down, and this is literature; not *things*, not the verbal symbols of things; not on the other hand mere *words*; but thoughts expressed in language. Call to mind, Gentlemen, the meaning of the Greek word which expresses this special prerogative of man over the feeble intelligence of the inferior animals. It is called Logos:

what does Logos mean? it stands both for *reason* and for *speech*, and it is difficult to say which it means more properly. It means both at once: why? because really they cannot be divided,—because they are in a true sense one. When we can separate light and illumination, life and motion, the convex and the concave of a curve, then will it be possible for thought to tread speech under foot, and to hope to do without it—then will it be conceivable that the vigorous and fertile intellect should renounce its own double, its instrument of expression, and the channel of its speculations and emotions.

Critics should consider this view of the subject before they lay down such canons of taste as the writer whose pages I have quoted. Such men as he is consider fine writing to be an *addition from without* to the matter treated of,—a sort of ornament superinduced, or a luxury indulged in, by those who have time and inclination for such vanities. They speak as if *one* man could do the thought, and *another* the style. We read in Persian travels of the way in which young gentlemen go to work in the East, when they would engage in correspondence with those who inspire them with hope or fear. They cannot write one sentence themselves; so they betake themselves to the professional letterwriter. They confide to him the object they have in view. They have a point to gain from a superior, a favour to ask, an evil to deprecate; they have to approach a man in power, or to make court to some beautiful lady. The professional man manufactures words for them, as they are wanted, as a stationer sells them paper, or a schoolmaster might cut their pens. Thought and word are, in their conception, two things, and thus there is a division of labour. The man of thought comes to the man of words; and the man of words, duly instructed in the thought, dips the pen of desire into the ink of devotedness, and proceeds to spread it over the page of desolation. Then the nightingale of affection is heard to warble to the rose of loveliness, while the breeze of anxiety plays around the brow of

expectation. This is what the Easterns are said to consider fine writing; and it seems pretty much the idea of the school of critics to whom I have been referring.

We have an instance in literary history of this very proceeding nearer home, in a great University, in the latter years of the last century. I have referred to it before now in a public lecture elsewhere; but it is too much in point here to be omitted. A learned Arabic scholar had to deliver a set of lectures before its doctors and professors on an historical subject in which his reading had lain. A linguist is conversant with science rather than with literature; but this gentleman felt that his lectures must not be without a style. Being of the opinion of the Orientals, with whose writings he was familiar, he determined to buy a style. He took the step of engaging a person, at a price, to turn the matter which he had got together into ornamental English. Observe, he did not wish for mere grammatical English, but for an elaborate, pretentious style. An artist was found in the person of a country curate, and the job was carried out. His lectures remain to this day, in their own place in the protracted series of annual Discourses to which they belong, distinguished amid a number of heavyish compositions by the rhetorical and ambitious diction for which he went into the market. This learned divine, indeed, and the author I have quoted, differ from each other in the estimate they respectively form of literary composition; but they agree together in this,—in considering such composition a trick and a trade; they put it on a par with the gold plate and the flowers and the music of a banquet, which do not make the viands better, but the entertainment more pleasurable; as if language were the hired servant, the mere mistress of the reason, and not the lawful wife in her own house.

But can they really think that Homer, or Pindar, or Shakespeare, or Dryden, or Walter Scott, were accustomed to aim at diction for its own sake, instead of being inspired with their subject, and pouring

forth beautiful words because they had beautiful thoughts? this is surely too great a paradox to be borne. Rather, it is the fire within the author's breast which overflows in the torrent of his burning, irresistible eloquence; it is the poetry of his inner soul, which relieves itself in the Ode or the Elegy; and his mental attitude and bearing, the beauty of his moral countenance, the force and keenness of his logic, are imaged in the tenderness, or energy, or richness of his language. Nay, according to the well-known line, "*facit indignatio versus;*" not the words alone, but even the rhythm, the metre, the verse, will be the contemporaneous offspring of the emotion or imagination which possesses him. "*Poeta nascitur, non fit,*" says the proverb; and this is in numerous instances true of his poems, as well as of himself. They are born, not framed; they are a strain rather than a composition; and their perfection is the monument, not so much of his skill as of his power. And this is true of prose as well as of verse in its degree: who will not recognize in the vision of Mirza a delicacy and beauty of style which is very difficult to describe, but which is felt to be in exact correspondence to the ideas of which it is the expression?

5.

And, since the thoughts and reasonings of an author have, as I have said, a personal character, no wonder that his style is not only the image of his subject, but of his mind. That pomp of language, that full and tuneful diction, that felicitousness in the choice and exquisiteness in the collocation of words, which to prosaic writers seem artificial, is nothing else but the mere habit and way of a lofty intellect. Aristotle, in his sketch of the magnanimous man, tells us that his voice is deep, his motions slow, and his stature commanding. In like manner, the elocution of a great intellect is great. His language expresses, not only his great thoughts, but his great self. Certainly he might use fewer words than he uses; but he fertilizes his simplest

ideas, and germinates into a multitude of details, and prolongs the march of his sentences, and sweeps round to the full diapason of his harmony, as if lúdfi caí~v, rejoicing in his own vigour and richness of resource. I say, a narrow critic will call it verbiage, when really it is a sort of fulness of heart, parallel to that which makes the merry boy whistle as he walks, or the strong man, like the smith in the novel, flourish his club when there is no one to fight with.

Shakespeare furnishes us with frequent instances of this peculiarity, and all so beautiful, that it is difficult to select for quotation. For instance, in Macbeth:—

“Canst thou not minister to a mind diseased,
Pluck from the memory a rooted sorrow,
Raze out the written troubles of the brain,
And, with some sweet oblivious antidote,
Cleanse the foul bosom of that perilous stuff,
Which weighs upon the heart?”

Here a simple idea, by a process which belongs to the orator rather than to the poet, but still comes from the native vigour of genius, is expanded into a many-membered period.

The following from Hamlet is of the same kind:—

“’Tis not alone my inky cloak, good mother,
Nor customary suits of solemn black,
Nor windy suspiration of forced breath,
No, nor the fruitful river in the eye,
Nor the dejected haviour of the visage,
Together with all forms, modes, shows of grief,

That can denote me truly.”

Now, if such declamation, for declamation it is, however noble, be allowable in a poet, whose genius is so far removed from pompousness or pretence, much more is it allowable in an orator, whose very province it is to put forth words to the best advantage he can. Cicero has nothing more redundant in any part of his writings than these passages from Shakespeare. No lover then at least of Shakespeare may fairly accuse Cicero of gorgeousness of phraseology or diffuseness of style. Nor will any sound critic be tempted to do so. As a certain unaffected neatness and propriety and grace of diction may be required of any author who lays claim to be a classic, for the same reason that a certain attention to dress is expected of every gentleman, so to Cicero may be allowed the privilege of the “*os magna sonaturum*,” of which the ancient critic speaks. His copious, majestic, musical flow of language, even if sometimes beyond what the subject-matter demands, is never out of keeping with the occasion or with the speaker. It is the expression of lofty sentiments in lofty sentences, the “*mens magna in corpore magno*.” It is the development of the inner man. Cicero vividly realised the *status* of a Roman senator and statesman, and the “pride of place” of Rome, in all the grace and grandeur which attached to her; and he imbibed, and became, what he admired. As the exploits of Scipio or Pompey are the expression of this greatness in deed, so the language of Cicero is the expression of it in word. And, as the acts of the Roman ruler or soldier represent to us, in a manner special to themselves, the characteristic magnanimity of the lords of the earth, so do the speeches or treatises of her accomplished orator bring it home to our imaginations as no other writing could do. Neither Livy, nor Tacitus, nor Terence, nor Seneca, nor Pliny, nor Quintilian, is an adequate spokesman for the Imperial

City. They write Latin; Cicero writes Roman.

6.

You will say that Cicero's language is undeniably studied, but that Shakespeare's is as undeniably natural and spontaneous; and that this is what is meant, when the Classics are accused of being mere artists of words. Here we are introduced to a further large question, which gives me the opportunity of anticipating a misapprehension of my meaning. I observe, then, that, not only is that lavish richness of style, which I have noticed in Shakespeare, justifiable on the principles which I have been laying down, but, what is less easy to receive, even elaborateness in composition is no mark of trick or artifice in an author. Undoubtedly the works of the Classics, particularly the Latin, *are* elaborate; they have cost a great deal of time, care, and trouble. They have had many rough copies; I grant it. I grant also that there are writers of name, ancient and modern, who really are guilty of the absurdity of making sentences, as the very end of their literary labour. Such was Isocrates; such were some of the sophists; they were set on words, to the neglect of thoughts or things; I cannot defend them. If I must give an English instance of this fault, much as I love and revere the personal character and intellectual vigour of Dr. Johnson, I cannot deny that his style often outruns the sense and the occasion, and is wanting in that simplicity which is the attribute of genius. Still, granting all this, I cannot grant, notwithstanding, that genius never need take pains,—that genius may not improve by practice,—that it never incurs failures, and succeeds the second time,—that it never finishes off at leisure what it has thrown off in the outline at a stroke.

Take the instance of the painter or the sculptor; he has a conception in his mind which he wishes to represent in the medium of his art;—the Madonna and Child, or Innocence, or Fortitude, or some historical character or event. Do you mean to say he does not study

his subject? does he not make sketches? does he not even call them “studies”? does he not call his workroom a *studio*? is he not ever designing, rejecting, adopting, correcting, perfecting? Are not the first attempts of Michael Angelo and Raffaello extant, in the case of some of their most celebrated compositions? Will any one say that the Apollo Belvidere is not a conception patiently elaborated into its proper perfection? These departments of taste are, according to the received notions of the world, the very province of genius, and yet we call them *arts*; they are the “Fine Arts.” Why may not that be true of literary composition which is true of painting, sculpture, architecture, and music? Why may not language be wrought as well as the clay of the modeller? why may not words be worked up as well as colours? why should not skill in diction be simply subservient and instrumental to the great prototypal ideas which are the contemplation of a Plato or a Virgil? Our greatest poet tells us,

“The poet’s eye, in a fine frenzy rolling,
Doth glance from heaven to earth, from earth to
heaven,
And, as imagination bodies forth
The forms of things unknown, the poet’s pen
Turns them to shapes, and gives to airy nothing
A local habitation and a name.”

Now, is it wonderful that that pen of his should sometimes be at fault for a while,—that it should pause, write, erase, re-write, amend, complete, before he satisfies himself that his language has done justice to the conceptions which his mind’s eye contemplated?

In this point of view, doubtless, many or most writers are elaborate; and those certainly not the least whose style is furthest

removed from ornament, being simple and natural, or vehement, or severely business-like and practical. Who so energetic and manly as Demosthenes? Yet he is said to have transcribed Thucydides many times over in the formation of his style. Who so gracefully natural as Herodotus? yet his very dialect is not his own, but chosen for the sake of the perfection of his narrative. Who exhibits such happy negligence as our own Addison? yet artistic fastidiousness was so notorious in his instance that the report has got abroad, truly or not, that he was too late in his issue of an important state-paper, from his habit of revision and recomposition. Such great authors were working by a model which was before the eyes of their intellect, and they were labouring to say what they had to say, in such a way as would most exactly and suitably express it. It is not wonderful that other authors, whose style is not simple, should be instances of a similar literary diligence. Virgil wished his *Æneid* to be burned, elaborate as is its composition, because he felt it needed more labour still, in order to make it perfect. The historian Gibbon in the last century is another instance in point. You must not suppose I am going to recommend his style for imitation, any more than his principles; but I refer to him as the example of a writer feeling the task which lay before him, feeling that he had to bring out into words for the comprehension of his readers a great and complicated scene, and wishing that those words should be adequate to his undertaking. I think he wrote the first chapter of his *History* three times over; it was not that he corrected or improved the first copy; but he put his first essay, and then his second, aside—he recast his matter, till he had hit the precise exhibition of it which he thought demanded by his subject.

Now in all these instances, I wish you to observe, that what I have admitted about literary workmanship differs from the doctrine which I am opposing in this,—that the mere dealer in words cares little or nothing for the subject which he is embellishing, but can paint and

gild anything whatever to order; whereas the artist, whom I am acknowledging, has his great or rich visions before him, and his only aim is to bring out what he thinks or what he feels in a way adequate to the thing spoken of, and appropriate to the speaker.

7.

The illustration which I have been borrowing from the Fine Arts will enable me to go a step further. I have been showing the connection of the thought with the language in literary composition; and in doing so I have exposed the unphilosophical notion, that the language was an extra which could be dispensed with, and provided to order according to the demand. But I have not yet brought out, what immediately follows from this, and which was the second point which I had to show, viz., that to be capable of easy translation is no test of the excellence of a composition. If I must say what I think, I should lay down, with little hesitation, that the truth was almost the reverse of this doctrine. Nor are many words required to show it. Such a doctrine, as is contained in the passage of the author whom I quoted when I began, goes upon the assumption that one language is just like another language,—that every language has all the ideas, turns of thought, delicacies of expression, figures, associations, abstractions, points of view, which every other language has. Now, as far as regards Science, it is true that all languages are pretty much alike for the purposes of Science; but even in this respect some are more suitable than others, which have to coin words, or to borrow them, in order to express scientific ideas. But if languages are not all equally adapted even to furnish symbols for those universal and eternal truths in which Science consists, how can they reasonably be expected to be all equally rich, equally forcible, equally musical, equally exact, equally happy in expressing the idiosyncratic peculiarities of thought of some original and fertile mind, who has availed himself of one of them? A

great author takes his native language, masters it, partly throws himself into it, partly moulds and adapts it, and pours out his multitude of ideas through the variously ramified and delicately minute channels of expression which he has found or framed:—does it follow that this his personal presence (as it may be called) can forthwith be transferred to every other language under the sun? Then may we reasonably maintain that Beethoven's *piano* music is not really beautiful, because it cannot be played on the hurdy-gurdy. Were not this astonishing doctrine maintained by persons far superior to the writer whom I have selected for animadversion, I should find it difficult to be patient under a gratuitous extravagance. It seems that a really great author must admit of translation, and that we have a test of his excellence when he reads to advantage in a foreign language as well as in his own. Then Shakespeare *is* a genius because he can be translated into German, and *not* a genius because he cannot be translated into French. Then the multiplication-table is the most gifted of all conceivable compositions, because it loses nothing by translation, and can hardly be said to belong to any one language whatever. Whereas I should rather have conceived that, in proportion as ideas are novel and recondite, they would be difficult to put into words, and that the very fact of their having insinuated themselves into one language would diminish the chance of that happy accident being repeated in another. In the language of savages you can hardly express any idea or act of the intellect at all: is the tongue of the Hottentot or Esquimaux to be made the measure of the genius of Plato, Pindar, Tacitus, St. Jerome, Dante, or Cervantes?

Let us recur, I say, to the illustration of the Fine Arts. I suppose you can express ideas in painting which you cannot express in sculpture; and the more an artist is of a painter, the less he is likely to be of a sculptor. The more he commits his genius to the methods and conditions of his own art, the less he will be able to throw himself into

the circumstances of another. Is the genius of Fra Angelico, of Francia, or of Raffaello disparaged by the fact that he was able to do that in colours which no man that ever lived, which no Angel, could achieve in wood? Each of the Fine Arts has its own subject-matter; from the nature of the case you can do in one what you cannot do in another; you can do in painting what you cannot do in carving; you can do in oils what you cannot do in fresco; you can do in marble what you cannot do in ivory; you can do in wax what you cannot do in bronze. Then, I repeat, applying this to the case of languages, why should not genius be able to do in Greek what it cannot do in Latin? and why are its Greek and Latin works defective because they will not turn into English? That genius, of which we are speaking, did not make English; it did not make all languages, present, past, and future; it did not make the laws of *any* language: why is it to be judged of by that in which it had no part, over which it has no control?

8.

And now we are naturally brought on to our third point, which is on the characteristics of Holy Scripture as compared with profane literature. Hitherto we have been concerned with the doctrine of these writers, viz., that style is an *extra*, that it is a mere artifice, and that hence it cannot be translated; now we come to their fact, viz., that Scripture has no such artificial style, and that Scripture can easily be translated. Surely their fact is as untenable as their doctrine.

Scripture easy of translation! then why have there been so few good translators? why is it that there has been such great difficulty in combining the two necessary qualities, fidelity to the original and purity in the adopted vernacular? why is it that the authorized versions of the Church are often so inferior to the original as compositions, except that the Church is bound above all things to see that the version is doctrinally correct, and in a difficult problem is

obliged to put up with defects in what is of secondary importance, provided she secure what is of first? If it were so easy to transfer the beauty of the original to the copy, she would not have been content with her received version in various languages which could be named.

And then in the next place, Scripture not elaborate! Scripture not ornamented in diction, and musical in cadence! Why, consider the Epistle to the Hebrews—where is there in the classics any composition more carefully, more artificially written? Consider the book of Job—is it not a sacred drama, as artistic, as perfect, as any Greek tragedy of Sophocles or Euripides? Consider the Psalter—are there no ornaments, no rhythm, no studied cadences, no responsive members, in that divinely beautiful book? And is it not hard to understand? are not the Prophets hard to understand? is not St. Paul hard to understand? Who can say that these are popular compositions? who can say that they are level at first reading with the understandings of the multitude?

That there are portions indeed of the inspired volume more simple both in style and in meaning, and that these are the more sacred and sublime passages, as, for instance, parts of the Gospels, I grant at once; but this does not militate against the doctrine I have been laying down. Recollect, Gentlemen, my distinction when I began. I have said Literature is one thing, and that Science is another; that Literature has to do with ideas, and Science with realities; that Literature is of a personal character, that Science treats of what is universal and eternal. In proportion, then, as Scripture excludes the personal colouring of its writers, and rises into the region of pure and mere inspiration, when it ceases in any sense to be the writing of man, of St. Paul or St. John, of Moses or Isaias, then it comes to belong to Science, not Literature. Then it conveys the things of heaven, unseen verities, divine manifestations, and them alone—not the ideas, the feelings, the aspirations, of its human instruments, who, for all that

they were inspired and infallible, did not cease to be men. St. Paul's epistles, then, I consider to be literature in a real and true sense, as personal, as rich in reflection and emotion, as Demosthenes or Euripides; and, without ceasing to be revelations of objective truth, they are expressions of the subjective notwithstanding. On the other hand, portions of the Gospels, of the book of Genesis, and other passages of the Sacred Volume, are of the nature of Science. Such is the beginning of St. John's Gospel, which we read at the end of Mass. Such is the Creed. I mean, passages such as these are the mere enunciation of eternal things, without (so to say) the medium of any human mind transmitting them to us. The words used have the grandeur, the majesty, the calm, unimpassioned beauty of Science; they are in no sense Literature, they are in no sense personal; and therefore they are easy to apprehend, and easy to translate.

Did time admit I could show you parallel instances of what I am speaking of in the Classics, inferior to the inspired word in proportion as the subject-matter of the classical authors is immensely inferior to the subjects treated of in Scripture—but parallel, inasmuch as the classical author or speaker ceases for the moment to have to do with Literature, as speaking of things objectively, and rises to the serene sublimity of Science. But I should be carried too far if I began.

9.

I shall then merely sum up what I have said, and come to a conclusion. Reverting, then, to my original question, what is the meaning of Letters, as contained, Gentlemen, in the designation of your Faculty, I have answered, that by Letters or Literature is meant the expression of thought in language, where by "thought" I mean the ideas, feelings, views, reasonings, and other operations of the human mind. And the Art of Letters is the method by which a speaker or writer brings out in words, worthy of his subject, and sufficient for his

audience or readers, the thoughts which impress him. Literature, then, is of a personal character; it consists in the enunciations and teachings of those who have a right to speak as representatives of their kind, and in whose words their brethren find an interpretation of their own sentiments, a record of their own experience, and a suggestion for their own judgments. A great author, Gentlemen, is not one who merely has a *copia verborum*, whether in prose or verse, and can, as it were, turn on at his will any number of splendid phrases and swelling sentences; but he is one who has something to say and knows how to say it. I do not claim for him, as such, any great depth of thought, or breadth of view, or philosophy, or sagacity, or knowledge of human nature, or experience of human life, though these additional gifts he may have, and the more he has of them the greater he is; but I ascribe to him, as his characteristic gift, in a large sense the faculty of Expression. He is master of the two-fold Logos, the thought and the word, distinct, but inseparable from each other. He may, if so be, elaborate his compositions, or he may pour out his improvisations, but in either case he has but one aim, which he keeps steadily before him, and is conscientious and single-minded in fulfilling. That aim is to give forth what he has within him; and from his very earnestness it comes to pass that, whatever be the splendour of his diction or the harmony of his periods, he has with him the charm of an incommunicable simplicity. Whatever be his subject, high or low, he treats it suitably and for its own sake. If he is a poet, “nil molitur ineptè.” If he is an orator, then too he speaks, not only “distinctè” and “splendidè,” but also “aptè.” His page is the lucid mirror of his mind and life—

“Quo fit, ut omnis

Votivâ pateat veluti descripta tabellâ

He writes passionately, because he feels keenly; forcibly, because he conceives vividly; he sees too clearly to be vague; he is too serious to be otiose; he can analyze his subject, and therefore he is rich; he embraces it as a whole and in its parts, and therefore he is consistent; he has a firm hold of it, and therefore he is luminous. When his imagination wells up, it overflows in ornament; when his heart is touched, it thrills along his verse. He always has the right word for the right idea, and never a word too much. If he is brief, it is because few words suffice; when he is lavish of them, still each word has its mark, and aids, not embarrasses, the vigorous march of his elocution. He expresses what all feel, but all cannot say; and his sayings pass into proverbs among his people, and his phrases become household words and idioms of their daily speech, which is tessellated with the rich fragments of his language, as we see in foreign lands the marbles of Roman grandeur worked into the walls and pavements of modern palaces.

Such pre-eminently is Shakespeare among ourselves; such pre-eminently Virgil among the Latins; such in their degree are all those writers who in every nation go by the name of Classics. To particular nations they are necessarily attached from the circumstance of the variety of tongues, and the peculiarities of each; but so far they have a catholic and ecumenical character, that what they express is common to the whole race of man, and they alone are able to express it.

10.

If then the power of speech is a gift as great as any that can be named,—if the origin of language is by many philosophers even considered to be nothing short of divine,—if by means of words the

secrets of the heart are brought to light, pain of soul is relieved, hidden grief is carried off, sympathy conveyed, counsel imparted, experience recorded, and wisdom perpetuated,—if by great authors the many are drawn up into unity, national character is fixed, a people speaks, the past and the future, the East and the West are brought into communication with each other,—if such men are, in a word, the spokesmen and prophets of the human family,—it will not answer to make light of Literature or to neglect its study; rather we may be sure that, in proportion as we master it in whatever language, and imbibe its spirit, we shall ourselves become in our own measure the ministers of like benefits to others, be they many or few, be they in the obscurer or the more distinguished walks of life,—who are united to us by social ties, and are within the sphere of our personal influence.

Lecture III

English Catholic Literature

One of the special objects which a Catholic University would promote is that of the formation of a Catholic Literature in the English language. It is an object, however, which must be understood before it can be suitably prosecuted; and which will not be understood without some discussion and investigation. First ideas on the subject must almost necessarily be crude. The real state of the case, what is desirable, what is possible, has to be ascertained; and then what has to be done, and what is to be expected. We have seen in public matters, for half a year past, to what mistakes, and to what disappointments, the country has been exposed, from not having been able distinctly to put before it what was to be aimed at by its fleets and armies, what was practicable, what was probable, in operations of war: and so, too, in the field of literature, we are sure of falling into a parallel perplexity and dissatisfaction, if we start with a vague notion of doing something or other important by means of a Catholic University, without having the caution to examine what is feasible, and what is unnecessary or hopeless. Accordingly, it is natural I should wish to direct attention to this subject, even though it be too difficult to handle in any exact or complete way, and though my attempt must be left for others to bring into a more perfect shape, who are more fitted for the task.

Here I shall chiefly employ myself in investigating what the object is *not*.

§ 1. In Its Relation to Religious Literature

When a “Catholic Literature in the English tongue” is spoken of as a *desideratum*, no reasonable person will mean by “Catholic works” much more than the “works of Catholics.” The phrase does not mean a *religious* literature. “Religious Literature” indeed would mean much more than “the Literature of religious men;” it means over and above this, that the subject-matter of the Literature is religious; but by “Catholic Literature” is not to be understood a literature which treats exclusively or primarily of Catholic matters, of Catholic doctrine, controversy, history, persons, or politics; but it includes all subjects of literature whatever, treated as a Catholic would treat them, and as he only can treat them. Why it is important to have them treated by Catholics hardly need be explained here, though something will be incidentally said on the point as we proceed: meanwhile I am drawing attention to the distinction between the two phrases in order to avoid a serious misapprehension. For it is evident that, if by a Catholic Literature were meant nothing more or less than a religious literature, its writers would be mainly ecclesiastics; just as writers on Law are mainly lawyers, and writers on Medicine are mainly physicians or surgeons. And if this be so, a Catholic Literature is no object special to a University, unless a University is to be considered identical with a Seminary or a Theological School.

I am not denying that a University might prove of the greatest benefit even to our religious literature; doubtless it would, and in various ways; still it is concerned with Theology only as one great subject of thought, as the greatest indeed which can occupy the human mind, yet not as the adequate or direct scope of its institution. Yet I suppose it is not impossible for a literary layman to wince at the idea, and to shrink from the proposal, of taking part in a scheme for the formation of a Catholic Literature, under the apprehension that in

some way or another he will be entangling himself in a semi-clerical occupation. It is not uncommon, on expressing an anticipation that the Professors of a Catholic University will promote a Catholic Literature, to have to encounter a vague notion that a lecturer or writer so employed must have something polemical about him, must moralize or preach, must (in Protestant language) *improve the occasion*, though his subject is not at all a religious one; in short, that he must do something else besides fairly and boldly go right on, and be a Catholic speaking as a Catholic spontaneously will speak, on the Classics, or Fine Arts, or Poetry, or whatever he has taken in hand. Men think that he cannot give a lecture on Comparative Anatomy without being bound to digress into the Argument from Final Causes; that he cannot recount the present geological theories without forcing them into an interpretation *seriatim* of the first two chapters of Genesis. Many, indeed, seem to go further still, and actually pronounce that, since our own University has been recommended by the Holy See, and is established by the Hierarchy, it cannot but be engaged in teaching religion and nothing else, and must and will have the discipline of a Seminary; which is about as sensible and logical a view of the matter as it would be to maintain that the Prime Minister *ipso facto* holds an ecclesiastical office, since he is always a Protestant; or that the members of the House of Commons must necessarily have been occupied in clerical duties, as long as they took an oath about Transubstantiation. Catholic Literature is not synonymous with Theology, nor does it supersede or interfere with the work of catechists, divines, preachers, or schoolmen.

§ 2. In Its Relation to Science

1.

And next, it must be borne in mind, that when we aim at

providing a Catholic Literature for Catholics, in place of an existing literature which is of a marked Protestant character, we do not, strictly speaking, include the pure sciences in our *desideratum*. Not that we should not feel pleased and proud to find Catholics distinguish themselves in publications on abstract or experimental philosophy, on account of the honour it does to our religion in the eyes of the world;—not that we are insensible to the congruity and respectability of depending in these matters on ourselves, and not on others, at least as regards our text-books;—not that we do not confidently anticipate that Catholics of these countries will in time to come be able to point to authorities and discoverers in science of their own, equal to those of Protestant England, Germany, or Sweden;—but because, as regards mathematics, chemistry, astronomy, and similar subjects, one man will not, on the score of his religion, treat of them better than another, and because the works of even an unbeliever or idolator, while he kept within the strict range of such studies, might be safely admitted into Catholic lecture-rooms, and put without scruple into the hands of Catholic youths. There is no crying demand, no imperative necessity, for our acquisition of a Catholic Euclid or a Catholic Newton. The object of all science is truth;—the pure sciences proceed to their enunciations from principles which the intellect discerns by a natural light, and by a process recognized by natural reason; and the experimental sciences investigate facts by methods of analysis or by ingenious expedients, ultimately resolvable into instruments of thought equally native to the human mind. If then we may assume that there is an objective truth, and that the constitution of the human mind is in correspondence with it, and acts truly when it acts according to its own laws; if we may assume that God made us, and that what He made is good, and that no action from and according to nature can in itself be evil; it will follow that, so long as it is man who is the geometrician, or natural philosopher, or mechanic, or critic, no

matter what man he be, Hindoo, Mahometan, or infidel, his conclusions within his own science, according to the laws of that science, are unquestionable, and not to be suspected by Catholics, unless Catholics may legitimately be jealous of fact and truth, of divine principles and divine creations.

I have been speaking of the scientific treatises or investigations of those who are not Catholics, to which the subject of Literature leads me; but I might even go on to speak of them in their persons as well as in their books. Were it not for the scandal which they would create; were it not for the example they would set; were it not for the certain tendency of the human mind involuntarily to outleap the strict boundaries of an abstract science, and to teach it upon extraneous principles, to embody it in concrete examples, and to carry it on to practical conclusions; above all, were it not for the indirect influence, and living energetic presence, and collateral duties, which accompany a Professor in a great school of learning, I do not see (abstracting from him, I repeat, in hypothesis, what never could possibly be abstracted from him in fact), why the chair of Astronomy in a Catholic University should not be filled by a La Place, or that of Physics by a Humboldt. Whatever they might wish to say, still, while they kept to their own science, they would be unable, like the heathen Prophet in Scripture, to “go beyond the word of the Lord, to utter any thing of their own head.”

2.

So far the arguments hold good of certain celebrated writers in a Northern Review, who, in their hostility to the principle of dogmatic teaching, seem obliged to maintain, because subject-matters are distinct, that living opinions are distinct too, and that men are abstractions as well as their respective sciences. “On the morning of the thirteenth of August, in the year 1704,” says a justly celebrated

author, in illustration and defence of the anti-dogmatic principle in political and social matters, “two great captains, equal in authority, united by close private and public ties, but of different creeds, prepared for battle, on the event of which were staked the liberties of Europe.... Marlborough gave orders for public prayers; the English chaplains read the service at the head of the English regiments; the Calvinistic chaplains of the Dutch army, with heads on which hand of Bishop had never been laid, poured forth their supplications in front of their countrymen. In the meantime the Danes might listen to the Lutheran ministers; and Capuchins might encourage the Austrian squadrons, and pray to the Virgin for a blessing on the arms of the holy Roman Empire. The battle commences; these men of various religions all act like members of one body: the Catholic and the Protestant generals exert themselves to assist and to surpass each other; before sunset the Empire is saved; France has lost in a day the fruits of eight years of intrigue and of victory; and the allies, after conquering together, return thanks to God separately, each after his own form of worship.”^[1]

The writer of this lively passage would be doubtless unwilling himself to carry out the principle which it insinuates to those extreme conclusions to which it is often pushed by others, in matters of education. Viewed in itself, viewed in the abstract, that principle is simply, undeniably true; and is only sophistical when it is carried out in practical matters at all. A religious opinion, though not formally recognized, cannot fail of influencing *in fact* the school, or society, or polity in which it is found; though in the abstract that opinion is one thing, and the school, society, or polity, another. Here were Episcopalians, Lutherans, Calvinists, and Catholics found all fighting on one side, it is true, without any prejudice to their respective religious tenets: and, certainly, I never heard that in a battle soldiers did do any thing else but fight. I did not know they had time for going

beyond the matter in hand; yet, even as regards this very illustration which he has chosen, if we were bound to decide by it the controversy, it does so happen that that danger of interference and collision between opposite religionists actually does occur upon a campaign, which could not be incurred in a battle: and at this very time some jealousy or disgust has been shown in English popular publications, when they have had to record that our ally, the Emperor of the French, has sent his troops, who are serving with the British against the Russians, to attend High Mass, or has presented his sailors with a picture of the Madonna.

If, then, we could have Professors who were mere abstractions and phantoms, marrowless in their bones, and without speculation in their eyes; or if they could only open their mouths on their own special subject, and in their scientific pedantry were dead to the world; if they resembled the well known character in the Romance, who was so imprisoned or fossilized in his erudition, that, though “he stirred the fire with some address,” nevertheless, on attempting to snuff the candles, he “was unsuccessful, and relinquished that ambitious post of courtesy, after having twice reduced the parlour to total darkness,” then indeed Voltaire himself might be admitted, not without scandal, but without risk, to lecture on astronomy or galvanism in Catholic, or Protestant, or Presbyterian Colleges, or in all of them at once; and we should have no practical controversy with philosophers who, after the fashion of the author I have been quoting, are so smart in proving that we, who differ from them, must needs be so bigotted and puzzle-headed.

And in strict conformity with these obvious distinctions, it will be found that, so far as we *are* able to reduce scientific men of anti-Catholic opinions to the type of the imaginary bookworm to whom I have been alluding, we do actually use them in our schools. We allow our Catholic student to use them, so far as he can surprise them (if I

may use the expression), in their formal treatises, and can keep them close prisoners there.

Vix defessa senem passus componere membra,
Cum clamore ruit magno, manicisque jacentem
Occupat.

The fisherman, in the Arabian tale, took no harm from the genius, till he let him out from the brass bottle in which he was confined. "He examined the vessel and shook it, to see if what was within made any noise, but he heard nothing." All was safe till he had succeeded in opening it, and "then came out a very thick smoke, which, ascending to the clouds and extending itself along the sea shore in a thick mist, astonished him very much. After a time the smoke collected, and was converted into a genius of enormous height. At the sight of this monster, whose head appeared to reach the clouds, the fisherman trembled with fear." Such is the difference between an unbelieving or heretical philosopher in person, and in the mere disquisitions proper to his science. Porson was no edifying companion for young men of eighteen, nor are his letters on the text of the Three Heavenly Witnesses to be recommended; but that does not hinder his being admitted into Catholic schools, while he is confined within the limits of his Preface to the Hecuba. Franklin certainly would have been intolerable in person, if he began to talk freely, and throw out, as I think he did in private, that each solar system had its own god; but such extravagances of so able a man do not interfere with the honour we justly pay his name in the history of experimental science. Nay, the great Newton himself would have been silenced in a Catholic University, when he got upon the Apocalypse; yet is that any reason why we should not study his Principia, or avail ourselves of the

wonderful analysis which he, Protestant as he was, originated, and which French infidels have developed? We are glad, for their own sakes, that anti-Catholic writers should, in their posthumous influence, do as much real service to the human race as ever they can, and we have no wish to interfere with it.

3.

Returning, then, to the point from which we set out, I observe that, this being the state of the case as regards abstract science, viz., that we have no quarrel with its anti-Catholic commentators, till they thrust their persons into our Chairs, or their popular writings into our reading-rooms, it follows that, when we contemplate the formation of a Catholic Literature, we do not consider scientific works as among our most prominent *desiderata*. They are to be looked for, not so much for their own sake, as because they are indications that we have able scientific men in our communion; for if we have such, they will be certain to write, and in proportion as they increase in number will there be the chance of really profound, original, and standard books issuing from our Lecture-rooms and Libraries. But, after all, there is no reason why these should be better than those which we have already received from Protestants; though it is at once more becoming and more agreeable to our feelings to use books of our own, instead of being indebted to the books of others.

Literature, then, is not synonymous with Science; nor does Catholic education imply the exclusion of works of abstract reasoning, or of physical experiment, or the like, though written by persons of another or of no communion.

There is another consideration in point here, or rather prior to what I have been saying; and that is, that, considering certain scientific works, those on Criticism, for instance, are so often written in a technical phraseology, and since others, as mathematical, deal so

largely in signs, symbols, and figures, which belong to all languages, these abstract studies cannot properly be said to fall under English *Literature* at all;—for by Literature I understand Thought, conveyed under the forms of some particular language. And this brings me to speak of Literature in its highest and most genuine sense, viz., as an historical and national fact; and I fear, in this sense of the word also, it is altogether beside or beyond any object which a Catholic University can reasonably contemplate, at least in any moderate term of years; but so large a subject here opens upon us that I must postpone it to another Section.

§ 3. In Its Relation to Classical Literature

1.

I have been directing the reader's attention, first to what we do not, and next to what we need not contemplate, when we turn our thoughts to the formation of an English Catholic Literature. I said that our object was neither a library of theological nor of scientific knowledge, though theology in its literary aspect, and abstract science as an exercise of intellect, have both of course a place in the Catholic encyclopædia. One undertaking, however, there is, which not merely does not, and need not, but unhappily cannot, come into the reasonable contemplation of any set of persons, whether members of a University or not, who are desirous of Catholicizing the English language, as is very evident; and that is simply the creation of an *English Classical Literature*, for that has been done long ago, and would be a work beyond the powers of any body of men, even if it had still to be done. If I insist on this point here, no one must suppose I do not consider it to be self-evident; for I shall not be aiming at proving it, so much as at bringing it home distinctly to the mind, that we may, one and all, have a clearer perception of the state of things with which we

have to deal. There is many an undeniable truth which is not practically felt and appreciated; and, unless we master our position in the matter before us, we may be led off into various wild imaginations or impossible schemes, which will, as a matter of course, end in disappointment.

Were the Catholic Church acknowledged from this moment through the length and breadth of these islands, and the English tongue henceforth baptized into the Catholic faith, and sealed and consecrated to Catholic objects, and were the present intellectual activity of the nation to continue, as of course it would continue, we should at once have an abundance of Catholic works, which would be English, and purely English, literature and high literature; but still all these would not constitute “English Literature,” as the words are commonly understood, nor even then could we say that the “English Literature” was Catholic. Much less can we ever aspire to affirm it, while we are but a portion of the vast English-speaking world-wide race, and are but striving to create a current in the direction of Catholic truth, when the waters are rapidly flowing the other way. In no case can we, strictly speaking, form an English Literature; for by the Literature of a Nation is meant its Classics, and its Classics have been given to England, and have been recognized as such, long since.

2.

A Literature, when it is formed, is a national and historical fact; it is a matter of the past and the present, and can be as little ignored as the present, as little undone as the past. We can deny, supersede, or change it, then only, when we can do the same towards the race or language which it represents. Every great people has a character of its own, which it manifests and perpetuates in a variety of ways. It developes into a monarchy or republic;—by means of commerce or in war, in agriculture or in manufactures, or in all of these at once; in its

cities, its public edifices and works, bridges, canals, and harbours; in its laws, traditions, customs, and manners; in its songs and its proverbs; in its religion; in its line of policy, its bearing, its action towards foreign nations; in its alliances, fortunes, and the whole course of its history. All these are peculiar, and parts of a whole, and betoken the national character, and savour of each other; and the case is the same with the national language and literature. They are what they are, and cannot be any thing else, whether they be good or bad or of a mixed nature; before they are formed, we cannot prescribe them, and afterwards, we cannot reverse them. We may feel great repugnance to Milton or Gibbon as men; we may most seriously protest against the spirit which ever lives, and the tendency which ever operates, in every page of their writings; but there they are, an integral portion of English Literature; we cannot extinguish them; we cannot deny their power; we cannot write a new Milton or a new Gibbon; we cannot expurgate what needs to be exorcised. They are great English authors, each breathing hatred to the Catholic Church in his own way, each a proud and rebellious creature of God, each gifted with incomparable gifts.

We must take things as they are, if we take them at all. We may refuse to say a word to English literature, if we will; we may have recourse to French or to Italian instead, if we think either of these less exceptionable than our own; we may fall back upon the Classics of Greece and Rome; we may have nothing whatever to do with literature, as such, of any kind, and confine ourselves to purely amorphous or monstrous specimens of language; but if we do once profess in our Universities the English language and literature, if we think it allowable to know the state of things we live in, and that national character which we share, if we think it desirable to have a chance of writing what may be read after our day, and praiseworthy to aim at providing for Catholics who speak English a Catholic

Literature then—I do not say that we must at once throw open every sort of book to the young, the weak, or the untrained,—I do not say that we may dispense with our ecclesiastical indexes and emendations, but—we must not fancy ourselves creating what is already created in spite of us, and which never could at a moment be created by means of us, and we must recognize that historical literature, which is in occupation of the language, both as a fact, nay, and as a standard for ourselves.

There is surely nothing either “temerarious” or paradoxical in a statement like this. The growth of a nation is like that of an individual; its tone of voice and subjects for speech vary with its age. Each age has its own propriety and charm; as a boy’s beauty is not a man’s, and the sweetness of a treble differs from the richness of a bass, so it is with a whole people. The same period does not produce its most popular poet, its most effective orator, and its most philosophic historian. Language changes with the progress of thought and the events of history, and style changes with it; and while in successive generations it passes through a series of separate excellences, the respective deficiencies of all are supplied alternately by each. Thus language and literature may be considered as dependent on a process of nature, and admitting of subjection to her laws. Father Hardouin indeed, who maintained that, with the exception of Pliny, Cicero, Virgil’s *Georgics*, and Horace’s *Satires* and *Epistles*, Latin literature was the work of the medieval monks, had the conception of a literature neither national nor historical; but the rest of the world will be apt to consider time and place as necessary conditions in its formation, and will be unable to conceive of classical authors, except as either the elaboration of centuries, or the rare and fitful accident of genius.

First-rate excellence in literature, as in other matters, is either an accident or the outcome of a process; and in either case demands a

course of years to secure. We cannot reckon on a Plato, we cannot force an Aristotle, any more than we can command a fine harvest, or create a coal field. If a literature be, as I have said, the voice of a particular nation, it requires a territory and a period, as large as that nation's extent and history, to mature in. It is broader and deeper than the capacity of any body of men, however gifted, or any system of teaching, however true. It is the exponent, not of truth, but of nature, which is true only in its elements. It is the result of the mutual action of a hundred simultaneous influences and operations, and the issue of a hundred strange accidents in independent places and times; it is the scanty compensating produce of the wild discipline of the world and of life, so fruitful in failures; and it is the concentration of those rare manifestations of intellectual power, which no one can account for. It is made up, in the particular language here under consideration, of human beings as heterogeneous as Burns and Bunyan, De Foe and Johnson, Goldsmith and Cowper, Law and Fielding, Scott and Byron. The remark has been made that the history of an author is the history of his works; it is far more exact to say that, at least in the case of great writers, the history of their works is the history of their fortunes or their times. Each is, in his turn, the man of his age, the type of a generation, or the interpreter of a crisis. He is made for his day, and his day for him. Hooker would not have been, but for the existence of Catholics and Puritans, the defeat of the former and the rise of the latter; Clarendon would not have been without the Great Rebellion; Hobbes is the prophet of the reaction to scoffing infidelity; and Addison is the child of the Revolution and its attendant changes. If there be any of our classical authors, who might at first sight have been pronounced a University man, with the exception of Johnson, Addison is he; yet even Addison, the son and brother of clergymen, the fellow of an Oxford Society, the resident of a College which still points to the walk which he planted, must be something more, in

order to take his place among the Classics of the language, and owed the variety of his matter to his experience of life, and to the call made on his resources by the exigencies of his day. The world he lived in made him and used him. While his writings educated his own generation, they have delineated it for all posterity after him.

3.

I have been speaking of the authors of a literature, in their relation to the people and course of events to which they belong; but a prior consideration, at which I have already glanced, is their connection with the language itself, which has been their organ. If they are in great measure the creatures of their times, they are on the other hand in a far higher sense the creators of their language. It is indeed commonly called their mother tongue, but virtually it did not exist till they gave it life and form. All greater matters are carried on and perfected by a succession of individual minds; what is true in the history of thought and of action is true of language also. Certain masters of composition, as Shakespeare, Milton, and Pope, the writers of the Protestant Bible and Prayer Book, Hooker and Addison, Swift, Hume, and Goldsmith, have been the making of the English language; and as that language is a fact, so is the literature a fact, by which it is formed, and in which it lives. Men of great ability have taken it in hand, each in his own day, and have done for it what the master of a gymnasium does for the bodily frame. They have formed its limbs, and developed its strength; they have endowed it with vigour, exercised it in suppleness and dexterity, and taught it grace. They have made it rich, harmonious, various, and precise. They have furnished it with a variety of styles, which from their individuality may almost be called dialects, and are monuments both of the powers of the language and the genius of its cultivators.

How real a creation, how *sui generis*, is the style of Shakespeare,

or of the Protestant Bible and Prayer Book, or of Swift, or of Pope, or of Gibbon, or of Johnson! Even were the subject-matter without meaning, though in truth the style cannot really be abstracted from the sense, still the style would, on that supposition, remain as perfect and original a work as Euclid's elements or a symphony of Beethoven. And, like music, it has seized upon the public mind; and the literature of England is no longer a mere letter, printed in books, and shut up in libraries, but it is a living voice, which has gone forth in its expressions and its sentiments into the world of men, which daily thrills upon our ears and syllables our thoughts, which speaks to us through our correspondents, and dictates when we put pen to paper. Whether we will or no, the phraseology and diction of Shakespeare, of the Protestant formularies, of Milton, of Pope, of Johnson's *Tabletalk*, and of Walter Scott, have become a portion of the vernacular tongue, the household words, of which perhaps we little guess the origin, and the very idioms of our familiar conversation. The man in the comedy spoke prose without knowing it; and we Catholics, without consciousness and without offence, are ever repeating the half sentences of dissolute playwrights and heretical partizans and preachers. So tyrannous is the literature of a nation; it is too much for us. We cannot destroy or reverse it; we may confront and encounter it, but we cannot make it over again. It is a great work of man, when it is no work of God's.

I repeat, then, whatever we be able or unable to effect in the great problem which lies before us, any how we cannot undo the past. English Literature will ever *have been* Protestant. Swift and Addison, the most native and natural of our writers, Hooker and Milton, the most elaborate, never can become our co-religionists; and, though this is but the enunciation of a truism, it is not on that account an unprofitable enunciation.

I trust we are not the men to give up an undertaking because it is perplexed or arduous; and to do nothing because we cannot do everything. Much may be attempted, much attained, even granting English Literature is not Catholic. Something indeed may be said even in alleviation of the misfortune itself, on which I have been insisting; and with two remarks bearing upon this latter point I will bring this Section to an end.

1. First, then, it is to be considered that, whether we look to countries Christian or heathen, we find the state of literature there as little satisfactory as it is in these islands; so that, whatever are our difficulties here, they are not worse than those of Catholics all over the world. I would not indeed say a word to extenuate the calamity, under which we lie, of having a literature formed in Protestantism; still, other literatures have disadvantages of their own; and, though in such matters comparisons are impossible, I doubt whether we should be better pleased if our English Classics were tainted with licentiousness, or defaced by infidelity or scepticism. I conceive we should not much mend matters if we were to exchange literatures with the French, Italians, or Germans. About Germany, however, I will not speak; as to France, it has great and religious authors; its classical drama, even in comedy, compared with that of other literatures, is singularly unexceptionable; but who is there that holds a place among its writers so historical and important, who is so copious, so versatile, so brilliant, as that Voltaire who is an open scoffer at every thing sacred, venerable, or high-minded? Nor can Rousseau, though he has not the pretensions of Voltaire, be excluded from the classical writers of France. Again, the gifted Pascal, in the work on which his literary fame is mainly founded, does not approve himself to a Catholic judgment; and Descartes, the first of French philosophers, was too independent in his inquiries to be always correct in his conclusions.

The witty Rabelais is said, by a recent critic, to show covertly in his former publications, and openly in his latter, his "dislike to the Church of Rome." La Fontaine was with difficulty brought, on his death-bed, to make public satisfaction for the scandal which he had done to religion by his immoral *Contes*, though at length he threw into the fire a piece which he had just finished for the stage. Montaigne, whose Essays "make an epoch in literature," by "their influence upon the tastes and opinions of Europe;" whose "school embraces a large proportion of French and English literature;" and of whose "brightness and felicity of genius there can be but one opinion," is disgraced, as the same writer tells us, by "a sceptical bias and great indifference of temperament;" and "has led the way" as an habitual offender, "to the indecency too characteristic of French literature."

Nor does Italy present a more encouraging picture. Ariosto, one of the few names, ancient or modern, who is allowed on all hands to occupy the first rank of Literature, is, I suppose, rightly arraigned by the author I have above quoted, of "coarse sensuality." Pulci, "by his sceptical insinuations, seems clearly to display an intention of exposing religion to contempt." Boccaccio, the first of Italian prose-writers, had in his old age touchingly to lament the corrupting tendency of his popular compositions; and Bellarmine has to vindicate him, Dante, and Petrarch, from the charge of virulent abuse of the Holy See. Dante certainly does not scruple to place in his *Inferno* a Pope, whom the Church has since canonized, and his work on *Monarchia* is on the Index. Another great Florentine, Macchiavel, is on the Index also; and Giannone, as great in political history at Naples as Macchiavel at Florence, is notorious for his disaffection to the interests of the Roman Pontiff.

These are but specimens of the general character of secular literature, whatever be the people to whom it belongs. One literature may be better than another, but bad will be the best, when weighed in

the balance of truth and morality. It cannot be otherwise; human nature is in all ages and all countries the same; and its literature, therefore, will ever and everywhere be one and the same also. Man's work will savour of man; in his elements and powers excellent and admirable, but prone to disorder and excess, to error and to sin. Such too will be his literature; it will have the beauty and the fierceness, the sweetness and the rankness, of the natural man, and, with all its richness and greatness, will necessarily offend the senses of those who, in the Apostle's words, are really "exercised to discern between good and evil." "It is said of the holy Sturme," says an Oxford writer, "that, in passing a horde of unconverted Germans, as they were bathing and gambolling in the stream, he was so overpowered by the intolerable scent which arose from them that he nearly fainted away." National Literature is, in a parallel way, the untutored movements of the reason, imagination, passions, and affections of the natural man, the leapings and the friskings, the plungings and the snortings, the sportings and the buffoonings, the clumsy play and the aimless toil, of the noble, lawless savage of God's intellectual creation.

It is well that we should clearly apprehend a truth so simple and elementary as this, and not expect from the nature of man, or the literature of the world, what they never held out to us. Certainly, I did not know that the world was to be regarded as favourable to Christian faith or practice, or that it would be breaking any engagement with us, if it took a line divergent from our own. I have never fancied that we should have reasonable ground for surprise or complaint, though man's intellect *puris naturalibus* did prefer, of the two, liberty to truth, or though his heart cherished a leaning towards licence of thought and speech in comparison with restraint.

5.

2. If we do but resign ourselves to facts, we shall soon be led on

to the second reflection which I have promised—viz., that, not only are things not better abroad, but they might be worse at home. We have, it is true, a Protestant literature; but then it is neither atheistical nor immoral; and, in the case of at least half a dozen of its highest and most influential departments, and of the most popular of its authors, it comes to us with very considerable alleviations. For instance, there surely is a call on us for thankfulness that the most illustrious amongst English writers has so little of a Protestant about him that Catholics have been able, without extravagance, to claim him as their own, and that enemies to our creed have allowed that he is only not a Catholic, because, and as far as, his times forbade it. It is an additional satisfaction to be able to boast that he offends in neither of those two respects, which reflect so seriously upon the reputation of great authors abroad. Whatever passages may be gleaned from his dramas disrespectful to ecclesiastical authority, still these are but passages; on the other hand, there is in Shakespeare neither contempt of religion nor scepticism, and he upholds the broad laws of moral and divine truth with the consistency and severity of an Æschylus, Sophocles, or Pindar. There is no mistaking in his works on which side lies the right; Satan is not made a hero, nor Cain a victim, but pride is pride, and vice is vice, and, whatever indulgence he may allow himself in light thoughts or unseemly words, yet his admiration is reserved for sanctity and truth. From the second chief fault of Literature, as indeed my last words imply, he is not so free; but, often as he may offend against modesty, he is clear of a worse charge, sensuality, and hardly a passage can be instanced in all that he has written to seduce the imagination or to excite the passions.

A rival to Shakespeare, if not in genius, at least in copiousness and variety, is found in Pope; and *he* was actually a Catholic, though personally an unsatisfactory one. His freedom indeed from Protestantism is but a poor compensation for a false theory of religion

in one of his poems; but, taking his works as a whole, we may surely acquit them of being dangerous to the reader, whether on the score of morals or of faith.

Again, the special title of moralist in English Literature is accorded by the public voice to Johnson, whose bias towards Catholicity is well known.

If we were to ask for a report of our philosophers, the investigation would not be so agreeable; for we have three of evil, and one of unsatisfactory repute. Locke is scarcely an honour to us in the standard of truth, grave and manly as he is; and Hobbes, Hume, and Bentham, in spite of their abilities, are simply a disgrace. Yet, even in this department, we find some compensation in the names of Clarke, Berkeley, Butler, and Reid, and in a name more famous than them all. Bacon was too intellectually great to hate or to condemn the Catholic faith; and he deserves by his writings to be called the most orthodox of Protestant philosophers.

§ 4. In Its Relation to the Literature of the Day

1.

The past cannot be undone. That our English Classical Literature is not Catholic is a plain fact which we cannot deny, to which we must reconcile ourselves, as best we may, and which, as I have shown above, has after all its compensations. When, then, I speak of the desirableness of forming a Catholic Literature, I am contemplating no such vain enterprise as that of reversing history; no, nor of redeeming the past by the future. I have no dream of Catholic Classics as still reserved for the English language. In truth, classical authors not only are national, but belong to a particular age of a nation's life; and I should not wonder if, as regards ourselves, that age is passing away.

Moreover, they perform a particular office towards its language, which is not likely to be called for beyond a definite time. And further, though analogies or parallels cannot be taken to decide a question of this nature, such is the fact, that the series of our classical writers has already extended through a longer period than was granted to the Classical Literature either of Greece or of Rome; and thus the English language also may have a long course of literature still to come through many centuries, without that Literature being classical.

Latin, for instance, was a living language for many hundred years after the date of the writers who brought it to its perfection; and then it continued for a second long period to be the medium of European correspondence. Greek was a living language to a date not very far short of that of the taking of Constantinople, ten centuries after the date of St. Basil, and seventeen hundred years after the period commonly called classical. And thus, as the year has its spring and summer, so even for those celebrated languages there was but a season of splendour, and, compared with the whole course of their duration, but a brief season. Since, then, English has had its great writers for a term of about three hundred years,—as long, that is, as the period from Sappho to Demosthenes, or from Pisistratus to Arcesilas, or from Æschylus and Pindar to Carneades, or from Ennius to Pliny,—we should have no right to be disappointed if the classical period be close upon its termination.

By the Classics of a national Literature I mean those authors who have the foremost place in exemplifying the powers and conducting the development of its language. The language of a nation is at first rude and clumsy; and it demands a succession of skilful artists to make it malleable and ductile, and to work it up to its proper perfection. It improves by use, but it is not every one who can use it while as yet it is unformed. To do this is an effort of genius; and so men of a peculiar

talent arise, one after another, according to the circumstances of the times, and accomplish it. One gives it flexibility, that is, shows how it can be used without difficulty to express adequately a variety of thoughts and feelings in their nicety or intricacy; another makes it perspicuous or forcible; a third adds to its vocabulary; and a fourth gives it grace and harmony. The style of each of such eminent masters becomes henceforth in some sort a property of the language itself; words, phrases, collocations, and structure, which hitherto did not exist, gradually passing into the conversation and the composition of the educated classes.

2.

Now I will attempt to show how this process of improvement is effected, and what is its limit. I conceive then that these gifted writers act upon the spoken and written language by means of the particular schools which form about them respectively. Their style, using the word in a large sense, forcibly arrests the reader, and draws him on to imitate it, by virtue of what is excellent in it, in spite of such defects as, in common with all human works, it may contain. I suppose all of us will recognize this fascination. For myself when I was fourteen or fifteen, I imitated Addison; when I was seventeen, I wrote in the style of Johnson; about the same time I fell in with the twelfth volume of Gibbon, and my ears rang with the cadence of his sentences, and I dreamed of it for a night or two. Then I began to make an analysis of Thucydides in Gibbon's style. In like manner, most Oxford undergraduates, forty years ago, when they would write poetry, adopted the versification of Pope Darwin, and the Pleasures of Hope, which had been made popular by Heber and Milman. The literary schools, indeed, which I am speaking of, as resulting from the attractions of some original, or at least novel artist, consist for the most part of mannerists, none of whom rise much above mediocrity;

but they are not the less serviceable as channels, by means of which the achievements of genius may be incorporated into the language itself, or become the common property of the nation. Henceforth, the most ordinary composer, the very student in the lecture-room, is able to write with a precision, a grace, or a copiousness, as the case may be unknown before the date of the authors whom he imitates, and he wonders at, if he does not rather pride himself on, his

novas frondes, et non sua poma.

If there is any one who illustrates this remark, it is Gibbon; I seem to trace his vigorous condensation and peculiar rhythm at every turn in the literature of the present day. Pope, again, is said to have tuned our versification. Since his time, any one, who has an ear and turn for poetry, can with little pains throw off a copy of verses equal or superior to the poet's own, and with far less of study and patient correction than would have been demanded of the poet himself for their production. Compare the choruses of the *Samson Agonistes* with any stanza taken at random in *Thalaba*: how much had the language gained in the interval between them! Without denying the high merits of Southey's beautiful romance, we surely shall not be wrong in saying, that in its unembarrassed eloquent flow, it is the language of the nineteenth century that speaks, as much as the author himself.

I will give an instance of what I mean: let us take the beginning of the first chorus in the *Samson*:—

Just are the ways of God.

And justifiable to men;

Unless there be who think not God at all;

If any be, they walk obscure,
For of such doctrine never was there school,
But the heart of the fool,
And no man therein doctor but himself.
But men there be, who doubt His ways not just,
As to His own edicts found contradicting,
Then give the reins to wandering thought,
Regardless of His glory's diminution;
Till, by their own perplexities involved,
They ravel more, still less resolved,
But never find self-satisfying solution.

And now take the opening stanza of Thalaba:—

How beautiful is night
A dewy freshness fills the silent air;
No mist obscures, nor cloud, nor speck, nor stain,
Breaks the serene of heaven.
In full-orb'd glory yonder Moon divine
Rolls through the dark blue depths.
Beneath her steady ray
The desert circle spreads,
Like the round ocean girdled with the sky.
How beautiful is night!

Does not Southey show to advantage here? yet the voice of the world proclaims Milton pre-eminently a poet; and no one can affect a doubt of the delicacy and exactness of his ear. Yet, much as he did for the language in verse and in prose, he left much for other artists to do

after him, which they have successfully accomplished. We see the fruit of the literary labours of Pope, Thomson, Gray, Goldsmith, and other poets of the eighteenth century, in the musical eloquence of Southey.

3.

So much for the process; now for its termination. I think it is brought about in some such way as the following:—

The influence of a great classic upon the nation which he represents is twofold; on the one hand he advances his native language towards its perfection; but on the other hand he discourages in some measure any advance beyond his own. Thus, in the parallel case of science, it is commonly said on the continent, that the very marvellousness of Newton's powers was the bane of English mathematics: inasmuch as those who succeeded him were content with his discoveries, bigoted to his methods of investigation, and averse to those new instruments which have carried on the French to such brilliant and successful results. In Literature, also, there is something oppressive in the authority of a great writer, and something of tyranny in the use to which his admirers put his name. The school which he forms would fain monopolize the language, draws up canons of criticism from his writings, and is intolerant of innovation. Those who come under its influence are dissuaded or deterred from striking out a path of their own. Thus Virgil's transcendent excellence fixed the character of the hexameter in subsequent poetry, and took away the chances, if not of improvement, at least of variety. Even Juvenal has much of Virgil in the structure of his verse. I have known those who prefer the rhythm of Catullus.

However, so summary a result is not of necessary occurrence. The splendour of an author may excite a generous emulation, or the tyrannous formalism of his followers a re-action; and thus other authors and other schools arise. We read of Thucydides, on hearing

Herodotus read his history at Olympia, being incited to attempt a similar work, though of an entirely different and of an original structure. Gibbon, in like manner, writing of Hume and Robertson, says: "The perfect composition, the nervous language, the well-turned periods of Dr. Robertson, inflamed me to the ambitious hope that I might one day tread in his footsteps; the calm philosophy, the careless inimitable beauties of his friend and rival, often forced me to close the volume with a mixed sensation of delight and despair."

As to re-actions, I suppose there has been something of the kind against the supremacy of Pope, since the time that his successors, Campbell especially, have developed his peculiarities and even defects into extravagance. Crabbe, for instance, turned back to a versification having much more of Dryden in it; and Byron, in spite of his high opinion of Pope, threw into his lines the rhythm of blank verse. Still, on the whole, the influence of a Classic acts in the way of discouraging any thing new, rather than in that of exciting rivalry or provoking re-action.

And another consideration is to be taken into account. When a language has been cultivated in any particular department of thought, and so far as it has been generally perfected, an existing want has been supplied, and there is no need for further workmen. In its earlier times, while it is yet unformed, to write in it at all is almost a work of genius. It is like crossing a country before roads are made communicating between place and place. The authors of that age deserve to be Classics, both because of what they do and because they can do it. It requires the courage or the force of great talent to compose in the language at all; and the composition, when effected, makes a permanent impression on it. In those early times, too, the licence of speech unfettered by precedents, the novelty of the work, the state of society, and the absence of criticism, enable an author to write with spirit and freshness. But, as centuries pass on, this stimulus

is taken away; the language by this time has become manageable for its various purposes, and is ready at command. Ideas have found their corresponding expressions; and one word will often convey what once required half a dozen. Roots have been expanded, derivations multiplied, terms invented or adopted. A variety of phrases has been provided, which form a sort of compound words. Separate professions, pursuits, and provinces of literature have gained their conventional terminology. There is an historical, political, social, commercial style. The ear of the nation has become accustomed to useful expressions or combinations of words, which otherwise would sound harsh. Strange metaphors have been naturalized in the ordinary prose, yet cannot be taken as precedents for a similar liberty. Criticism has become an art, and exercises a continual and jealous watch over the free genius of new writers. It is difficult for them to be original in the use of their mother tongue without being singular.

Thus the language has become in a great measure stereotype; as in the case of the human frame, it has expanded to the loss of its elasticity, and can expand no more. Then the general style of educated men, formed by the accumulated improvements of centuries, is far superior perhaps in perfectness to that of any one of those national Classics, who have taught their countrymen to write more clearly, or more elegantly, or more forcibly than themselves. And literary men submit themselves to what they find so well provided for them; or, if impatient of conventionalities, and resolved to shake off a yoke which tames them down to the loss of individuality, they adopt no half measures, but indulge in novelties which offend against the genius of the language, and the true canons of taste. Political causes may co-operate in a revolt of this kind; and, as a nation declines in patriotism, so does its language in purity. It seems to me as if the sententious, epigrammatic style of writing, which set in with Seneca, and is seen at least as late as in the writings of St. Ambrose, is an attempt to escape

from the simplicity of Cæsar and the majestic elocution of Cicero; while Tertullian, with more of genius than good sense, relieves himself in the harsh originality of his provincial Latin.

There is another impediment, as time goes on, to the rise of fresh classics in any nation; and that is the effect which foreigners, or foreign literature, will exert upon it. It may happen that a certain language, like Greek, is adopted and used familiarly by educated men in other countries; or again, that educated men, to whom it is native, may abandon it for some other language, as the Romans of the second and third centuries wrote in Greek instead of Latin. The consequence will be, that the language in question will tend to lose its nationality—that is, its distinctive character; it will cease to be idiomatic in the sense in which it once was so; and whatever grace or propriety it may retain, it will be comparatively tame and spiritless; or, on the other hand, it will be corrupted by the admixture of foreign elements.

4.

Such, as I consider, being the fortunes of Classical Literature, viewed generally, I should never be surprised to find that, as regards this hemisphere, for I can prophesy nothing of America, we have well nigh seen the end of English Classics. Certainly, it is in no expectation of Catholics continuing the series here that I speak of the duty and necessity of their cultivating English literature. When I speak of the formation of a Catholic school of writers, I have respect principally to the matter of what is written, and to composition only so far forth as style is necessary to convey and to recommend the matter. I mean a literature which resembles the literature of the day. This is not a day for great writers, but for good writing, and a great deal of it. There never was a time when men wrote so much and so well, and that, without being of any great account themselves. While our literature in this day, especially the periodical, is rich and various, its language is

elaborated to a perfection far beyond that of our Classics, by the jealous rivalry, the incessant practice, the mutual influence, of its many writers. In point of mere style, I suppose, many an article in the *Times* newspaper, or Edinburgh Review, is superior to a preface of Dryden's, or a Spectator, or a pamphlet of Swift's, or one of South's sermons.

Our writers write so well that there is little to choose between them. What they lack is that individuality, that earnestness, most personal yet most unconscious of self, which is the greatest charm of an author. The very form of the compositions of the day suggests to us their main deficiency. They are anonymous. So was it not in the literature of those nations which we consider the special standard of classical writing; so is it not with our own Classics. The Epic was sung by the voice of the living, present poet. The drama, in its very idea, is poetry in persons. Historians begin, "Herodotus, of Halicarnassus, publishes his researches;" or, "Thucydides, the Athenian, has composed an account of the war." Pindar is all through his odes a speaker. Plato, Xenophon, and Cicero, throw their philosophical dissertations into the form of a dialogue. Orators and preachers are by their very profession known persons, and the personal is laid down by the Philosopher of antiquity as the source of their greatest persuasiveness. Virgil and Horace are ever bringing into their poetry their own characters and tastes. Dante's poems furnish a series of events for the chronology of his times. Milton is frequent in allusions to his own history and circumstances. Even when Addison writes anonymously, he writes under a professed character, and that in a great measure his own; he writes in the first person. The "I" of the Spectator, and the "we" of the modern Review or Newspaper, are the respective symbols of the two ages in our literature. Catholics must do as their neighbours; they must be content to serve their generation, to promote the interests of religion, to recommend truth, and to edify

their brethren to-day, though their names are to have little weight, and their works are not to last much beyond themselves.

5.

And now having shown what it is that a Catholic University does not think of doing, what it need not do, and what it cannot do, I might go on to trace out in detail what it is that it really might and will encourage and create. But, as such an investigation would neither be difficult to pursue, nor easy to terminate, I prefer to leave the subject at the preliminary point to which I have brought it.

[\[1\]](#) Macaulay's Essays.

Lecture IV

Elementary Studies

It has often been observed that, when the eyes of the infant first open upon the world, the reflected rays of light which strike them from the myriad of surrounding objects present to him no image, but a medley of colours and shadows. They do not form into a whole; they do not rise into foregrounds and melt into distances; they do not divide into groups; they do not coalesce into unities; they do not combine into persons; but each particular hue and tint stands by itself, wedged in amid a thousand others upon the vast and flat mosaic, having no intelligence, and conveying no story, any more than the wrong side of some rich tapestry. The little babe stretches out his arms and fingers, as if to grasp or to fathom the many-coloured vision; and thus he gradually learns the connexion of part with part, separates what moves from what is stationary, watches the coming and going of figures, masters the idea of shape and of perspective, calls in the information conveyed through the other senses to assist him in his mental process, and thus gradually converts a calidoscope into a picture. The first view was the more splendid, the second the more real; the former more poetical, the latter more philosophical. Alas! what are we doing all through life, both as a necessity and as a duty, but unlearning the world's poetry, and attaining to its prose! This is our education, as boys and as men, in the action of life, and in the closet or library; in our affections, in our aims, in our hopes, and in our memories. And in like manner it is the education of our intellect; I

say, that one main portion of intellectual education, of the labours of both school and university, is to remove the original dimness of the mind's eye; to strengthen and perfect its vision; to enable it to look out into the world right forward, steadily and truly; to give the mind clearness, accuracy, precision; to enable it to use words aright, to understand what it says, to conceive justly what it thinks about, to abstract, compare, analyze, divide, define, and reason, correctly. There is a particular science which takes these matters in hand, and it is called logic; but it is not by logic, certainly not by logic alone, that the faculty I speak of is acquired. The infant does not learn to spell and read the hues upon his retina by any scientific rule; nor does the student learn accuracy of thought by any manual or treatise. The instruction given him, of whatever kind, if it be really instruction, is mainly, or at least pre-eminently, this,—a discipline in accuracy of mind.

Boys are always more or less inaccurate, and too many, or rather the majority, remain boys all their lives. When, for instance, I hear speakers at public meetings declaiming about “large and enlightened views,” or about “freedom of conscience,” or about “the Gospel,” or any other popular subject of the day, I am far from denying that some among them know what they are talking about; but it would be satisfactory, in a particular case, to be sure of the fact; for it seems to me that those household words may stand in a man's mind for a something or other, very glorious indeed, but very misty, pretty much like the idea of “civilization” which floats before the mental vision of a Turk,—that is, if, when he interrupts his smoking to utter the word, he condescends to reflect whether it has any meaning at all. Again, a critic in a periodical dashes off, perhaps, his praises of a new work, as “talented, original, replete with intense interest, irresistible in argument, and, in the best sense of the word, a very readable book;”—can we really believe that he cares to attach any definite sense to the

words of which he is so lavish? nay, that, if he had a habit of attaching sense to them, he could ever bring himself to so prodigal and wholesale an expenditure of them?

To a short-sighted person, colours run together and intermix, outlines disappear, blues and reds and yellows become russets or browns, the lamps or candles of an illumination spread into an unmeaning glare, or dissolve into a milky way. He takes up an eye-glass, and the mist clears up; every image stands out distinct, and the rays of light fall back upon their centres. It is this haziness of intellectual vision which is the malady of all classes of men by nature, of those who read and write and compose, quite as well as of those who cannot,—of all who have not had a really good education. Those who cannot either read or write may, nevertheless, be in the number of those who have remedied and got rid of it; those who can, are too often still under its power. It is an acquisition quite separate from miscellaneous information, or knowledge of books. This is a large subject, which might be pursued at great length, and of which here I shall but attempt one or two illustrations.

§ 1. Grammar

1.

One of the subjects especially interesting to all persons who, from any point of view, as officials or as students, are regarding a University course, is that of the Entrance Examination. Now a principal subject introduced into this examination will be “the elements of Latin and Greek Grammar.” “Grammar” in the middle ages was often used as almost synonymous with “literature,” and a Grammarian was a “Professor literarum.” This is the sense of the word in which a youth of an inaccurate mind delights. He rejoices to profess all the classics, and to learn none of them. On the other hand, by

“Grammar” is now more commonly meant, as Johnson defines it, “the art of using *words* properly,” and it “comprises four parts—Orthography, Etymology, Syntax, and Prosody.” Grammar, in this sense, is the scientific analysis of language, and to be conversant with it, as regards a particular language, is to be able to understand the meaning and force of that language when thrown into sentences and paragraphs.

Thus the word is used when the “elements of Latin and Greek Grammar” are spoken of as subjects of our Entrance Examination; not, that is, the elements of Latin and Greek literature, as if a youth were intended to have a smattering of the classical writers in general, and were to be able to give an opinion about the eloquence of Demosthenes and Cicero, the value of Livy, or the existence of Homer; or need have read half a dozen Greek and Latin authors, and portions of a dozen others:—though of course it would be much to his credit if he had done so; only, such proficiency is not to be expected, and cannot be required, of him:—but we mean the structure and characteristics of the Latin and Greek languages, or an examination of his scholarship. That is, an examination in order to ascertain whether he knows Etymology and Syntax, the two principal departments of the science of language,—whether he understands how the separate portions of a sentence hang together, how they form a whole, how each has its own place in the government of it, what are the peculiarities of construction or the idiomatic expressions in it proper to the language in which it is written, what is the precise meaning of its terms, and what the history of their formation.

All this will be best arrived at by trying how far he can frame a possible, or analyze a given sentence. To translate an English sentence into Latin is to *frame* a sentence, and is the best test whether or not a student knows the difference of Latin from English construction; to construe and parse is to *analyze* a sentence, and is an evidence of the

easier attainment of knowing what Latin construction is in itself. And this is the sense of the word "Grammar" which our inaccurate student detests, and this is the sense of the word which every sensible tutor will maintain. His maxim is, "a little, but well;" that is, really know what you say you know: know what you know and what you do not know; get one thing well before you go on to a second; try to ascertain what your words mean; when you read a sentence, picture it before your mind as a whole, take in the truth or information contained in it, express it in your own words, and, if it be important, commit it to the faithful memory. Again, compare one idea with another; adjust truths and facts; form them into one whole, or notice the obstacles which occur in doing so. This is the way to make progress; this is the way to arrive at results; not to swallow knowledge, but (according to the figure sometimes used) to masticate and digest it.

2.

To illustrate what I mean, I proceed to take an instance. I will draw the sketch of a candidate for entrance, deficient to a great extent. I shall put him below *par*, and not such as it is likely that a respectable school would turn out, with a view of clearly bringing before the reader, by the contrast, what a student ought *not* to be, or what is meant by *inaccuracy*. And, in order to simplify the case to the utmost, I shall take, as he will perceive as I proceed, one *single word* as a sort of text, and show how that one word, even by itself, affords matter for a sufficient examination of a youth in grammar, history, and geography. I set off thus:—

Tutor. Mr. Brown, I believe? sit down. *Candidate.* Yes.

T. What are the Latin and Greek books you propose to be examined in? *C.* Homer, Lucian, Demosthenes, Xenophon, Virgil, Horace, Statius, Juvenal, Cicero, Analecta, and Matthiæ.

T. No; I mean what are the books I am to examine you in? *C.* *is*

silent.

T. The two books, one Latin and one Greek: don't flurry yourself.

C. Oh, ... Xenophon and Virgil.

T. Xenophon and Virgil. Very well; what part of Xenophon? C. *is silent.*

T. What work of Xenophon? C. Xenophon.

T. Xenophon wrote many works. Do you know the names of any of them? C. I ... Xenophon ... Xenophon.

T. Is it the *Anabasis* you take up? C. (*with surprise*) O yes; the *Anabasis*.

T. Well, Xenophon's *Anabasis*; now what is the meaning of the word *anabasis*? C. *is silent.*

T. You know very well; take your time, and don't be alarmed. *Anabasis* means ... C. An ascent.

T. Very right; it means an ascent. Now how comes it to mean an ascent? What is it derived from? C. It comes from ... (*a pause*). *Anabasis* ... it is the nominative.

T. Quite right: but what part of speech is it? C. A noun,—a noun substantive.

T. Very well; a noun substantive, now what is the verb that *anabasis* is derived from? C. *is silent.*

T. From the verb ἀναβαίν~, isn't it? from ἀναβαίν~. C. Yes.

T. Just so. Now, what does ἀναβαίν~ mean? C. To go up, to ascend.

T. Very well; and which part of the word means *to go*, and which part *up*? C. ἀνά is *up*, and βαίν~ *go*.

T. βαίν~ to go, yes; now, βαίσις? What does βαίσις mean? C. A going.

T. That is right; and ἀνά-βαίσις? C. A going up.

T. Now what is a going *down*? C. *is silent.*

T. What is down? ...Κατά... don't you recollect? Κατά. C.Κατά.

T. Well, then, what is a going *down*? Cat .. cat ... C. Cat....

T. Cata ... C. Cata....

T. Catabasis. C. Oh, of course, catabasis.

T. Now tell me what is the future of βαίν~? C. (*thinks*) βαῶ.

T. No, no; think again; you know better than that. C. (*objects*)

Uαίν~, Uavō?

T. Certainly, Uavō is the future of Uαίν~; but Uαίν~ is, you know, an irregular verb. C. Oh, I recollect, βῆανω.

T. Well, that is much better; but you are not quite right yet; βῆσϩnak. C. Oh, of course,.

T. βῆσϩnak. Now do you mean to say that βῆσϩnak comes from βαίν~? C. is silent.

T. For instance: x^v]~ comes from x^vrx~ by a change of letters; does βῆσϩnak in any similar way come from βαίν~? C. It is an irregular verb.

T. What do you mean by an irregular verb? does it form tenses anyhow and by caprice? C. It does not go according to the paradigm.

T. Yes, but how do you account for this? C. *is silent*.

T. Are its tenses formed from several roots? C. *is silent*.

T. *is silent; then he changes the subject*.

T. Well, now you say *Anabasis* means an *ascent*. Who ascended? C. The Greeks, Xenophon.

T. Very well: Xenophon and the Greeks; the Greeks ascended. To what did they ascend? C. Against the Persian king: they ascended to fight the Persian king.

T. That is right ... an ascent; but I thought we called it a *descent* when a foreign army carried war into a country? C. *is silent*.

T. Don't we talk of a descent of barbarians? C. Yes.

T. Why then are the Greeks said to go *up*? C. They went up to fight the Persian king.

T. Yes; but why *up* ... why not *down*? C. They came down

afterwards, when they retreated back to Greece.

T. Perfectly right; they did ... but could you give no reason why they are said to go *up* to Persia, not *down*? C. They went *up* to Persia.

T. Why do you not say they went *down*? C. *pauses, then ...*

They went *down* to Persia.

T. You have misunderstood me.

A silence.

T. Why do you not say *down*? C. I do ... *down*.

T. You have got confused; you know very well. C. I understood you to ask why I did not say “they went *down*.”

A silence on both sides.

T. Have you come up to Dublin or down? C. I came up.

T. Why do you call it coming *up*? C. *thinks, then smiles, then ...* We *always* call it coming up to Dublin.

T. Well, but you always have a *reason* for what you do ... what is your reason here? C. *is silent*.

T. Come, come, Mr. Brown, I won't believe you don't know; I am sure you have a very good reason for saying you go up to Dublin, not *down*. C. *thinks, then ...* It is the capital.

T. Very well; now was Persia the capital? C. Yes.

T. Well ... no ... not exactly ... explain yourself; was Persia a city? C. A country.

T. That is right; well, but did you ever hear of Susa? *Now*, why did they speak of going *up* to Persia? C. *is silent*.

T. Because it was the seat of government; that was one reason. Persia was the seat of government; they went up because it was the seat of government. C. Because it was the seat of government.

T. Now where did they go up from? C. From Greece.

T. But where did this army assemble? whence did it set out? C. *is silent*.

T. It is mentioned in the first book; where did the troops

rendezvous? C. is silent.

T. Open your book; now turn to Book I., chapter ii.; now tell me.
C. Oh, at Sardis.

T. Very right: at Sardis; now where was Sardis? C. In Asia Minor?... no ... it's an island ... *a pause, then* ... Sardinia.

T. In Asia Minor; the army set out from Asia Minor, and went on towards Persia; and therefore it is said to go *up*—because ... C. *is silent.*

T. Because ... Persia ... C. Because Persia ...

T. Of course; because Persia held a sovereignty over Asia Minor.
C. Yes.

T. Now do you know how and when Persia came to conquer and gain possession of Asia Minor? C. *is silent.*

T. Was Persia in possession of many countries? C. *is silent.*

T. Was Persia at the head of an empire? C. *is silent.*

T. Who was Xerxes? C. Oh, Xerxes ... yes ... Xerxes; he invaded Greece; he flogged the sea.

T. Right; he flogged the sea: what sea? C. *is silent.*

T. Have you read any history of Persia?... what history? C. Grote, and Mitford.

T. Well, now, Mr. Brown, you can name some other reason why the Greeks spoke of going up to Persia? Do we talk of going *up* or *down* from the sea-coast? C. Up.

T. That is right; well, going from Asia Minor, would you go from the sea, or towards it? C. From.

T. What countries would you pass, going from the coast of Asia Minor to Persia? ... mention any of them. C. *is silent.*

T. What do you mean by Asia *Minor*?... why called Minor?... how does it lie? C. *is silent.*

Etc., etc.

I have drawn out this specimen at the risk of wearying the reader; but I have wished to bring out clearly what it really is which an Entrance Examination should aim at and require in its students. This young man had read the *Anabasis*, and had some general idea what the word meant; but he had no accurate knowledge how the word came to have its meaning, or of the history and geography implied in it. This being the case, it was useless, or rather hurtful, for a boy like him to amuse himself with running through Grote's many volumes, or to cast his eye over Matthiæ's minute criticisms. Indeed, this seems to have been Mr. Brown's stumbling-block; he began by saying that he had read Demosthenes, Virgil, Juvenal, and I do not know how many other authors. Nothing is more common in an age like this, when books abound, than to fancy that the gratification of a love of reading is real study. Of course there are youths who shrink even from story books, and cannot be coaxed into getting through a tale of romance. Such Mr. Brown was not; but there are others, and I suppose he was in their number, who certainly have a taste for reading, but in whom it is little more than the result of mental restlessness and curiosity. Such minds cannot fix their gaze on one object for two seconds together; the very impulse which leads them to read at all, leads them to read on, and never to stay or hang over any one idea. The pleasurable excitement of reading what is new is their motive principle; and the imagination that they are doing something, and the boyish vanity which accompanies it, are their reward. Such youths often profess to like poetry, or to like history or biography; they are fond of lectures on certain of the physical sciences; or they may possibly have a real and true taste for natural history or other cognate subjects;—and so far they may be regarded with satisfaction; but on the other hand they profess that they do not like logic, they do not like algebra, they have no taste for mathematics; which only means that they do not like

application, they do not like attention, they shrink from the effort and labour of thinking, and the process of true intellectual gymnastics. The consequence will be that, when they grow up, they may, if it so happen, be agreeable in conversation, they may be well informed in this or that department of knowledge, they may be what is called literary; but they will have no consistency, steadiness, or perseverance; they will not be able to make a telling speech, or to write a good letter, or to fling in debate a smart antagonist, unless so far as, now and then, mother-wit supplies a sudden capacity, which cannot be ordinarily counted on. They cannot state an argument or a question, or take a clear survey of a whole transaction, or give sensible and appropriate advice under difficulties, or do any of those things which inspire confidence and gain influence, which raise a man in life, and make him useful to his religion or his country.

And now, having instanced what I mean by the *want* of accuracy, and stated the results in which I think it issues, I proceed to sketch, by way of contrast, an examination which displays a student, who, whatever may be his proficiency, at least knows what he is about, and has tried to master what he has read. I am far from saying that every candidate for admission must come up to its standard:—

T. I think you have named Cicero's Letters ad Familiares, Mr. Black? Open, if you please, at Book xi., Epistle 29, and begin reading.

C. *reads.* Cicero Appio salutem. Dubitanti mihi (quod scit Atticus noster), de hoc toto consilio profectionis, quod in utramque partem in mentem multa veniebant, magnum pondus accessit ad tollendam dubitationem, judicium et consilium tuum. Nam et scripsisti aperte, quid tibi videretur; et Atticus ad me sermonem tuum pertulit. Semper judicavi, in te, et in capiendo consilio prudentiam summam esse, et in dando fidem; maximeque sum expertus, cùm, initio civilis belli, per literas te consulissem quid mihi faciendum esse censes; eundumne

ad Pompeium an manendum in Italiâ.

T. Very well, stop there; Now construe. C. Cicero Appio salutem.
... *Cicero greets Appius.*

T. "Greets Appius." True; but it sounds stiff in English, doesn't it? What is the real English of it? C. "My dear Appius?"...

T. That will do; go on. C. Dubitanti mihi, quod scit Atticus noster, *While I was hesitating, as our friend Atticus knows...*

T. That is right. C. De hoc toto consilio profectionis, *about the whole plan ... entire project ... de hoc toto consilio profectionis ... on the subject of my proposed journey ... on my proposed journey altogether.*

T. Never mind; go on; any of them will do. C. Quod in utramque partem in mentem multa veniebant, *inasmuch as many considerations both for and against it came into my mind*, magnum pondus accessit ad tollendam dubitationem, *it came with great force to remove my hesitation.*

T. What do you mean by "accessit"? C. It means *it contributed to turn the scale*; accessit, *it was an addition to one side.*

T. Well, it may mean so, but the words run, ad tollendam dubitationem. C. *It was a great ... it was a powerful help towards removing my hesitation ... no ... this was a powerful help, viz., your judgment and advice.*

T. Well, what is the construction of "pondus" and "judicium"? C. *Your advice came as a great weight.*

T. Very well, go on. C. Nam et scripsisti aperte quid tibi videretur; *for you distinctly wrote your opinion.*

T. Now, what is the force of "nam"? C. *pauses; then*, It refers to "accessit" ... it is an explanation of the fact, that Appius's opinion was a help.

T. "Et"; you omitted "et" ... "et scripsisti." C. It is one of two "ets"; et scripsisti, et Atticus.

T. Well, but why don't you construe it? C. Et scripsisti, *you both*

distinctly...

T. No; tell me, *why* did you leave it out? had you a reason? C. I thought it was only the Latin style, to dress the sentence, to make it antithetical; and was not English.

T. Very good, still, you can express it; try. C. Also, with the second clause?

T. That is right, go on. C. Nam et, *for you distinctly stated in writing your opinion*, et Atticus ad me sermonem tuum pertulit, *and Atticus too sent me word of what you said,... of what you said to him in conversation*.

T. "Pertulit." C. It means that Atticus conveyed on to Cicero the conversation he had with Appius.

T. Who was Atticus? C. *is silent*.

T. Who was Atticus? C. I didn't think it came into the examination....

T. Well, I didn't say it did: but still you can tell me who Atticus was. C. A great friend of Cicero's.

T. Did he take much part in politics? C. No.

T. What were his opinions? C. He was an Epicurean.

T. What was an Epicurean? C. *is silent, then*, Epicureans lived for themselves.

T. You are answering very well, sir; proceed. C. Semper judicavi, *I have ever considered*, in te, et in capiendo consilio prudentiam summam esse, et in dando fidem; *that your wisdom was of the highest order ... that you had the greatest wisdom ... that nothing could exceed the wisdom of your resolves, or the honesty of your advice*.

T. "Fidem." C. It means *faithfulness to the person asking ... maximeque sum expertus, and I had a great proof of it...*

T. Great; why don't you say *greatest*? "maxime" is superlative. C. The Latins use the superlative, when they only mean the positive.

T. You mean, when English uses the positive; can you give me an instance of what you mean? C. Cicero always speaks of others as

amplissimi, optimi, doctissimi, clarissimi.

T. Do they ever use the comparative for the positive? C. *thinks, then, Certior factus sum.*

T. Well, perhaps; however, here, "maxime" may mean *special*, may it not? C. *And I had a special proof of it, cùm, initio civilis belli, per literas te consuluissem, when, on the commencement of the civil war, I had written to ask your advice, quid mihi faciendum esse censeret, what you thought I ought to do, eundumne ad Pompeium, an manendum in Italiâ, to go to Pompey, or to remain in Italy.*

T. Very well, now stop. Dubitanti mini, quod scit Atticus noster. You construed quod, as. C. I meant the relative as.

T. Is as a relative? C. As is used in English for the relative, as when we say *such as* for *those who*.

T. Well, but why do you use it here? What is the antecedent to "quod"? C. The sentence Dubitanti mihi, etc.

T. Still, construe "quod" literally. C. *A thing which.*

T. Where is *a thing*? C. It is understood.

T. Well, but put it in. C. Illud quod.

T. Is that right? what is the common phrase? C. *is silent.*

T. Did you ever see "illud quod" in that position? is it the phrase? C. *is silent.*

T. It is commonly "id quod," isn't it? id quod. C. Oh, I recollect, id quod.

T. Well, which is more common, "quod," or "id quod," when the sentence is the antecedent? C. I think "id quod."

T. At least it is far more distinct; yes, I think it is more common. What could you put instead of it? C. Quod quidem.

T. Now, dubitanti mihi; what is "mihi" governed by? C. Accessit.

T. No; hardly. C. *is silent.*

T. Does "accessit" govern the dative? C. I thought it did.

T. Well, it may; but would Cicero use the dative after it? what is

the more common practice with words of motion? Do you say, Venit mihi, *he came to me*? C. No, Venit ad me;—I recollect.

T. That is right; venit ad me. Now, for instance, "incumbo:" what case does "incumbo" govern? C. Incumbite remis?

T. Where is that? in Cicero? C. No, in Virgil. Cicero uses "in"; I recollect, incumbere in opus ... ad opus.

T. Well, then, *is* this "mihi" governed by "accessit"? *what* comes after accessit? C. I see; it is, accessit ad tollendam dubitationem.

T. That is right; but then, what after all do you do with "mihi"? how is it governed? C. *is silent*.

T. How is "mihi" governed, if it does not come after "accessit"? C. *pauses, then*, "Mihi" ... "mihi" is often used so; and "tibi" and "sibi": I mean "suo sibi gladio hunc jugulo"; ... "venit mihi in mentem"; that is, *it came into my mind*; and so, "accessit mihi ad tollendam," etc.

T. That is very right. C. I recollect somewhere in Horace, vellunt tibi barbam.

Etc., etc.

4.

And now, my patient reader, I suspect you have had enough of me on this subject; and the best I can expect from you is, that you will say: "His first pages had some amusement in them, but he is dullish towards the end." Perhaps so; but then you must kindly bear in mind that the latter part is about a steady careful youth, and the earlier part is not; and that goodness, exactness, and diligence, and the correct and the unexceptionable, though vastly more desirable than their contraries in fact, are not near so entertaining in fiction.

§ 2. Composition

I am able to present the reader by anticipation with the correspondence which will pass between Mr. Brown's father and Mr. White, the tutor, on the subject of Mr. Brown's examination for entrance at the University. And, in doing so, let me state the reason why I dwell on what many will think an extreme case, or even a caricature. I do so, because what may be called exaggeration is often the best means of *bringing out* certain faults of the mind which do indeed exist commonly, if not in that degree. If a master in carriage and deportment wishes to carry home to one of his boys that he slouches, he will caricature the boy himself, by way of impressing on the boy's intellect a sort of abstract and typical representation of the ungraceful habit which he wishes corrected. When we once have the simple and perfect ideas of things in our minds, we refer the particular and partial manifestations of them to these types; we recognize what they are, good or bad, as we never did before, and we have a guide set up within us to direct our course by. So it is with principles of taste, good breeding, or of conventional fashion; so it is in the fine arts, in painting, or in music. We cannot even understand the criticism passed on these subjects until we have set up for ourselves the ideal standard of what is admirable and what is absurd.

So is it with the cultivation and discipline of the mind, as it should be conducted at College and University, and as it manifests itself afterwards in life. Clearness of head, accuracy, scholarlike precision, method, and the like, are ideas obvious to point out, and easy to grasp; yet they do not suggest themselves to youths at once, and have to be urged and inflicted upon them. And this is done best by a caricature of their opposites.

And, as I am now going to continue the caricature by bringing in Mr. Brown's father as well as himself, I have to make a fresh explanation, lest I should seem to imply there are fathers altogether

such as he will prove to be. I do not mean to say there are; yet it may easily happen that many excellent fathers, many even able and thoughtful men, may be found, who in a certain measure are under the basis of that error of which Mr. Brown senior is the typical instance, and who may be led possibly to modify them, if they are confronted with all exhibition of them in their full dimension;—and that, in consequences of their being forced to master the typical representation, though the error is never found thus pure and complete in fact, but only in degrees and portions, so that, when represented pure, it is called, and may fairly be called, a caricature. With this explanation of my meaning, and this apology in anticipation, I hope to be able without misconstruction to put before the reader the correspondence of which u have spoken.

2.

Mr. Brown, jun, to his father

"MY DEAR FATHER,

"It seems odd I never was in Dubiln before, though we have been now time in Ireland. Well, I find it a handsomer place than I thought for—really a respectable town. But it is sadly behind the world in many things. Think of its having no Social Science, not even a National Gallery or British Museum! nor have they any high art here: some good public buildings, but very pagan. The bay is a fine thing.

"I called with your letter on Mr. Black, who introduced me to the professors, some of whom, judging by their skulls, are clever men.

"There is a lot here for examination, and an Exhibition is to be given to the best. I should like to get it. Young Black,—you saw him once,—is one of them; I knew him at school; he is a large fellow now, though younger than I am. If he be the best of them, I shall not be

much afraid.

"Well—in I went yesterday, and was examined. It was such a queer concern. One of the junior Tutors had me up, and he must be a new hand, he was so uneasy. He gave me the slowest examination! I don't know to this minute what he was at. He first said a word or two, and then was silent. He then asked me why we came up to Dublin, and did not go down; and put some absurd little questions about βαίῃ. I was tolerably satisfied with myself, but he gave me no opportunity to show off. He asked me literally nothing; he did not even give me a passage to construe for a long time, and then gave me nothing more than two or three easy sentences. And he kept playing with his paper knife, and saying: 'How are you now, Mr. Brown? don't be alarmed, Mr. Brown; take your time, Mr. Brown; you know very well, Mr. Brown;' so that I could hardly help laughing. I never was less afraid in my life. It would be wonderful if such an examination *could* put me out of countenance.

"There's a lot of things which I know very well, which the Examiner said not a word about. Indeed, I think I have been getting up a great many things for nothing;—provoking enough. I had read a good deal of Grote; but though I told him so, he did not ask me one question in it; and there's Whewell, Macaulay, and Schlegel, all thrown away.

"He has not said a word yet where I am to be lodged. He looked quite confused when I asked him. He is, I suspect, a *character*.

"Your dutiful son, etc.,

"ROBERT."

Mr. White to Mr. Brown, sen.

"MY DEAR SIR,

"I have to acknowledge the kind letter you sent me by your son, and I am much pleased to find the confidence you express in us. Your

son seems an amiable young man, of studious habits, and there is every hope, when he joins us, of his passing his academical career with respectability, and his examination with credit. This is what I should have expected from his telling me that he had been educated at home under your own paternal eye; indeed, if I do not mistake, you have undertaken the interesting office of instructor yourself.

"I hardly know what best to recommend to him at the moment: his reading has been *desultory*; he knows *something* about a great many things, of which youths of his age commonly know nothing. Of course we *could* take him into residence now, if you urge it; but my advice is that he should first direct his efforts to distinct preparation for our examination, and to study its particular character. Our rule is to recommend youths to do a *little well*, instead of throwing themselves upon a large field of study. I conceive it to be your son's fault of mind not to see exactly the *point* of things, nor to be so well *grounded* as he might be. Young men are indeed always wanting in *accuracy*; this kind of deficiency is not peculiar to him, and he will doubtless soon overcome it when he sets about it.

"On the whole, then, if you will kindly send him up six months hence he will be more able to profit by our lectures. I will tell him what to read in the meanwhile. Did it depend on me, I should send him for that time to a good school or college, or I could find you a private Tutor for him.

"I am, etc."

Mr. Brown, sen., to Mr. White.

"SIR,

"Your letter, which I have received by this morning's post, is gratifying to a parent's feelings, so far as it bears witness to the impression which my son's amiableness and steadiness have made on you. He is indeed a most exemplary lad: fathers are partial, and their word about their children is commonly not to be taken; but I flatter

myself that the present case is an exception to the rule; for, if ever there was a well-conducted youth, it is my dear son. He is certainly very clever; and a closer student, and, for his age, of more extensive reading and sounder judgment, does not exist.

"With this conviction, you will excuse me if I say that there were portions of your letter which I could not reconcile with that part of it to which I have been alluding. You say he is 'a young man of *studious habits*,' having '*every hope* of passing his academical career with respectability, and *his examination with credit*;' you allow that 'he knows something about a *great many things*, of which youths of his age commonly *know nothing*:' no common commendation, I consider; yet, in spite of this, you recommend, though you do not exact, as a complete disarrangement of my plans (for I do not know how long my duties will keep me in Ireland), a postponement of his coming into residence for six months.

"Will you allow me to suggest an explanation of this inconsistency? It is found in your confession that the examination is of a 'particular character.' Of course it is very right in the governors of a great Institution to be 'particular,' and it is not for me to argue with them. Nevertheless, I cannot help saying, that at this day nothing is so much wanted in education as *general* knowledge. This alone will fit a youth *for the world*. In a less stirring time, it may be well enough to delay in particularities, and to trifle over minutiae; but the world will not stand still for us, and, unless we are up to its requisitions, we shall find ourselves thrown out of the contest. A man must have *something in him* now, to make his way; and the sooner we understand this, the better.

"It mortified me, I confess, to hear from my son, that you did not try him in a greater number of subjects, in handling which he would probably have changed your opinion of him. He has a good memory, and a great talent for history, ancient and modern, especially

constitutional and parliamentary; another favourite study with him is the philosophy of history. He has read Pritchard's Physical History, Cardinal Wiseman's Lectures on Science, Bacon's Advancement of Learning, Macaulay, and Hallam: I never met with a faster reader. I have let him attend, in England, some of the most talented lecturers in chemistry, geology, and comparative anatomy, and he sees the Quarterly Reviews and the best Magazines, as a matter of course. Yet on these matters not a word of examination!

"I have forgotten to mention, he has a very pretty idea of poetical composition: I enclose a fragment which I have found on his table, as well as one of his prose Essays.

"Allow me, as a warm friend of your undertaking, to suggest, that the *substance* of knowledge is far more valuable than its *technicalities*; and that the vigour of the youthful mind is but *wasted* on *barren* learning, and its ardour is *quenched* in *dry* disquisition.

"I have the honour to be, etc."

On the receipt of this letter, Mr. White will find, to his dissatisfaction, that he has not advanced one hair's breadth in bringing home to Mr. Brown's father the real state of the case, and has done no more than present himself as a mark for certain commonplaces, very true, but very inappropriate to the matter in hand. Filled with this disappointing thought, for a while he will not inspect the enclosures of Mr. Brown's letter, being his son's attempts at composition. At length he opens them, and reads as follows:

Mr. Brown's poetry

THE TAKING OF SEBASTOPOL.

Oh, might I flee to Araby the blest,
The world forgetting, but its gifts possessed,
Where fair-eyed peace holds sway from shore to
shore,
And war's shrill clarion frights the air no more.

Heard ye the cloud-compelling blast awake
The slumbers of the inhospitable lake?
Saw ye the banner in its pride unfold
The blush of crimson and the blaze of gold?

Raglan and St. Arnaud, in high command,
Have steamed from old Byzantium's hoary strand;
The famed Cyanean rocks presaged their fight,
Twin giants, with the astonished Muscovite.
So the loved maid, in Syria's balmy noon,
Forebodes the coming of the hot simoon,
And sighs...
And longs...
And dimly traces...

Mr. Brown's prose.

"FORTES FORTUNA ADJUVAT."

"Of all the uncertain and capricious powers which rule our earthly destiny, fortune is the chief. Who has not heard of the poor being raised up, and the rich being laid low? Alexander the Great said he envied Diogenes in his tub, because Diogenes could have nothing less. We need not go far for an instance of fortune. Who was so great as Nicholas, the Czar of all the Russias, a year ago, and now he is 'fallen,

fallen from his high estate, without a friend to grace his obsequies.' The Turks are the finest specimen of the human race, yet they, too, have experienced the vicissitudes of fortune. Horace says that we should wrap ourselves in our virtue, when fortune changes. Napoleon, too, shows us how little we can rely on fortune; but his faults, great as they were, are being redeemed by his nephew, Louis Napoleon, who has shown himself very different from what we expected, though he has never explained how he came to swear to the Constitution, and then mounted the imperial throne.

"From all this it appears, that we should rely on fortune only while it remains,—recollecting the words of the thesis, '*Fortes fortuna adjuvat*;' and that, above all, we should ever cultivate those virtues which will never fail us, and which are a sure basis of respectability, and will profit us here and hereafter."

On reading these compositions over, Mr. White will take to musing; then he will reflect that he may as well spare himself the trouble of arguing with a correspondent, whose principle and standard of judgment is so different from his own; and so he will write a civil letter back to Mr. Brown, enclosing the two papers.

3.

Mr. Brown, however, has not the resignation of Mr. White; and, on his Dublin friend, Mr. Black, paying him a visit, he will open his mind to him; and I am going to tell the reader all that will pass between the two.

Mr. Black is a man of education and of judgment. He knows the difference between show and substance; he is penetrated with the conviction that Rome was not built in a day, that buildings will not stand without foundations, and that, if boys are to be taught well, they must be taught slowly, and step by step. Moreover, he thinks in his

secret heart that his own son Harry, whose acquaintance we have already formed, is worth a dozen young Browns. To him, then, not quite an impartial judge, Mr. Brown unbosoms his dissatisfaction, presenting to him his son's Theme as an *experimentum crucis* between him and Mr. White. Mr. Black reads it through once, and then a second time; and then he observes—

"Well, it is only the sort of thing which any boy would write, neither better nor worse. I speak candidly."

On Mr. Brown expressing disappointment, inasmuch as the said Theme is *not* the sort of thing which any boy could write, Mr. Black continues—

"There's not one word of it upon the thesis; but all boys write in this way."

Mr. Brown directs his friend's attention to the knowledge of ancient history which the composition displays, of Alexander and Diogenes; of the history of Napoleon; to the evident interest which the young author takes in contemporary history, and his prompt application of passing events to his purpose; moreover, to the apposite quotation from Dryden, and the reference to Horace;—all proofs of a sharp wit and a literary mind.

But Mr. Black is more relentlessly critical than the occasion needs, and more pertinacious than any father can comfortably bear. He proceeds to break the butterfly on the wheel in the following oration:

—

"Now look here," he says, "the subject is 'Fortes fortuna adjuvat'; now this is a *proposition*; it states a certain general principle, and this is just what an ordinary boy would be sure to miss, and Robert does miss it. He goes off at once on the word 'fortuna.' 'Fortuna' was not his subject; the thesis was intended to *guide* him, for his own good; he refuses to be put into leading-strings; he breaks loose, and runs off in his own fashion on the broad field and in wild chase of 'fortune,'

instead of closing with a subject, which, as being definite, would have supported him.

"It would have been very cruel to have told a boy to write on 'fortune'; it would have been like asking him his opinion 'of things in general.' Fortune is 'good,' 'bad,' 'capricious,' 'unexpected,' ten thousand things all at once (you see them all in the Gradus), and one of them as much as the other. Ten thousand things may be said of it: give me *one* of them, and I will write upon it; I cannot write on more than one; Robert prefers to write upon all.

"'Fortune favours the bold;' here is a very definite subject: take hold of it, and it will steady and lead you on: you will know in what direction to look. Not one boy in a hundred does avail himself of this assistance; your boy is not solitary in his inaccuracy; all boys are more or less inaccurate, *because* they are boys; boyishness of mind means inaccuracy. Boys cannot deliver a message, or execute an order, or relate an occurrence, without a blunder. They do not rouse up their attention and reflect: they do not like the trouble of it: they cannot look at anything steadily; and, when they attempt to write, off they go in a rigmarole of words, which does them no good, and never would, though they scribbled themes till they wrote their fingers off.

"A really clever youth, especially as his mind opens, is impatient of this defect of mind, even though, as being a youth, he be partially under its influence. He shrinks from a vague subject, as spontaneously as a slovenly mind takes to it; and he will often show at disadvantage, and seem ignorant and stupid, from seeing more and knowing more, and having a clearer perception of things than another has. I recollect once hearing such a young man, in the course of an examination, asked very absurdly what 'his opinion' was of Lord Chatham. Well, this was like asking him his view of 'things in general.' The poor youth stuck, and looked like a fool, though it was not *he*. The examiner, blind to his own absurdity, went on to ask him 'what were the

characteristics of English history.' Another silence, and the poor fellow seemed to lookers-on to be done for, when his only fault was that he had better sense than his interrogator.

"When I hear such questions put, I admire the tact of the worthy Milnwood in *Old Mortality*, when in a similar predicament. Sergeant Bothwell broke into his house and dining-room in the king's name, and asked him what he thought of the murder of the Archbishop of St. Andrew's; the old man was far too prudent to hazard any opinion of his own, even on a precept of the Decalogue, when a trooper called for it; so he glanced his eye down the Royal Proclamation in the Sergeant's hand, and appropriated its sentiments as an answer to the question before him. Thereby he was enabled to pronounce the said assassination to be 'savage,' 'treacherous,' 'diabolical,' and 'contrary to the king's peace and the security of the subject;' to the edification of all present, and the satisfaction of the military inquisitor. It was in some such way my young friend got off. His guardian angel reminded him in a whisper that Mr. Grey, his examiner, had himself written a book on Lord Chatham and his times. This set him up at once; he drew boldly on his knowledge of his man for the political views advanced in it; was at no loss for definite propositions to suit his purpose; recovered his ground, and came off triumphantly."

Here Mr. Black stops; and Mr. Brown takes advantage of the pause to insinuate that Mr. Black is not himself a disciple of his own philosophy, having travelled some way from his subject;—his friend stands corrected, and retraces his steps.

"The thesis," he begins again, "is 'Fortune favours the brave;' Robert has gone off with the nominative without waiting for verb and accusative. He might as easily have gone off upon 'brave,' or upon 'favour,' except that 'fortune' comes first. He does not merely ramble from his subject, but he starts from a false point. Nothing could go right after this beginning, for having never gone *off* his subject (as I

did off mine), he never could come back to it. However, at least he might have kept to some subject or other; he might have shown some exactness or consecutiveness in detail; but just the contrary;—observe. He begins by calling fortune 'a power'; let that pass. Next, it is one of the powers 'which rule our earthly destiny,' that is, *fortune* rules *destiny*. Why, where there is fortune, there is no destiny; where there is destiny, there is no fortune. Next, after stating generally that fortune raises or depresses, he proceeds to exemplify: there's Alexander, for instance, and Diogenes,—instances, that is, of what fortune did *not* do, for they died, as they lived, in their respective states of life. Then comes the Emperor Nicholas *hic et nunc*; with the Turks on the other hand, place and time and case not stated. Then examples are dropped, and we are turned over to poetry, and what we ought to do, according to Horace, when fortune changes. Next, we are brought back to our examples, in order to commence a series of rambles, beginning with Napoleon the First. *Apropos* of Napoleon the First comes in Napoleon the Third; this leads us to observe that the latter has acted 'very differently from what we expected;' and this again to the further remark, that no explanation has yet been given of his getting rid of the Constitution. He then ends by boldly quoting the thesis, in proof that we may rely on fortune, when we cannot help it; and by giving us advice, sound, but unexpected, to cultivate virtue."

"O! Black, it is quite ludicrous" ... breaks in Mr. Brown;—this Mr. Brown must be a very good-tempered man, or he would not bear so much:—this is my remark, not Mr. Black's, who will not be interrupted, but only raises his voice: "Now, I know how this Theme was written," he says, "first one sentence, and then your boy sat thinking, and devouring the end of his pen; presently down went the second, and so on. The rule is, first think, and then write: don't write when you have nothing to say; or, if you do, you will make a mess of it. A thoughtful youth may deliver himself clumsily, he may set down

little; but depend upon it, his half sentences will be worth more than the folio sheet of another boy, and an experienced examiner will see it.

"Now, I will prophesy one thing of Robert, unless this fault is knocked out of him," continues merciless Mr. Black. "When he grows up, and has to make a speech, or write a letter for the papers, he will look out for flowers, full-blown flowers, figures, smart expressions, trite quotations, hackneyed beginnings and endings, pompous circumlocutions, and so on: but the meaning, the sense, the solid sense, the foundation, you may hunt the slipper long enough before you catch it."

"Well," says Mr. Brown, a little chafed, "you are a great deal worse than Mr. White; you have missed your vocation: you ought to have been a schoolmaster." Yet he goes home somewhat struck by what his friend has said, and turns it in his mind for some time to come, when he gets there. He is a sensible man at bottom, as well as good-tempered, this Mr. Brown.

§ 3. Latin Writing

1.

Mr. White, the Tutor, is more and more pleased with young Mr. Black; and, when the latter asks him for some hints for writing Latin, Mr. White takes him into his confidence and lends him a number of his own papers. Among others he puts the following into Mr. Black's hands.

Mr. White's view of Latin translation

"There are four requisites of good Composition,—correctness of vocabulary, or diction, syntax, idiom, and elegance. Of these, the two first need no explanation, and are likely to be displayed by every candidate. The last is desirable indeed, but not essential. The point

which requires especial attention is *idiomatic propriety*.

"By *idiom* is meant that *use* of words which is peculiar to a particular language. Two nations may have corresponding words for the same ideas, yet differ altogether in their *mode of using* those words. For instance, 'et' *means* 'and,' yet it does not always admit of being used in Latin, where 'and' is used in English. 'Faire' may be French for 'do'; yet in a particular phrase, for 'How do you *do*?' 'faire' is not *used*, but 'se porter,' viz., 'Comment vous *portez-vous*?' An Englishman or a Frenchman would be almost unintelligible and altogether ridiculous to each other, who used the French or English *words*, with the idioms or *peculiar uses* of his own language. Hence, the most complete and exact acquaintance with dictionary and grammar will utterly fail to teach a student to write or compose. Something more is wanted, viz., the knowledge of the *use* of words and constructions, or the knowledge of *idiom*.

"Take the following English of a modern writer:

"This is a serious consideration:—Among men, as among wild beasts, the taste of blood creates the appetite for it, and the appetite for it is strengthened by indulgence.'

"Translate it word for word literally into Latin, thus:—

"Hæc est seria consideratio. Inter homines, ut inter feras, gustus sanguinis creat ejus appetitum, et ejus appetitus indulgentiâ roboratur.'

"Purer Latin, as far as *diction* is concerned, more correct, as far as *syntax*, cannot be desired. Every word is classical, every construction grammatical: yet Latinity it simply has none. From beginning to end it follows the English *mode* of speaking, or English idiom, not the Latin.

"In proportion, then, as a candidate advances from this Anglicism into Latinity, so far does he write good Latin.

"We might make the following remarks upon the above literal version.

"1. 'Consideratio' is not 'a consideration,' the Latins, having no article, are driven to expedients to supply its place, *e.g.*, *quidam* is sometimes used for *a*.

"2. 'Consideratio' is not 'a consideration,' *i.e.*, a *thing* considered, or a subject; but the *act* of considering.

"3. It must never be forgotten, that such words as 'consideratio' are generally metaphorical, and therefore cannot be used *simply*, and without limitation or explanation, in the English sense, according to which the *mental* act is primarily conveyed by the word. 'Consideratio,' it is true, can be used absolutely, with greater propriety than most words of the kind; but if we take a parallel case, for instance, 'agitatio,' we could not use it at once in the mental sense for 'agitation,' but we should be obliged to say 'agitatio *mentis*, *animi*,' etc., though even then it would not answer to 'agitation.'

"4. 'Inter homines, gustus,' etc. Here the English, as is not uncommon, throws two ideas together. It means, first, that something *occurs* among men, and *occurs* among wild beasts, and that it is the same thing which occurs among both; and secondly that this something is, that the taste of blood has a certain particular effect. In other words, it means, (1) '*this* occurs among beasts and men,' (2) *viz.*, that the 'taste of blood,' etc. Therefore, 'inter homines, etc., gustus creat, etc.,' does not express the English *meaning*, it only translates its *expression*.

"5. 'Inter homines' is not the Latin phrase for 'among.' 'Inter' generally involves some sense of *division*, *viz.*, interruption, contrast, rivalry, etc. Thus, with a singular noun, 'inter cœnam hoc accidit,' *i.e.*, this *interrupted* the supper. And so with two nouns, 'inter me et Brundusium Cæsar est.' And so with a plural noun, 'hoc *inter homines* ambigitur,' *i.e.*, man with man. 'Micat *inter omnes* Julium sidus,' *i.e.*, in the rivalry of star against star. 'Inter tot annos unus (vir) inventus est,' *i.e.*, though all those years, one by one, put in their claim, yet only one

of them can produce a man, etc. 'Inter se diligunt,' they love each other. On the contrary, the Latin word for 'among,' simply understood, is 'in.'

"6. As a general rule, indicatives active followed by accusatives, are foreign to the main structure of a Latin sentence.

"7. 'Et;' here two clauses are *connected*, having *different* subjects or nominatives; in the former 'appetitus' is in the nominative, and in the latter in the accusative. It is usual in Latin to carry on the *same* subject, in *connected* clauses.

"8. 'Et' here connects two *distinct* clauses. 'Autem' is more common.

"These being some of the faults of the literal version, I transcribe the translations sent in to me by six of my pupils respectively, who, however deficient in elegance of composition, and though more or less deficient in hitting the Latin idiom, yet evidently know what idiom is.

"The first wrote:—Videte rem graviorem; quod feris, id hominibus quoque accidit,—sanguinis sitim semel gustantibus intus concipi, plenè potantibus maturari.

"The second wrote:—Res seria agitur; nam quod in feris, illud in hominibus quoque cernitur, sanguinis appetitionem et suscitari lambendo et epulando inflammari.

"The third:—Ecce res summâ consideratione digna; et in feris et in hominibus, sanguinis semel delibati sitis est, sæpius hausti libido.

"The fourth:—Sollicitè animadvertendum est, cum in feris tum in hominibus fieri, ut guttæ pariant appetitum sanguinis, frequentiores potus ingluviem.

"And the fifth:—Perpende sedulo, gustum sanguinis tam in hominibus quam in feris primò appetitionem sui tandem cupidinem inferre.

"And the sixth:—Hoc grave est, quod hominibus cum feris videmus commune, gustasse est appetere sanguinem, hausisse in

deliciis habere."

Mr. Black, junr., studies this paper, and considers that he has gained something from it. Accordingly, when he sees his father, he mentions to him Mr. White, his kindness, his papers, and especially the above, of which he has taken a copy. His father begs to see it; and, being a bit of a critic, forthwith delivers his judgment on it, and condescends to praise it; but he says that it fails in this, *viz.*, in overlooking the subject of *structure*. He maintains that the turning-point of good or bad Latinity is, not idiom, as Mr. White says, but structure. Then Mr. Black, the father, is led on to speak of himself, and of his youthful studies; and he ends by giving Harry a history of his own search after the knack of writing Latin. I do not see quite how this is to the point of Mr. White's paper, which cannot be said to contradict Mr. Black's narrative; but for this very reason, I may consistently quote it, for from a different point of view it may throw light on the subject treated in common by both these literary authorities.

2.

Old Mr. Black's Confession of his search after a Latin style

"The attempts and the failures and the successes of those who have gone before, my dear son, are the direction-posts of those who come after; and, as I am only speaking to you, it strikes me that I may, without egotism or ostentation, suggest views or cautions, which might indeed be useful to the University Student generally, by a relation of some of my own endeavours to improve my own mind, and to increase my own knowledge in my early life. I am no great admirer of self-taught geniuses; to be self-taught is a misfortune, except in the case of those extraordinary minds, to whom the title of genius justly belongs; for in most cases, to be self-taught is to be badly grounded, to be slovenly finished, and to be preposterously conceited. Nor, again,

was that misfortune I speak of really mine; but I have been left at times just so much to myself, as to make it possible for young students to gain hints from the history of my mind, which will be useful to themselves. And now for my subject.

"At school I was reckoned a sharp boy; I ran through its classes rapidly; and by the time I was fifteen, my masters had nothing more to teach me, and did not know what to do with me. I might have gone to a public school, or to a private tutor for three or four years; but there were reasons against either plan, and at the unusual age I speak of, with some inexact acquaintance with Homer, Sophocles, Herodotus, and Xenophon, Horace, Virgil, and Cicero, I was matriculated at the University. I had from a child been very fond of composition, verse and prose, English and Latin, and took especial interest in the subject of style; and one of the wishes nearest my heart was to write Latin well. I had some idea of the style of Addison, Hume, and Johnson, in English; but I had no idea what was meant by good Latin style. I had read Cicero without learning what it was; the books said, 'This is neat Ciceronian language,' 'this is pure and elegant Latinity,' but they did not tell me why. Some persons told me to go by my ear; to get Cicero by heart; and then I should know how to turn my thoughts and marshal my words, nay, more, where to put subjunctive moods and where to put indicative. In consequence I had a vague, unsatisfied feeling on the subject, and kept grasping shadows, and had upon me something of the unpleasant sensation of a bad dream.

"When I was sixteen, I fell upon an article in the *Quarterly*, which reviewed a Latin history of (I think) the Rebellion of 1715; perhaps by Dr. Whitaker. Years afterwards I learned that the critique was the writing of a celebrated Oxford scholar; but at the time, it was the subject itself, not the writer, that took hold of me. I read it carefully, and made extracts which, I believe, I have to this day. Had I known

more of Latin writing, it would have been of real use to me; but as it was concerned of necessity in verbal criticisms, it did but lead me deeper into the mistake to which I had already been introduced,—that Latinity consisted in using good phrases. Accordingly I began noting down, and using in my exercises, idiomatic or peculiar expressions: such as 'oleum perdidit,' 'haud scio an non,' 'cogitanti mihi,' 'verum enimvero,' 'equidem,' 'dixerim,' and the like; and I made a great point of putting the verb at the end of the sentence. What took me in the same direction was Dumesnil's *Synonymes*, a good book, but one which does not even profess to teach Latin writing. I was aiming to be an architect by learning to make bricks.

"Then I fell in with the *Germania* and *Agricola* of Tacitus, and was very much taken by his style. Its peculiarities were much easier to understand, and to copy, than Cicero's: 'decipit exemplar vitiis imitabile;' and thus, without any advance whatever in understanding the genius of the language, or the construction of a Latin sentence, I added to my fine words and cut-and-dried idioms, phrases smacking of Tacitus. The *Dialogues* of Erasmus, which I studied, carried me in the same direction; for dialogues, from the nature of the case, consist of words and clauses, and smart, pregnant, or colloquial expressions, rather than of sentences with an adequate structure."

Mr. Black takes breath, and then continues:

"The labour, then, of years came to nothing, and when I was twenty I knew no more of Latin composition than I had known at fifteen. It was then that circumstances turned my attention to a volume of Latin Lectures, which had been published by the accomplished scholar of whose critique in the *Quarterly Review* I have already spoken. The Lectures in question had been delivered terminally while he held the Professorship of Poetry, and were afterwards collected into a volume; and various circumstances combined to give them a peculiar character. Delivered one by one at

intervals, to a large, cultivated, and critical audience, they both demanded and admitted of special elaboration of the style. As coming from a person of his high reputation for Latinity, they were displays of art; and, as addressed to persons who had to follow *ex tempore* the course of a discussion delivered in a foreign tongue, they needed a style as neat, pointed, lucid, and perspicuous as it was ornamental. Moreover, as expressing modern ideas in an ancient language, they involved a new development and application of its powers. The result of these united conditions was a style less simple, less natural and fresh, than Cicero's; more studied, more ambitious, more sparkling; heaping together in a page the flowers which Cicero scatters over a treatise; but still on that very account more fitted for the purpose of inflicting upon the inquiring student what Latinity was. Any how, such was its effect upon me; it was like the 'Open Sesame' of the tale; and I quickly found that I had a new sense, as regards composition, that I understood beyond mistake what a Latin sentence should be, and saw how an English sentence must be fused and remoulded in order to make it Latin. Henceforth Cicero, as an artist, had a meaning, when I read him, which he never had had to me before; the bad dream of seeking and never finding was over; and, whether I ever wrote Latin or not, at least I knew what good Latin was.

"I had now learned that good Latinity lies in structure; that every word of a sentence may be Latin, yet the whole sentence remain English; and that dictionaries do not teach composition. Exulting in my discovery, I next proceeded to analyze and to throw into the shape of science that idea of Latinity to which I had attained. Rules and remarks, such as are contained in works on composition, had not led me to master the idea; and now that I really had gained it, it led me to form from it rules and remarks for myself. I could now turn Cicero to account, and I proceeded to make his writings the materials of an induction, from which I drew out and threw into form what I have

called a science of Latinity,—with its principles and peculiarities, their connection and their consequences,—or at least considerable specimens of such a science, the like of which I have not happened to see in print. Considering, however, how much has been done for scholarship since the time I speak of, and especially how many German books have been translated, I doubt not I should now find my own poor investigations and discoveries anticipated and superseded by works which are in the hands of every school-boy. At the same time, I am quite sure that I gained a very great deal in the way of precision of thought, delicacy of judgment, and refinement of taste, by the processes of induction to which I am referring. I kept blank books, in which every peculiarity in every sentence of Cicero was minutely noted down, as I went on reading. The force of words, their combination into phrases, their collocation—the carrying on of one subject or nominative through a sentence, the breaking up of a sentence into clauses, the evasion of its categorical form, the resolution of abstract nouns into verbs and participles;—what is possible in Latin composition and what is not, how to compensate for want of brevity by elegance, and to secure perspicuity by the use of figures, these, and a hundred similar points of art, I illustrated with a diligence which even bordered on subtlety. Cicero became a mere magazine of instances, and the main use of the river was to feed the canal. I am unable to say whether these elaborate inductions would profit any one else, but I have a vivid recollection of the great utility they were at that time to my own mind.

"The general subject of Latin composition, my dear son, has ever interested me much, and you see only one point in it has made me speak for a quarter of an hour; but now that I have had my say about it, what is its upshot? The great moral I would impress upon you is this, that in learning to write Latin, as in all learning, you must not trust to books, but only make use of them; not hang like a dead weight

upon your teacher, but catch some of his life; handle what is given you, not as a formula, but as a pattern to copy and as a capital to improve; throw your heart and mind into what you are about, and thus unite the separate advantages of being tutored and of being self-taught,—self-taught, yet without oddities, and tutorized, yet without conventionalities."

"Why, my dear father," says young Mr. Black, "you speak like a book. You must let me ask you to write down for me what you have been giving out in conversation."

I have had the advantage of the written copy.

§ 4. General Religious Knowledge

1.

It has been the custom in the English Universities to introduce religious instruction into the School of Arts; and a very right custom it is, which every University may well imitate. I have certainly felt it ought to have a place in that School; yet the subject is not without its difficulty, and I intend to say a few words upon it here. That place, if it has one, should of course be determined on some intelligible principle, which, while it justifies the introduction of Religion into a secular Faculty, will preserve it from becoming an intrusion, by fixing the conditions under which it is to be admitted. There are many who would make over the subject of Religion to the theologian exclusively; there are others who allow it almost unlimited extension in the province of Letters. The latter of these two classes, if not large, at least is serious and earnest; it seems to consider that the Classics should be superseded by the Scriptures and the Fathers, and that Theology proper should be taught to the youthful aspirant for University honours. I am not here concerned with opinions of this character, which I respect, but cannot follow. Nor am I concerned with that large

class, on the other hand, who, in their exclusion of Religion from the lecture-rooms of Philosophy and Letters (or of Arts, as it used to be called), are actuated by scepticism or indifference; but there are other persons, much to be consulted, who arrive at the same practical conclusion as the sceptic and unbeliever, from real reverence and pure zeal for the interests of Theology, which they consider sure to suffer from the superficial treatment of lay-professors, and the superficial reception of young minds, as soon as, and in whatever degree, it is associated with classical, philosophical, and historical studies;—and as very many persons of great consideration seem to be of this opinion, I will set down the reasons why I follow the English tradition instead, and in what sense I follow it.

I might appeal, I conceive, to authority in my favour, but I pass it over, because mere authority, however sufficient for my own guidance, is not sufficient for the definite direction of those who have to carry out the matter of it in practice.

2.

In the first place, then, it is congruous certainly that youths who are prepared in a Catholic University for the general duties of a secular life, or for the secular professions, should not leave it without some knowledge of their religion; and, on the other hand, it does, in matter of fact, act to the disadvantage of a Christian place of education, in the world and in the judgment of men of the world, and is a reproach to its conductors, and even a scandal, if it sends out its pupils accomplished in all knowledge except Christian knowledge; and hence, even though it were impossible to rest the introduction of religious teaching into the secular lecture-room upon any logical principle, the imperative necessity of its introduction would remain, and the only question would be, what matter was to be introduced, and how much.

And next, considering that, as the mind is enlarged and cultivated generally, it is capable, or rather is desirous and has need, of fuller religious information, it is difficult to maintain that that knowledge of Christianity which is sufficient for entrance at the University is all that is incumbent on students who have been submitted to the academical course. So that we are unavoidably led on to the further question, viz., shall we sharpen and refine the youthful intellect, and then leave it to exercise its new powers upon the most sacred of subjects, as it will, and with the chance of its exercising them wrongly; or shall we proceed to feed it with divine truth, as it gains an appetite for knowledge?

Religious teaching, then, is urged upon us in the case of University students, first, by its evident propriety; secondly, by the force of public opinion; thirdly, from the great inconveniences of neglecting it. And, if the subject of Religion is to have a real place in their course of study, it must enter into the examinations in which that course results; for nothing will be found to impress and occupy their minds but such matters as they have to present to their Examiners.

Such, then, are the considerations which actually oblige us to introduce the subject of Religion into our secular schools, whether it be logical or not to do so; but next, I think that we can do so without any sacrifice of principle or of consistency; and this, I trust, will appear, if I proceed to explain the mode which I should propose to adopt for the purpose:—

I would treat the subject of Religion in the School of Philosophy and Letters simply as a branch of knowledge. If the University student is bound to have a knowledge of History generally, he is bound to have inclusively a knowledge of sacred history as well as profane; if he ought to be well instructed in Ancient Literature, Biblical Literature comes under that general description as well as Classical; if he knows the Philosophy of men, he will not be extravagating from his general

subject, if he cultivate also that Philosophy which is divine. And as a student is not necessarily superficial, though he has not studied all the classical poets, or all Aristotle's philosophy, so he need not be dangerously superficial, if he has but a parallel knowledge of Religion.

3.

However, it may be said that the risk of theological error is so serious, and the effects of theological conceit are so mischievous, that it is better for a youth to know nothing of the sacred subject, than to have a slender knowledge which he can use freely and recklessly, for the very reason that it is slender. And here we have the maxim in corroboration: "A little learning is a dangerous thing."

This objection is of too anxious a character to be disregarded. I should answer it thus:—In the first place it is obvious to remark, that one great portion of the knowledge here advocated is, as I have just said, historical knowledge, which has little or nothing to do with doctrine. If a Catholic youth mixes with educated Protestants of his own age, he will find them conversant with the outlines and the characteristics of sacred and ecclesiastical history as well as profane: it is desirable that he should be on a par with them, and able to keep up a conversation with them. It is desirable, if he has left our University with honours or prizes, that he should know as well as they about the great primitive divisions of Christianity, its polity, its luminaries, its acts, and its fortunes; its great eras, and its course down to this day. He should have some idea of its propagation, and of the order in which the nations, which have submitted to it, entered its pale; and of the list of its Fathers, and of its writers generally, and of the subjects of their works. He should know who St. Justin Martyr was, and when he lived; what language St. Ephraim wrote in; on what St. Chrysostom's literary fame is founded; who was Celsus, or Ammonius, or Porphyry, or Ulphilas, or Symmachus, or Theodoric. Who were the

Nestorians; what was the religion of the barbarian nations who took possession of the Roman Empire: who was Eutyches, or Berengarius, who the Albigenses. He should know something about the Benedictines, Dominicans, or Franciscans, about the Crusades, and the chief movers in them. He should be able to say what the Holy See has done for learning and science; the place which these islands hold in the literary history of the dark age; what part the Church had, and how her highest interests fared, in the revival of letters; who Bessarion was, or Ximenes, or William of Wykeham, or Cardinal Allen. I do not say that we can insure all this knowledge in every accomplished student who goes from us, but at least we can admit such knowledge, we can encourage it, in our lecture-rooms and examination-halls.

And so in like manner, as regards Biblical knowledge, it is desirable that, while our students are encouraged to pursue the history of classical literature, they should also be invited to acquaint themselves with some general facts about the canon of Holy Scripture, its history, the Jewish canon, St. Jerome, the Protestant Bible; again, about the languages of Scripture, the contents of its separate books, their authors, and their versions. In all such knowledge I conceive no great harm can lie in being superficial.

But now as to Theology itself. To meet the apprehended danger, I would exclude the teaching *in extense* of pure dogma from the secular schools, and content myself with enforcing such a broad knowledge of doctrinal subjects as is contained in the catechisms of the Church, or the actual writings of her laity. I would have students apply their minds to such religious topics as laymen actually do treat, and are thought praiseworthy in treating. Certainly I admit that, when a lawyer or physician, or statesman, or merchant, or soldier sets about discussing theological points, he is likely to succeed as ill as an ecclesiastic who meddles with law, or medicine, or the exchange. But I am professing to contemplate Christian knowledge in what may be

called its secular aspect, as it is practically useful in the intercourse of life and in general conversation; and I would encourage it so far as it bears upon the history, the literature, and the philosophy of Christianity.

It is to be considered that our students are to go out into the world, and a world not of professed Catholics, but of inveterate, often bitter, commonly contemptuous, Protestants; nay, of Protestants who, so far as they come from Protestant Universities and public schools, do know their own system, do know, in proportion to their general attainments, the doctrines and arguments of Protestantism. I should desire, then, to encourage in our students an intelligent apprehension of the relations, as I may call them, between the Church and Society at large; for instance, the difference between the Church and a religious sect; the respective prerogatives of the Church and the civil power; what the Church claims of necessity, what it cannot dispense with, what it can; what it can grant, what it cannot. A Catholic hears the celibacy of the clergy discussed in general society; is that usage a matter of faith, or is it not of faith? He hears the Pope accused of interfering with the prerogatives of her Majesty, because he appoints an hierarchy. What is he to answer? What principle is to guide him in the remarks which he cannot escape from the necessity of making? He fills a station of importance, and he is addressed by some friend who has political reasons for wishing to know what is the difference between Canon and Civil Law, whether the Council of Trent has been received in France, whether a Priest cannot in certain cases absolve prospectively, what is meant by his *intention*, what by the *opus operatum*; whether, and in what sense, we consider Protestants to be heretics; whether any one can be saved without sacramental confession; whether we deny the reality of natural virtue, or what worth we assign to it?

Questions may be multiplied without limit, which occur in

conversation between friends, in social intercourse, or in the business of life, when no argument is needed, no subtle and delicate disquisition, but a few direct words stating the fact, and when perhaps a few words may even hinder most serious inconveniences to the Catholic body. Half the controversies which go on in the world arise from ignorance of the facts of the case; half the prejudices against Catholicity lie in the misinformation of the prejudiced parties. Candid persons are set right, and enemies silenced, by the mere statement of what it is that we believe. It will not answer the purpose for a Catholic to say, "I leave it to theologians," "I will ask my priest;" but it will commonly give him a triumph, as easy as it is complete, if he can then and there lay down the law. I say "lay down the law;" for remarkable it is that even those who speak against Catholicism like to hear about it, and will excuse its advocate from alleging arguments if he can gratify their curiosity by giving them information. Generally speaking, however, as I have said, what is given as information will really be an argument as well as information. I recollect, some twenty-five years ago, three friends of my own, as they then were, clergymen of the Establishment, making a tour through Ireland. In the West or South they had occasion to become pedestrians for the day; and they took a boy of thirteen to be their guide. They amused themselves with putting questions to him on the subject of his religion; and one of them confessed to me on his return that that poor child put them all to silence. How? Not, of course, by any train of arguments, or refined theological disquisition, but merely by knowing and understanding the answers in his catechism.

4.

Nor will argument itself be out of place in the hands of laymen mixing with the world. As secular power, influence, or resources are never more suitably placed than when they are in the hands of

Catholics, so secular knowledge and secular gifts are then best employed when they minister to Divine Revelation. Theologians inculcate the matter, and determine the details of that Revelation; they view it from within; philosophers view it from without, and this external view may be called the Philosophy of Religion, and the office of delineating it externally is most gracefully performed by laymen. In the first age laymen were most commonly the Apologists. Such were Justin, Tatian, Athenagoras, Aristides, Hermias, Minucius Felix, Arnobius, and Lactantius. In like manner in this age some of the most prominent defences of the Church are from laymen: as De Maistre, Chateaubriand, Nicolas, Montalembert, and others. If laymen may write, lay students may read; they surely may read what their fathers may have written. They might surely study other works too, ancient and modern, written whether by ecclesiastics or laymen, which, although they do contain theology, nevertheless, in their structure and drift, are polemical. Such is Origen's great work against Celsus; and Tertullian's Apology; such some of the controversial treatises of Eusebius and Theodoret; or St. Augustine's City of God; or the tract of Vincentius Lirinensis. And I confess that I should not even object to portions of Bellarmine's Controversies, or to the work of Suarez on laws, or to Melchior Canus's treatises on the *Loci Theologici*. On these questions in detail, however,—which are, I readily acknowledge, very delicate,—opinions may differ, even where the general principle is admitted; but, even if we confine ourselves strictly to the Philosophy, that is, the external contemplation, of Religion, we shall have a range of reading sufficiently wide, and as valuable in its practical application as it is liberal in its character. In it will be included what are commonly called the Evidences; and what is a subject of special interest at this day, the Notes of the Church.

But I have said enough in general illustration of the rule which I

am recommending. One more remark I make, though it is implied in what I have been saying:—Whatever students read in the province of Religion, they read, and would read from the very nature of the case, under the superintendence, and with the explanations, of those who are older and more experienced than themselves.

Lecture V

A Form of Infidelity of the Day

§ 1. Its Sentiments

1.

Though it cannot be denied that at the present day, in consequence of the close juxtaposition and intercourse of men of all religions, there is a considerable danger of the subtle, silent, unconscious perversion and corruption of Catholic intellects, who as yet profess, and sincerely profess, their submission to the authority of Revelation, still that danger is far inferior to what it was in one portion of the middle ages. Nay, contrasting the two periods together, we may even say, that in this very point they differ, that, in the mediæval, since Catholicism was then the sole religion recognized in Christendom, unbelief necessarily made its advances under the language and the guise of faith; whereas in the present, when universal toleration prevails, and it is open to assail revealed truth (whether Scripture or Tradition, the Fathers or the "Sense of the faithful"), unbelief in consequence throws off the mask, and takes up a position over against us in citadels of its own, and confronts us in the broad light and with a direct assault. And I have no hesitation in saying (apart of course from moral and ecclesiastical considerations, and under correction of the command and policy of the Church), that I prefer to live in an age when the fight is in the day, not in the

twilight; and think it a gain to be speared by a foe, rather than to be stabbed by a friend.

I do not, then, repine at all at the open development of unbelief in Germany, supposing unbelief is to be, or at its growing audacity in England; not as if I were satisfied with the state of things, considered positively, but because, in the unavoidable alternative of avowed unbelief and secret, my own personal leaning is in favour of the former. I hold that unbelief is in some shape unavoidable in an age of intellect and in a world like this, considering that faith requires an act of the will, and presupposes the due exercise of religious advantages. You may persist in calling Europe Catholic, though it is not; you may enforce an outward acceptance of Catholic dogma, and an outward obedience to Catholic precept; and your enactments may be, so far, not only pious in themselves, but even merciful towards the teachers of false doctrine, as well as just towards their victims; but this is all that you can do; you cannot bespeak conclusions which, in spite of yourselves, you are leaving free to the human will. There will be, I say, in spite of you, unbelief and immorality to the end of the world, and you must be prepared for immorality more odious, and unbelief more astute, more subtle, more bitter, and more resentful, in proportion as it is obliged to dissemble.

It is one great advantage of an age in which unbelief speaks out, that Faith can speak out too; that, if falsehood assails Truth, Truth can assail falsehood. In such an age it is possible to found a University more emphatically Catholic than could be set up in the middle age, because Truth can entrench itself carefully, and define its own profession severely, and display its colours unequivocally, by occasion of that very unbelief which so shamelessly vaunts itself. And a kindred advantage to this is the confidence which, in such an age, we can place in all who are around us, so that we need look for no foes but those who are in the enemy's camp.

The medieval schools were the *arena* of as critical a struggle between truth and error as Christianity has ever endured; and the philosophy which bears their name carried its supremacy by means of a succession of victories in the cause of the Church. Scarcely had Universities risen into popularity, when they were found to be infected with the most subtle and fatal forms of unbelief; and the heresies of the East germinated in the West of Europe and in Catholic lecture-rooms, with a mysterious vigour upon which history throws little light. The questions agitated were as deep as any in theology; the being and essence of the Almighty were the main subjects of the disputation, and Aristotle was introduced to the ecclesiastical youth as a teacher of Pantheism. Saracenic expositions of the great philosopher were in vogue; and, when a fresh treatise was imported from Constantinople, the curious and impatient student threw himself upon it, regardless of the Church's warnings, and reckless of the effect upon his own mind. The acutest intellects became sceptics and misbelievers; and the head of the Holy Roman Empire, the Cæsar Frederick the Second, to say nothing of our miserable king John, had the reputation of meditating a profession of Mahometanism. It is said that, in the community at large, men had a vague suspicion and mistrust of each other's belief in Revelation. A secret society was discovered in the Universities of Lombardy, Tuscany, and France, organized for the propagation of infidel opinions; it was bound together by oaths, and sent its missionaries among the people in the disguise of pedlars and vagrants.

The success of such efforts was attested in the south of France by the great extension of the Albigenses, and the prevalence of Manichean doctrine. The University of Paris was obliged to limit the number of its doctors in theology to as few as eight, from misgivings about the orthodoxy of its divines generally. The narrative of Simon of

Tournay, struck dead for crying out after lecture, "Ah! good Jesus, I could disprove Thee, did I please, as easily as I have proved," whatever be its authenticity, at least may be taken as a representation of the frightful peril to which Christianity was exposed. Amaury of Chartres was the author of a school of Pantheism, and has given his name to a sect; Abelard, Roscelin, Gilbert, and David de Dinant, Tanquelin, and Eon, and others who might be named, show the extraordinary influence of anti-Catholic doctrines on high and low. Ten ecclesiastics and several of the populace of Paris were condemned for maintaining that our Lord's reign was past, that the Holy Ghost was to be incarnate, or for parallel heresies.

Frederick the Second established a University at Naples with a view to the propagation of the infidelity which was so dear to him. It gave birth to the great St. Thomas, the champion of revealed truth. So intimate was the intermixture, so close the grapple, between faith and unbelief. It was the conspiracy of traitors, it was a civil strife, of which the medieval seats of learning were the scene.

In this day, on the contrary, Truth and Error lie over against each other with a valley between them, and David goes forward in the sight of all men, and from his own camp, to engage with the Philistine. Such is the providential overruling of that principle of toleration, which was conceived in the spirit of unbelief, in order to the destruction of Catholicity. The sway of the Church is contracted; but she gains in intensity what she loses in extent. She has now a direct command and a reliable influence over her own institutions, which was wanting in the middle ages. A University is her possession in these times, as well as her creation: nor has she the need, which once was so urgent, to expel heresies from her pale, which have now their own centres of attraction elsewhere, and spontaneously take their departure. Secular advantages no longer present an inducement to hypocrisy, and her members in consequence have the consolation of

being able to be sure of each other. How much better is it, for us at least, whatever it may be for themselves (to take a case before our eyes in Ireland), that those persons, who have left the Church to become ministers in the Protestant Establishment, should be in their proper place, as they are, than that they should have perforce continued in her communion! I repeat it, I would rather fight with unbelief as we find it in the nineteenth century, than as it existed in the twelfth and thirteenth.

3.

I look out, then, into the enemy's camp, and I try to trace the outlines of the hostile movements and the preparations for assault which are there in agitation against us. The arming and the manœuvring, the earth-works and the mines, go on incessantly; and one cannot of course tell, without the gift of prophecy, which of his projects will be carried into effect and attain its purpose, and which will eventually fail or be abandoned. Threatening demonstrations may come to nothing; and those who are to be our most formidable foes, may before the attack elude our observation. All these uncertainties, we know, are the lot of the soldier in the field: and they are parallel to those which befall the warriors of the Temple. Fully feeling the force of such considerations, and under their correction, nevertheless I make my anticipations according to the signs of the times; and such must be my *proviso*, when I proceed to describe some characteristics of one particular form of infidelity, which is coming into existence and activity over against us, in the intellectual citadels of England.

It must not be supposed that I attribute, what I am going to speak of as a form of infidelity of the day, to any given individual or individuals; nor is it necessary to my purpose to suppose that any one man as yet consciously holds, or sees the drift, of that portion of the theory to which he has given assent. I am to describe a set of opinions

which may be considered as the true explanation of many floating views, and the converging point of a multitude of separate and independent minds; and, as of old Arius or Nestorius not only was spoken of in his own person, but was viewed as the abstract and typical teacher of the heresy which he introduced, and thus his name denoted a heretic more complete and explicit, even though not more formal, than the heresiarch himself, so here too, in like manner, I may be describing a school of thought in its fully developed proportions, which at present every one, to whom membership with it is imputed, will at once begin to disown, and I may be pointing to teachers whom no one will be able to descry. Still, it is not less true that I may be speaking of tendencies and elements which exist, and he may come in person at last, who comes at first to us merely in his spirit and in his power.

The teacher, then, whom I speak of, will discourse thus in his secret heart:—He will begin, as many so far have done before him, by laying it down as if a position which approves itself to the reason, immediately that it is fairly examined,—which is of so axiomatic a character as to have a claim to be treated as a first principle, and is firm and steady enough to bear a large superstructure upon it,—that Religion is not the subject-matter of a science. "You may have opinions in religion, you may have theories, you may have arguments, you may have probabilities; you may have anything but demonstration, and therefore you cannot have science. In mechanics you advance from sure premisses to sure conclusions; in optics you form your undeniable facts into system, arrive at general principles, and then again infallibly apply them: here you have Science. On the other hand, there is at present no real science of the weather, because you cannot get hold of facts and truths on which it depends; there is no science of the coming and going of epidemics; no science of the breaking out and the cessation of wars; no science of popular likings

and dislikings, or of the fashions. It is not that these subject-matters are themselves incapable of science, but that, under existing circumstances, *we* are incapable of subjecting them to it. And so, in like manner," says the philosopher in question, "without denying that in the matter of religion some things are true and some things false, still we certainly are not in a position to determine the one or the other. And, as it would be absurd to dogmatize about the weather, and say that 1860 will be a wet season or a dry season, a time of peace or war, so it is absurd for men in our present state to teach anything positively about the next world, that there is a heaven, or a hell, or a last judgment, or that the soul is immortal, or that there is a God. It is not that you have not a right to your own opinion, as you have a right to place implicit trust in your own banker, or in your own physician; but undeniably such persuasions are not knowledge, they are not scientific, they cannot become public property, they are consistent with your allowing your friend to entertain the opposite opinion; and, if you are tempted to be violent in the defence of your own view of the case in this matter of religion, then it is well to lay seriously to heart whether sensitiveness on the subject of your banker or your doctor, when he is handled sceptically by another, would not be taken to argue a secret misgiving in your mind about him, in spite of your confident profession, an absence of clear, unruffled certainty in his honesty or in his skill."

Such is our philosopher's primary position. He does not prove it; he does but distinctly state it; but he thinks it self-evident when it is distinctly stated. And there he leaves it.

4.

Taking his primary position henceforth for granted, he will proceed as follows:—"Well, then, if Religion is just one of those subjects about which we can know nothing, what can be so absurd as

to spend time upon it? what so absurd as to quarrel with others about it? Let us all keep to our own religious opinions respectively, and be content; but so far from it, upon no subject whatever has the intellect of man been fastened so intensely as upon Religion. And the misery is, that, if once we allow it to engage our attention, we are in a circle from which we never shall be able to extricate ourselves. Our mistake reproduces and corroborates itself. A small insect, a wasp or a fly, is unable to make his way through the pane of glass; and his very failure is the occasion of greater violence in his struggle than before. He is as heroically obstinate in his resolution to succeed as the assailant or defender of some critical battle-field; he is unflagging and fierce in an effort which cannot lead to anything beyond itself. When, then, in like manner, you have once resolved that certain religious doctrines shall be indisputably true, and that all men ought to perceive their truth, you have engaged in an undertaking which, though continued on to eternity, will never reach its aim; and, since you are convinced it ought to do so, the more you have failed hitherto, the more violent and pertinacious will be your attempt in time to come. And further still, since you are not the only man in the world who is in this error, but one of ten thousand, all holding the general principle that Religion is scientific, and yet all differing as to the truths and facts and conclusions of this science, it follows that the misery of social disputation and disunion is added to the misery of a hopeless investigation, and life is not only wasted in fruitless speculation, but embittered by bigotted sectarianism.

"Such is the state in which the world has laid," it will be said, "ever since the introduction of Christianity. Christianity has been the bane of true knowledge, for it has turned the intellect away from what it can know, and occupied it in what it cannot. Differences of opinion crop up and multiply themselves, in proportion to the difficulty of deciding them; and the unfruitfulness of Theology has been, in matter

of fact, the very reason, not for seeking better food, but for feeding on nothing else. Truth has been sought in the wrong direction, and the attainable has been put aside for the visionary."

Now, there is no call on me here to refute these arguments, but merely to state them. I need not refute what has not yet been proved. It is sufficient for me to repeat what I have already said, that they are founded upon a mere assumption. *Supposing*, indeed, religious truth cannot be ascertained, *then*, of course, it is not only idle, but mischievous, to attempt to do so; *then*, of course, argument does but increase the mistake of attempting it. But surely both Catholics and Protestants have written solid defences of Revelation, of Christianity, and of dogma, as such, and these are not simply to be put aside without saying why. It has not yet been shown by our philosophers to be self-evident that religious truth is really incapable of attainment; on the other hand, it has at least been powerfully argued by a number of profound minds that it *can* be attained; and the *onus probandi* plainly lies with those who are introducing into the world what the whole world feels to be a paradox.

5.

However, where men really are persuaded of all this, however unreasonable, what will follow? A feeling, not merely of contempt, but of absolute hatred, towards the Catholic theologian and the dogmatic teacher. The patriot abhors and loathes the partizans who have degraded and injured his country; and the citizen of the world, the advocate of the human race, feels bitter indignation at those whom he holds to have been its misleaders and tyrants for two thousand years. "The world has lost two thousand years. It is pretty much where it was in the days of Augustus. This is what has come of priests." There are those who are actuated by a benevolent liberalism, and condescend to say that Catholics are not worse than other

maintainers of dogmatic theology. There are those, again, who are good enough to grant that the Catholic Church fostered knowledge and science up to the days of Galileo, and that she has only retrograded for the last several centuries. But the new teacher, whom I am contemplating in the light of that nebula out of which he will be concentrated, echoes the words of the early persecutor of Christians, that they are the "enemies of the human race." "But for Athanasius, but for Augustine, but for Aquinas, the world would have had its Bacons and its Newtons, its Lavoisiers, its Cuviers, its Watts, and its Adam Smiths, centuries upon centuries ago. And now, when at length the true philosophy has struggled into existence, and is making its way, what is left for its champion but to make an eager desperate attack upon Christian theology, the scabbard flung away, and no quarter given? and what will be the issue but the triumph of the stronger,—the overthrow of an old error and an odious tyranny, and a reign of the beautiful Truth?" Thus he thinks, and he sits dreaming over the inspiring thought, and longs for that approaching, that inevitable day.

There let us leave him for the present, dreaming and longing in his impotent hatred of a Power which Julian and Frederic, Shaftesbury and Voltaire, and a thousand other great sovereigns and subtle thinkers, have assailed in vain.

§ 2. Its Policy

1.

It is a miserable time when a man's Catholic profession is no voucher for his orthodoxy, and when a teacher of religion may be within the Church's pale, yet external to her faith. Such has been for a season the trial of her children at various eras of her history. It was the state of things during the dreadful Arian ascendancy, when the flock had to keep aloof from the shepherd, and the unsuspecting

Fathers of the Western Councils trusted and followed some consecrated sophist from Greece or Syria. It was the case in those passages of medieval history when simony resisted the Supreme Pontiff, or when heresy lurked in Universities. It was a longer and more tedious trial, while the controversies lasted with the Monophysites of old, and with the Jansenists in modern times. A great scandal it is and a perplexity to the little ones of Christ, to have to choose between rival claimants upon their allegiance, or to find a condemnation at length pronounced upon one whom in their simplicity they have admired. We, too, in this age have our scandals, for scandals must be; but they are not what they were once; and if it be the just complaint of pious men now, that never was infidelity so rampant, it is their boast and consolation, on the other hand, that never was the Church less troubled with false teachers, never more united.

False teachers do not remain within her pale now, because they can easily leave it, and because there are seats of error external to her to which they are attracted. "They went out from us," says the Apostle, "but they were not of us; for if they had been of us, they would no doubt have continued with us: but that they might be made manifest that they are not all of us." It is a great gain when error becomes manifest, for it then ceases to deceive the simple. With these thoughts I began to describe by anticipation the formation of a school of unbelief external to the Church, which perhaps as yet only exists, as I then expressed it, in a nebula. In the middle ages it might have managed, by means of subterfuges, to maintain itself for a while within the sacred limits,—now of course it is outside of it; yet still, from the intermixture of Catholics with the world, and the present immature condition of the false doctrine, it may at first exert an influence even upon those who would shrink from it if they recognized it as it really is and as it will ultimately show itself.

Moreover, it is natural, and not unprofitable, for persons under our circumstances to speculate on the forms of error with which a University of this age will have to contend, as the medieval Universities had their own special antagonists. And for both reasons I am hazarding some remarks on a set of opinions and a line of action which seems to be at present, at least in its rudiments, in the seats of English intellect, whether the danger dies away of itself or not.

I have already said that its fundamental dogma is, that nothing can be known for certain about the unseen world. This being taken for granted as a self-evident point, undeniable as soon as stated, it goes on, or will go on, to argue that, in consequence, the immense outlay which has been made of time, anxiety, and toil, of health, bodily and mental, upon theological researches, has been simply thrown away; nay, has been, not useless merely, but even mischievous, inasmuch as it has indirectly thwarted the cultivation of studies of far greater promise and of an evident utility. This is the main position of the School I am contemplating; and the result, in the minds of its members, is a deep hatred and a bitter resentment against the Power which has managed, as they consider, to stunt the world's knowledge and the intellect of man for so many hundred years. Thus much I have already said, and now I am going to state the line of policy which these people will adopt, and the course of thought which that policy of theirs will make necessary to them or natural.

2.

Supposing, then, it is the main tenet of the School in question, that the study of Religion as a science has been the bane of philosophy and knowledge, what remedy will its masters apply for the evils they deplore? Should they profess themselves the antagonists of theology, and engage in argumentative exercises with theologians? This evidently would be to increase, to perpetuate the calamity. Nothing,

they will say to themselves, do religious men desire so ardently, nothing would so surely advance the cause of Religion, as Controversy. The very policy of religious men, they will argue, is to get the world to fix its attention steadily upon the subject of Religion, and Controversy is the most effectual means of doing this. And their own game, they will consider, is, on the contrary, to be elaborately silent about it. Should they not then go on to shut up the theological schools, and exclude Religion from the subjects scientifically treated in philosophical education? This indeed has been, and is, a favourite mode of proceeding with very many of the enemies of Theology; but still it cannot be said to have been justified by any greater success than the policy of Controversy. The establishment of the London University only gave immediate occasion to the establishment of King's College, founded on the dogmatic principle; and the liberalism of the Dutch government led to the restoration of the University of Louvain. It is a well-known story how the very absence of the statues of Brutus and Cassius brought them more vividly into the recollection of the Roman people. When, then, in a comprehensive scheme of education, Religion alone is excluded, that exclusion pleads in its behalf. Whatever be the real value of Religion, say these philosophers to themselves, it has a name in the world, and must not be ill-treated, lest men should rally round it from a feeling of generosity. They will decide, in consequence, that the exclusive method, though it has met with favour in this generation, is quite as much a mistake as the controversial.

Turning, then, to the Universities of England, they will pronounce that the true policy to be observed there would be simply to let the schools of Theology alone. Most unfortunate it is that they have been roused from the state of decadence and torpor in which they lay some twenty or thirty years ago. Up to that time, a routine lecture, delivered once to successive batches of young men destined for the

Protestant Ministry, not during their residence, but when they were leaving or had already left the University,—and not about dogmatics, history, ecclesiastical law, or casuistry, but about the list of authors to be selected and works to be read by those who had neither curiosity to read them nor money to purchase;—and again a periodical advertisement of a lecture on the Thirty-nine Articles, which was never delivered because it was never attended,—these two demonstrations, one undertaken by one theological Professor, the other by another, comprised the theological teaching of a seat of learning which had been the home of Duns Scotus and Alexander Hales. What envious mischance put an end to those halcyon days, and revived the *odium theologicum* in the years which followed? Let us do justice to the authoritative rulers of the University; they have their failings; but not to them is the revolution to be ascribed. It was nobody's fault among all the guardians of education and trustees of the intellect in that celebrated place. However, the mischief has been done; and now the wisest course for the interests of infidelity is to leave it to itself, and let the fever gradually subside; treatment would but irritate it. Not to interfere with Theology, not to raise a little finger against it, is the only means of superseding it. The more bitter is the hatred which such men bear it, the less they must show it.

3.

What, then, is the line of action which they must pursue? They think, and rightly think, that, in all contests, the wisest and largest policy is to conduct a positive, not a negative opposition, not to prevent but to anticipate, to obstruct by constructing, and to exterminate by supplanting. To cast any slight upon Theology, whether in its Protestant or its Catholic schools, would be to elicit an inexhaustible stream of polemics, and a phalanx of dogmatic doctors and confessors.

"Let alone Camarina, for 'tis best let alone."

The proper procedure, then, is, not to oppose Theology, but to rival it. Leave its teachers to themselves; merely aim at the introduction of other studies, which, while they have the accidental charm of novelty, possess a surpassing interest, richness, and practical value of their own. Get possession of these studies, and appropriate them, and monopolize the use of them, to the exclusion of the votaries of Religion. Take it for granted, and protest, for the future, that Religion has nothing to do with the studies to which I am alluding, nor those studies with Religion. Exclaim and cry out, if the Catholic Church presumes herself to handle what you mean to use as a weapon against her. The range of the Experimental Sciences, viz., psychology, and politics, and political economy, and the many departments of physics, various both in their subject-matter and their method of research; the great Sciences which are the characteristics of this era, and which become the more marvellous, the more thoroughly they are understood,—astronomy, magnetism, chemistry, geology, comparative anatomy, natural history, ethnology, languages, political geography, antiquities,—these be your indirect but effectual means of overturning Religion! They do but need to be seen in order to be pursued; you will put an end, in the Schools of learning, to the long reign of the unseen shadowy world, by the mere exhibition of the visible. This was impossible heretofore, for the visible world was so little known itself; but now, thanks to the New Philosophy, sight is able to contest the field with faith. The medieval philosopher had no weapon against Revelation but Metaphysics; Physical Science has a better temper, if not a keener edge, for the purpose.

Now here I interrupt the course of thought I am tracing, to

introduce a *caveat*, lest I should be thought to cherish any secret disrespect towards the sciences I have enumerated, or apprehension of their legitimate tendencies; whereas my very object is to protest against a monopoly of them by others. And it is not surely a heavy imputation on them to say that they, as other divine gifts, may be used to wrong purposes, with which they have no natural connection, and for which they were never intended; and that, as in Greece the element of beauty, with which the universe is flooded, and the poetical faculty, which is its truest interpreter, were made to minister to sensuality; as, in the middle ages, abstract speculation, another great instrument of truth, was often frittered away in sophistical exercises; so now, too, the department of fact, and the method of research and experiment which is proper to it, may for the moment eclipse the light of faith in the imagination of the student, and be degraded into the accidental tool, *hic et nunc*, of infidelity. I am as little hostile to physical science as I am to poetry or metaphysics; but I wish for studies of every kind a legitimate application: nor do I grudge them to anti-Catholics, so that anti-Catholics will not claim to monopolize them, cry out when we profess them, or direct them against Revelation.

I wish, indeed, I could think that these studies were not intended by a certain school of philosophers to bear directly against its authority. There are those who hope, there are those who are sure, that in the incessant investigation of facts, physical, political, and moral, something or other, or many things, will sooner or later turn up, and stubborn facts too, simply contradictory of revealed declarations. A vision comes before them of some physical or historical proof that mankind is not descended from a common origin, or that the hopes of the world were never consigned to a wooden ark floating on the waters, or that the manifestations on Mount Sinai were the work of man or nature, or that the Hebrew patriarchs or the

judges of Israel are mythical personages, or that St. Peter had no connection with Rome, or that the doctrine of the Holy Trinity or of the Real Presence was foreign to primitive belief. An anticipation possesses them that the ultimate truths embodied in mesmerism will certainly solve all the Gospel miracles; or that to Niebuhrize the Gospels or the Fathers is a simple expedient for stultifying the whole Catholic system. They imagine that the eternal, immutable word of God is to quail and come to nought before the penetrating intellect of man. And, where this feeling exists, there will be a still stronger motive for letting Theology alone. That party, with whom success is but a matter of time, can afford to wait patiently; and if an inevitable train is laid for blowing up the fortress, why need we be anxious that the catastrophe should take place to-day, rather than to-morrow?

4.

But, without making too much of their own anticipations on this point, which may or may not be in part fulfilled, these men have secure grounds for knowing that the sciences, as they would pursue them, will at least be prejudicial to the religious sentiment. Any one study, of whatever kind, exclusively pursued, deadens in the mind the interest, nay, the perception of any other. Thus Cicero says that Plato and Demosthenes, Aristotle and Isocrates, might have respectively excelled in each other's province, but that each was absorbed in his own; his words are emphatic; "*quorum uterque, suo studio delectatus, contempsit alterum.*" Specimens of this peculiarity occur every day. You can hardly persuade some men to talk about any thing but their own pursuit; they refer the whole world to their own centre, and measure all matters by their own rule, like the fisherman in the drama, whose eulogy on his deceased lord was, that "he was so fond of fish." The saints illustrate this on the other hand; St. Bernard had no eye for architecture; St. Basil had no nose for flowers; St. Aloysius had no

palate for meat and drink; St. Paula or St. Jane Frances could spurn or could step over her own child;—not that natural faculties were wanting to those great servants of God, but that a higher gift outshone and obscured every lower attribute of man, as human features may remain in heaven, yet the beauty of them be killed by the surpassing light of glory. And in like manner it is clear that the tendency of science is to make men indifferentists or sceptics, merely by being exclusively pursued. The party, then, of whom I speak, understanding this well, would suffer disputations in the theological schools every day in the year, provided they can manage to keep the students of science at a distance from them.

Nor is this all; they trust to the influence of the modern sciences on what may be called the Imagination. When any thing, which comes before us, is very unlike what we commonly experience, we consider it on that account untrue; not because it really shocks our reason as improbable, but because it startles our imagination as strange. Now, Revelation presents to us a perfectly different aspect of the universe from that presented by the Sciences. The two informations are like the distinct subjects represented by the lines of the same drawing, which, accordingly as they are read on their concave or convex side, exhibit to us now a group of trees with branches and leaves, and now human faces hid amid the leaves, or some majestic figures standing out from the branches. Thus is faith opposed to sight: it is parallel to the contrast afforded by plane astronomy and physical; plane, in accordance with our senses, discourses of the sun's rising and setting, while physical, in accordance with our reason, asserts, on the contrary, that the sun is all but stationary, and that it is the earth that moves. This is what is meant by saying that truth lies in a well; phenomena are no measure of fact; *primâ facie* representations, which we receive from without, do not reach to the real state of things, or put them before us simply as they are.

While, then, Reason and Revelation are consistent in fact, they often are inconsistent in appearance; and this seeming discordance acts most keenly and alarmingly on the Imagination, and may suddenly expose a man to the temptation, and even hurry him on to the commission, of definite acts of unbelief, in which reason itself really does not come into exercise at all. I mean, let a person devote himself to the studies of the day; let him be taught by the astronomer that our sun is but one of a million central luminaries, and our earth but one of ten million globes moving in space; let him learn from the geologist that on that globe of ours enormous revolutions have been in progress through innumerable ages; let him be told by the comparative anatomist of the minutely arranged system of organized nature; by the chemist and physicist, of the peremptory yet intricate laws to which nature, organized and inorganic, is subjected; by the ethnologist, of the originals, and ramifications, and varieties, and fortunes of nations; by the antiquarian, of old cities disinterred, and primitive countries laid bare, with the specific forms of human society once existing; by the linguist, of the slow formation and development of languages; by the psychologist, the physiologist, and the economist, of the subtle, complicated structure of the breathing, energetic, restless world of men; I say, let him take in and master the vastness of the view thus afforded him of Nature, its infinite complexity, its awful comprehensiveness, and its diversified yet harmonious colouring; and then, when he has for years drank in and fed upon this vision, let him turn round to peruse the inspired records, or listen to the authoritative teaching of Revelation, the book of Genesis, or the warnings and prophecies of the Gospels, or the *Symbolum Quicumque*, or the Life of St. Antony or St. Hilarion, and he may certainly experience a most distressing revulsion of feeling,—not that his reason really deduces any thing from his much loved studies contrary to the faith, but that his imagination is bewildered, and swims with the sense of the

ineffable distance of that faith from the view of things which is familiar to him, with its strangeness, and then again its rude simplicity, as he considers it, and its apparent poverty contrasted with the exuberant life and reality of his own world. All this, the school I am speaking of understands well; it comprehends that, if it can but exclude the professors of Religion from the lecture-halls of science, it may safely allow them full play in their own; for it will be able to rear up infidels, without speaking a word, merely by the terrible influence of that faculty against which both Bacon and Butler so solemnly warn us.

I say, it leaves the theologian the full and free possession of his own schools, for it thinks he will have no chance of arresting the opposite teaching or of rivalling the fascination of modern science. Knowing little, and caring less for the depth and largeness of that heavenly Wisdom, on which the Apostle delights to expatiate, or the variety of those sciences, dogmatic or ethical, mystical or hagiological, historical or exegetical, which Revelation has created, these philosophers know perfectly well that, in matter of fact, to beings, constituted as we are, sciences which concern this world and this state of existence are worth far more, are more arresting and attractive, than those which relate to a system of things which they do not see and cannot master by their natural powers. Sciences which deal with tangible facts, practical results, evergrowing discoveries, and perpetual novelties, which feed curiosity, sustain attention, and stimulate expectation, require, they consider, but a fair stage and no favour to distance that Ancient Truth, which never changes and but cautiously advances, in the race for popularity and power. And therefore they look out for the day when they shall have put down Religion, not by shutting its schools, but by emptying them; not by disputing its tenets, but by the superior worth and persuasiveness of their own.

Such is the tactic which a new school of philosophers adopt against Christian Theology. They have this characteristic, compared with former schools of infidelity, viz., the union of intense hatred with a large toleration of Theology. They are professedly civil to it, and run a race with it. They rely, not on any logical disproof of it, but on three considerations; first, on the effects of studies of whatever kind to indispose the mind towards other studies; next, on the special effect of modern sciences upon the imagination, prejudicial to revealed truth; and lastly, on the absorbing interest attached to those sciences from their marvellous results. This line of action will be forced upon these persons by the peculiar character and position of Religion in England.

And here I have arrived at the limits of my paper before I have finished the discussion upon which I have entered; and I must be content with having made some suggestions which, if worth anything, others may use.

Lecture VI

University Preaching

1.

When I obtained from various distinguished persons the acceptable promise that they would give me the advantage of their countenance and assistance by appearing from time to time in the pulpit of our new University, some of them accompanied that promise with the natural request that I, who had asked for it, should offer them my own views of the mode and form in which the duty would be most satisfactorily accomplished. On the other hand, it was quite as natural that I on my part should be disinclined to take on myself an office which belongs to a higher station and authority in the Church than my own; and the more so, because, on the definite subject about which the inquiry is made, I should have far less direct aid from the writings of holy men and great divines than I could desire. Were it indeed my sole business to put into shape the scattered precepts which saints and doctors have delivered upon it, I might have ventured on such a task with comparatively little misgiving. Under the shadow of the great teachers of the pastoral office I might have been content to speak, without looking out for any living authority to prompt me. But this unfortunately is not the case; such venerable guidance does not extend beyond the general principles and rules of preaching, and these require both expansion and adaptation when they are to be made to bear on compositions addressed in the name of a University to University men. They define the essence of Christian preaching, which

is one and the same in all cases; but not the subject-matter or the method, which vary according to circumstances. Still, after all, the points to which they do reach are more, and more important, than those which they fall short of. I therefore, though with a good deal of anxiety, have attempted to perform a task which seemed naturally to fall to me; and I am thankful to say that, though I must in some measure go beyond the range of the simple direction to which I have referred, the greater part of my remarks will lie within it.

2.

So far is clear at once, that the preacher's object is the spiritual good of his hearers. "*Finis prædicanti sit*," says St. Francis de Sales; "*ut vitam (justitiæ) habeant homines, et abundantius habeant*." And St. Charles: "*Considerandum, ad Dei omnipotentis gloriam, ad animarumque salutem, referri omnem concionandi vim ac rationem*." Moreover, "*Prædicatorem esse ministrum Dei, per quem verbum Dei à spiritûs fonte ducitur ad fidelium animas irrigandas*." As a marksman aims at the target and its bull's-eye, and at nothing else, so the preacher must have a definite point before him, which he has to hit. So much is contained for his direction in this simple maxim, that duly to enter into it and use it is half the battle; and if he mastered nothing else, still if he really mastered as much as this, he would know all that was imperative for the due discharge of his office.

1. For what is the conduct of men who have one object definitely before them, and one only? Why, that, whatever be their skill, whatever their resources, greater or less, to its attainment all their efforts are simply, spontaneously, visibly, directed. This cuts off a number of questions sometimes asked about preaching, and extinguishes a number of anxieties. "*Sollicita es, et turbaris*," says our Lord to St. Martha; "*erga plurima; porro unum est necessarium*." We ask questions perhaps about diction, elocution, rhetorical power; but

does the commander of a besieging force dream of holiday displays, reviews, mock engagements, feats of strength, or trials of skill, such as would be graceful and suitable on a parade ground when a foreigner of rank was to be received and *fêted*; or does he aim at one and one thing only, viz., to take the strong place? Display dissipates the energy, which for the object in view needs to be concentrated and condensed. We have no reason to suppose that the Divine blessing follows the lead of human accomplishments. Indeed, St. Paul, writing to the Corinthians, who made much of such advantages of nature, contrasts the persuasive words of human wisdom "with the showing of the Spirit," and tells us that "the kingdom of God is not in speech, but in power."

But, not to go to the consideration of divine influences, which is beyond my subject, the very presence of simple earnestness is even in itself a powerful natural instrument to effect that toward which it is directed. Earnestness creates earnestness in others by sympathy; and the more a preacher loses and is lost to himself, the more does he gain his brethren. Nor is it without some logical force also; for what is powerful enough to absorb and possess a preacher has at least a *primâ facie* claim of attention on the part of his hearers. On the other hand, any thing which interferes with this earnestness, or which argues its absence, is still more certain to blunt the force of the most cogent argument conveyed in the most eloquent language. Hence it is that the great philosopher of antiquity, in speaking, in his Treatise on Rhetoric, of the various kinds of persuasives, which are available in the Art, considers the most authoritative of these to be that which is drawn from personal traits of an ethical nature evident in the orator; for such matters are cognizable by all men, and the common sense of the world decides that it is safer, where it is possible, to commit oneself to the judgment of men of character than to any considerations addressed merely to the feelings or to the reason.

On these grounds I would go on to lay down a precept, which I trust is not extravagant, when allowance is made for the preciseness and the point which are unavoidable in all categorical statements upon matters of conduct. It is, that preachers should neglect everything whatever besides devotion to their one object, and earnestness in pursuing it, till they in some good in measure attain to these requisites. Talent, logic, learning, words, manner, voice, action, all are required for the perfection of a preacher; but "one thing is necessary,"—an intense perception and appreciation of the end for which he preaches, and that is, to be the minister of some definite spiritual good to those who hear him. Who could wish to be more eloquent, more powerful, more successful than the Teacher of the Nations? yet who more earnest, who more natural, who more unstudied, who more self-forgetting than he?

3.

(1) And here, in order to prevent misconception, two remarks must be made, which will lead us further into the subject we are engaged upon. The first is, that, in what I have been saying, I do not mean that a preacher must aim at *earnestness*, but that he must aim at his *object*, which is to do some spiritual good to his hearers, and which will at once *make* him earnest. It is said that, when a man has to cross an abyss by a narrow plank thrown over it, it is his wisdom, not to look at the plank, along which lies his path, but to fix his eyes steadily on the point in the opposite precipice at which the plank ends. It is by gazing at the object which he must reach, and ruling himself by it, that he secures to himself the power of walking to it straight and steadily. The case is the same in moral matters; no one will become really earnest by aiming directly at earnestness; any one may become earnest by meditating on the motives, and by drinking at the sources, of earnestness. We may of course work ourselves up into a pretence,

nay, into a paroxysm, of earnestness; as we may chafe our cold hands till they are warm. But when we cease chafing, we lose the warmth again; on the contrary, let the sun come out and strike us with his beams, and we need no artificial chafing to be warm. The hot words, then, and energetic gestures of a preacher, taken by themselves, are just as much signs of earnestness as rubbing the hands or flapping the arms together are signs of warmth; though they are natural where earnestness already exists, and pleasing as being its spontaneous concomitants. To sit down to compose for the pulpit with a resolution to be eloquent is one impediment to persuasion; but to be determined to be earnest is absolutely fatal to it.

He who has before his mental eye the Four Last Things will have the true earnestness, the horror or the rapture, of one who witnesses a conflagration, or discerns some rich and sublime prospect of natural scenery. His countenance, his manner, his voice, speak for him, in proportion as his view has been vivid and minute. The great English poet has described this sort of eloquence when a calamity had befallen:—

Yea, this man's brow, like to a title page,
Foretells the nature of a tragic volume.
Thou tremblest, and the whiteness in thy cheek
Is apter than thy tongue to tell thy errand.

It is this earnestness, in the supernatural order, which is the eloquence of saints; and not of saints only, but of all Christian preachers, according to the measure of their faith and love. As the case would be with one who has actually seen what he relates, the herald of tidings of the invisible world also will be, from the nature of the case, whether vehement or calm, sad or exulting, always simple,

grave, emphatic, and peremptory; and all this, not because he has proposed to himself to be so, but because certain intellectual convictions involve certain external manifestations. St. Francis de Sales is full and clear upon this point. It is necessary, he says, "ut ipsemet penitus hauseris, ut persuasissimam tibi habeas, doctrinam quam aliis persuasam cupis. Artificium summum erit, nullum habere artificium. Inflammata sint verba, non clamoribus gesticulationibusve immodicis, sed interiore affectione. De corde plus quàm de ore proficiscantur. Quantumvis ore dixerimus, sanè cor cordi loquitur, lingua non nisi aures pulsat." St. Augustine had said to the same purpose long before: "Sonus verborum nostrorum aures percutit; magister intus est."

(2) My second remark is, that it is the preacher's duty to aim at imparting to others, not any fortuitous, unpremeditated benefit, but some *definite* spiritual good. It is here that design and study find their place; the more exact and precise is the subject which he treats, the more impressive and practical will he be; whereas no one will carry off much from a discourse which is on the general subject of virtue, or vaguely and feebly entertains the question of the desirableness of attaining Heaven, or the rashness of incurring eternal ruin. As a distinct image before the mind makes the preacher earnest, so it will give him something which it is worth while to communicate to others. Mere sympathy, it is true, is able, as I have said, to transfer an emotion or sentiment from mind to mind, but it is not able to fix it there. He must aim at imprinting on the heart what will never leave it, and this he cannot do unless he employ himself on some definite subject, which he has to handle and weigh, and then, as it were, to hand over from himself to others.

Hence it is that the Saints insist so expressly on the necessity of his addressing himself to the intellect of men, and of convincing as well as persuading. "Necesse est ut *doceat* et *moveat*," says St. Francis;

and St. Antoninus still more distinctly: "Debet prædicator clare loqui, ut *instruat intellectum* auditoris, et doceat." Hence, moreover, in St. Ignatius's Exercises, the act of the intellect precedes that of the affections. Father Lohner seems to me to be giving an instance in point when he tells us of a court-preacher, who delivered what would be commonly considered eloquent sermons, and attracted no one; and next took to simple explanations of the Mass and similar subjects, and then found the church thronged. So necessary is it to have something to say, if we desire any one to listen.

Nay, I would go the length of recommending a preacher to place a distinct categorical proposition before him, such as he can write down in a form of words, and to guide and limit his preparation by it, and to aim in all he says to bring it out, and nothing else. This seems to be implied or suggested in St. Charles's direction: "Id omnino studebit, ut quod in concione dicturus est antea *bene cognitum* habeat." Nay, is it not expressly conveyed in the Scripture phrase of "preaching the *word*"? for what is meant by "the word" but a proposition addressed to the intellect? nor will a preacher's earnestness show itself in anything more unequivocally than in his rejecting, whatever be the temptation to admit it, every remark, however original, every period, however eloquent, which does not in some way or other tend to bring out this one distinct proposition which he has chosen. Nothing is so fatal to the effect of a sermon as the habit of preaching on three or four subjects at once. I acknowledge I am advancing a step beyond the practice of great Catholic preachers when I add that, even though we preach on only one at a time, finishing and dismissing the first before we go to the second, and the second before we go to the third, still, after all, a practice like this, though not open to the inconvenience which the confusing of one subject with another involves, is in matter of fact nothing short of the delivery of three sermons in succession without break between them.

Summing up, then, what I have been saying, I observe that, if I have understood the doctrine of St. Charles, St. Francis, and other saints aright, *definiteness of object* is in various ways the one virtue of the preacher;—and this means that he should set out with the intention of conveying to others some spiritual benefit; that, with a view to this, and as the only ordinary way to it, he should select some distinct fact or scene, some passage in history, some truth, simple or profound, some doctrine, some principle, or some sentiment, and should study it well and thoroughly, and first make it his own, or else have already dwelt on it and mastered it, so as to be able to use it for the occasion from an habitual understanding of it; and that then he should employ himself, as the one business of his discourse, to bring home to others, and to leave deep within them, what he has, before he began to speak to them, brought home to himself. What he feels himself, and feels deeply, he has to make others feel deeply; and in proportion as he comprehends this, he will rise above the temptation of introducing collateral matters, and will have no taste, no heart, for going aside after flowers of oratory, fine figures, tuneful periods, which are worth nothing, unless they come to him spontaneously, and are spoken "out of the abundance of the heart." Our Lord said on one occasion "I am come to send fire on the earth, and what will I but that it be kindled?" He had one work, and He accomplished it. "The words," He says, "which Thou gavest Me, I have *given* to them, and they have *received* them,... *and now* I come to Thee." And the Apostles, again, as they had received, so were they to give. "That which *we* have seen and have heard," says one of them, "we declare unto *you*, that you may have *fellowship* with us." If, then, a preacher's subject only be some portion of the Divine message, however elementary it may be, however trite, it will have a dignity such as to possess him, and a virtue to kindle him, and an influence to subdue and convert those to whom it goes forth from him, according to the words of the promise,

"My word, which shall go forth from My mouth, shall not return to Me void, but it shall do whatsoever I please, and shall prosper in the things for which I sent it."

4.

2. And now having got as far as this, we shall see without difficulty what a University Sermon ought to be just so far as it is distinct from other sermons; for, if all preaching is directed towards a hearer, such as is the hearer will be the preaching, and, as a University auditory differs from other auditories, so will a sermon addressed to it differ from other sermons. This, indeed, is a broad maxim which holy men lay down on the subject of preaching. Thus, St. Gregory Theologus, as quoted by the Pope his namesake, says: "The self-same exhortation is not suitable for all hearers; for all have not the same disposition of mind, and what profits these is hurtful to those." The holy Pope himself throws the maxim into another form, still more precise: "*Debet prædicator,*" he says, "*perspicere, ne plus prædicet, quàm ab audiente capi possit.*" And St. Charles expounds it, referring to Pope St. Gregory: "*Pro audientium genere locos doctrinarum, ex quibus concionem conficiat, non modo distinctos, sed optimè explicatos habebit. Atque in hoc quidem multiplici genere concionator videbit, ne quæcumque, ut S. Gregorius scitè monet, legerit, aut scientiâ comprehenderit, omnia enunciet atque effundat; sed delectum habebit, ita ut documenta alia exponat, alia tacitè relinquat, prout locus, ordo, conditioque auditorum deponat.*" And, by way of obviating the chance of such a rule being considered a human artifice inconsistent with the simplicity of the Gospel, he had said shortly before: "*Ad Dei gloriam, ad cœlestis regni propagationem, et ad animarum salutem, plurimum interest, non solum quales sint prædicatores, sed quâ viâ, quâ ratione prædicent.*"

It is true, this is also one of the elementary principles of the Art of

Rhetoric; but it is no scandal that a saintly Bishop should in this matter borrow a maxim from secular, nay, from pagan schools. For divine grace does not overpower nor supersede the action of the human mind according to its proper nature; and if heathen writers have analyzed that nature well, so far let them be used to the greater glory of the Author and Source of all Truth. Aristotle, then, in his celebrated treatise on Rhetoric, makes the very essence of the Art lie in the precise recognition of a hearer. It is a relative art, and in that respect differs from Logic, which simply teaches the right use of reason, whereas Rhetoric is the art of persuasion, which implies a person who is to be persuaded. As, then, the Christian Preacher aims at the Divine Glory, not in any vague and general way, but definitely by the enunciation of some article or passage of the Revealed Word, so further, he enunciates it, not for the instruction of the whole world, but directly for the sake of those very persons who are before him. He is, when in the pulpit, instructing, enlightening, informing, advancing, sanctifying, not all nations, nor all classes, nor all callings, but those particular ranks, professions, states, ages, characters, which have gathered around him. Proof indeed is the same all over the earth; but he has not only to prove, but to persuade;—*Whom?* A hearer, then, is included in the very idea of preaching; and we cannot determine how in detail we ought to preach, till we know whom we are to address.

In all the most important respects, indeed, all hearers are the same, and what is suitable for one audience is suitable for another. All hearers are children of Adam, all, too, are children of the Christian adoption and of the Catholic Church. The great topics which suit the multitude, which attract the poor, which sway the unlearned, which warn, arrest, recall, the wayward and wandering, are in place within the precincts of a University as elsewhere. A *Studium Generale* is not a cloister, or noviciate, or seminary, or boarding-school; it is an assemblage of the young, the inexperienced, the lay and the secular;

and not even the simplest of religious truths, or the most elementary article of the Christian faith, can be unseasonable from its pulpit. A sermon on the Divine Omnipresence, on the future judgment, on the satisfaction of Christ, on the intercession of saints, will be not less, perhaps more, suitable there than if it were addressed to a parish congregation. Let no one suppose that any thing recondite is essential to the idea of a University sermon. The most obvious truths are often the most profitable. Seldom does an opportunity occur for a subject there which might not under circumstances be treated before any other auditory whatever. Nay, further; an academical auditory might be well content if it never heard any subject treated at all but what would be suitable to any general congregation.

However, after all, a University has a character of its own; it has some traits of human nature more prominently developed than others, and its members are brought together under circumstances which impart to the auditory a peculiar colour and expression, even where it does not substantially differ from another. It is composed of men, not women; of the young rather than the old; and of persons either highly educated or under education. These are the points which the preacher will bear in mind, and which will direct him both in his choice of subject, and in his mode of treating it.

5.

(1) And first as to his *matter* or subject. Here I would remark upon the circumstance, that courses of sermons upon theological points, polemical discussions, treatises *in extenso*, and the like, are often included in the idea of a University Sermon, and are considered to be legitimately entitled to occupy the attention of a University audience; the object of such compositions being, not directly and mainly the edification of the hearers, but the defence or advantage of Catholicism at large, and the gradual formation of a volume suitable for

publication. Without absolutely discountenancing such important works, it is not necessary to say more of them than that they rather belong to the divinity school, and fall under the idea of Lectures, than have a claim to be viewed as University Sermons. Anyhow, I do not feel called upon to speak of such discourses here. And I say the same of panegyric orations, discourses on special occasions, funeral sermons, and the like. Putting such exceptional compositions aside, I will confine myself to the consideration of what may be called Sermons proper. And here, I repeat, any general subject will be seasonable in the University pulpit which would be seasonable elsewhere; but, if we look for subjects especially suitable, they will be of two kinds. The temptations which ordinarily assail the young and the intellectual are two: those which are directed against their virtue, and those which are directed against their faith. All divine gifts are exposed to misuse and perversion; youth and intellect are both of them goods, and involve in them certain duties respectively, and can be used to the glory of the Giver; but, as youth becomes the occasion of excess and sensuality, so does intellect give accidental opportunity to religious error, rash speculation, doubt, and infidelity. That these are in fact the peculiar evils to which large Academical Bodies are liable is shown from the history of Universities; and if a preacher would have a subject which has especial significance in such a place, he must select one which bears upon one or other of these two classes of sin. I mean, he would be treating on some such subject with the same sort of appositeness as he would discourse upon almsgiving when addressing the rich, or on patience, resignation, and industry, when he was addressing the poor, or on forgiveness of injuries when he was addressing the oppressed or persecuted.

To this suggestion I append two cautions. First, I need hardly say, that a preacher should be quite sure that he understands the persons he is addressing before he ventures to aim at what he considers to be

their ethical condition; for, if he mistakes, he will probably be doing harm rather than good. I have known consequences to occur very far from edifying, when strangers have fancied they knew an auditory when they did not, and have by implication imputed to them habits or motives which were not theirs. Better far would it be for a preacher to select one of those more general subjects which are safe than risk what is evidently ambitious, if it is not successful.

My other caution is this:—that, even when he addresses himself to some special danger or probable deficiency or need of his hearers, he should do so covertly, not showing on the surface of his discourse what he is aiming at. I see no advantage in a preacher professing to treat of infidelity, orthodoxy, or virtue, or the pride of reason, or riot, or sensual indulgence. To say nothing else, common-places are but blunt weapons; whereas it is particular topics that penetrate and reach their mark. Such subjects rather are, for instance, the improvement of time, avoiding the occasions of sin, frequenting the Sacraments, divine warnings, the inspirations of grace, the mysteries of the Rosary, natural virtue, beauty of the rites of the Church, consistency of the Catholic faith, relation of Scripture to the Church, the philosophy of tradition, and any others, which may touch the heart and conscience, or may suggest trains of thought to the intellect, without proclaiming the main reason why they have been chosen.

(2) Next, as to the *mode of treating* its subject, which a University discourse requires. It is this respect, after all, I think, in which it especially differs from other kinds of preaching. As translations differ from each other, as expressing the same ideas in different languages, so in the case of sermons, each may undertake the same subject, yet treat it in its own way, as contemplating its own hearers. This is well exemplified in the speeches of St. Paul, as recorded in the book of Acts. To the Jews he quotes the Old Testament; on the Areopagus, addressing the philosophers of Athens, he insists,—not indeed upon

any recondite doctrine, contrariwise, upon the most elementary, the being and unity of God;—but he treats it with a learning and depth of thought, which the presence of that celebrated city naturally suggested. And in like manner, while the most simple subjects are apposite in a University pulpit, they certainly would there require a treatment more exact than is necessary in merely popular exhortations. It is not asking much to demand for academical discourses a more careful study beforehand, a more accurate conception of the idea which they are to enforce, a more cautious use of words, a more anxious consultation of writers of authority, and somewhat more of philosophical and theological knowledge.

But here again, as before, I would insist on the necessity of such compositions being unpretending. It is not necessary for a preacher to quote the Holy Fathers, or to show erudition, or to construct an original argument, or to be ambitious in style and profuse of ornament, on the ground that the audience is a University: it is only necessary so to keep the character and necessities of his hearers before him as to avoid what may offend them, or mislead, or disappoint, or fail to profit.

6.

3. But here a distinct question opens upon us, on which I must say a few words in conclusion, viz., whether or not the preacher should preach without book.

This is a delicate question to enter upon, considering that the Irish practice of preaching without book, which is in accordance with that of foreign countries, and, as it would appear, with the tradition of the Church from the first, is not universally adopted in England, nor, as I believe, in Scotland; and it might seem unreasonable or presumptuous to abridge a liberty at present granted to the preacher. I will simply set down what occurs to me to say on each side of the

question.

First of all, looking at the matter on the side of usage, I have always understood that it was the rule in Catholic countries, as I have just said, both in this and in former times, to preach without book; and, if the rule be really so, it carries extreme weight with it. I do not speak as if I had consulted a library, and made my ground sure; but at first sight it would appear impossible, even from the number of homilies and commentaries which are assigned to certain Fathers, as to St. Augustine or to St. Chrysostom, that they could have delivered them from formally-written compositions. On the other hand, St. Leo's sermons certainly are, in the strict sense of the word, compositions; nay, passages of them are carefully dogmatic; nay, further still, they have sometimes the character of a symbol, and, in consequence, are found repeated in other parts of his works; and again, though I do not profess to be well read in the works of St. Chrysostom, there is generally in such portions of them as are known to those of us who are in Holy Orders, a peculiarity, an identity of style, which enables one to recognize the author at a glance, even in the latin version of the Breviary, and which would seem to be quite beyond the mere fidelity of reporters. It would seem, then, he must after all have written them; and if he did write at all, it is more likely that he wrote with the stimulus of preaching before him, than that he had time and inducement to correct and enlarge them afterwards from notes, for what is now called "publication," which at that time could hardly be said to exist at all. To this consideration we must add the remarkable fact (which, though in classical history, throws light upon our inquiry) that, not to produce other instances, the greater part of Cicero's powerful and brilliant orations against Verres were never delivered at all. Nor must it be forgotten that Cicero specifies memory in his enumeration of the distinct talents necessary for a great orator. And then we have in corroboration the French practice of writing sermons

and learning them by heart.

These remarks, as far as they go, lead us to lay great stress on the *preparation* of a sermon, as amounting in fact to composition, even in writing, and *in extenso*. Now consider St. Carlo's direction, as quoted above: "Id omnino studebit, ut quod in concione dicturus est, antea bene cognitum habeat." Now a parish priest has neither time nor occasion for any but elementary and ordinary topics; and any such subject he has habitually made his own, "cognitum habet," already; but when the matter is of a more select and occasional character, as in the case of a University Sermon, then the preacher has to study it well and thoroughly, and master it beforehand. Study and meditation being imperative, can it be denied that one of the most effectual means by which we are able to ascertain our understanding of a subject, to bring out our thoughts upon it, to clear our meaning, to enlarge our views of its relations to other subjects, and to develop it generally, is to write down carefully all we have to say about it? People indeed differ in matters of this kind, but I think that writing is a stimulus to the mental faculties, to the logical talent, to originality, to the power of illustration, to the arrangement of topics, second to none. Till a man begins to put down his thoughts about a subject on paper he will not ascertain what he knows and what he does not know; and still less will he be able to express what he does know. Such a formal preparation of course cannot be required of a parish priest, burdened, as he may be, with other duties, and preaching on elementary subjects, and supported by the systematic order and the suggestions of the Catechism; but in occasional sermons the case is otherwise. In these it is both possible and generally necessary; and the fuller the sketch, and the more clear and continuous the thread of the discourse, the more the preacher will find himself at home when the time of delivery arrives. I have said "generally necessary," for of course there will be exceptional cases, in which such a mode of preparation does

not answer, whether from some mistake in carrying it out, or from some special gift superseding it.

To many preachers there will be another advantage besides;—such a practice will secure them against venturing upon really *extempore* matter. The more ardent a man is, and the greater power he has of affecting his hearers, so much the more will he need self-control and sustained recollection, and feel the advantage of committing himself, as it were, to the custody of his previous intentions, instead of yielding to any chance current of thought which rushes upon him in the midst of his preaching. His very gifts may need the counterpoise of more ordinary and homely accessories, such as the drudgery of composition.

It must be borne in mind too, that, since a University Sermon will commonly have more pains than ordinary bestowed on it, it will be considered in the number of those which the author would especially wish to preserve. Some record of it then will be natural, or even is involved in its composition; and, while the least elaborate will be as much as a sketch or abstract, even the most minute, exact, and copious assemblage of notes will not be found too long hereafter, supposing, as time goes on, any reason occurs for wishing to commit it to the press.

Here are various reasons, which are likely to lead, or to oblige, a preacher to have recourse to his pen in preparation for his special office. A further reason might be suggested, which would be more intimate than any we have given, going indeed so far as to justify the introduction of a manuscript into the pulpit itself, if the case supposed fell for certain under the idea of a University Sermon. It may be urged with great cogency that a process of argument, or a logical analysis and investigation, cannot at all be conducted with suitable accuracy of wording, completeness of statement, or succession of ideas, if the composition is to be prompted at the moment, and breathed out, as it

were, from the intellect together with the very words which are its vehicle. There are indeed a few persons in a generation, such as Pitt, who are able to converse like a book, and to speak a pamphlet; but others must be content to write and to read their writing. This is true; but I have already found reason to question whether such delicate and complicated organizations of thought have a right to the name of Sermons at all. In truth, a discourse, which, from its fineness and precision of ideas, is too difficult for a preacher to deliver without such extraneous assistance, is too difficult for a hearer to follow; and, if a book be imperative for teaching, it is imperative for learning. Both parties ought to read, if they are to be on equal terms;—and this remark furnishes me with a principle which has an application wider than the particular case which has suggested it.

While, then, a preacher will find it becoming and advisable to put into writing any important discourse beforehand, he will find it equally a point of propriety and expedience not to read it in the pulpit. I am not of course denying his right to use a manuscript, if he wishes; but he will do well to conceal it, as far as he can, unless, which is the most effectual concealment, whatever be its counterbalancing disadvantages, he prefers, mainly not verbally, to get it by heart. To conceal it, indeed, in one way or other, will be his natural impulse; and this very circumstance seems to show us that to read a sermon needs an apology. For, why should he commit it to memory, or conceal his use of it, unless he felt that it was more natural, more decorous, to do without it? And so again, if he employs a manuscript, the more he appears to dispense with it, the more he looks off from it, and directly addresses his audience, the more will he be considered to preach; and, on the other hand, the more will he be judged to come short of preaching the more sedulous he is in following his manuscript line after line, and by the tone of his voice makes it clear that he has got it safely before him. What is this but a

popular testimony to the fact that preaching is not reading, and reading is not preaching?

There is, as I have said, a principle involved in this decision. It is a common answer made by the Protestant poor to their clergy or other superiors, when asked why they do not go to church, that "they can read their book at home quite as well." It is quite true, they *can* read their book at home, and it is difficult what to rejoin, and it is a problem, which has employed before now the more thoughtful of their communion, to make out *what* is got by going to public service. The prayers are from a printed book, the sermon is from a manuscript. The printed prayers they have already; and, as to the manuscript sermon, why should it be in any respects better than the volume of sermons which they have at home? Why should not an approved author be as good as one who has not yet submitted himself to criticism? And again, if it is to be read in the church, why may not one person read it quite as well as another? Good advice is good advice, all the world over. There is something more, then, than composition in a sermon; there is something personal in preaching; people are drawn and moved, not simply by what is said, but by how it is said, and who says it. The same things said by one man are not the same as when said by another. The same things when read are not the same as when they are preached.

7.

In this respect the preacher differs from the minister of the sacraments, that he comes to his hearers, in some sense or other, with antecedents. Clad in his sacerdotal vestments, he sinks what is individual in himself altogether, and is but the representative of Him from whom he derives his commission. His words, his tones, his actions, his presence, lose their personality; one bishop, one priest, is like another; they all chant the same notes, and observe the same

genuflexions, as they give one peace and one blessing, as they offer one and the same sacrifice. The Mass must not be said without a Missal under the priest's eye; nor in any language but that in which it has come down to us from the early hierarchs of the Western Church. But, when it is over, and the celebrant has resigned the vestments proper to it, then he resumes himself, and comes to us in the gifts and associations which attach to his person. He knows his sheep, and they know him; and it is this direct bearing of the teacher on the taught, of his mind upon their minds, and the mutual sympathy which exists between them, which is his strength and influence when he addresses them. They hang upon his lips as they cannot hang upon the pages of his book. Definiteness is the life of preaching. A definite hearer, not the whole world; a definite topic, not the whole evangelical tradition; and, in like manner, a definite speaker. Nothing that is anonymous will preach; nothing that is dead and gone; nothing even which is of yesterday, however religious in itself and useful. Thought and word are one in the Eternal Logos, and must not be separate in those who are His shadows on earth. They must issue fresh and fresh, as from the preacher's mouth, so from his breast, if they are to be "spirit and life" to the hearts of his hearers. And what is true of a parish priest applies, *mutatis mutandis*, to a University preacher; who, even more, perhaps, than the ordinary *parochus*, comes to his audience with a name and a history, and excites a personal interest, and persuades by what he is, as well as by what he delivers.

I am far from forgetting that every one has his own talent, and that one has not what another has. Eloquence is a divine gift, which to a certain point supersedes rules, and is to be used, like other gifts, to the glory of the Giver, and then only to be discountenanced when it forgets its place, when it throws into the shade and embarrasses the essential functions of the Christian preacher, and claims to be cultivated for its own sake instead of being made subordinate and

subservient to a higher work and to sacred objects. And how to make eloquence subservient to the evangelical office is not more difficult than how to use learning or intellect for a supernatural end; but it does not come into consideration here.

In the case of particular preachers, circumstances may constantly arise which render the use of a manuscript the more advisable course; but I have been considering how the case stands in itself, and attempting to set down what is to be aimed at as best. If religious men once ascertain what is abstractedly desirable, and acquiesce in it with their hearts, they will be in the way to get over many difficulties which otherwise will be insurmountable. For myself, I think it no extravagance to say that a very inferior sermon, delivered without book, answers the purposes for which all sermons are delivered more perfectly than one of great merit, if it be written and read. Of course, all men will not speak without book equally well, just as their voices are not equally clear and loud, or their manner equally impressive. Eloquence, I repeat, is a gift; but most men, unless they have passed the age for learning, may with practice attain such fluency in expressing their thoughts as will enable them to convey and manifest to their audience that earnestness and devotion to their object, which is the life of preaching,—which both covers, in the preacher's own consciousness, the sense of his own deficiencies, and makes up for them over and over again in the judgment of his hearers.

亚里士多德（公元前384—公元前322年），古代史最伟大的哲学家、科学家和教育家。

Lecture VII

Christianity and Physical Science

—A Lecture in the School of Medicine

1.

Now that we have just commenced our second Academical Year, it is natural, Gentlemen, that, as in November last, when we were entering upon our great undertaking, I offered to you some remarks suggested by the occasion, so now again I should not suffer the first weeks of the Session to pass away without addressing to you a few words on one of those subjects which are at the moment especially interesting to us. And when I apply myself to think what topic I shall in consequence submit to your consideration, I seem to be directed what to select by the principle of selection which I followed on that former occasion to which I have been referring. Then we were opening the Schools of Philosophy and Letters, as now we are opening those of Medicine; and, as I then attempted some brief investigation of the mutual bearings of Revelation and Literature, so at the present time I shall not, I trust, be unprofitably engaging your attention, if I make one or two parallel reflections on the relations existing between Revelation and Physical Science.

This subject, indeed, viewed in its just dimensions, is far too large for an occasion such as this; still I may be able to select some one point out of the many which it offers for discussion, and, while elucidating it, to throw light even on others which at the moment I do not formally undertake. I propose, then, to discuss the antagonism

which is popularly supposed to exist between Physics and Theology; and to show, first, that such antagonism does not really exist, and, next, to account for the circumstance that so groundless an imagination should have got abroad.

I think I am not mistaken in the fact that there exists, both in the educated and half-educated portions of the community, something of a surmise or misgiving, that there really is at bottom a certain contrariety between the declarations of religion and the results of physical inquiry; a suspicion such, that, while it encourages those persons who are not over-religious to anticipate a coming day, when at length the difference will break out into open conflict, to the disadvantage of Revelation, it leads religious minds, on the other hand, who have not had the opportunity of considering accurately the state of the case, to be jealous of the researches, and prejudiced against the discoveries, of Science. The consequence is, on the one side, a certain contempt of Theology; on the other, a disposition to undervalue, to deny, to ridicule, to discourage, and almost to denounce, the labours of the physiological, astronomical, or geological investigator.

I do not suppose that any of those gentlemen who are now honouring me with their presence are exposed to the temptation either of the religious or of the scientific prejudice; but that is no reason why some notice of it may not have its use even in this place. It may lead us to consider the subject itself more carefully and exactly; it may assist us in attaining clearer ideas than before how Physics and Theology stand relatively to each other.

2.

Let us begin with a first approximation to the real state of the case, or a broad view, which, though it may require corrections, will serve at once to illustrate and to start the subject. We may divide

knowledge, then, into natural and supernatural. Some knowledge, of course, is both at once; for the moment let us put this circumstance aside, and view these two fields of knowledge in themselves, and as distinct from each other in idea. By nature is meant, I suppose, that vast system of things, taken as a whole, of which we are cognizant by means of our natural powers. By the supernatural world is meant that still more marvellous and awful universe, of which the Creator Himself is the fulness, and which becomes known to us, not through our natural faculties, but by superadded and direct communication from Him. These two great circles of knowledge, as I have said, intersect; first, as far as supernatural knowledge includes truths and facts of the natural world, and secondly, as far as truths and facts of the natural world are on the other hand data for inferences about the supernatural. Still, allowing this interference to the full, it will be found, on the whole, that the two worlds and the two kinds of knowledge respectively are separated off from each other; and that, therefore, as being separate, they cannot on the whole contradict each other. That is, in other words, a person who has the fullest knowledge of one of these worlds, may be nevertheless, on the whole, as ignorant as the rest of mankind, as unequal to form a judgment, of the facts and truths of the other. He who knows all that can possibly be known about physics, about politics, about geography, ethnology, and ethics, will have made no approximation whatever to decide the question whether or not there are angels, and how many are their orders; and on the other hand, the most learned of dogmatic and mystical divines,—St. Augustine, St. Thomas,—will not on that score know more than a peasant about the laws of motion, or the wealth of nations. I do not mean that there may not be speculations and guesses on this side and that, but I speak of any conclusion which merits to be called, I will not say knowledge, but even opinion. If, then, Theology be the philosophy of the supernatural world, and Science the philosophy of the natural,

Theology and Science, whether in their respective ideas, or again in their own actual fields, on the whole, are incommunicable, incapable of collision, and needing, at most to be connected, never to be reconciled.

Now this broad general view of our subject is found to be so far true in fact, in spite of such deductions from it that have to be made in detail, that the recent French editors of one of the works of St. Thomas are able to give it as one of their reasons why that great theologian made an alliance, not with Plato, but with Aristotle, because Aristotle (they say), unlike Plato, confined himself to human science, and therefore was secured from coming into collision with divine.

"Not without reason," they say, "did St. Thomas acknowledge Aristotle as if the Master of human philosophy; for, inasmuch as Aristotle was not a Theologian, he had only treated of logical, physical, psychological, and metaphysical theses, to the exclusion of those which are concerned about the supernatural relations of man to God, that is, religion; which, on the other hand, had been the source of the worst errors of other philosophers, and especially of Plato."

3.

But if there be so substantial a truth even in this very broad statement concerning the independence of the fields of Theology and general Science severally, and the consequent impossibility of collision between them, how much more true is that statement, from the very nature of the case, when we contrast Theology, not with Science generally, but definitely with Physics! In Physics is comprised that family of sciences which is concerned with the sensible world, with the phenomena which we see, hear, and handle, or, in other words, with matter. It is the philosophy of matter. Its basis of operations, what it starts from, what it falls back upon, is the phenomena which meet the senses. Those phenomena it ascertains, catalogues, compares,

combines, arranges, and then uses for determining something beyond themselves, viz., the order to which they are subservient, or what we commonly call the laws of nature. It never travels beyond the examination of cause and effect. Its object is to resolve the complexity of phenomena into simple elements and principles; but when it has reached those first elements, principles, and laws, its mission is at an end; it keeps within that material system with which it began, and never ventures beyond the "flammantia moenia mundi." It may, indeed, if it chooses, feel a doubt of the completeness of its analysis hitherto, and for that reason endeavour to arrive at more simple laws and fewer principles. It may be dissatisfied with its own combinations, hypotheses, systems; and leave Ptolemy for Newton, the alchemists for Lavoisier and Davy;—that is, it may decide that it has not yet touched the bottom of its own subject; but still its aim will be to get to the bottom, and nothing more. With matter it began, with matter it will end; it will never trespass into the province of mind. The Hindoo notion is said to be that the earth stands upon a tortoise; but the physicist, as such, will never ask himself by what influence, external to the universe, the universe is sustained; simply because he is a physicist.

If indeed he be a religious man, he will of course have a very definite view of the subject; but that view of his is private, not professional,—the view, not of a physicist, but of a religious man; and this, not because physical science says any thing different, but simply because it says nothing at all on the subject, nor can do so by the very undertaking with which it set out. The question is simply *extra artem*. The physical philosopher has nothing whatever to do with final causes, and will get into inextricable confusion, if he introduces them into his investigations. He has to look in one definite direction, not in any other. It is said that in some countries, when a stranger asks his way, he is at once questioned in turn what place he came from:

something like this would be the unseasonableness of a physicist, who inquired how the phenomena and laws of the material world primarily came to be, when his simple task is that of ascertaining what they are. Within the limits of those phenomena he may speculate and prove; he may trace the operation of the laws of matter through periods of time; he may penetrate into the past, and anticipate the future; he may recount the changes which they have effected upon matter, and the rise, growth, and decay of phenomena; and so in a certain sense he may write the history of the material world, as far as he can; still he will always advance from phenomena, and conclude upon the internal evidence which they supply. He will not come near the questions, what that ultimate element is, which we call matter, how it came to be, whether it can cease to be, whether it ever was not, whether it will ever come to nought, in what its laws really consist, whether they can cease to be, whether they can be suspended, what causation is, what time is, what the relations of time to cause and effect, and a hundred other questions of a similar character.

Such is Physical Science, and Theology, as is obvious, is just what such Science is not. Theology begins, as its name denotes, not with any sensible facts, phenomena, or results, not with nature at all, but with the Author of nature,—with the one invisible, unapproachable Cause and Source of all things. It begins at the other end of knowledge, and is occupied, not with the finite, but the Infinite. It unfolds and systematizes what He Himself has told us of Himself; of His nature, His attributes, His will, and His acts. As far as it approaches towards Physics, it takes just the counterpart of the questions which occupy the Physical Philosopher. He contemplates facts before him; the Theologian gives the reasons of those facts. The Physicist treats of efficient causes; the Theologian of final. The Physicist tells us of laws; the Theologian of the Author, Maintainer, and Controller of them; of their scope, of their suspension, if so be; of

their beginning and their end. This is how the two schools stand related to each other, at that point where they approach the nearest; but for the most part they are absolutely divergent. What Physical Science is engaged in I have already said; as to Theology, it contemplates the world, not of matter, but of mind; the Supreme Intelligence; souls and their destiny; conscience and duty; the past, present, and future dealings of the Creator with the creature.

4.

So far, then, as these remarks have gone, Theology and Physics cannot touch each other, have no intercommunion, have no ground of difference or agreement, of jealousy or of sympathy. As well may musical truths be said to interfere with the doctrines of architectural science; as well may there be a collision between the mechanist and the geologist, the engineer and the grammarian; as well might the British Parliament or the French nation be jealous of some possible belligerent power upon the surface of the moon, as Physics pick a quarrel with Theology. And it may be well,—before I proceed to fill up in detail this outline, and to explain what has to be explained in this statement,—to corroborate it, as it stands, by the remarkable words upon the subject of a writer of the day:—

"We often hear it said," he observes, writing as a Protestant (and here let me assure you, Gentlemen, that though his words have a controversial tone with them, I do not quote them in that aspect, or as wishing here to urge any thing against Protestants, but merely in pursuance of my own point, that Revelation and Physical Science cannot really come into collision), "we often hear it said that the world is constantly becoming more and more enlightened, and that this enlightenment must be favourable to Protestantism, and unfavourable to Catholicism. We wish that we could think so. But we see great reason to doubt whether this is a well-founded expectation.

We see that during the last two hundred and fifty years the human mind has been in the highest degree active; that it has made great advances in every branch of natural philosophy; that it has produced innumerable inventions tending to promote the convenience of life; that medicine, surgery, chemistry, engineering, have been very greatly improved, that government, police, and law have been improved, though not to so great an extent as the physical sciences. Yet we see that, during these two hundred and fifty years, Protestantism has made no conquests worth speaking of. Nay, we believe that, as far as there has been change, that change has, on the whole, been in favour of the Church of Rome. We cannot, therefore, feel confident that the progress of knowledge will necessarily be fatal to a system which has, to say the least, stood its ground in spite of the immense progress made by the human race in knowledge since the days of Queen Elizabeth.

"Indeed, the argument which we are considering seems to us to be founded on an entire mistake. There are branches of knowledge with respect to which the law of the human mind is progress. In mathematics, when once a proposition has been demonstrated, it is never afterwards contested. Every fresh story is as solid a basis for a new superstructure as the original foundation was. Here, therefore, there is a constant addition to the stock of truth. In the inductive sciences, again, the law is progress...

"But with theology the case is very different. As respects natural religion (Revelation being for the present altogether left out of the question), it is not easy to see that a philosopher of the present day is more favourably situated than Thales or Simonides. He has before him just the same evidences of design in the structure of the universe which the early Greeks had.... As to the other great question, the question what becomes of man after death, we do not see that a highly educated European, left to his unassisted reason, is more likely

to be in the right than a Blackfoot Indian. Not a single one of the many sciences, in which we surpass the Blackfoot Indians, throws the smallest light on the state of the soul after the animal life is extinct...

"Natural Theology, then, is not a progressive science. That knowledge of our origin and of our destiny which we derive from Revelation is indeed of very different clearness, and of very different importance. But neither is Revealed Religion of the nature of a progressive science.... In divinity there cannot be a progress analogous to that which is constantly taking place in pharmacy, geology, and navigation. A Christian of the fifth century with a Bible is neither better nor worse situated than a Christian of the nineteenth century with a Bible, candour and natural acuteness being of course supposed equal. It matters not at all that the compass, printing, gunpowder, steam, gas, vaccination, and a thousand other discoveries and inventions, which were unknown in the fifth century, are familiar to the nineteenth. None of these discoveries and inventions has the smallest bearing on the question whether man is justified by faith alone, or whether the invocation of saints is an orthodox practice.... We are confident that the world will never go back to the solar system of Ptolemy; nor is our confidence in the least shaken by the circumstance that so great a man as Bacon rejected the theory of Galileo with scorn; for Bacon had not all the means of arriving at a sound conclusion.... But when we reflect that Sir Thomas More was ready to die for the doctrine of Transubstantiation, we cannot but feel some doubt whether the doctrine of Transubstantiation may not triumph over all opposition. More was a man of eminent talents. He had all the information on the subject that we have, or *that, while the world lasts, any human being will have.... No progress that science has made, or will make*, can add to what seems to us the overwhelming force of the argument against the Real Presence. We are therefore unable to understand why what Sir Thomas More believed respecting

Transubstantiation may not be believed to the end of time by men equal in abilities and honesty to Sir Thomas More. But Sir Thomas More is one of the choice specimens of human wisdom and virtue; and the doctrine of Transubstantiation is a kind of proof charge. The faith which stands that test will stand any test...

"The history of Catholicism strikingly illustrates these observations. During the last seven centuries the public mind of Europe has made constant progress in every department of secular knowledge; but in religion we can trace no constant progress... Four times since the authority of the Church of Rome was established in Western Christendom has the human intellect risen up against her yoke. Twice that Church remained completely victorious. Twice she came forth from the conflict bearing the marks of cruel wounds, but with the principle of life still strong within her. When we reflect on the tremendous assaults she has survived, we find it difficult to conceive in what way she is to perish."

You see, Gentlemen, if you trust the judgment of a sagacious mind, deeply read in history, Catholic Theology has nothing to fear from the progress of Physical Science, even independently of the divinity of its doctrines. It speaks of things supernatural; and these, by the very force of the words, research into nature cannot touch.

5.

It is true that the author in question, while saying all this, and much more to the same purpose, also makes mention of one exception to his general statement, though he mentions it in order to put it aside. I, too, have to notice the same exception here; and you will see at once, Gentlemen, as soon as it is named, how little it interferes really with the broad view which I have been drawing out. It is true, then, that Revelation has in one or two instances advanced beyond its chosen territory, which is the invisible world, in order to throw light

upon the history of the material universe. Holy Scripture, it is perfectly true, does declare a few momentous facts, so few that they may be counted, of a physical character. It speaks of a process of formation out of chaos which occupied six days; it speaks of the firmament; of the sun and moon being created for the sake of the earth; of the earth being immovable; of a great deluge; and of several other similar facts and events. It is true; nor is there any reason why we should anticipate any difficulty in accepting these statements as they stand, whenever their meaning and drift are authoritatively determined; for, it must be recollected, their meaning has not yet engaged the formal attention of the Church, or received any interpretation which, as Catholics, we are bound to accept, and in the absence of such definite interpretation, there is perhaps some presumption in saying that it means this, and does not mean that. And this being the case, it is not at all probable that any discoveries ever should be made by physical inquiries incompatible at the same time with one and all of those senses which the letter admits, and which are still open. As to certain popular interpretations of the texts in question, I shall have something to say of them presently; here I am only concerned with the letter of the Holy Scriptures itself, as far as it bears upon the history of the heavens and the earth; and I say that we may wait in peace and tranquillity till there is some real collision between Scripture authoritatively interpreted, and results of science clearly ascertained, before we consider how we are to deal with a difficulty which we have reasonable grounds for thinking will never really occur.

And, after noticing this exception, I really have made the utmost admission that has to be made about the existence of any common ground upon which Theology and Physical Science may fight a battle. On the whole, the two studies do most surely occupy distinct fields, in which each may teach without expecting any interposition from the

other. It might indeed have pleased the Almighty to have superseded physical inquiry by revealing the truths which are its object, though He has not done so: but whether it had pleased Him to do so or not, anyhow Theology and Physics would be distinct sciences; and nothing which the one says of the material world ever can contradict what the other says of the immaterial. Here, then, is the end of the question; and here I might come to an end also, were it not incumbent on me to explain how it is that, though Theology and Physics cannot quarrel, nevertheless, Physical Philosophers and Theologians have quarrelled in fact, and quarrel still. To the solution of this difficulty I shall devote the remainder of my Lecture.

6.

I observe, then, that the elementary methods of reasoning and inquiring used in Theology and Physics are contrary the one to the other; each of them has a method of its own; and in this, I think, has lain the point of controversy between the two schools, viz., that neither of them has been quite content to remain on its own homestead, but that, whereas each has its own method, which is the best for its own science, each has considered it the best for all purposes whatever, and has at different times thought to impose it upon the other science, to the disparagement or rejection of that opposite method which legitimately belongs to it.

The argumentative method of Theology is that of a strict science, such as Geometry, or deductive; the method of Physics, at least on starting, is that of an empirical pursuit, or inductive. This peculiarity on either side arises from the nature of the case. In Physics a vast and omnigenous mass of information lies before the inquirer, all in a confused litter, and needing arrangement and analysis. In Theology such varied phenomena are wanting, and Revelation presents itself instead. What is known in Christianity is just that which is revealed,

and nothing more; certain truths, communicated directly from above, are committed to the keeping of the faithful, and to the very last nothing can really be added to those truths. From the time of the Apostles to the end of the world no strictly new truth can be added to the theological information which the Apostles were inspired to deliver. It is possible of course to make numberless deductions from the original doctrines; but, as the conclusion is ever in its premisses, such deductions are not, strictly speaking, an addition; and, though experience may variously guide and modify those deductions, still, on the whole, Theology retains the severe character of a science, advancing syllogistically from premisses to conclusion.

The method of Physics is just the reverse of this: it has hardly any principles or truths to start with, externally delivered and already ascertained. It has to commence with sight and touch; it has to handle, weigh, and measure its own exuberant *sylva* of phenomena, and from these to advance to new truths,—truths, that is, which are beyond and distinct from the phenomena from which they originate. Thus Physical Science is experimental, Theology traditional; Physical Science is the richer, Theology the more exact; Physics the bolder, Theology the surer; Physics progressive, Theology, in comparison, stationary; Theology is loyal to the past, Physics has visions of the future. Such they are, I repeat, and such their respective methods of inquiry, from the nature of the case.

But minds habituated to either of these two methods can hardly help extending it beyond its due limits, unless they are put upon their guard, and have great command of themselves. It cannot be denied that divines have from time to time been much inclined to give a traditional, logical shape to sciences which do not admit of any such treatment. Nor can it be denied, on the other hand, that men of science often show a special irritation at theologians for going by antiquity, precedent, authority, and logic, and for declining to

introduce Bacon or Niebuhr into their own school, or to apply some new experimental and critical process for the improvement of that which has been given once for all from above. Hence the mutual jealousy of the two parties; and I shall now attempt to give instances of it.

7.

First, then, let me refer to those interpretations of Scripture, popular and of long standing, though not authoritative, to which I have already had occasion to allude. Scripture, we know, is to be interpreted according to the unanimous consent of the Fathers; but, besides this consent, which is of authority, carrying with it the evidence of its truth, there have ever been in Christendom a number of floating opinions, more or less appended to the divine tradition; opinions which have a certain probability of being more than human, or of having a basis or admixture of truth, but which admit of no test, whence they came, or how far they are true, besides the course of events, and which meanwhile are to be received at least with attention and deference. Sometimes they are comments on Scripture prophecy, sometimes on other obscurities or mysteries. It was once an opinion, for instance, drawn from the sacred text, that the Christian Dispensation was to last a thousand years, and no more; the event disproved it. A still more exact and plausible tradition, derived from Scripture, was that which asserted that, when the Roman Empire should fall to pieces, Antichrist should appear, who should be followed at once by the Second Coming. Various Fathers thus interpret St. Paul, and Bellarmine receives the interpretation as late as the sixteenth century. The event alone can decide if, under any aspect of Christian history, it is true; but at present we are at least able to say that it is not true in that broad plain sense in which it was once received.

Passing from comments on prophetic passages of Scripture to those on cosmological, it was, I suppose, the common belief of ages, sustained by received interpretations of the sacred text, that the earth was immovable. Hence, I suppose, it was that the Irish Bishop who asserted the existence of the Antipodes alarmed his contemporaries; though it is well to observe that, even in the dark age in which he lived, the Holy See, to which reference was made, did not commit itself to any condemnation of the unusual opinion. The same alarm again occupied the public mind when the Copernican System was first advocated: nor were the received traditions, which were the ground of that alarm, hastily to be rejected; yet rejected they ultimately have been. If in any quarter these human traditions were enforced, and, as it were, enacted, to the prejudice and detriment of scientific investigations (and this was never done by the Church herself), this was a case of undue interference on the part of the Theological schools in the province of Physics.

So much may be said as regards interpretations of Scripture; but it is easy to see that other received opinions, not resting on the sacred volume, might with less claim and greater inconvenience be put forward to harass the physical inquirer, to challenge his submission, and to preclude that process of examination which is proper to his own peculiar pursuit. Such are the dictatorial formulæ against which Bacon inveighs, and the effect of which was to change Physics into a deductive science, and to oblige the student to assume implicitly, as first principles, enunciations and maxims, which were venerable, only because no one could tell whence they came, and authoritative, only because no one could say what arguments there were in their favour. In proportion as these encroachments were made upon his own field of inquiry would be the indignation of the physical philosopher; and he would exercise a scepticism which relieved his feelings, while it approved itself to his reason, if he was called on ever to keep in mind

that light bodies went up, and heavy bodies fell down, and other similar maxims, which had no pretensions to a divine origin, or to be considered self-evident principles, or intuitive truths.

And in like manner, if a philosopher with a true genius for physical research found the Physical Schools of his day occupied with the discussion of final causes, and solving difficulties in material nature by means of them; if he found it decided, for instance, that the roots of trees make for the river, *because* they need moisture, or that the axis of the earth lies at a certain angle to the plane of its motion by *reason* of certain advantages thence accruing to its inhabitants, I should not wonder at his exerting himself for a great reform in the process of inquiry, preaching the method of Induction, and, if he fancied that theologians were indirectly or in any respect the occasion of the blunder, getting provoked for a time, however unreasonably, with Theology itself.

I wish the experimental school of Philosophers had gone no further in its opposition to Theology than indulging in some indignation at it for the fault of its disciples; but it must be confessed that it has run into excesses on its own side for which the school of high Deductive Science has afforded no precedent; and that, if it once for a time suffered from the tyranny of the logical method of inquiry, it has encouraged, by way of reprisals, encroachments and usurpations on the province of Theology far more serious than that unintentional and long obsolete interference with its own province, on the part of Theologians, which has been its excuse. And to these unjustifiable and mischievous intrusions made by the Experimentalists into the department of Theology I have now, Gentlemen, to call your attention.

8.

You will let me repeat, then, what I have already said, that, taking things as they are, the very idea of Revelation is that of a direct

interference from above, for the introduction of truths otherwise unknown; moreover, as such a communication implies recipients, an authoritative depositary of the things revealed will be found practically to be involved in that idea. Knowledge, then, of these revealed truths, is gained, not by any research into facts, but simply by appealing to the authoritative keepers of them, as every Catholic knows, by learning what is a matter of teaching, and by dwelling upon, and drawing out into detail, the doctrines which are delivered; according to the text, "Faith cometh by hearing." I do not prove what, after all, does not need proof, because I speak to Catholics; I am stating what we Catholics know, and ever will maintain to be the method proper to Theology, as it has ever been recognized. Such, I say, is the theological method, deductive; however, the history of the last three centuries is only one long course of attempts, on the part of the partisans of the Baconian Philosophy, to get rid of the method proper to Theology and to make it an experimental science.

But, I say, for an experimental science, we must have a large collection of phenomena or facts: where, then, are those which are to be adopted as a basis for an inductive theology? Three principal stores have been used, Gentlemen: the first, the text of Holy Scripture; the second, the events and transactions of ecclesiastical history; the third, the phenomena of the visible world. This triple subject-matter,—Scripture, Antiquity, Nature,—has been taken as a foundation, on which the inductive method may be exercised for the investigation and ascertainment of that theological truth, which to a Catholic is a matter of teaching, transmission, and deduction.

Now let us pause for a moment and make a reflection before going into any detail. Truth cannot be contrary to truth; if these three subject-matters were able, under the pressure of the inductive method, to yield respectively theological conclusions in unison and in concord with each other, and also contrary to the doctrines of Theology as a

deductive science, then that Theology would not indeed at once be overthrown (for still the question would remain for discussion, which of the two doctrinal systems was the truth, and which the apparent truth), but certainly the received deductive theological science would be in an anxious position, and would be on its trial.

Again, truth cannot be contrary to truth;—if, then, on the other hand, these three subject-matters,—Scripture, Antiquity, and Nature, —worked through three centuries by men of great abilities, with the method or instrument of Bacon in their hands, have respectively issued in conclusions contradictory of each other, nay, have even issued, this or that taken by itself, Scripture or Antiquity, in various systems of doctrine, so that on the whole, instead of all three resulting in one set of conclusions, they have yielded a good score of them; then and in that case—it does not at once follow that no one of this score of conclusions may happen to be the true one, and all the rest false; but at least such a catastrophe will throw a very grave shade of doubt upon them all, and bears out the antecedent declaration, or rather prophecy, of theologians, before these experimentalists started, that it was nothing more than a huge mistake to introduce the method of research and of induction into the study of Theology at all.

Now I think you will allow me to say, Gentlemen, as a matter of historical fact, that the latter supposition has been actually fulfilled, and that the former has not. I mean that, so far from a scientific proof of some one system of doctrine, and that antagonistic to the old Theology, having been constructed by the experimental party, by a triple convergence, from the several bases of Scripture, Antiquity, and Nature, on the contrary, that empirical method, which has done such wonderful things in physics and other human sciences, has sustained a most emphatic and eloquent reverse in its usurped territory,—has come to no one conclusion,—has illuminated no definite view,—has brought its glasses to no focus,—has shown not even a tendency

towards prospective success; nay, further still, has already confessed its own absolute failure, and has closed the inquiry itself, not indeed by giving place to the legitimate method which it dispossessed, but by announcing that nothing can be known on the subject at all,—that religion is not a science, and that in religion scepticism is the only true philosophy; or again, by a still more remarkable avowal, that the decision lies *between* the old Theology and none at all, and that, certain though it be that religious truth is nowhere, yet that, *if* anywhere it is, it undoubtedly is not in the new empirical schools, but in that old teaching, founded on the deductive method, which was in honour and in possession at the time when Experiment and Induction commenced their brilliant career. What a singular break-down of a noble instrument, when used for the arrogant and tyrannical invasion of a sacred territory! What can be more sacred than Theology? What can be more noble than the Baconian method? But the two do not correspond; they are mismatched. The age has mistaken lock and key. It has broken the key in a lock which does not belong to it; it has ruined the wards by a key which never will fit into them. Let us hope that its present disgust and despair at the result are the preliminaries of a generous and great repentance.

I have thought, Gentlemen, that you would allow me to draw this moral in the first place; and now I will say a few words on one specimen of this error in detail.

9.

It seems, then, that instead of having recourse to the tradition and teaching of the Catholic Church, it has been the philosophy of the modern school to attempt to determine the doctrines of Theology by means of Holy Scripture, or of ecclesiastical antiquity, or of physical phenomena. And the question may arise, *why*, after all, should not such informations, scriptural, historical, or physical, be used? and if

used, why should they not lead to true results? Various answers may be given to this question: I shall confine myself to one; and again, for the sake of brevity, I shall apply it mainly to one out of the three expedients, to which the opponents to Theology have had recourse. Passing over, then, what might be said respecting what is called Scriptural Religion, and Historical Religion, I propose to direct your attention, in conclusion, to the real character of Physical Religion, or Natural Theology, as being more closely connected with the main subject of this Lecture.

The school of Physics, from its very drift and method of reasoning, has, as I have said, nothing to do with Religion. However, there is a science which avails itself of the phenomena and laws of the material universe, as exhibited by that school, as a means of establishing the existence of Design in their construction, and thereby the fact of a Creator and Preserver. This science has, in these modern times, at least in England, taken the name of Natural Theology; and, though absolutely distinct from Physics, yet Physical Philosophers, having furnished its most curious and interesting data, are apt to claim it as their own, and to pride themselves upon it accordingly.

I have no wish to speak lightly of the merits of this so-called Natural or, more properly, Physical Theology. There are a great many minds so constituted that, when they turn their thoughts to the question of the existence of a Supreme Being, they feel a comfort in resting the proof mainly or solely on the Argument of Design which the Universe furnishes. To them this science of Physical Theology is of high importance. Again, this science exhibits, in great prominence and distinctness, three of the more elementary notions which the human reason attaches to the idea of a Supreme Being, that is, three of His simplest attributes, Power, Wisdom, and Goodness.

These are great services rendered to faith by Physical Theology, and I acknowledge them as such. Whether, however, Faith on that

account owes any great deal to Physics or Physicists, is another matter. The Argument from Design is really in no sense due to the philosophy of Bacon. The author I quoted just now has a striking passage on this point, of which I have already read to you a part. "As respects Natural Religion," he says, "it is not easy to see that the philosopher of the present day is more favourably situated than Thales or Simonides. He has before him just the same evidences of design in the structure of the universe which the early Greeks had. We say, just the same; for the discoveries of modern astronomers and anatomists *have really added nothing* to the force of that argument which a reflecting mind finds in every beast, bird, insect, fish, leaf, flower, and shell. The reasoning by which Socrates, in Xenophon's hearing, confuted the little atheist, Aristodemus, is exactly the reasoning of Paley's Natural Theology. Socrates makes precisely the same use of the statues of Polycletus and the pictures of Zeuxis, which Paley makes of the watch."

Physical Theology, then, is pretty much what it was two thousand years ago, and has not received much help from modern science: but now, on the contrary, I think it has received from it a positive disadvantage,—I mean, it has been taken out of its place, has been put too prominently forward, and thereby has almost been used as an instrument against Christianity,—as I will attempt in a few words to explain.

10.

I observe, then, that there are many investigations in every subject-matter which only lead us a certain way towards truth, and not the whole way: either leading us, for instance, to a strong probability, not to a certainty, or again, proving only some things out of the whole number which are true. And it is plain that if such investigations as these are taken as the measure of the whole truth,

and are erected into substantive sciences, instead of being understood to be, what they really are, inchoate and subordinate processes, they will, accidentally indeed, but seriously, mislead us.

1. Let us recur for a moment, in illustration, to the instances which I have put aside. Consider what is called Scriptural Religion, or the Religion of the Bible. The fault which the theologian, over and above the question of private judgment, will find with a religion logically drawn from Scripture only, is, not that it is not true, as far as it goes, but that it is not the whole truth; that it consists of only some out of the whole circle of theological doctrines, and that, even in the case of those which it includes, it does not always invest them with certainty, but only with probability. If, indeed, the Religion of the Bible is made subservient to Theology, it is but a specimen of useful induction; but if it is set up, as something complete in itself, against Theology, it is turned into a mischievous paralogism. And if such a paralogism has taken place, and that in consequence of the influence of the Baconian philosophy, it shows us what comes of the intrusion of that philosophy into a province with which it had no concern.

2. And so, again, as to Historical Religion, or what is often called Antiquity. A research into the records of the early Church no Catholic can view with jealousy: truth cannot be contrary to truth; we are confident that what is there found will, when maturely weighed, be nothing else than an illustration and confirmation of our own Theology. But it is another thing altogether whether the results will go to the full lengths of our Theology; they will indeed concur with it, but only as far as they go. There is no reason why the data for investigation supplied by the extant documents of Antiquity should be sufficient for all that was included in the Divine Revelation delivered by the Apostles; and to expect that they will is like expecting that one witness in a trial is to prove the whole case, and that his testimony actually contradicts it, unless it does. While, then, this research into

ecclesiastical history and the writings of the Fathers keeps its proper place, as subordinate to the magisterial sovereignty of the Theological Tradition and the voice of the Church, it deserves the acknowledgments of theologians; but when it (so to say) sets up for itself, when it professes to fulfil an office for which it was never intended, when it claims to issue in a true and full teaching, derived by a scientific process of induction, then it is but another instance of the encroachment of the Baconian empirical method in a department not its own.

3. And now we come to the case of Physical Theology, which is directly before us. I confess, in spite of whatever may be said in its favour, I have ever viewed it with the greatest suspicion. As one class of thinkers has substituted what is called a Scriptural Religion, and another a Patristical or Primitive Religion, for the theological teaching of Catholicism, so a Physical Religion or Theology is the very gospel of many persons of the Physical School, and therefore, true as it may be in itself, still under the circumstances is a false gospel. Half of the truth is a falsehood:—consider, Gentlemen, what this so-called Theology teaches, and then say whether what I have asserted is extravagant.

Any one divine attribute of course virtually includes all; still if a preacher always insisted on the Divine Justice, he would practically be obscuring the Divine Mercy, and if he insisted only on the incommunicableness and distance from the creature of the Uncreated Essence, he would tend to throw into the shade the doctrine of a Particular Providence. Observe, then, Gentlemen, that Physical Theology teaches three Divine Attributes, I may say, exclusively; and of these, most of Power, and least of Goodness.

And in the next place, what, on the contrary, are those special Attributes, which are the immediate correlatives of religious sentiment? Sanctity, omniscience, justice, mercy, faithfulness. What

does Physical Theology, what does the Argument from Design, what do fine disquisitions about final causes, teach us, except very indirectly, faintly, enigmatically, of these transcendently important, these essential portions of the idea of Religion? Religion is more than Theology; it is something relative to us; and it includes our relation towards the Object of it. What does Physical Theology tell us of duty and conscience? of a particular providence? and, coming at length to Christianity, what does it teach us even of the four last things, death, judgment, heaven, and hell, the mere elements of Christianity? It cannot tell us anything of Christianity at all.

Gentlemen, let me press this point upon your earnest attention. I say Physical Theology cannot, from the nature of the case, tell us one word about Christianity proper; it cannot be Christian, in any true sense, at all: —and from this plain reason, because it is derived from informations which existed just as they are now, before man was created, and Adam fell. How can that be a real substantive Theology, though it takes the name, which is but an abstraction, a particular aspect of the whole truth, and is dumb almost as regards the moral attributes of the Creator, and utterly so as regards the evangelical?

Nay, more than this; I do not hesitate to say that, taking men as they are, this so-called science tends, if it occupies the mind, to dispose it against Christianity. And for this plain reason, because it speaks only of laws; and cannot contemplate their suspension, that is, miracles, which are of the essence of the idea of a Revelation. Thus, the God of Physical Theology may very easily become a mere idol; for He comes to the inductive mind in the medium of fixed appointments, so excellent, so skilful, so beneficent, that, when it has for a long time gazed upon them, it will think them too beautiful to be broken, and will at length so contract its notion of Him as to conclude that He never could have the heart (if I may dare use such a term) to undo or mar His own work; and this conclusion will be the first step towards

its degrading its idea of God a second time, and identifying Him with His works. Indeed, a Being of Power, Wisdom, and Goodness, and nothing else, is not very different from the God of the Pantheist.

In thus speaking of the Theology of the modern Physical School, I have said but a few words on a large subject; yet, though few words, I trust they are clear enough not to hazard the risk of being taken in a sense which I do not intend. Graft the science, if it is so to be called, on Theology proper, and it will be in its right place, and will be a religious science. Then it will illustrate the awful, incomprehensible, adorable Fertility of the Divine Omnipotence; it will serve to prove the real miraculousness of the Revelation in its various parts, by impressing on the mind vividly what are the laws of nature, and how immutable they are in their own order; and it will in other ways subserve theological truth. Separate it from the supernatural teaching, and make it stand on its own base, and (though of course it is better for the individual philosopher himself), yet, as regards his influence on the world and the interests of Religion, I really doubt whether I should not prefer that he should be an Atheist at once than such a naturalistic, pantheistic religionist. His profession of Theology deceives others, perhaps deceives himself.

Do not for an instant suppose, Gentlemen, that I would identify the great mind of Bacon with so serious a delusion: he has expressly warned us against it; but I cannot deny that many of his school have from time to time in this way turned physical research against Christianity.

But I have detained you far longer than I had intended; and now I can only thank you for the patience which has enabled you to sustain a discussion which cannot be complete, upon a subject which, however momentous, cannot be popular.

Lecture VIII

Christianity and Scientific Investigation —A Lecture Written for the School of Science

1.

This is a time, Gentlemen, when not only the Classics, but much more the Sciences, in the largest sense of the word, are looked upon with anxiety, not altogether ungrounded, by religious men; and, whereas a University such as ours professes to embrace all departments and exercises of the intellect, and since I for my part wish to stand on good terms with all kinds of knowledge, and have no intention of quarrelling with any, and would open my heart, if not my intellect (for that is beyond me), to the whole circle of truth, and would tender at least a recognition and hospitality even to those studies which are strangers to me, and would speed them on their way,—therefore, as I have already been making overtures of reconciliation, first between Polite Literature and Religion, and next between Physics and Theology, so I would now say a word by way of deprecating and protesting against the needless antagonism, which sometimes exists in fact, between divines and the cultivators of the Sciences generally.

2.

Here I am led at once to expatiate on the grandeur of an

Institution which is comprehensive enough to admit the discussion of a subject such as this. Among the objects of human enterprise,—I may say it surely without extravagance, Gentlemen,—none higher or nobler can be named than that which is contemplated in the erection of a University. To set on foot and to maintain in life and vigour a real University, is confessedly, as soon as the word "University" is understood, one of those greatest works, great in their difficulty and their importance, on which are deservedly expended the rarest intellects and the most varied endowments. For, first of all, it professes to teach whatever has to be taught in any whatever department of human knowledge, and it embraces in its scope the loftiest subjects of human thought, and the richest fields of human inquiry. Nothing is too vast, nothing too subtle, nothing too distant, nothing too minute, nothing too discursive, nothing too exact, to engage its attention.

This, however, is not the reason why I claim for it so sovereign a position; for, to bring schools of all knowledge under one name, and call them a University, may be fairly said to be a mere generalization; and to proclaim that the prosecution of all kinds of knowledge to their utmost limits demands the fullest reach and range of our intellectual faculties is but a truism. My reason for speaking of a University in the terms on which I have ventured is, not that it occupies the whole territory of knowledge merely, but that it is the very realm; that it professes much more than to take in and to lodge as in a caravanserai all art and science, all history and philosophy. In truth, it professes to assign to each study, which it receives, its own proper place and its just boundaries; to define the rights, to establish the mutual relations, and to effect the intercommunion of one and all; to keep in check the ambitious and encroaching, and to succour and maintain those which from time to time are succumbing under the more popular or the more fortunately circumstanced; to keep the peace between them all, and to convert their mutual differences and contrarieties into the common

good. This, Gentlemen, is why I say that to erect a University is at once so arduous and beneficial an undertaking, viz., because it is pledged to admit, without fear, without prejudice, without compromise, all comers, if they come in the name of Truth; to adjust views, and experiences, and habits of mind the most independent and dissimilar; and to give full play to thought and erudition in their most original forms, and their most intense expressions, and in their most ample circuit. Thus to draw many things into one, is its special function; and it learns to do it, not by rules reducible to writing, but by sagacity, wisdom, and forbearance, acting upon a profound insight into the subject-matter of knowledge, and by a vigilant repression of aggression or bigotry in any quarter.

We count it a great thing, and justly so, to plan and carry out a wide political organization. To bring under one yoke, after the manner of old Rome, a hundred discordant peoples; to maintain each of them in its own privileges within its legitimate range of action; to allow them severally the indulgence of national feelings, and the stimulus of rival interests; and yet withal to blend them into one great social establishment, and to pledge them to the perpetuity of the one imperial power;—this is an achievement which carries with it the unequivocal token of genius in the race which effects it.

"Tu regere imperio populos, Romane, memento."

This was the special boast, as the poet considered it, of the Roman; a boast as high in its own line as that other boast, proper to the Greek nation, of literary pre-eminence, of exuberance of thought, and of skill and refinement in expressing it.

What an empire is in political history, such is a University in the sphere of philosophy and research. It is, as I have said, the high protecting power of all knowledge and science, of fact and principle, of inquiry and discovery, of experiment and speculation; it maps out

the territory of the intellect, and sees that the boundaries of each province are religiously respected, and that there is neither encroachment nor surrender on any side. It acts as umpire between truth and truth, and, taking into account the nature and importance of each, assigns to all their due order of precedence. It maintains no one department of thought exclusively, however ample and noble; and it sacrifices none. It is deferential and loyal, according to their respective weight, to the claims of literature, of physical research, of history, of metaphysics, of theological science. It is impartial towards them all, and promotes each in its own place and for its own object. It is ancillary certainly, and of necessity, to the Catholic Church; but in the same way that one of the Queen's judges is an officer of the Queen's, and nevertheless determines certain legal proceedings between the Queen and her subjects. It is ministrative to the Catholic Church, first, because truth of any kind can but minister to truth; and next, still more, because Nature ever will pay homage to Grace, and Reason cannot but illustrate and defend Revelation; and thirdly, because the Church has a sovereign authority, and, when she speaks *ex cathedra*, must be obeyed. But this is the remote end of a University; its immediate end (with which alone we have here to do) is to secure the due disposition, according to one sovereign order, and the cultivation in that order, of all the provinces and methods of thought which the human intellect has created.

In this point of view, its several professors are like the ministers of various political powers at one court or conference. They represent their respective sciences, and attend to the private interests of those sciences respectively; and, should dispute arise between those sciences, they are the persons to talk over and arrange it, without risk of extravagant pretensions on any side, of angry collision, or of popular commotion. A liberal philosophy becomes the habit of minds thus exercised; a breadth and spaciousness of thought, in which lines,

seemingly parallel, may converge at leisure, and principles, recognized as incommensurable, may be safely antagonistic.

3.

And here, Gentlemen, we recognize the special character of the Philosophy I am speaking of, if Philosophy it is to be called, in contrast with the method of a strict science or system. Its teaching is not founded on one idea, or reducible to certain formulæ. Newton might discover the great law of motion in the physical world, and the key to ten thousand phenomena; and a similar resolution of complex facts into simple principles may be possible in other departments of nature; but the great Universe itself, moral and material, sensible and supernatural, cannot be gauged and meted by even the greatest of human intellects, and its constituent parts admit indeed of comparison and adjustment, but not of fusion. This is the point which bears directly on the subject which I set before me when I began, and towards which I am moving in all I have said or shall be saying.

I observe, then, and ask you, Gentlemen, to bear in mind, that the philosophy of an imperial intellect, for such I am considering a University to be, is based, not so much on simplification as on discrimination. Its true representative defines, rather than analyzes. He aims at no complete catalogue, or interpretation of the subjects of knowledge, but a following out, as far as man can, what in its fulness is mysterious and unfathomable. Taking into his charge all sciences, methods, collections of facts, principles, doctrines, truths, which are the reflexions of the universe upon the human intellect, he admits them all, he disregards none, and, as disregarding none, he allows none to exceed or encroach. His watchword is, Live and let live. He takes things as they are; he submits to them all, as far as they go; he recognizes the insuperable lines of demarcation which run between subject and subject; he observes how separate truths lie relatively to

each other, where they concur, where they part company, and where, being carried too far, they cease to be truths at all. It is his office to determine how much can be known in each province of thought; when we must be contented not to know; in what direction inquiry is hopeless, or on the other hand full of promise; where it gathers into coils insoluble by reason, where it is absorbed in mysteries, or runs into the abyss. It will be his care to be familiar with the signs of real and apparent difficulties, with the methods proper to particular subject-matters, what in each particular case are the limits of a rational scepticism, and what the claims of a peremptory faith. If he has one cardinal maxim in his philosophy, it is, that truth cannot be contrary to truth; if he has a second, it is, that truth often *seems* contrary to truth; and, if a third, it is the practical conclusion, that we must be patient with such appearances, and not be hasty to pronounce them to be really of a more formidable character.

It is the very immensity of the system of things, the human record of which he has in charge, which is the reason of this patience and caution; for that immensity suggests to him that the contrarieties and mysteries, which meet him in the various sciences, may be simply the consequences of our necessarily defective comprehension. There is but one thought greater than that of the universe, and that is the thought of its Maker. If, Gentlemen, for one single instant, leaving my proper train of thought, I allude to our knowledge of the Supreme Being, it is in order to deduce from it an illustration bearing upon my subject. He, though One, is a sort of world of worlds in Himself, giving birth in our minds to an indefinite number of distinct truths, each ineffably more mysterious than any thing that is found in this universe of space and time. Any one of His attributes, considered by itself, is the object of an inexhaustible science: and the attempt to reconcile any two or three of them together,—love, power, justice, sanctity, truth, wisdom,—affords matter for an everlasting controversy. We are able to apprehend and

receive each divine attribute in its elementary form, but still we are not able to accept them in their infinity, either in themselves or in union with each other. Yet we do not deny the first because it cannot be perfectly reconciled with the second, nor the second because it is in apparent contrariety with the first and the third. The case is the same in its degree with His creation material and moral. It is the highest wisdom to accept truth of whatever kind, wherever it is clearly ascertained to be such, though there be difficulty in adjusting it with other known truth.

Instances are easily producible of that extreme contrariety of ideas, one with another, which the contemplation of the Universe forces upon our acceptance, making it clear to us that there is nothing irrational in submitting to undeniable incompatibilities, which we call apparent, only because, if they were not apparent but real, they could not co-exist. Such, for instance, is the contemplation of Space; the existence of which we cannot deny, though its idea is capable, in no sort of posture, of seating itself (if I may so speak) in our minds;—for we find it impossible to say that it comes to a limit anywhere; and it is incomprehensible to say that it runs out infinitely; and it seems to be unmeaning if we say that it does not exist till bodies come into it, and thus is enlarged according to an accident.

And so again in the instance of Time. We cannot place a beginning to it without asking ourselves what was before that beginning; yet that there should be no beginning at all, put it as far back as we will, is simply incomprehensible. Here again, as in the case of Space, we never dream of denying the existence of what we have no means of understanding.

And, passing from this high region of thought (which, high as it may be, is the subject even of a child's contemplations), when we come to consider the mutual action of soul and body, we are specially perplexed by incompatibilities which we can neither reject nor

explain. How it is that the will can act on the muscles, is a question of which even a child may feel the force, but which no experimentalist can answer.

Further, when we contrast the physical with the social laws under which man finds himself here below, we must grant that Physiology and Social Science are in collision. Man is both a physical and a social being; yet he cannot at once pursue to the full his physical end and his social end, his physical duties (if I may so speak) and his social duties, but is forced to sacrifice in part one or the other. If we were wild enough to fancy that there were two creators, one of whom was the author of our animal frames, the other of society, then indeed we might understand how it comes to pass that labour of mind and body, the useful arts, the duties of a statesman, government, and the like, which are required by the social system, are so destructive of health, enjoyment, and life. That is, in other words, we cannot adequately account for existing and undeniable truths except on the hypothesis of what we feel to be an absurdity.

And so in Mathematical Science, as has been often insisted on, the philosopher has patiently to endure the presence of truths, which are not the less true for being irreconcilable with each other. He is told of the existence of an infinite number of curves, which are able to divide a space, into which no straight line, though it be length without breadth, can even enter. He is told, too, of certain lines, which approach to each other continually, with a finite distance between them, yet never meet; and these apparent contrarieties he must bear as he best can, without attempting to deny the existence of the truths which constitute them in the Science in question.

4.

Now, let me call your attention, Gentlemen, to what I would infer from these familiar facts. It is, to urge you with an argument *à fortiori*:

viz., that, as you exercise so much exemplary patience in the case of the inexplicable truths which surround so many departments of knowledge, human and divine, viewed in themselves; as you are not at once indignant, censorious, suspicious, difficult of belief, on finding that in the secular sciences one truth is incompatible (according to our human intellect) with another or inconsistent with itself; so you should not think it very hard to be told that there exists, here and there, not an inextricable difficulty, not an astounding contrariety, not (much less) a contradiction as to clear facts, between Revelation and Nature; but a hitch, an obscurity, a divergence of tendency, a temporary antagonism, a difference of tone, between the two,—that is, between Catholic opinion on the one hand, and astronomy, or geology, or physiology, or ethnology, or political economy, or history, or antiquities, on the other. I say that, as we admit, because we are Catholics, that the Divine Unity contains in it attributes, which, to our finite minds, appear in partial contrariety with each other; as we admit that, in His revealed Nature are things, which, though not opposed to Reason, are infinitely strange to the Imagination; as in His works we can neither reject nor admit the ideas of space, and of time, and the necessary properties of lines, without intellectual distress, or even torture; really, Gentlemen, I am making no outrageous request, when, in the name of a University, I ask religious writers, jurists, economists, physiologists, chemists, geologists, and historians, to go on quietly, and in a neighbourly way, in their own respective lines of speculation, research, and experiment, with full faith in the consistency of that multiform truth, which they share between them, in a generous confidence that they will be ultimately consistent, one and all, in their combined results, though there may be momentary collisions, awkward appearances, and many forebodings and prophecies of contrariety, and at all times things hard to the Imagination, though not, I repeat, to the Reason. It surely is not asking

them a great deal to beg of them,—since they are forced to admit mysteries in the truths of Revelation, taken by themselves, and in the truths of Reason, taken by themselves,—to beg of them, I say, to keep the peace, to live in good will, and to exercise equanimity, if, when Nature and Revelation are compared with each other, there be, as I have said, discrepancies,—not in the issue, but in the reasonings, the circumstances, the associations, the anticipations, the accidents, proper to their respective teachings.

It is most necessary to insist seriously and energetically on this point, for the sake of Protestants, for they have very strange notions about us. In spite of the testimony of history the other way, they think that the Church has no other method of putting down error than the arm of force, or the prohibition of inquiry. They defy us to set up and carry on a School of Science. For their sake, then, I am led to enlarge upon the subject here. I say, then, he who believes Revelation with that absolute faith which is the prerogative of a Catholic, is not the nervous creature who startles at every sudden sound, and is fluttered by every strange or novel appearance which meets his eyes. He has no sort of apprehension, he laughs at the idea, that any thing can be discovered by any other scientific method, which can contradict any one of the dogmas of his religion. He knows full well there is no science whatever, but, in the course of its extension, runs the risk of infringing, without any meaning of offence on its own part, the path of other sciences: and he knows also that, if there be any one science which, from its sovereign and unassailable position can calmly bear such unintentional collisions on the part of the children of earth, it is Theology. He is sure, and nothing shall make him doubt, that, if anything seems to be proved by astronomer, or geologist, or chronologist, or antiquarian, or ethnologist, in contradiction to the dogmas of faith, that point will eventually turn out, first, *not* to be proved, or, secondly, not *contradictory*, or thirdly, not contradictory to

any thing *really revealed*, but to something which has been confused with revelation. And if, at the moment, it appears to be contradictory, then he is content to wait, knowing that error is like other delinquents; give it rope enough, and it will be found to have a strong suicidal propensity. I do not mean to say he will not take his part in encouraging, in helping forward the prospective suicide; he will not only give the error rope enough, but show it how to handle and adjust the rope;—he will commit the matter to reason, reflection, sober judgment, common sense; to Time, the great interpreter of so many secrets. Instead of being irritated at the momentary triumph of the foes of Revelation, if such a feeling of triumph there be, and of hurrying on a forcible solution of the difficulty, which may in the event only reduce the inquiry to an inextricable tangle, he will recollect that, in the order of Providence, our seeming dangers are often our greatest gains; that in the words of the Protestant poet,

The clouds you so much dread
Are big with mercy, and shall break
In blessings on your head.

5.

To one notorious instance indeed it is obvious to allude here. When the Copernican system first made progress, what religious man would not have been tempted to uneasiness, or at least fear of scandal, from the seeming contradiction which it involved to some authoritative tradition of the Church and the declaration of Scripture? It was generally received, as if the Apostles had expressly delivered it both orally and in writing, as a truth of Revelation, that the earth was stationary, and that the sun, fixed in a solid firmament, whirled round

the earth. After a little time, however, and on full consideration, it was found that the Church had decided next to nothing on questions such as these, and that Physical Science might range in this sphere of thought almost at will, without fear of encountering the decisions of ecclesiastical authority. Now, besides the relief which it afforded to Catholics to find that they were to be spared this addition, on the side of Cosmology, to their many controversies already existing, there is something of an argument in this very circumstance in behalf of the divinity of their Religion. For it surely is a very remarkable fact, considering how widely and how long one certain interpretation of these physical statements in Scripture had been received by Catholics, that the Church should not have formally acknowledged it. Looking at the matter in a human point of view, it was inevitable that she should have made that opinion her own. But now we find, on ascertaining where we stand, in the face of the new sciences of these latter times, that in spite of the bountiful comments which from the first she has ever been making on the sacred text, as it is her duty and her right to do, nevertheless, she has never been led formally to explain the texts in question, or to give them an authoritative sense which modern science may question.

Nor was this escape a mere accident, but rather the result of a providential superintendence; as would appear from a passage of history in the dark age itself. When the glorious St. Boniface, Apostle of Germany, great in sanctity, though not in secular knowledge, complained to the Holy See that St. Virgilius taught the existence of the Antipodes, the Holy See was guided what to do; it did not indeed side with the Irish philosopher, which would have been going out of its place, but it passed over, in a matter not revealed, a philosophical opinion.

Time went on; a new state of things, intellectual and social, came in; the Church was girt with temporal power; the preachers of St.

Dominic were in the ascendant: now at length we may ask with curious interest, did the Church alter her ancient rule of action, and proscribe intellectual activity? Just the contrary; this is the very age of Universities; it is the classical period of the schoolmen; it is the splendid and palmary instance of the wise policy and large liberality of the Church, as regards philosophical inquiry. If there ever was a time when the intellect went wild, and had a licentious revel, it was at the date I speak of. When was there ever a more curious, more meddling, bolder, keener, more penetrating, more rationalistic exercise of the reason than at that time? What class of questions did that subtle, metaphysical spirit not scrutinize? What premiss was allowed without examination? What principle was not traced to its first origin, and exhibited in its most naked shape? What whole was not analyzed? What complex idea was not elaborately traced out, and, as it were, finely painted for the contemplation of the mind, till it was spread out in all its minutest portions as perfectly and delicately as a frog's foot shows under the intense scrutiny of the microscope? Well, I repeat, here was something which came somewhat nearer to Theology than physical research comes; Aristotle was a somewhat more serious foe then, beyond all mistake, than Bacon has been since. Did the Church take a high hand with philosophy then? No, not though that philosophy was metaphysical. It was a time when she had temporal power, and could have exterminated the spirit of inquiry with fire and sword; but she determined to put it down by *argument*, she said: "Two can play at that, and my argument is the better." She sent her controversialists into the philosophical arena. It was the Dominican and Franciscan doctors, the greatest of them being St. Thomas, who in those medieval Universities fought the battle of Revelation with the weapons of heathenism. It was no matter whose the weapon was; truth was truth all the world over. With the jawbone of an ass, with the skeleton philosophy of pagan Greece, did the Samson of the

schools put to flight his thousand Philistines.

Here, Gentlemen, observe the contrast exhibited between the Church herself, who has the gift of wisdom, and even the ablest, or wisest, or holiest of her children. As St. Boniface had been jealous of physical speculations, so had the early Fathers shown an extreme aversion to the great heathen philosopher whom I just now named, Aristotle. I do not know who of them could endure him; and when there arose those in the middle age who would take his part, especially since their intentions were of a suspicious character, a strenuous effort was made to banish him out of Christendom. The Church the while had kept silence; she had as little denounced heathen philosophy in the mass as she had pronounced upon the meaning of certain texts of Scripture of a cosmological character. From Tertullian and Caius to the two Gregories of Cappadocia, from them to Anastasius Sinaita, from him to the school of Paris, Aristotle was a word of offence; at length St. Thomas made him a hewer of wood and drawer of water to the Church. A strong slave he is; and the Church herself has given her sanction to the use in Theology of the ideas and terms of his philosophy.

6.

Now, while this free discussion is, to say the least, so safe for Religion, or rather so expedient, it is on the other hand simply necessary for progress in Science; and I shall now go on to insist on this side of the subject. I say, then, that it is a matter of primary importance in the cultivation of those sciences, in which truth is discoverable by the human intellect, that the investigator should be free, independent, unshackled in his movements; that he should be allowed and enabled, without impediment, to fix his mind intently, nay, exclusively, on his special object, without the risk of being distracted every other minute in the process and progress of his

inquiry, by charges of temerariousness, or by warnings against extravagance or scandal. But in thus speaking, I must premise several explanations, lest I be misunderstood.

First, then, Gentlemen, as to the fundamental principles of religion and morals, and again as to the fundamental principles of Christianity, or what are called the *dogmas* of faith,—as to this double creed, natural and revealed,—we, none of us, should say that it is any shackle at all upon the intellect to maintain these inviolate. Indeed, a Catholic cannot put off his thought of them; and they as little impede the movements of his intellect as the laws of physics impede his bodily movements. The habitual apprehension of them has become a second nature with him, as the laws of optics, hydrostatics, dynamics, are latent conditions which he takes for granted in the use of his corporeal organs. I am not supposing any collision with dogma, I am but speaking of opinions of divines, or of the multitude, parallel to those in former times of the sun going round the earth, or of the last day being close at hand, or of St. Dionysius the Areopagite being the author of the works which bear his name.

Nor, secondly, even as regards such opinions, am I supposing any direct intrusion into the province of religion, or of a teacher of Science actually laying down the law *in a matter of Religion*; but of such unintentional collisions as are incidental to a discussion pursued on some subject of his own. It would be a great mistake in such a one to propose his philosophical or historical conclusions as the formal interpretation of the sacred text, as Galileo is said to have done, instead of being content to hold his doctrine of the motion of the earth as a scientific conclusion, and leaving it to those whom it really concerned to compare it with Scripture. And, it must be confessed, Gentlemen, not a few instances occur of this mistake at the present day, on the part, not indeed of men of science, but of religious men, who, from a nervous impatience lest Scripture should for one moment

seem inconsistent with the results of some speculation of the hour, are ever proposing geological or ethnological comments upon it, which they have to alter or obliterate before the ink is well dry, from changes in the progressive science, which they have so officiously brought to its aid.

And thirdly, I observe that, when I advocate the independence of philosophical thought, I am not speaking of any *formal teaching* at all, but of investigations, speculations, and discussions. I am far indeed from allowing, in any matter which even borders on Religion, what an eminent Protestant divine has advocated on the most sacred subjects, —I mean "the liberty of Prophesying." I have no wish to degrade the professors of Science, who ought to be Prophets of the Truth, into mere advertisers of crude fancies or notorious absurdities. I am not pleading that they should at random shower down upon their hearers ingenuities and novelties; or that they should teach even what has a basis of truth in it, in a brilliant, off-hand way, to a collection of youths, who may not perhaps hear them for six consecutive lectures, and who will carry away with them into the country a misty idea of the half-created theories of some ambitious intellect.

Once more, as the last sentence suggests, there must be great care taken to avoid scandal, or shocking the popular mind, or unsettling the weak; the association between truth and error being so strong in particular minds that it is impossible to weed them of the error without rooting up the wheat with it. If, then, there is the chance of any current religious opinion being in any way compromised in the course of a scientific investigation, this would be a reason for conducting it, not in light ephemeral publications, which come into the hands of the careless or ignorant, but in works of a grave and business-like character, answering to the medieval schools of philosophical disputation, which, removed as they were from the region of popular thought and feeling, have, by their vigorous

restlessness of inquiry, in spite of their extravagances, done so much for theological precision.

7.

I am not, then, supposing the scientific investigator (1) to be *coming into collision with dogma*; nor (2) venturing, by means of his investigations, upon any interpretation of *Scripture*, or upon other conclusion *in the matter of religion*; nor (3) of his *teaching*, even in his own science, religious paradoxes, when he should be investigating and proposing; nor (4) of his recklessly *scandalizing the weak*; but, these explanations being made, I still say that a scientific speculator or inquirer is not bound, in conducting his researches, to be every moment adjusting his course by the maxims of the schools or by popular traditions, or by those of any other science distinct from his own, or to be ever narrowly watching what those external sciences have to say to him, or to be determined to be edifying, or to be ever answering heretics and unbelievers; being confident, from the impulse of a generous faith, that, however his line of investigation may swerve now and then, and vary to and fro in its course, or threaten momentary collision or embarrassment with any other department of knowledge, theological or not, yet, if he lets it alone, it will be sure to come home, because truth never can really be contrary to truth, and because often what at first sight is an "exceptio," in the event most emphatically "probat regulam." This is a point of serious importance to him. Unless he is at liberty to investigate on the basis, and according to the peculiarities, of his science, he cannot investigate at all. It is the very law of the human mind in its inquiry after and acquisition of truth to make its advances by a process which consists of many stages, and is circuitous. There are no short cuts to knowledge; nor does the road to it always lie in the direction in which it terminates, nor are we able to see the end on starting. It may often seem to be diverging from

a goal into which it will soon run without effort, if we are but patient and resolute in following it out; and, as we are told in Ethics to gain the mean merely by receding from both extremes, so in scientific researches error may be said, without a paradox, to be in some instances the way to truth, and the only way. Moreover, it is not often the fortune of any one man to live through an investigation; the process is one of not only many stages, but of many minds. What one begins another finishes; and a true conclusion is at length worked out by the co-operation of independent schools and the perseverance of successive generations. This being the case, we are obliged, under circumstances, to bear for a while with what we feel to be error, in consideration of the truth in which it is eventually to issue.

The analogy of locomotion is most pertinent here. No one can go straight up a mountain; no sailing vessel makes for its port without tacking. And so, applying the illustration, we can indeed, if we will, refuse to allow of investigation or research altogether; but, if we invite reason to take its place in our schools, we must let reason have fair and full play. If we reason, we must submit to the conditions of reason. We cannot use it by halves; we must use it as proceeding from Him who has also given us Revelation; and to be ever interrupting its processes, and diverting its attention by objections brought from a higher knowledge, is parallel to a landsman's dismay at the changes in the course of a vessel on which he has deliberately embarked, and argues surely some distrust either in the powers of Reason on the one hand, or the certainty of Revealed Truth on the other. The passenger should not have embarked at all, if he did not reckon on the chance of a rough sea, of currents, of wind and tide, of rocks and shoals; and we should act more wisely in discountenancing altogether the exercise of Reason than in being alarmed and impatient under the suspense, delay, and anxiety which, from the nature of the case, may be found to attach to it. Let us eschew secular history, and science, and

philosophy for good and all, if we are not allowed to be sure that Revelation is so true that the altercations and perplexities of human opinion cannot really or eventually injure its authority. That is no intellectual triumph of any truth of Religion, which has not been preceded by a full statement of what can be said against it; it is but the ego vapulando, ille verberando, of the Comedy.

Great minds need elbow-room, not indeed in the domain of faith, but of thought. And so indeed do lesser minds, and all minds. There are many persons in the world who are called, and with a great deal of truth, geniuses. They had been gifted by nature with some particular faculty or capacity; and, while vehemently excited and imperiously ruled by it, they are blind to everything else. They are enthusiasts in their own line, and are simply dead to the beauty of any line *except* their own. Accordingly, they think their own line the only line in the whole world worth pursuing, and they feel a sort of contempt for such studies as move upon any other line. Now, these men may be, and often are, very good Catholics, and have not a dream of any thing but affection and deference towards Catholicity, nay, perhaps are zealous in its interests. Yet, if you insist that in their speculations, researches, or conclusions in their particular science, it is not enough that they should submit to the Church generally, and acknowledge its dogmas, but that they must get up all that divines have said or the multitude believed upon religious matters, you simply crush and stamp out the flame within them, and they can do nothing at all.

This is the case of men of genius: now one word on the contrary in behalf of master minds, gifted with a broad philosophical view of things, and a creative power, and a versatility capable of accommodating itself to various provinces of thought. These persons perhaps, like those I have already spoken of, take up some idea and are intent upon it;—some deep, prolific, eventful idea, which grows

upon them, till they develop it into a great system. Now, if any such thinker starts from radically unsound principles, or aims at directly false conclusions, if he be a Hobbes, or a Shaftesbury, or a Hume, or a Bentham, then, of course, there is an end of the whole matter. He is an opponent of Revealed Truth, and he means to be so;—nothing more need be said. But perhaps it is not so; perhaps his errors are those which are inseparable accidents of his system or of his mind, and are spontaneously evolved, not pertinaciously defended. Every human system, every human writer, is open to just criticism. Make him shut up his portfolio; good! and then perhaps you lose what, on the whole and in spite of incidental mistakes, would have been one of the ablest defences of Revealed Truth (directly or indirectly, according to his subject) ever given to the world.

This is how I should account for a circumstance, which has sometimes caused surprise, that so many great Catholic thinkers have in some points or other incurred the criticism or animadversion of theologians or of ecclesiastical authority. It must be so in the nature of things; there is indeed an animadversion which implies a condemnation of the author; but there is another which means not much more than the "*piè legendum*" written against passages in the Fathers. The author may not be to blame; yet the ecclesiastical authority would be to blame, if it did not give notice of his imperfections. I do not know what Catholic would not hold the name of Malebranche in veneration; but he may have accidentally come into collision with theologians, or made temerarious assertions, notwithstanding.

The practical question is, whether he had not much better have written as he has written, than not have written at all. And so fully is the Holy See accustomed to enter into this view of the matter, that it has allowed of its application, not only to philosophical, but even to theological and ecclesiastical authors, who do not come within the

range of these remarks. I believe I am right in saying that, in the case of three great names, in various departments of learning, Cardinal Noris, Bossuet, and Muratori,^[1] while not concealing its sense of their having propounded each what might have been said better, nevertheless it has considered, that their services to Religion were on the whole far too important to allow of their being molested by critical observation in detail.

8.

And now, Gentlemen, I bring these remarks to a conclusion. What I would urge upon every one, whatever may be his particular line of research,—what I would urge upon men of Science in their thoughts of Theology,—what I would venture to recommend to theologians, when their attention is drawn to the subject of scientific investigations,—is a great and firm belief in the sovereignty of Truth. Error may flourish for a time, but Truth will prevail in the end. The only effect of error ultimately is to promote Truth. Theories, speculations, hypotheses, are started; perhaps they are to die, still not before they have suggested ideas better than themselves. These better ideas are taken up in turn by other men, and, if they do not yet lead to truth, nevertheless they lead to what is still nearer to truth than themselves; and thus knowledge on the whole makes progress. The errors of some minds in scientific investigation are more fruitful than the truths of others. A Science seems making no progress, but to abound in failures, yet imperceptibly all the time it is advancing, and it is of course a gain to truth even to have learned what is not true, if nothing more.

On the other hand, it must be of course remembered, Gentlemen, that I am supposing all along good faith, honest intentions, a loyal Catholic spirit, and a deep sense of responsibility. I am supposing, in the scientific inquirer, a due fear of giving scandal, of seeming to

countenance views which he does not really countenance, and of siding with parties from whom he heartily differs. I am supposing that he is fully alive to the existence and the power of the infidelity of the age; that he keeps in mind the moral weakness and the intellectual confusion of the majority of men; and that he has no wish at all that any one soul should get harm from certain speculations to-day, though he may have the satisfaction of being sure that those speculations will, as far as they are erroneous or misunderstood, be corrected in the course of the next half-century.

[1] Muratori's work was not directly theological. *Vid.* note at the end of the Volume.

Lecture IX

Discipline of Mind

—An Address to the Evening Classes

1.

When I found that it was in my power to be present here at the commencement of the new Session, one of the first thoughts, Gentlemen, which thereupon occurred to me, was this, that I should in consequence have the great satisfaction of meeting you, of whom I had thought and heard so much, and the opportunity of addressing you, as Rector of the University. I can truly say that I thought of you before you thought of the University; perhaps I may say, long before;—for it was previously to our commencing that great work, which is now so fully before the public, it was when I first came over here to make preparations for it, that I had to encounter the serious objection of wise and good men, who said to me, "There is no class of persons in Ireland who *need* a University;" and again, "Whom will you get to belong to it? who will fill its lecture-rooms?" This was said to me, and then, without denying their knowledge of the state of Ireland, or their sagacity, I made answer, "We will give lectures in the evening, we will fill our classes with the young men of Dublin."

And some persons here may recollect that the very first thing I did, when we opened the School of Philosophy and Letters, this time four years, was to institute a system of Evening Lectures, which were suspended after a while, only because the singularly inclement season which ensued, and the want of publicity and interest incident to a new

undertaking, made them premature. And it is a satisfaction to me to reflect that the Statute, under which you will be able to pass examinations and take degrees, is one to which I specially obtained the consent of the Academical Senate, nearly two years ago, in addition to our original Regulations, and that you will be the first persons to avail yourselves of it.

Having thus prepared, as it were, the University for you, it was with great pleasure that I received from a number of you, Gentlemen, last May year, a spontaneous request which showed that my original anticipations were not visionary. You suggested then what we have since acted upon,—acted upon, not so quickly as both you might hope and we might wish, because all important commencements have to be maturely considered—still acted on at length according to those anticipations of mine, to which I have referred; and, while I recur to them as an introduction to what I have to say, I might also dwell upon them as a sure presage that other and broader anticipations, too bold as they may seem now, will, if we are but patient, have their fulfilment in their season.

2.

For I should not be honest, Gentlemen, if I did not confess that, much as I desire that this University should be of service to the young men of Dublin, I do not desire this benefit to you, simply for your own sakes. For your own sakes certainly I wish it, but not on your account only. Man is not born for himself alone, as the classical moralist tells us. *You* are born for Ireland; and, in your advancement, Ireland is advanced;—in your advancement in what is good and what is true, in knowledge, in learning, in cultivation of mind, in enlightened attachment to your religion, in good name and respectability and social influence, I am contemplating the honour and renown, the literary and scientific aggrandisement, the increase of political power,

of the Island of the Saints.

I go further still. If I do homage to the many virtues and gifts of the Irish people, and am zealous for their full development, it is not simply for the sake of themselves, but because the name of Ireland ever has been, and, I believe, ever will be, associated with the Catholic Faith, and because, in doing any service, however poor it may be, to Ireland, a man is ministering, in his own place and measure, to the cause of the Holy Roman Apostolic Church.

Gentlemen, I should consider it an impertinence in me thus to be speaking to you of myself, were it not that, in recounting to you the feelings with which I have witnessed the establishment of these Evening Classes, I am in fact addressing to you at the same time words of encouragement and advice, such words as it becomes a Rector to use in speaking to those who are submitted to his care.

I say, then, that, had I been younger than I was when the high office which I at present hold was first offered to me, had I not had prior duties upon me of affection and devotion to the Oratory of St. Philip, and to my own dear country, no position whatever, in the whole range of administrations which are open to the ambition of those who wish to serve God in their generation, and to do some great work before they die, would have had more attractions for me than that of being at the head of a University like this. When I became a Catholic, one of my first questions was, "Why have not our Catholics a University?" and Ireland, and the metropolis of Ireland, was obviously the proper seat of such an institution.

Ireland is the proper seat of a Catholic University, on account of its ancient hereditary Catholicity, and again of the future which is in store for it. It is impossible, Gentlemen, to doubt that a future is in store for Ireland, for more reasons than can here be enumerated. First, there is the circumstance, so highly suggestive, even if there was nothing else to be said, viz., that the Irish have been so miserably ill-

treated and misused hitherto; for, in the times now opening upon us, nationalities are waking into life, and the remotest people can make themselves heard into all the quarters of the earth. The lately invented methods of travel and of intelligence have destroyed geographical obstacles; and the wrongs of the oppressed, in spite of oceans or of mountains, are brought under the public opinion of Europe,—not before kings and governments alone, but before the tribunal of the European populations, who are becoming ever more powerful in the determination of political questions. And thus retribution is demanded and exacted for past crimes in proportion to their heinousness and their duration.

And in the next place, it is plain that, according as intercommunion grows between Europe and America, it is Ireland that must grow with it in social and political importance. For Ireland is the high road by which that intercourse is carried on; and the traffic between hemispheres must be to her a source of material as well as social benefit,—as of old time, though on the minute geographical scale of Greece, Corinth, as being the thoroughfare of commerce by sea and land, became and was called "the rich."

And then, again, we must consider the material resources of Ireland, so insufficiently explored, so poorly developed,—of which it belongs to them rather to speak, who by profession and attainments are masters of the subject.

That this momentous future, thus foreshadowed, will be as glorious for Catholicity as for Ireland we cannot doubt from the experience of the past; but, as Providence works by means of human agencies, that natural anticipation has no tendency to diminish the anxiety and earnestness of all zealous Catholics to do their part in securing its fulfilment. And the wise and diligent cultivation of the intellect is one principal means, under the Divine blessing, of the desired result.

Gentlemen, the seat of this intellectual progress must necessarily be the great towns of Ireland; and those great towns have a remarkable and happy characteristic, as contrasted with the cities of Catholic Europe. Abroad, even in Catholic countries, if there be in any part of their territory scepticism and insubordination in religion, cities are the seat of the mischief. Even Rome itself has its insubordinate population, and its concealed free-thinkers; even Belgium, that nobly Catholic country, cannot boast of the religious loyalty of its great towns. Such a calamity is unknown to the Catholicism of Dublin, Cork, Belfast, and the other cities of Ireland; for, to say nothing of higher and more religious causes of the difference, the very presence of a rival religion is a perpetual incentive to faith and devotion in men who, from the circumstances of the case, would be in danger of becoming worse than lax Catholics, unless they resolved on being zealous ones.

Here, then, is one remarkable ground of promise in the future of Ireland, that that large and important class, members of which I am now addressing,—that the middle classes in its cities, which will be the depositaries of its increasing political power, and which elsewhere are opposed in their hearts to the Catholicism which they profess,—are here so sound in faith, and so exemplary in devotional exercises, and in works of piety.

And next I would observe, that, while thus distinguished for religious earnestness, the Catholic population is in no respect degenerate from the ancient fame of Ireland as regards its intellectual endowments. It too often happens that the religiously disposed are in the same degree intellectually deficient; but the Irish ever have been, as their worst enemies must grant, not only a Catholic people, but a people of great natural abilities, keen-witted, original, and subtle. This has been the characteristic of the nation from the very early times,

and was especially prominent in the middle ages. As Rome was the centre of authority, so, I may say, Ireland was the native home of speculation. In this respect they were as remarkably contrasted to the English as they are now, though, in those ages, England was as devoted to the Holy See as it is now hostile. The Englishman was hard-working, plodding, bold, determined, persevering, practical, obedient to law and precedent, and, if he cultivated his mind, he was literary and classical rather than scientific, for Literature involves in it the idea of authority and prescription. On the other hand, in Ireland, the intellect seems rather to have taken the line of Science, and we have various instances to show how fully this was recognized in those times, and with what success it was carried out. "Philosopher," is in those times almost the name for an Irish monk. Both in Paris and Oxford, the two great schools of medieval thought, we find the boldest and most subtle of their disputants an Irishman,—the monk John Scotus Erigena, at Paris, and Duns Scotus, the Franciscan friar, at Oxford.

Now, it is my belief, Gentlemen, that this character of mind remains in you still. I think I rightly recognize in the Irishman now, as formerly, the curious, inquisitive observer, the acute reasoner, the subtle speculator. I recognize in you talents which are fearfully mischievous, when used on the side of error, but which, when wielded by Catholic devotion, such as I am sure will ever be the characteristic of the Irish disputant, are of the highest importance to Catholic interests, and especially at this day, when a subtle logic is used against the Church, and demands a logic still more subtle on the part of her defenders to expose it.

Gentlemen, I do not expect those who, like you, are employed in your secular callings, who are not monks or friars, not priests, not theologians, not philosophers, to come forward as champions of the faith; but I think that incalculable benefit may ensue to the Catholic

cause, greater almost than that which even singularly gifted theologians or controversialists could effect, if a body of men in your station of life shall be found in the great towns of Ireland, not disputatious, contentious, loquacious, presumptuous (of course I am not advocating inquiry for mere argument's sake), but gravely and solidly educated in Catholic knowledge, intelligent, acute, versed in their religion, sensitive of its beauty and majesty, alive to the arguments in its behalf, and aware both of its difficulties and of the mode of treating them. And the first step in attaining this desirable end is that you should submit yourselves to a curriculum of studies, such as that which brings you with such praiseworthy diligence within these walls evening after evening; and, though you may not be giving attention to them with this view, but from the laudable love of knowledge, or for the advantages which will accrue to you personally from its pursuit, yet my own reason for rejoicing in the establishment of your classes is the same as that which led me to take part in the establishment of the University itself, viz., the wish, by increasing the intellectual force of Ireland, to strengthen the defences, in a day of great danger, of the Christian religion.

4.

Gentlemen, within the last thirty years, there has been, as you know, a great movement in behalf of the extension of knowledge among those classes in society whom you represent. This movement has issued in the establishment of what have been called Mechanics' Institutes through the United Kingdom; and a new species of literature has been brought into existence, with a view, among its objects, of furnishing the members of these institutions with interesting and instructive reading. I never will deny to that literature its due praise. It has been the production of men of the highest ability and the most distinguished station, who have not grudged, moreover, the trouble,

and, I may say in a certain sense, the condescension, of presenting themselves before the classes for whose intellectual advancement they were showing so laudable a zeal; who have not grudged, in the cause of Literature, History, or Science, to make a display, in the lecture room or the public hall, of that eloquence, which was, strictly speaking, the property, as I may call it, of Parliament, or of the august tribunals of the Law. Nor will I deny to the speaking and writing, to which I am referring, the merit of success, as well as that of talent and good intention, so far as this,—that it has provided a fund of innocent amusement and information for the leisure hours of those who might otherwise have been exposed to the temptation of corrupt reading or bad company.

So much may be granted,—and must be granted in candour: but, when I go on to ask myself the question, what *permanent* advantage the mind gets by such desultory reading and hearing, as this literary movement encourages, then I find myself altogether in a new field of thought, and am obliged to return an answer less favourable than I could wish to those who are the advocates of it. We must carefully distinguish, Gentlemen, between the mere diversion of the mind and its real education. Supposing, for instance, I am tempted to go into some society which will do me harm, and supposing, instead, I fall asleep in my chair, and so let the time pass by, in that case certainly I escape the danger, but it is as if by accident, and my going to sleep has not had any real effect upon me, or made me more able to resist the temptation on some future occasion. I wake, and I am what I was before. The opportune sleep has but removed the temptation for this once. It has not made me better; for I have not been shielded from temptation by any act of my own, but I was passive under an accident, for such I may call sleep. And so in like manner, if I hear a lecture indolently and passively, I cannot indeed be elsewhere *while* I am here hearing it,—but it produces no positive effect on my mind,—it does

not tend to create any power in my breast capable of resisting temptation by its own vigour, should temptation come a second time.

Now this is no fault, Gentlemen, of the books or the lectures of the Mechanics' Institute. They could not do more than they do, from their very nature. They do their part, but their part is not enough. A man may hear a thousand lectures, and read a thousand volumes, and be at the end of the process very much where he was, as regards knowledge. Something more than merely *admitting* it in a negative way into the mind is necessary, if it is to remain there. It must not be passively received, but actually and actively entered into, embraced, mastered. The mind must go half-way to meet what comes to it from without.

This, then, is the point in which the institutions I am speaking of fail; here, on the contrary, is the advantage of such lectures as you are attending, Gentlemen, in our University. You have come, not merely to be taught, but to learn. You have come to exert your minds. You have come to make what you hear your own, by putting out your hand, as it were, to grasp it and appropriate it. You do not come merely to hear a lecture, or to read a book, but you come for that catechetical instruction, which consists in a sort of conversation between your lecturer and you. He tells you a thing, and he asks you to repeat it after him. He questions you, he examines you, he will not let you go till he has proof, not only that you have heard, but that you know.

5.

Gentlemen, I am induced to quote here some remarks of my own, which I put into print on occasion of those Evening Lectures, already referred to, with which we introduced the first terms of the University. The attendance upon them was not large, and in consequence we discontinued them for a time, but I attempted to explain in print what

the object of them had been; and while what I then said is pertinent to the subject I am now pursuing, it will be an evidence too, in addition to my opening remarks, of the hold which the idea of these Evening Lectures has had upon me.

"I will venture to give you my thoughts," I then said, writing to a friend,^[1] "on the *object* of the Evening Public Lectures lately delivered in the University House, which, I think, has been misunderstood.

"I can bear witness, not only to their remarkable merit as lectures, but also to the fact that they were very satisfactorily attended. Many, however, attach a vague or unreasonable idea to the word 'satisfactory,' and maintain that no lectures can be called satisfactory which do not make a great deal of noise in the place, and they are disappointed otherwise. This is what I mean by misconceiving their object; for such an expectation, and consequent regret, arise from confusing the ordinary with the extraordinary object of a lecture,—upon which point we ought to have clear and definite ideas.

"The *ordinary* object of lectures is *to teach*; but there is an object, sometimes demanding attention, and not incongruous, which, nevertheless, cannot be said properly to belong to them, or to be more than occasional. As there are kinds of eloquence which do not aim at any thing beyond their own exhibition, and are content with being eloquent, and with the sensation which eloquence creates; so in Schools and Universities there are seasons, festive or solemn, anyhow extraordinary, when academical acts are not directed towards their proper ends, so much as intended to amuse, to astonish, and to attract, and thus to have an effect upon public opinion. Such are the exhibition days of Colleges; such the annual Commemoration of Benefactors at one of the English Universities, when Doctors put on their gayest gowns, and Public Orators make Latin Speeches. Such, too, are the Terminal Lectures, at which divines of the greatest reputation for intellect and learning have before now poured forth

sentences of burning eloquence into the ears of an audience brought together for the very sake of the display. The object of all such Lectures and Orations is to excite or to keep up an interest and reverence in the public mind for the Institutions from which the exhibition proceeds:"—I might have added, such are the lectures delivered by celebrated persons in Mechanics' Institutes.

I continue: "Such we have suitably had in the new University;—such were the Inaugural Lectures. Displays of strength and skill of this kind, in order to succeed, *should* attract attention, and if they do not attract attention, they have failed. They do not invite an audience, but an attendance; and perhaps it is hardly too much to say that they are intended for seeing rather than for hearing.

"Such celebrations, however, from the nature of the case, must be rare. It is the novelty which brings, it is the excitement which recompenses, the assemblage. The academical body which attempts to make such extraordinary acts the normal condition of its proceedings, is putting itself and its Professors in a false position.

"It is, then, a simple misconception to suppose that those to whom the government of our University is confided have aimed at an object, which could not be contemplated at all without a confusion or inadvertence, such as no considerate person will impute to them. Public lectures, delivered with such an object, could not be successful; and, in consequence, our late lectures have, I cannot doubt (for it could not be otherwise), ended unsatisfactorily in the judgment of any zealous person who has assumed for them an office with which their projectors never invested them.

"What their object really was the very meaning of academical institutions suggests to us. It is, as I said when I began, *to teach*. Lectures are, properly speaking, not exhibitions or exercises of art, but matters of business; they profess to impart something definite to those who attend them, and those who attend them profess on their part to

receive what the lecturer has to offer. It is a case of contract:—'I will speak, if you will listen:'—'I will come here to learn, if you have any thing worth teaching me.' In an oratorical display, all the effort is on one side; in a lecture, it is shared between two parties, who co-operate towards a common end.

"There should be ever something, on the face of the arrangements, to act as a memento that those who come, come to gain something, and not from mere curiosity. And in matters of fact, such were the persons who did attend, in the course of last term, and such as those, and no others, will attend. Those came who wished to gain information on a subject new to them, from informants whom they held in consideration, and regarded as authorities. It was impossible to survey the audience which occupied the lecture-room without seeing that they came on what may be called business. And this is why I said, when I began, that the attendance was satisfactory. That attendance is satisfactory,—not which is numerous, but—which is steady and persevering. But it is plain, that to a mere by-stander, who came merely from general interest or good will to see how things were going on, and who did not catch the object of advertising the Lectures, it would not occur to look into the faces of the audience; he would think it enough to be counting their heads; he would do little more than observe whether the staircase and landing were full of loungers, and whether there was such a noise and bustle that it was impossible to hear a word; and if he could get in and out of the room without an effort, if he could sit at his ease, and actually hear the lecturer, he would think he had sufficient grounds for considering the attendance unsatisfactory.

"The stimulating system may easily be overdone, and does not answer on the long run. A blaze among the stubble, and then all is dark. I have seen in my time various instances of the way in which Lectures really gain upon the public; and I must express my opinion

that, even were it the sole object of our great undertaking to make a general impression upon public opinion, instead of that of doing definite good to definite persons, I should reject that method, which the University indeed itself has *not* taken, but which young and ardent minds may have thought the more promising. Even did I wish merely to get the intellect of all Dublin into our rooms, I should not dream of doing it all at once, but at length. I should not rely on sudden, startling effects, but on the slow, silent, penetrating, overpowering effects of patience, steadiness, routine, and perseverance. I have known individuals set themselves down in a neighbourhood where they had no advantages, and in a place which had no pretensions, and upon a work which had little or nothing of authoritative sanction; and they have gone on steadily lecturing week after week, with little encouragement, but much resolution. For months they were ill attended, and overlooked in the bustle of the world around them. But there was a secret, gradual movement going on, and a specific force of attraction, and a drifting and accumulation of hearers, which at length made itself felt, and could not be mistaken. In this stage of things, a friend said in conversation to me, when at the moment I knew nothing of the parties: 'By-the-bye, if you are interested in such and such a subject, go by all means, and hear such a one. So and so does, and says there is no one like him. I looked in myself the other night, and was very much struck. Do go, you can't mistake; he lectures every Tuesday night, or Wednesday, or Thursday,' as it might be. An influence thus gradually acquired endures; sudden popularity dies away as suddenly."

As regards ourselves, the time is passed now, Gentlemen, for such modesty of expectation, and such caution in encouragement, as these last sentences exhibit. The few, but diligent, attendants upon the Professors' lectures, with whom we began, have grown into the diligent and zealous many; and the speedy fulfilment of anticipations,

which then seemed to be hazardous, surely is a call on us to cherish bolder hopes and to form more extended plans for the years which are to follow.

6.

You will ask me, perhaps, after these general remarks, to suggest to you the particular intellectual benefit which I conceive students have a right to require of us, and which we engage by means of our evening classes to provide for them. And, in order to this, you must allow me to make use of an illustration, which I have heretofore employed, and which I repeat here, because it is the best that I can find to convey what I wish to impress upon you. It is an illustration which includes in its application all of us, teachers as well as taught, though it applies of course to some more than to others, and to those especially who come for instruction.

I consider, then, that the position of our minds, as far as they are uncultivated, towards intellectual objects,—I mean of our minds, before they have been disciplined and formed by the action of our reason upon them,—is analogous to that of a blind man towards the objects of vision, at the moment when eyes are for the first time given to him by the skill of the operator. Then the multitude of things, which present themselves to the sight under a multiplicity of shapes and hues, pour in upon him from the external world all at once, and are at first nothing else but lines and colours, without mutual connection, dependence, or contrast, without order or principle, without drift or meaning, and like the wrong side of a piece of tapestry or carpet. By degrees, by the sense of touch, by reaching out the hands, by walking into this maze of colours, by turning round in it, by accepting the principle of perspective, by the various slow teaching of experience, the first information of the sight is corrected, and what was an unintelligible wilderness becomes a landscape or a

scene, and is understood to consist of space, and of bodies variously located in space, with such consequences as thence necessarily follow. The knowledge is at length gained of things or objects, and of their relation to each other; and it is a kind of knowledge, as is plain, which is forced upon us all from infancy, as to the blind on their first seeing, by the testimony of our other senses, and by the very necessity of supporting life; so that even the brute animals have been gifted with the faculty of acquiring it.

Such is the case as regards material objects; and it is much the same as regards intellectual. I mean that there is a vast host of matters of all kinds, which address themselves, not to the eye, but to our mental sense; viz., all those matters of thought which, in the course of life and the intercourse of society, are brought before us, which we hear of in conversation, which we read of in books; matters political, social, ecclesiastical, literary, domestic; persons, and their doings or their writings; events, and works, and undertakings, and laws, and institutions. These make up a much more subtle and intricate world than that visible universe of which I was just now speaking. It is much more difficult in this world than in the material to separate things off from each other, and to find out how they stand related to each other, and to learn how to class them, and where to locate them respectively. Still, it is not less true that, as the various figures and forms in a landscape have each its own place, and stand in this or that direction towards each other, so all the various objects which address the intellect have severally a substance of their own, and have fixed relations each of them with everything else,—relations which our minds have no power of creating, but which we are obliged to ascertain before we have a right to boast that we really know any thing about them. Yet, when the mind looks out for the first time into this manifold spiritual world, it is just as much confused and dazzled and distracted as are the eyes of the blind when they first begin to see;

and it is by a long process, and with much effort and anxiety, that we begin hardly and partially to apprehend its various contents and to put each in its proper place.

We grow up from boyhood; our minds open; we go into the world; we hear what men say, or read what they put in print; and thus a profusion of matters of all kinds is discharged upon us. Some sort of an idea we have of most of them, from hearing what others say; but it is a very vague idea, probably a very mistaken idea. Young people, especially, because they are young, colour the assemblage of persons and things which they encounter with the freshness and grace of their own springtide, look for all good from the reflection of their own hopefulness, and worship what they have created. Men of ambition, again, look upon the world as a theatre for fame and glory, and make it that magnificent scene of high enterprise and august recompence which Pindar or Cicero has delineated. Poets, too, after their wont, put their ideal interpretation upon all things, material as well as moral, and substitute the noble for the true. Here are various obvious instances, suggestive of the discipline which is imperative, if the mind is to grasp things as they are, and to discriminate substances from shadows. For I am not concerned merely with youth, ambition, or poetry, but with our mental condition generally. It is the fault of all of us, till we have duly practised our minds, to be unreal in our sentiments and crude in our judgments, and to be carried off by fancies, instead of being at the trouble of acquiring sound knowledge.

In consequence, when we hear opinions put forth on any new subject, we have no principle to guide us in balancing them; we do not know what to make of them; we turn them to and fro, and over, and back again, as if to pronounce upon them, if we could, but with no means of pronouncing. It is the same when we attempt to speak upon them: we make some random venture; or we take up the opinion of some one else, which strikes our fancy; or perhaps, with the vaguest

enunciation possible of any opinion at all, we are satisfied with ourselves if we are merely able to throw off some rounded sentences, to make some pointed remarks on some other subject, or to introduce some figure of speech, or flowers of rhetoric, which, instead of being the vehicle, are the mere substitute of meaning. We wish to take a part in politics, and then nothing is open to us but to follow some person, or some party, and to learn the commonplaces and the watchwords which belong to it. We hear about landed interests, and mercantile interests, and trade, and higher and lower classes, and their rights, duties, and prerogatives; and we attempt to transmit what we have received; and soon our minds become loaded and perplexed by the incumbrance of ideas which we have not mastered and cannot use. We have some vague idea, for instance, that constitutional government and slavery are inconsistent with each other; that there is a connection between private judgment and democracy, between Christianity and civilization; we attempt to find arguments in proof, and our arguments are the most plain demonstration that we simply do not understand the things themselves of which we are professedly treating.

7.

Reflect, Gentlemen, how many disputes you must have listened to, which were interminable, because neither party understood either his opponent or himself. Consider the fortunes of an argument in a debating society, and the need there so frequently is, not simply of some clear thinker to disentangle the perplexities of thought, but of capacity in the combatants to do justice to the clearest explanations which are set before them,—so much so, that the luminous arbitration only gives rise, perhaps, to more hopeless altercation. "Is a constitutional government better for a population than an absolute rule?" What a number of points have to be clearly apprehended before

we are in a position to say one word on such a question! What is meant by "constitution"? by "constitutional government"? by "better"? by "a population"? and by "absolutism"? The ideas represented by these various words ought, I do not say, to be as perfectly defined and located in the minds of the speakers as objects of sight in a landscape, but to be sufficiently, even though incompletely, apprehended, before they have a right to speak. "How is it that democracy can admit of slavery, as in ancient Greece?" "How can Catholicism flourish in a republic?" Now, a person who knows his ignorance will say, "These questions are beyond me;" and he tries to gain a clear notion and a firm hold of them; and, if he speaks, it is as investigating, not as deciding. On the other hand, let him never have tried to throw things together, or to discriminate between them, or to denote their peculiarities, in that case he has no hesitation in undertaking any subject, and perhaps has most to say upon those questions which are most new to him. This is why so many men are one-sided, narrow-minded, prejudiced, crotchety. This is why able men have to change their minds and their line of action in middle age, and to begin life again, because they have followed their party, instead of having secured that faculty of true perception as regards intellectual objects which has accrued to them, without their knowing how, as regards the objects of sight.

But this defect will never be corrected,—on the contrary, it will be aggravated,—by those popular institutions to which I referred just now. The displays of eloquence, or the interesting matter contained in their lectures, the variety of useful or entertaining knowledge contained in their libraries, though admirable in themselves, and advantageous to the student at a later stage of his course, never can serve as a substitute for methodical and laborious teaching. A young man of sharp and active intellect, who has had no other training, has little to show for it besides a litter of ideas heaped up into his mind

anyhow. He can utter a number of truths or sophisms, as the case may be, and one is as good to him as another. He is up with a number of doctrines and a number of facts, but they are all loose and straggling, for he has no principles set up in his mind round which to aggregate and locate them. He can say a word or two on half a dozen sciences, but not a dozen words on any one. He says one thing now, and another thing presently; and when he attempts to write down distinctly what he holds upon a point in dispute, or what he understands by its terms, he breaks down, and is surprised at his failure. He sees objections more clearly than truths, and can ask a thousand questions which the wisest of men cannot answer; and withal, he has a very good opinion of himself, and is well satisfied with his attainments, and he declares against others, as opposed to the spread of knowledge altogether, who do not happen to adopt his ways of furthering it, or the opinions in which he considers it to result.

This is that barren mockery of knowledge which comes of attending on great Lecturers, or of mere acquaintance with reviews, magazines, newspapers, and other literature of the day, which, however able and valuable in itself, is not the instrument of intellectual education. If this is all the training a man has, the chance is that, when a few years have passed over his head, and he has talked to the full, he wearies of talking, and of the subjects on which he talked. He gives up the pursuit of knowledge, and forgets what he knew, whatever it was; and, taking things at their best, his mind is in no very different condition from what it was when he first began to improve it, as he hoped, though perhaps he never thought of more than of amusing himself. I say, "at the best," for perhaps he will suffer from exhaustion and a distaste of the subjects which once pleased him; or perhaps he has suffered some real intellectual mischief; perhaps he has contracted some serious disorder, he has admitted some taint of scepticism, which he will never get rid of.

And here we see what is meant by the poet's maxim, "A little learning is a dangerous thing." Not that knowledge, little or much, if it be real knowledge, is dangerous; but that many a man considers a mere hazy view of many things to be real knowledge, whereas it does but mislead, just as a short-sighted man sees only so far as to be led by his uncertain sight over the precipice.

Such, then, being true cultivation of mind, and such the literary institutions which do not tend to it, I might proceed to show you, Gentlemen, did time admit, how, on the other hand, that kind of instruction of which our Evening Classes are a specimen, is especially suited to effect what they propose. Consider, for instance, what a discipline in accuracy of thought it is to have to construe a foreign language into your own; what a still severer and more improving exercise it is to translate from your own into a foreign language. Consider, again, what a lesson in memory and discrimination it is to get up, as it is called, any one chapter of history. Consider what a trial of acuteness, caution, and exactness, it is to master, and still more to prove, a number of definitions. Again, what an exercise in logic is classification, what an exercise in logical precision it is to understand and enunciate the proof of any of the more difficult propositions of Euclid, or to master any one of the great arguments for Christianity so thoroughly as to bear examination upon it; or, again, to analyze sufficiently, yet in as few words as possible, a speech, or to draw up a critique upon a poem. And so of any other science,—chemistry, or comparative anatomy, or natural history; it does not matter what it is, if it be really studied and mastered, as far as it is taken up. The result is a formation of mind,—that is, a habit of order and system, a habit of referring every accession of knowledge to what we already know, and of adjusting the one with the other; and, moreover, as such a habit implies, the actual acceptance and use of certain principles as centres of thought, around which our knowledge grows and is located.

Where this critical faculty exists, history is no longer a mere story-book, or biography a romance; orators and publications of the day are no longer infallible authorities; eloquent diction is no longer a substitute for matter, nor bold statements, or lively descriptions, a substitute for proof. This is that faculty of perception in intellectual matters, which, as I have said so often, is analogous to the capacity we all have of mastering the multitude of lines and colours which pour in upon our eyes, and of deciding what every one of them is worth.

8.

But I should be transgressing the limits assigned to an address of this nature were I to proceed. I have not said any thing, Gentlemen, on the religious duties which become the members of a Catholic University, because we are directly concerned here with your studies only. It is my consolation to know that so many of you belong to a Society or Association, which the zeal of some excellent priests, one especially, has been so instrumental in establishing in your great towns. You do not come to us to have the foundation laid in your breasts of that knowledge which is highest of all: it has been laid already. You have begun your mental training with faith and devotion; and then you come to us to add the education of the intellect to the education of the heart. Go on as you have begun, and you will be one of the proudest achievements of our great undertaking. We shall be able to point to you in proof that zeal for knowledge may thrive even under the pressure of secular callings; that mother-wit does not necessarily make a man idle, nor inquisitiveness of mind irreverent; that shrewdness and cleverness are not incompatible with firm faith in the mysteries of Revelation; that attainment in Literature and Science need not make men conceited, nor above their station, nor restless, nor self-willed. We shall be able to point to you in proof of the power of Catholicism to make out of

the staple of great towns exemplary and enlightened Christians, —of those classes which, external to Ireland, are the problem and perplexity of patriotic statesmen, and the natural opponents of the teachers of every kind of religion.

As to myself, I wish I could by actual service and hard work of my own respond to your zeal, as so many of my dear and excellent friends, the Professors of the University, have done and do. They have a merit, they have a claim on you, Gentlemen, in which I have no part. If I admire the energy and bravery with which you have undertaken the work of self-improvement, be sure I do not forget their public spirit and noble free devotion to the University any more than you do. I know I should not satisfy you with any praise of this supplement of our academical arrangements which did not include those who give to it its life. It is a very pleasant and encouraging sight to see both parties, the teachers and the taught, co-operating with a pure *esprit-de-corps* thus voluntarily,—they as fully as you can do, —for a great object; and I offer up my earnest prayers to the Author of all good, that He will ever bestow on you all, on Professors and on Students, as I feel sure He will bestow, Rulers and Superiors, who, by their zeal and diligence in their own place, shall prove themselves worthy both of your cause and of yourselves.

Lecture X

Christianity and Medical Science

—An Address to the Students of Medicine

1.

I have had so few opportunities, Gentlemen, of addressing you, and our present meeting is of so interesting and pleasing a character, by reason of the object which occasions it, that I am encouraged to speak freely to you, though I do not know you personally, on a subject which, as you may conceive, is often before my own mind: I mean, the exact relation in which your noble profession stands towards the Catholic University itself and towards Catholicism generally. Considering my own most responsible office as Rector, my vocation as an ecclesiastic, and then again my years, which increase my present claim, and diminish my future chances, of speaking to you, I need make no apology, I am sure, for a step, which will be recommended to you by my good intentions, even though it deserves no consideration on the score of the reflections and suggestions themselves which I shall bring before you. If indeed this University, and its Faculty of Medicine inclusively, were set up for the promotion of any merely secular object,—in the spirit of religious rivalry, as a measure of party politics, or as a commercial speculation,—then indeed I should be out of place, not only in addressing you in the tone of advice, but in being here at all; for what reason could I in that case have had for having now given some of the most valuable years of my life to this University, for having placed it foremost in my thoughts and anxieties,

—(I had well nigh said) to the prejudice of prior, dearer, and more sacred ties,—except that I felt that the highest and most special religious interests were bound up in its establishment and in its success? Suffer me, then, Gentlemen, if with these views and feelings I conform my observations to the sacred building in which we find ourselves, and if I speak to you for a few minutes as if I were rather addressing you authoritatively from the pulpit than in the Rector's chair.

Now I am going to set before you, in as few words as I can, what I conceive to be the principal duty of the Medical Profession towards Religion, and some of the difficulties which are found in the observance of that duty: and in speaking on the subject I am conscious how little qualified I am to handle it in such a way as will come home to your minds, from that want of acquaintance with you personally, to which I have alluded, and from my necessary ignorance of the influences of whatever kind which actually surround you, and the points of detail which are likely to be your religious embarrassments. I can but lay down principles and maxims, which you must apply for yourselves, and which in some respects or cases you may feel have no true application at all.

2.

All professions have their dangers, all general truths have their fallacies, all spheres of action have their limits, and are liable to improper extension or alteration. Every professional man has rightly a zeal for his profession, and he would not do his duty towards it without that zeal. And that zeal soon becomes exclusive, or rather necessarily involves a sort of exclusiveness. A zealous professional man soon comes to think that his profession is all in all, and that the world would not go on without it. We have heard, for instance, a great deal lately in regard to the war in India, of *political* views suggesting

one plan of campaign, and *military* views suggesting another. How hard it must be for the military man to forego his own strategical dispositions, not on the ground that they are not the best,—not that they are not acknowledged by those who nevertheless put them aside to *be* the best *for* the object of military success,—but because military success is not the highest of objects, and the end of ends,—because it is not the sovereign science, but must ever be subordinate to political considerations or maxims of government, which is a higher science with higher objects,—and that therefore his sure success on the field must be relinquished because the interests of the council and the cabinet require the sacrifice, that the war must yield to the statesman's craft, the commander-in-chief to the governor-general. Yet what the soldier feels is natural, and what the statesman does is just. This collision, this desire on the part of every profession to be supreme,—this necessary, though reluctant, subordination of the one to the other,—is a process ever going on, ever acted out before our eyes. The civilian is in rivalry with the soldier, the soldier with the civilian. The diplomatist, the lawyer, the political economist, the merchant, each wishes to usurp the powers of the state, and to mould society upon the principles of his own pursuit.

Nor do they confine themselves to the mere province of secular matters. They intrude into the province of Religion. In England, in the reign of Queen Elizabeth, lawyers got hold of religion, and never have let it go. Abroad, bureaucracy keeps hold of Religion with a more or less firm grasp. The circles of literature and science have in like manner before now made Religion a mere province of their universal empire.

I remark, moreover, that these various usurpations are frequently made in perfectly good faith. There is no intention of encroachment on the part of the encroachers. The commander recommends what with all his heart and soul he thinks best for his country when he

presses on Government a certain plan of campaign. The political economist has the most honest intentions of improving the Christian system of social duty by his reforms. The statesman may have the best and most loyal dispositions towards the Holy See, at the time that he is urging changes in ecclesiastical discipline which would be seriously detrimental to the Church.

And now I will say how this applies to the Medical Profession, and what is its special danger, viewed in relation to Catholicity.

3.

Its province is the physical nature of man, and its object is the preservation of that physical nature in its proper state, and its restoration when it has lost it. It limits itself, by its very profession, to the health of the body; it ascertains the conditions of that health; it analyzes the causes of its interruption or failure; it seeks about for the means of cure. But, after all, bodily health is not the only end of man, and the medical science is not the highest science of which he is the subject. Man has a moral and a religious nature, as well as a physical. He has a mind and a soul; and the mind and soul have a legitimate sovereignty over the body, and the sciences relating to them have in consequence the precedence of those sciences which relate to the body. And as the soldier must yield to the statesman, when they come into collision with each other, so must the medical man to the priest; not that the medical man may not be enunciating what is absolutely certain, in a medical point of view, as the commander may be perfectly right in what he enunciates strategically, but that his action is suspended in the given case by the interests and duty of a superior science, and he retires not confuted but superseded.

Now this general principle thus stated, all will admit: who will deny that health must give way to duty? So far there is no perplexity: supposing a fever to break out in a certain place, and the medical

practitioner said to a Sister of Charity who was visiting the sick there, "You will die to a certainty if you remain there," and her ecclesiastical superiors on the contrary said, "You have devoted your life to such services, and there you must stay;" and supposing she stayed and was taken off; the medical adviser would be right, but who would say that the Religious Sister was wrong? She did not doubt his word, but she denied the importance of that word, compared with the word of her religious superiors. The medical man was right, yet he could not gain his point. He was right in what he said, he said what was true, yet he had to give way.

Here we are approaching what I conceive to be the especial temptation and danger to which the medical profession is exposed: it is a certain sophism of the intellect, founded on this maxim, implied, but not spoken or even recognized—"What is true is lawful." Not so. Observe, here is the fallacy,—What is true in one science is dictated to us indeed according to that science, but not according to another science, or in another department. What is certain in the military art has force in the military art, but not in statesmanship; and if statesmanship be a higher department of action than war, and enjoins the contrary, it has no claim on our reception and obedience at all. And so what is true in medical science might in all cases be carried out, *were* man a mere animal or brute without a soul; but since he is a rational, responsible being, a thing may be ever so true in medicine, yet may be unlawful in fact, in consequence of the *higher* law of morals and religion having come to some different conclusion. Now I must be allowed some few words to express, or rather to suggest, more fully what I mean.

The whole universe comes from the good God. It is His creation; it is good; it is all good, as being the work of the Good, though good only in its degree, and not after His Infinite Perfection. The physical nature of man is good; nor can there be any thing sinful in itself in

acting according to that nature. Every natural appetite or function is lawful, speaking abstractedly. No natural feeling or act is in itself sinful. There can be no doubt of all this; and there can be no doubt that science can determine what is natural, what tends to the preservation of a healthy state of nature, and what on the contrary is injurious to nature. Thus the medical student has a vast field of knowledge spread out before him, true, because knowledge, and innocent, because true.

So much in the abstract—but when we come to *fact*, it may easily happen that what is in itself innocent may not be innocent to this or that person, or in this or that mode or degree. Again, it may easily happen that the impressions made on a man's mind by his own science may be indefinitely more vivid and operative than the enunciations of truths belonging to some other branch of knowledge, which strike indeed his ear, but do not come home to him, are not fixed in his memory, are not imprinted on his imagination. And in the profession before us, a medical student may realize far more powerfully and habitually that certain acts are *advisable in themselves* according to the law of physical nature, than the fact that they are forbidden according to the law of some higher science, as theology; or again, that they are accidentally wrong, as being, though lawful in themselves, wrong in this or that individual, or under the circumstances of the case.

Now to recur to the instance I have already given: it is supposable that that Sister of Charity, who, for the sake of her soul, would not obey the law of self-preservation as regards her body, might cause her medical adviser great irritation and disgust. His own particular profession might have so engrossed his mind, and the truth of its maxims have so penetrated it, that he could not understand or admit any other or any higher system. He might in process of time have become simply dead to all religious truths, because such truths were not present to him, and those of his own science were ever present.

And observe, his fault would be, not that of taking error for truth, for what he relied on *was* truth—but in not understanding that there were other truths, and those higher than his own.

Take another case, in which there will often in particular circumstances be considerable differences of opinion among really religious men, but which does not cease on that account to illustrate the point I am insisting on. A patient is dying: the priest wishes to be introduced, lest he should die without due preparation: the medical man says that the thought of religion will disturb his mind and imperil his recovery. Now in the particular case, the one party or the other may be right in urging his own view of what ought to be done. I am merely directing attention to the *principle* involved in it. Here are the representatives of two great sciences, Religion and Medicine. Each says what is true in his own science, each will think he has a right to insist on seeing that the truth which he himself is maintaining is carried out in action; whereas, one of the two sciences is above the other, and the end of Religion is indefinitely higher than the end of Medicine. And, however the decision ought to go, in the particular case, as to introducing the subject of religion or not, I think the priest ought to have that decision; just as a Governor-General, not a Commander-in-Chief, would have the ultimate decision, were politics and strategics to come into collision.

You will easily understand, Gentlemen, that I dare not pursue my subject into those details, which are of the greater importance for the very reason that they cannot be spoken of. A medical philosopher, who has so simply fixed his intellect on his own science as to have forgotten the existence of any other, will view man, who is the subject of his contemplation, as a being who has little more to do than to be born, to grow, to eat, to drink, to walk, to reproduce his kind, and to die. He sees him born as other animals are born; he sees life leave him, with all those phenomena of annihilation which accompany the

death of a brute. He compares his structure, his organs, his functions, with those of other animals, and his own range of science leads to the discovery of no facts which are sufficient to convince him that there is any difference in kind between the human animal and them. His practice, then, is according to his facts and his theory. Such a person will think himself free to give advice, and to insist upon rules, which are quite insufferable to any religious mind, and simply antagonistic to faith and morals. It is not, I repeat, that he says what is untrue, supposing that man *were* an animal and nothing else: but he thinks that whatever is true in his own science is at once lawful in practice—as if there were not a number of rival sciences in the great circle of philosophy, as if there were not a number of conflicting views and objects in human nature to be taken into account and reconciled, or as if it were his duty to forget all but his own; whereas

There are more things in heaven and earth, Horatio,
Than are dreamt of in your philosophy.

I have known in England the most detestable advice given to young persons by eminent physicians, in consequence of this contracted view of man and his destinies. God forbid that I should measure the professional habits of Catholics by the rules of practice of those who were not! but it is plain that what is actually carried out where religion is not known, exists as a temptation and a danger in the Science of Medicine itself, where religion is known ever so well.

4.

And now, having suggested, as far as I dare, what I consider the consequences of that radical sophism to which the medical profession

is exposed, let me go on to say in what way it is corrected by the action of Catholicism upon it.

You will observe, then, Gentlemen, that those higher sciences of which I have spoken, Morals and Religion, are not represented to the intelligence of the world by intimations and notices strong and obvious, such as those which are the foundation of Physical Science. The physical nature lies before us, patent to the sight, ready to the touch, appealing to the senses in so unequivocal a way that the science which is founded upon it is as real to us as the fact of our personal existence. But the phenomena, which are the basis of morals and Religion, have nothing of this luminous evidence. Instead of being obtruded upon our notice, so that we cannot possibly overlook them, they are the dictates either of Conscience or of Faith. They are faint shadows and tracings, certain indeed, but delicate, fragile, and almost evanescent, which the mind recognizes at one time, not at another,—discerns when it is calm, loses when it is in agitation. The reflection of sky and mountains in the lake is a proof that sky and mountains are around it, but the twilight, or the mist, or the sudden storm hurries away the beautiful image, which leaves behind it no memorial of what it was. Something like this are the Moral Law and the informations of Faith, as they present themselves to individual minds. Who can deny the existence of Conscience? who does not feel the force of its injunctions? but how dim is the illumination in which it is invested, and how feeble its influence, compared with that evidence of sight and touch which is the foundation of Physical Science! How easily can we be talked out of our clearest views of duty! how does this or that moral precept crumble into nothing when we rudely handle it! how does the fear of sin pass off from us, as quickly as the glow of modesty dies away from the countenance! and then we say, "It is all superstition." However, after a time we look round, and then to our surprise we see, as before, the same law of duty, the same moral

precepts, the same protests against sin, appearing over against us, in their old places, as if they never had been brushed away, like the divine handwriting upon the wall at the banquet. Then perhaps we approach them rudely, and inspect them irreverently, and accost them sceptically, and away they go again, like so many spectres,—shining in their cold beauty, but not presenting themselves bodily to us, for our inspection, so to say, of their hands and their feet. And thus these awful, supernatural, bright, majestic, delicate apparitions, much as we may in our hearts acknowledge their sovereignty, are no match as a foundation of Science for the hard, palpable, material facts which make up the province of Physics. Recurring to my original illustration, it is as if the India Commander-in-Chief, instead of being under the control of a local seat of government at Calcutta, were governed simply from London, or from the moon. In that case, he would be under a strong temptation to neglect the home government, which nevertheless in theory he acknowledged. Such, I say, is the natural condition of mankind:—we depend upon a seat of government which is in another world; we are directed and governed by intimations from above; we need a local government on earth.

That great institution, then, the Catholic Church, has been set up by Divine Mercy, as a present, visible antagonist, and the only possible antagonist, to sight and sense. Conscience, reason, good feeling, the instincts of our moral nature, the traditions of Faith, the conclusions and deductions of philosophical Religion, are no match at all for the stubborn facts (for they are facts, though there are other facts besides them), for the facts, which are the foundation of physical, and in particular of medical, science. Gentlemen, if you feel, as you must feel, the whisper of a law of moral truth within you, and the impulse to believe, be sure there is nothing whatever on earth which can be the sufficient champion of these sovereign authorities of your soul, which can vindicate and preserve them to you, and make you loyal to

them, but the Catholic Church. You fear they will go, you see with dismay that they are going, under the continual impression created on your mind by the details of the material science to which you have devoted your lives. It is so—I do not deny it; except under rare and happy circumstances, go they will, unless you have Catholicism to back you up in keeping faithful to them. The world is a rough antagonist of spiritual truth: sometimes with mailed hand, sometimes with pertinacious logic, sometimes with a storm of irresistible facts, it presses on against you. What it says is true perhaps as far as it goes, but it is not the whole truth, or the most important truth. These more important truths, which the natural heart admits in their substance, though it cannot maintain,—the being of a God, the certainty of future retribution, the claims of the moral law, the reality of sin, the hope of supernatural help,—of these the Church is in matter of fact the undaunted and the only defender.

Even those who do not look on her as divine must grant as much as this. I do not ask you for more here than to contemplate and recognize her as a fact,—as other things are facts. She has been eighteen hundred years in the world, and all that time she has been doing battle in the boldest, most obstinate way in the cause of the human race, in maintenance of the undeniable but comparatively obscure truths of Religion. She is always alive, always on the alert, when any enemy whatever attacks them. She has brought them through a thousand perils. Sometimes preaching, sometimes pleading, sometimes arguing,—sometimes exposing her ministers to death, and sometimes, though rarely, inflicting blows herself,—by peremptory deeds, by patient concessions,—she has fought on and fulfilled her trust. No wonder so many speak against her, for she deserves it; she has earned the hatred and obloquy of her opponents by her success in opposing them. Those even who speak against her in this day, own that she was of use in a former day. The historians in fashion with us

just now, much as they may disown her in their own country, where she is an actual, present, unpleasant, inconvenient monitor, acknowledge that, in the middle ages which are gone, in her were lodged, by her were saved, the fortunes and the hopes of the human race. The very characteristics of her discipline, the very maxims of her policy, which they reprobate now, they perceive to have been of service then. They understand, and candidly avow, that once she was the patron of the arts, the home and sanctuary of letters, the basis of law, the principle of order and government, and the saviour of Christianity itself. They judge clearly enough in the case of others, though they are slow to see the fact in their own age and country; and, while they do not like to be regulated by her, and kept in order by her, themselves, they are very well satisfied that the populations of those former centuries should have been so ruled, and tamed, and taught by her resolute and wise teaching. And be sure of this, that as the generation now alive admits these benefits to have arisen from her presence in a state of society now gone by, so in turn, when the interests and passions of this day are passed away, will future generations ascribe to her a like special beneficial action upon this nineteenth century in which we live. For she is ever the same,—ever young and vigorous, and ever overcoming new errors with the old weapons.

5.

And now I have explained, Gentlemen, why it has been so highly expedient and desirable in a country like this to bring the Faculty of Medicine under the shadow of the Catholic Church. I say "in a country like this;" for, if there be any country which deserves that Science should not run wild, like a planet broken loose from its celestial system, it is a country which can boast of such hereditary faith, of such a persevering confessorship, of such an accumulation of good

works, of such a glorious name, as Ireland. Far be it from this country, far be it from the counsels of Divine Mercy, that it should grow in knowledge and not grow in religion! and Catholicism is the strength of Religion, as Science and System are the strength of Knowledge.

Aspirations such as these are met, Gentlemen, I am well aware, by a responsive feeling in your own hearts; but by my putting them into words, thoughts which already exist within you are brought into livelier exercise, and sentiments which exist in many breasts hold intercommunion with each other. Gentlemen, it will be your high office to be the links in your generation between Religion and Science. Return thanks to the Author of all good that He has chosen you for this work. Trust the Church of God implicitly, even when your natural judgment would take a different course from hers, and would induce you to question her prudence or her correctness. Recollect what a hard task she has; how she is sure to be criticized and spoken against, whatever she does;—recollect how much she needs your loyal and tender devotion. Recollect, too, how long is the experience gained in eighteen hundred years, and what a right she has to claim your assent to principles which have had so extended and so triumphant a trial. Thank her that she has kept the faith safe for so many generations, and do your part in helping her to transmit it to generations after you.

For me, if it has been given me to have any share in so great a work, I shall rejoice with a joy, not such indeed as I should feel were I myself a native of this generous land, but with a joy of my own, not the less pure, because I have exerted myself for that which concerns others more nearly than myself. I have had no other motive, as far as I know myself, than to attempt, according to my strength, some service to the cause of Religion, and to be the servant of those to whom as a nation the whole of Christendom is so deeply indebted; and though this University, and the Faculty of Medicine which belongs to it, are as yet only in the commencement of their long career of usefulness, yet

while I live, and (I trust) after life, it will ever be a theme of thankfulness for my heart and my lips, that I have been allowed to do even a little, and to witness so much, of the arduous, pleasant, and hopeful toil which has attended on their establishment.

I think it worthwhile, in illustration of what I have said above at the page specified, to append the following passage from Grandorgæus's catalogue of Muratori's works.

"Sanctissimus D.N. Benedictus xiv. Pont. Max. Epistolam sapientiæ ac roboris plenam dederat ... ad Episcopum Terulensem Hispaniæ Inquisitionis Majorem Inquisitorem, quâ illum hortabatur, ut 'Historiam Pelagianam et dissertationem, etc.,' editas à claræ memoriæ Henrico Cardinali Norisio, in Indicem Expurgatorium Hispanum nuper ingestas, perinde ac si aliquid Baianismi aut Jansenismi redolerent, prout auctor 'Bibliothecæ Jansenisticæ' immerito autumavit, quamprimum expungendas curaret. Eoque nomine Sapientissimus Pontifex plura in medium attulit prudentis œconomix exempla, qua semper usum, supremum S. R. Congr. Indicis Tribunal, à proscribendis virorum doctissimorum operibus aliquando temperavit.

"Quum autem summus Pontifex, ea inter nomina illustria Tillemontii, Bollandistarum, Bosoueti Ep. Meld., et illud recensuerit L. A. Muratorii, his ad Auctorem nostrum delatis, quam maximè indoluit, veritus ne in tantâ operum copiâ ab se editorum, aliquid Fidei aut Religioni minùs consonum sibi excidisset...

"Verùm clementissimus Pontifex ne animum desponderet doctus et humilis filius, perhumaniter ad ipsum rescripsit ... eumque paternè consolatus, inter alia hæc habet: 'Quanto si era detto nella nostra Lettera all' Inquisitore di Spagna in ordine alle di Lei Opere, non aveva che fare con la materia delle Feste, nè con verun dogma o disciplina. Il contenuto delle Opere chi qui non è piaciuto (nè che Ella poteva mai lusingarsi che fosse per piacere), riguarda la Giurisdizione Temporale del Romano Pontifice nè suoi stati,' " etc. (pp. lx., lxi).

中国人民大学出版社外语出版分社读者信息反馈表

尊敬的读者：

感谢您购买和使用中国人民大学出版社外语出版分社的_____一书，我们希望通过这张小小的反馈卡来获得您更多的建议和意见，以改进我们的工作，加强我们双方的沟通和联系。我们期待着能为更多的读者提供更多的好书。

请您填妥下表后，寄回或传真回复我们，对我们的支持我们不胜感激！

1. 您是从何种途径得知本书的：

☐书店 ☐网上 ☐报纸杂志 ☐朋友推荐

2. 您为什么决定购买本书：

☐工作需要 ☐学习参考 ☐对本书主题感兴趣 ☐随便翻翻

3. 您对本书内容的评价是：

☐很好 ☐好 ☐一般 ☐差 ☐很差

4. 您在阅读本书的过程中有没有发现明显的专业及编校错误，如果有，它们是：

5. 您对哪些专业的图书信息比较感兴趣：

6. 如果方便，请提供您的个人信息，以便于我们和您联系（您的个人资料我们将严格保密）：

出版说明

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切：“如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。”今人之于古人的“以意逆志”尚且如此，又遑论国人之于西人？于是王国维先生认为“外国语中之无我国‘天’字之相当字，与我国语中之无God之相当字无以异”；经典之妙，“无论何人，不能精密译之”。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本书编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出“世界大师原典文库（中文导读插图版）”，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，“世界大师原典文库（中文导读插图版）”会成为各界读者阅读、研究和收藏的精神大餐。

导读

韩东晖 孟 然

一、背景介绍

启蒙（enlightenment）是近代哲学的宏大主题。滥觞于16世纪末17世纪初的近代早期哲学汲取了中世纪和文艺复兴的思想资源，又突破了中世纪经院哲学的束缚，开启了哲学发展的新阶段。自培根、笛卡尔以降，英才辈出，流派众多。在哲学思想的大变革、大发展当中，一个重要转折点就是以崭新的方式重新开始探讨人类的情感，这种讨论从心理学意义上人的情感出发，扩展至认识论、伦理学、政治学等各个方面。

之所以说是重新开始，原因在于这种对人类情感的探讨从先前哲学家的文本中汲取了大量的有益素材。古希腊的柏拉图、亚里士多德、斯多亚学派、伊壁鸠鲁学派，古罗马的西塞罗，中世纪的阿奎那等哲学家，都探讨过人类情感及其相关领域，互有差异，又各成体系，近代早期哲学就是以其主题和思路为基础来展开的。但是，近代哲学对于古代文本的继承在很大程度上是具有批判性的，往往是对各种观点综合比较之后个人观点的阐发，并带有鲜明的时代特征。

具体到17世纪的英国，最主要的时代特征体现在“苏格兰启蒙运动”当中。这场运动以人文主义和科学理性为依托，以大量的文化成就与科学进步为特征，引领苏格兰成为整个欧洲平均文化水平最高的地区。哲学则是这场运动的最高成就，包括弗朗西斯·哈奇森、大卫·休谟、亚当·斯密、托马斯·里德在内的重要哲学家，都在这一时期酝酿出各自的主要思想和重要作品，一些在中世纪或文艺复兴时期诞生的古老大学如格拉斯哥大学、爱丁堡大学、阿伯丁大学则成为这些伟大思想传播的基地。

我们现在手中的这本书，亚当·斯密的《道德情操论》，就是产生于上述背景之中的伟大作品之一。作者亚当·斯密（1723—1790）是格拉斯哥大学逻辑和伦理学教授，苏格兰启蒙运动的关键人物，因其《国富论》（*An Inquiry into the Nature and Causes of the Wealth of Nations*, 1776）而被称为“自由主义经济学和资本主义之父”。在2009年一家苏格兰电视台举办的投票中，斯密还被入选为自古至今“最伟大的苏格兰人”之列。比起《国富论》所受到的关注和获得的荣耀，这本《道德情操

论》的光环则少了许多。然而或许在作者本人看来，后一本更具价值。这是他出版的第一部著作，同时也可以说是最后一部，因为在此书第一版出版（1759年）之后的30余年中，斯密不遗余力地反复修订了5次（1761、1767、1774、1781、1790），最终的第六版于斯密去世前三个月才出版，且做了大量补充和重大修改。

这本书起源于斯密在任格拉斯哥大学道德哲学教授期间的一系列讲座：1751年斯密离开爱丁堡大学，被委任为格拉斯哥大学逻辑学教授，随后于1752年转入道德哲学。一般认为，本书直接源于1752年到1758年之间斯密任教期间的逐步积累。

其实早在30年代斯密就在这所大学里受到了道德哲学的教育，当时的教授是弗朗西斯·哈奇森（1694—1746）。哈奇森是苏格兰启蒙运动的先锋，他是格拉斯哥大学首个用英语代替拉丁语教课的老师，他关于道德感（the moral sense）、仁慈等问题的论述直接影响了对于道德哲学的研究入径，文本的最后一部分斯密对于哈奇森的思想及其与自身理论的差异作了较为详细的评述（参见：Part VII. Sect. III. Chap.III；Part VII. Sect. II. Chap.III）。

值得一提的是，与思想影响相比，哈奇森对于斯密的影响更重要的或许在于人格魅力与讲课风格上。哈奇森崇尚自由、性格温和、口才极佳，深得学生爱戴，也被斯密称为“永远难以忘怀的哈奇森”（“the never to be forgotten Hutcheson”）。

另一个最主要的影响在于，哈奇森一定程度上搭起了斯密和休谟之间的友谊之桥。1739年经哈奇森介绍，斯密和休谟相识，从此两人便成为一生的挚友。普遍认为休谟的道德哲学是哈奇森式的，但是休谟明显在自爱和仁爱两者的平衡方面走得更远，以至于形成了一套更为完整的情感主义伦理体系。而休谟的理论也给予了斯密重大的影响：斯密理论中的核心概念“同情”和“旁观者”等在休谟的理论中已得到阐述，斯密的理论与之有着密切的联系，但是也存在明显的差异。具体的解读我们将在接下来的概念解析中介绍。

二、概念解析

在关于情感、道德的研究中，很多概念往往模糊不清，这种模糊性与自然科学、法学、逻辑学的精确性形成了鲜明的对比；但也正是这种模糊性，使这种学科的发展总伴随着百家争鸣，莫衷一是。对于同一个概念，不同的哲学家会有自己独特的解读，并使其与自己的整个体系相协调。

在斯密的文本中，有一些反复出现的概念。开头标题中的“情操”（sentiments）就是一个可宽可窄的模糊概念。它可以指人产生的所有感觉（feeling）、激情（passion）和情感（emotions）等等。但是在18世纪中期，在哈奇森、休谟和斯密的作品中，这一概念似乎被限定于一种道德感（the moral sense），这种感觉根植于人性，天然地形成关于道德的非推理的知识，从而激发我们的行动。如果我们向前追溯，就会发现这样一种道德感、道德概念其实并非欧洲人独有，而是人同此心，心同此理，例如在中国先秦文献《孟子》中，我们看到：“人皆有不忍人之心。所谓人皆有不忍人之心者，今人乍见孺子将入于井，皆有怵惕惻隐之心，非所以内交于孺子之父母也；非所以要誉于乡党朋友也；非恶其声而然也。由是观之，无惻隐之心，非人也。”（《孟子·公孙丑上》）这就是道德感的典型论述，而“情操”这一中文译名也恰当地表现出这种情感。但是不同的是，哈奇森的道德感更多的是一种天赋的德性或善良意志，但在斯密看来，情操并不是决然利他的，而是一种包含了自爱和仁爱两种天然情感。

自爱和仁爱两种天然情感的共存则表现为同情（sympathy），也就是通过想象力将自己与当事人换位思考，从而产生与当事人的原始情感相类似的情感。这是斯密的理论中最基本的道德情操，也是整个理论的主线。斯密提醒我们，同情既不像哈奇森所描述的那样仁慈，也并不是完全出自于自私的情感，而是一种自然的情感事实。严格说来，我们进行换位思考，并不是把自己放在对方的情景中，而是想象如果我是当事人。这时，转换了的不仅是环境，也调换了自己的身份和地位。因此我感受到的悲伤或愉快都是因为我以对方的身份进入了对方的情境中。这

也是斯密和休谟在该概念上的差异之一：休谟认为同情来源于对对象本身及其效用的好恶情感；而斯密则把同情归于自然形成的对当事人的激情的想象和感受。

在同情的基础上形成了“当事人”和“旁观者”的概念。这一对概念的关系颇为微妙：处于真实情景中的“当事人”要努力将自己的情绪降低到“旁观者”能赞同的程度；而“旁观者”则要努力体谅“当事人”此时此刻的情感；通过双方的努力，要尽量促成同情和原始激情的一致，这种一致会产生赞同的情感判断，双方的相互赞同导致了美德的确立：旁观者努力体谅当事人的情感，则产生公正、宽容、仁慈等美德；而当事人努力控制自己，则产生崇高、自制、庄重等美德。

以上的概念便是斯密道德哲学的基础和原则。人们完全是根据自己希望这些激情如何表达以及自己对相应表达方式的同情，来判别各类情绪和行为是否恰当。接下来，我们会对文本进行梳理，以此展示斯密是如何在这一原则基础上建立起整个理论的。

三、文本梳理

1. 合宜与赞同。在第一卷中，斯密首先研究了各种原始激情和行为的合宜性。肉体欲望产生的激情、思维定势产生的激情，以及不友好的憎恶和愤恨之情引起他人的不快，需要当事人加以克制，否则将难以得到旁观者的同情；相反，那些仁慈、善良、友好的感情却总是能够获得最大的同情，令人感到愉快和合适。也正是因为人们容易同情快乐而不是悲伤，所以财富、权力和优越地位可以给我们带来荣誉和赞许，但贫穷只会遭到忽视和羞辱，财富和地位就成了一部分人追求的目的，也成了骚动、忙碌、劫掠和不义的根源，它给世界带来了贪婪和野心。因此当我们在追求财富地位时，吸引我们的不全然是舒适的生活，更重要的是博得了他人关心和赞同的满足感。

2. 优点和缺点。在第二卷中，斯密开始研究他人的各种原始激情和行为的优劣，这是比合宜性更进一步的道德判断。优与劣是一种毋庸置疑的赞同或反对的对象，是应得到报答或惩罚的品质。与合宜性相比，优劣的判断涉及三者之间感情的互通——旁观者、行为者和受行为影响者。所以，斯密提醒我们注意，我们的评判一方面要基于对行为者动机和感情的直接体会，另一方面也要基于对受行为影响者的感情的间接体会。只是我们对优点与缺点的感受有些差异：对优点的感受大多来源于对施恩者动机与行为的直接同情与赞许，而对缺点的感受却更多来自于对受难者苦难与愤恨的间接体会。

不论是行为合宜性还是优劣的判断，都不只是完美的人具有的能力，而是每一个平凡人在道德生活中确实存在的基本感情。造物主赋予所有生物自卫和繁衍种族的目的，赋予人类的则是对目的的渴望，但同时并没有赋予我们相应的理性来发现达到目的的适当手段，而是通过直觉和本能来引导我们发现手段，利用手段来达到目的。斯密在这里借着造物主的荣光实际上在为人类的天然情感和欲望提供坚实依据，树立自信和尊严。这是欧洲古典自由主义精神的体现，也是苏格兰启蒙运动的典型理论特征。

在讨论了优点的判断标准之后，亚当·斯密比较了两种最重要的优点

——仁慈和正义。在他看来，仁慈是一种积极的美德，不受束缚也不被强迫，如果努力践行仁慈，那么它会得到最大的报答，缺乏这种美德也不会受到惩罚；正义是消极的美德，它用压力迫使人们遵守，谁违背它就会招致愤恨，导致伤害。那些怀着正确动机而仁慈的人，会欣喜，会赞同和尊重自己的行为，因而充满了欢乐、安详和镇静的心情，这些感情构成了对优点的意识；那些违反神圣的正义法律的人会思考自己的所作所为，就会产生与旁观者类似的情感——对自己的憎恨、对他人的怜悯、对社会的畏惧——这就是人们产生畏惧心理的根源。仁慈和正义所导致的欢乐和畏惧的情感有助于维系社会，正义在此发挥着更重要的作用：如果仁慈是装饰的话，那么正义则是支柱，恶有恶报和被惩罚的害怕心理就像卫士一样锄强扶弱。

在这里，与此前的观点类似，斯密也试图说明，我们最初对侵犯个人罪行的惩罚的关注不是出于对爱护社会的某种关切，也不是理性推论的结果，因为我们会对不同的惩罚抱有不同的感情，这说明不同的感情并不是按照同一原则而做出的，以恶报恶是出于我们的直觉和本能。所以引起感激和气愤的唯一原因就是其引起快乐或者痛苦。至于行为引起的善果或恶果，那是命运的安排，所以命运对人类有关优点和缺点的情感也在发生影响：如果行为没有产生预期的后果，那么我们对优缺点的感觉就慢慢减弱，如果行为偶然引起了极大的快乐或痛苦，我们对优缺点的感觉就会明显增强。

3. 良心和责任。在对他人的感情和行为作出了评判之后，在第三卷中，斯密引导我们对自己的行为进行分析和判断。同样基于同情原则，当我们站在对方的立场来检视自己的行为时，会不会赞同自己的行为呢？这也要看能否充分理解并同情那些影响自己行为的情感和意图。所以对自己的判断最终来自他人和社会的反映。因此我们最大的幸福在于受人尊敬和知道自己值得别人尊敬，最大的痛苦则是受人痛恨和知道自己该被人痛恨。

这就导致我们时时刻刻都要面临一个公正的旁观者的审判，自己就是旁人：仅仅得到别人的钦佩无法令人满足，我们必须成为自己品质和行为的公正的旁观者，以这种眼光来查看自己的行为得到的赞同才会使自我称赞更加坚定；同样即使旁人对自己的恶劣行为不得而知，那个

公正的旁观者还是会让我们反省自己的行为并悔恨不已，从而掉入绝望、颓废和心烦意乱的深渊。这个第三者就是——理性、道义、良心、内心中那个存在者，判断我们行为的伟大法官。它是一种比自爱和爱他人更强烈的爱，一种对光荣而崇高的东西的敬爱，一种对伟大和尊严的敬爱，一种对自己品质中那些优点的热爱。

不过，在真正的情境中，有时我们激情会异常强烈，以致难以做到这个法官所要求的合宜性。但是这种偏差并不会持久，我们在社会中不断观察别人，不断感受赞同或反对的感情，就会逐渐形成一般的道德准则。一旦准则形成，我们就会在各种场合下以这些准则来衡量行为的合宜性，也会尽力遵守准则，这种对准则的尊重就形成了责任感。

责任感对于人类社会的维持具有重要作用，一旦缺失，人类社会就会混乱甚至瓦解。这就需要为责任感的合法性提供更坚实的依据。斯密在这一方面强调了宗教的影响。宗教将一般准则神圣化，往往能让人们对准则产生敬畏之感。但是这明显不是斯密的意图。斯密多次强调天性的倾向与自然的事实和准则的一致，因此在这里斯密又一次借着神的名义来凸显人类天性和世界秩序的光辉，所以责任感归根到底是人性和自然的要求。

4. 效用和习惯。第四卷和第五卷探讨了其他影响我们情感和判断的因素：效用、习惯和风气。

休谟认为效用是美的主要来源之一，这是与人的天性相符的，所有人都热爱秩序，重视条理美、艺术美和创造美。与艺术类似，人格品质的美与效用同样是一致的：优秀品质旨在实现最令人愉悦的目的，因而拥有最完善的美；恶劣的品质则为了满足不耻的野心而充满了笨拙和丑陋。

但是，斯密似乎认为效用虽然有此影响，但并不是影响赞同判断的决定因素。在他看来，赞同的情感总是包含某种合宜性的感觉，这种感觉与对效用的直觉不同，更多的源于旁观者与当事人情感之间的一致性；效用的作用在于给予这些行动一种新的美，并由此使它们更进一步地博得我们的赞同。

同样习惯和风气也是影响道德感的原则：对于两个恒常联结的对象，如果在它们的联结中存在某种天然的合宜性，习惯就会使我们对它的感觉增强，一旦出现不同，我们会更加不愉快；如果它们的联系不合宜，习惯则会减弱我们的不合宜感。大多数人的性格和品质容易受到时代、国家和环境之差异的影响而不同。

不过，它们对道德情感的影响却并非如此重大，因为道德情感以人类最强烈和最充沛的感情为基础。这种基础如此之强，以至于习惯在大多数情况下都是与其相协调而不是相背离的。只是在一些特殊的行为中，习惯可能会偶尔严重损害良好的道德。所以与其说习惯影响了判断，倒不如说是情感形成了习惯。

5. 美德和品质。在讨论了美德的根本来源及其影响因素之后，斯密接下来在第六卷中具体讨论了各种美德的品质。天性已经赋予了美德以次序。首先指向自身，其次指向他者。对自己的感受是原始感受，是实体；对他人的感受是因原始感受而产生的反射或同情的想象，是影子。

对自己幸福的关心，要求我们具有谨慎的美德。因为身体状况、财富、地位和名誉，是人幸福的主要依据，所以这便是谨慎的合宜职责。这就要求谨慎之人将安全作为首要的对象，同时认真学习要了解的东西、真诚待人、恪守礼仪、坚持勤劳和简朴。不过，人们为了自己的幸福，通常不愿意承担任何自己职责范围以外的责任，远离政治。所以谨慎虽被认为是一种值得尊重的品质，但从来不被认为是最令人喜爱的美德。

对别人幸福的关心，要求我们具有正义和仁慈的美德。亲人是我们首先要关心的对象。由于环境及其他原因，亲属之间自然会产生天然感情；这种感情会发展成为一种一般准则，准则与感情共同维持着亲人之间的习惯性同情，彼此相爱，相互照应。如果对方并非亲人、朋友、邻人或位高权重者，但我们因为对他的高尚行为怀有尊敬和赞同，确立了对他全部感情的基础，并经过长期考验而得到证实，那么这便是最值得尊重的感情，也最为持久和牢靠。

对社会的感情最主要体现在热爱自己的国家，因为我自己和我们最

热爱和最尊敬的人都依赖于国家的安全和繁荣，所以我的自私、仁慈都使得我热爱自己的祖国。

其实，人们不仅关心自己、家庭、朋友、国家的幸福，对任何单纯而有知觉的生物都会衷心期盼他们幸福，厌恶他们的不幸。神以其伟大、仁慈、智慧来直接关怀和保护着这个世界的所有居民。人们的能力有限，无法关心到普遍的幸福，只是被限定在很小的范围内，但是这个范围与人的能力和理智是更加相宜。

一个人如果能按照完美的谨慎、严格的正义和合理的仁慈去行事，那么他可以说是具有完美美德的人。但是，人实际上非常容易被自己的激情引入歧途。这就需要自我控制，从而使自己的行为限于合宜的范围内。自我控制在抑制愤怒和恐惧时表现为意志坚忍、刚毅和坚强；抑制欲望时表现为节制、庄重、谨慎和适度；抑制骄傲和虚荣时表现为冷静、端正和谦逊。

6. 理论和评价——第七卷是第六版中新加的部分，是斯密对之前的道德理论进行整理和评述。这一卷大体分为两个部分：论美德的本质和论美德的标准。不过，我们发现，斯密对于之前理论的切入和分析基本上都遵循自己的理论思路，且似乎有意无意地用自己的理论作为标准来评价其他的理论。这其中既包含古代的也包含斯密同一时代的重要伦理学家，从柏拉图、亚里士多德、斯多亚学派、伊壁鸠鲁学派到孟德维尔、哈奇森、霍布斯等等，这些人的思想都深刻地影响着斯密伦理学体系的建立，只是有些人是正面的奠基，而有些则是反面的刺激。这卷中涉及的人物和理论较多，斯密对他们的评价不一而足，且流露出暧昧不清和摇摆不定的倾向。具体内容在此不再一一赘述，但是总体上来说，斯密在这一卷中对以往理论进行评述的同时，也对自己的理论进行了一些整理。在第四部分中，我们会对其理论作整体概述，并提出自己对该理论的观点。

四、简要评价

总体来看，斯密的《道德情操论》阐述了这样一种伦理学思想：每个人都必须在社会中生存，而且人的天性既具有自爱的天然情感，喜爱善的东西、厌恶恶的东西的天然倾向，同时也有对他人的同情之心。人们通过自己的天然情感和对他人的同情的双重作用，对自我和他人的激情和行为产生评价：合宜与不合宜；优点与缺点。这些评价逐渐固定下来，形成了社会的一般道德准则。这些道德准则要求我们面对自我要具有谨慎的美德；面对他人及社会要具有仁慈和正义的美德。在实践美德的过程中，我们会不断受到激情的诱惑，这就需要我们用良心与责任感进行自我控制，从而使自己的行为和对他人的评价都控制在准则要求的合宜性范围内。同时命运、效用、习惯和风气都会对这种合宜性的范围产生或多或少的影响，然而这些影响都不是绝对的，道德产生的基础始终都是我们的自爱和仁爱的天然情操。

通过总结，我们可以看到斯密的道德理论始终都存在着一种二元的对立关系：自爱和仁爱，自我和他人，旁观者和当事人，激情和自制，仁慈和谨慎等等，这种对立在斯密的理论中又是统一而平衡的。在他看来，世界是神以其完满的智慧和仁慈而建造的无与伦比的精密仪器，人们只要按照天性、按照自然或造物主给我们的行为规定的那些法则和指令去生活，那么所发生的一切都将有助于整体的幸福和完美。因此多数学者将斯密的道德哲学看做是斯多亚式的。的确，斯密对斯多亚学派自然的和谐、平静的内心、安然的幸福表示赞同，但是作为启蒙运动的核心力量，亚当·斯密理论的核心所凸显的仍然是人的天然情操，这种对人自身情感的挖掘，对于自爱本性的肯定，对美德存乎人心的信心都为人类价值及尊严的树立提供了理论基础。

因此，斯密似乎是在寻求某种中庸的平衡，是对哈奇森的仁爱原则与休谟的效用原则的中和，是对基督教强调的自制与资产阶级要求的自由的中和。这种理论上的中和适应了当时社会的转型，所以也就不难理解为什么这本书第一次出版不久就引起了极大的反响和热烈的回应。然而，我们也应该看到这种不同理论间的中和势必伴随着各种矛盾与碰

撞：究竟如果达成自爱和仁爱的统一？在现实的生活中，不同情形下道德行为和道德判断的合宜性应该如何具体分辨？历史是证实了还是证伪了这一理论？这些都为斯密的道德理论的可操作性和现实价值带来质疑。

但是，如果我们把《国富论》的巨大成功看作在当时社会转型过程中，斯密在其道德理论的土壤上培养出的丰硕果实；那么无疑在当代，人类社会同样面临重大转型，在天平已经越来越偏向自爱的时代中，对于这一理论的探讨同样十分重要。唯一的不同是，斯密的时代要鼓励人们冲破基督教禁欲的牢笼，正视自爱的本性；而当下的时代却需要让人们看到仁慈和正义存在于人的天性之中，对于仁爱之心的蔑视和对正义的践踏，不仅是对整个社会利益的损害，也同样是对自己天性和尊严的无视。

以上是对斯密的《道德情操论》的观点和意义所做的梳理，该书中的细致论证和深刻思想决不能通过这一篇导读来穷尽。每一部伟大的著作都为不同的读者提供了不同的灵感，唯有通过反复阅读和认真思考方能真正从灵感中发掘真理，指引自己的人生。

I—1 : Adam Smith (June 1723—July 1790)

The Theory of Moral Sentiments by Adam Smith Professor of Moral Philosophy in the University of Glasgow.

目录

出版说明

导读

Part I Of the Propriety of Action

Section I Of the Sense of Propriety

Section II Of the Degrees of the Different Passions Which Are Consistent with Propriety

Section III Of the Effects of Prosperity and Adversity upon the Judgment of Mankind with regard to the Propriety of Action; and why it is more easy to obtain their Approbation in the one state than in the other

Part II Of Merit and Demerit; or, of the Objects of Reward

Section I Of the Sense of Merit and Demerit

Section II Of Justice and Beneficence

Section III Of the Influence of Fortune upon the Sentiments of Mankind, with regard to the Merit or Demerit of Actions

Part III Of the Foundation of Our Judgments Concerning Our Own Sentiments and Conduct, and of the Sense of Duty

Part IV Of the Effect of Utility upon the Sentiment of Approbation

Part V Of the Influence of Custom and Fashion upon the Sentiments of Moral Approbation and Disapprobation

Part VI Of the Character of Virtue

Section I Of the Character of the Individual, so far as it affects his own Happiness; or of Prudence

Section II Of the Character of the Individual, so far as it can affect the Happiness of other People

Section III Of Self-command

Conclusion of the Six Part

Part VII Of Systems of Moral Philosophy

Section I Of the Questions which ought to be examined in a Theory of Moral Sentiments

Section II Of the different Accounts which have been given of
the Nature of Virtue

Section III Of the different Systems which have been formed
concerning the Principle of Approbation

Section IV Of the Manner in which different Authors have
treated of the practical Rules of Morality

Part I Of the Propriety of Action

Section I Of the Sense of Propriety

Chap. I Of Sympathy

How selfish soever man may be supposed, there are evidently some principles in his nature, which interest him in the fortune of others, and render their happiness necessary to him, though he derives nothing from it except the pleasure of seeing it. Of this kind is pity or compassion, the emotion which we feel for the misery of others, when we either see it, or are made to conceive it in a very lively manner. That we often derive sorrow from the sorrow of others, is a matter of fact too obvious to require any instances to prove it; for this sentiment, like all the other original passions of human nature, is by no means confined to the virtuous and humane, though they perhaps may feel it with the most exquisite sensibility. The greatest ruffian, the most hardened violator of the laws of society, is not altogether without it.

As we have no immediate experience of what other men feel, we can form no idea of the manner in which they are affected, but by conceiving what we ourselves should feel in the like situation. Though our brother is upon the rack, as long as we ourselves are at our ease, our senses will never inform us of what he suffers. They never did, and never can, carry us beyond our own person, and it is by the imagination only that we can form any conception of what are his sensations.^[1] Neither can that faculty help us to this any other way, than by representing to us what would be our own, if we were in his case. It is the impressions of our own senses only, not those of his, which our imaginations copy. By the imagination we place ourselves in his situation, we conceive ourselves enduring all the same torments, we enter as it were into his body, and become in some measure the same person with him, and thence form some idea of his sensations,

and even feel something which, though weaker in degree, is not altogether unlike them. His agonies, when they are thus brought home to ourselves, when we have thus adopted and made them our own, begin at last to affect us, and we then tremble and shudder at the thought of what he feels. For as to be in pain or distress of any kind excites the most excessive sorrow, so to conceive or to imagine that we are in it, excites some degree of the same emotion, in proportion to the vivacity or dulness of the conception.

That this is the source of our fellow-feeling for the misery of others, that it is by changing places in fancy with the sufferer, that we come either to conceive or to be affected by what he feels, may be demonstrated by many obvious observations, if it should not be thought sufficiently evident of itself. When we see a stroke aimed and just ready to fall upon the leg or arm of another person, we naturally shrink and draw back our own leg or our own arm; and when it does fall, we feel it in some measure, and are hurt by it as well as the sufferer. The mob, when they are gazing at a dancer on the slack rope, naturally writhe and twist and balance their own bodies, as they see him do, and as they feel that they themselves must do if in his situation. Persons of delicate fibres and a weak constitution of body complain, that in looking on the sores and ulcers which are exposed by beggars in the streets, they are apt to feel an itching or uneasy sensation in the correspondent part of their own bodies. The horror which they conceive at the misery of those wretches affects that particular part in themselves more than any other; because that horror arises from conceiving what they themselves would suffer, if they really were the wretches whom they are looking upon, and if that particular part in themselves was actually affected in the same miserable manner. The very force of this conception is sufficient, in their feeble frames, to produce that itching or uneasy sensation complained of. Men of the most robust make, observe that in looking upon sore eyes they often feel a very sensible soreness in their own,

which proceeds from the same reason; that organ being in the strongest man more delicate, than any other part of the body is in the weakest.

Neither is it those circumstances only, which create pain or sorrow, that call forth our fellow-feeling. Whatever is the passion which arises from any object in the person principally concerned, an analogous emotion springs up, at the thought of his situation, in the breast of every attentive spectator. Our joy for the deliverance of those heroes of tragedy or romance who interest us, is as sincere as our grief for their distress, and our fellow-feeling with their misery is not more real than that with their happiness. We enter into their gratitude towards those faithful friends who did not desert them in their difficulties; and we heartily go along with their resentment against those perfidious traitors who injured, abandoned, or deceived them. In every passion of which the mind of man is susceptible, the emotions of the by-stander always correspond to that, by bringing the case home to himself, he imagines should be the sentiments of the sufferer.

Pity and compassion are words appropriated to signify our fellow-feeling with the sorrow of others. Sympathy^[2], though its meaning was, perhaps, originally the same, may now, however, without much impropriety, be made use of to denote our fellow-feeling with any passion whatever.

Upon some occasions sympathy may seem to arise merely from the view of a certain emotion in another person. The passions, upon some occasions, may seem to be transfused from one man to another, instantaneously and antecedent to any knowledge of what excited them in the person principally concerned. Grief and joy, for example, strongly expressed in the look and gestures of any one, at once affect the spectator with some degree of a like painful or agreeable emotion. A smiling face is, to every body that sees it, a cheerful object; as a

sorrowful countenance, on the other hand, is a melancholy one.

This, however, does not hold universally, or with regard to every passion. There are some passions of which the expressions excite no sort of sympathy, but before we are acquainted with what gave occasion to them, serve rather to disgust and provoke us against them. The furious behaviour of an angry man is more likely to exasperate us against himself than against his enemies. As we are unacquainted with his provocation, we cannot bring his case home to ourselves, nor conceive any thing like the passions which it excites. But we plainly see what is the situation of those with whom he is angry, and to what violence they may be exposed from so enraged an adversary. We readily, therefore, sympathize with their fear or resentment, and are immediately disposed to take part against the man from whom they appear to be in so much danger.

If the very appearances of grief and joy inspire us with some degree of the like emotions, it is because they suggest to us the general idea of some good or bad fortune that has befallen the person in whom we observe them: and in these passions this is sufficient to have some little influence upon us. The effects of grief and joy terminate in the person who feels those emotions, of which the expressions do not, like those of resentment, suggest to us the idea of any other person for whom we are concerned, and whose interests are opposite to his. The general idea of good or bad fortune, therefore, creates some concern for the person who has met with it, but the general idea of provocation excites no sympathy with the anger of the man who has received it. Nature, it seems, teaches us to be more averse to enter into this passion, and, till informed of its cause, to be disposed rather to take part against it.

Even our sympathy with the grief or joy of another, before we are informed of the cause of either, is always extremely imperfect. General lamentations, which express nothing but the anguish of the

sufferer, create rather a curiosity to inquire into his situation, along with some disposition to sympathize with him, than any actual sympathy that is very sensible. The first question which we ask is, What has befallen you? Till this be answered, though we are uneasy both from the vague idea of his misfortune, and still more from torturing ourselves with conjectures about what it may be, yet our fellow-feeling is not very considerable.

Sympathy, therefore, does not arise so much from the view of the passion, as from that of the situation which excites it. We sometimes feel for another, a passion of which he himself seems to be altogether incapable; because, when we put ourselves in his case, that passion arises in our breast from the imagination, though it does not in his from the reality. We blush for the impudence and rudeness of another, though he himself appears to have no sense of the impropriety of his own behaviour; because we cannot help feeling with what confusion we ourselves should be covered, had we behaved in so absurd a manner.

Of all the calamities to which the condition of mortality exposes mankind, the loss of reason appears, to those who have the least spark of humanity, by far the most dreadful, and they behold that last stage of human wretchedness with deeper commiseration than any other. But the poor wretch, who is in it, laughs and sings perhaps, and is altogether insensible of his own misery. The anguish which humanity feels, therefore, at the sight of such an object, cannot be the reflection of any sentiment of the sufferer. The compassion of the spectator must arise altogether from the consideration of what he himself would feel if he was reduced to the same unhappy situation, and, what perhaps is impossible, was at the same time able to regard it with his present reason and judgment.

What are the pangs of a mother, when she hears the moanings of her infant that during the agony of disease cannot express what it

feels? In her idea of what it suffers, she joins, to its real helplessness, her own consciousness of that helplessness, and her own terrors for the unknown consequences of its disorder; and out of all these, forms, for her own sorrow, the most complete image of misery and distress. The infant, however, feels only the uneasiness of the present instant, which can never be great. With regard to the future, it is perfectly secure, and in its thoughtlessness and want of foresight, possesses an antidote against fear and anxiety, the great tormentors of the human breast, from which reason^[3] and philosophy will, in vain, attempt to defend it, when it grows up to a man.

We sympathize even with the dead, and overlooking what is of real importance in their situation, that awful futurity which awaits them, we are chiefly affected by those circumstances which strike our senses, but can have no influence upon their happiness. It is miserable, we think, to be deprived of the light of the sun; to be shut out from life and conversation; to be laid in the cold grave, a prey to corruption and the reptiles of the earth; to be no more thought of in this world, but to be obliterated, in a little time, from the affections, and almost from the memory, of their dearest friends and relations. Surely, we imagine, we can never feel too much for those who have suffered so dreadful a calamity. The tribute of our fellow-feeling seems doubly due to them now, when they are in danger of being forgot by every body; and, by the vain honours which we pay to their memory, we endeavour, for our own misery, artificially to keep alive our melancholy remembrance of their misfortune. That our sympathy can afford them no consolation seems to be an addition to their calamity; and to think that all we can do is unavailing, and that, what alleviates all other distress, the regret, the love, and the lamentations of their friends, can yield no comfort to them, serves only to exasperate our sense of their misery. The happiness of the dead, however, most assuredly, is affected by none of these circumstances; nor is it the thought of these things which can ever disturb the profound security

of their repose. The idea of that dreary and endless melancholy, which the fancy naturally ascribes to their condition, arises altogether from our joining to the change which has been produced upon them, our own consciousness of that change, from our putting ourselves in their situation, and from our lodging, if I may be allowed to say so, our own living souls in their inanimated bodies, and thence conceiving what would be our emotions in this case. It is from this very illusion of the imagination, that the foresight of our own dissolution is so terrible to us, and that the idea of those circumstances, which undoubtedly can give us no pain when we are dead, makes us miserable while we are alive. And from thence arises one of the most important principles in human nature, the dread of death, the great poison to the happiness, but the great restraint upon the injustice of mankind, which, while it afflicts and mortifies the individual, guards and protects the society.

[4] Chap. II Of the Pleasure of mutual Sympathy

But whatever may be the cause of sympathy, or however it may be excited, nothing pleases us more than to observe in other men a fellow-feeling with all the emotions of our own breast; nor are we ever so much shocked as by the appearance of the contrary. Those who are fond of deducing all our sentiments from certain refinements of self-love, think themselves at no loss to account, according to their own principles, both for this pleasure and this pain. Man, say they, conscious of his own weakness, and of the need which he has for the assistance of others, rejoices whenever he observes that they adopt his own passions, because he is then assured of that assistance; and grieves whenever he observes the contrary, because he is then assured of their opposition.^[5] But both the pleasure and the pain are always felt so instantaneously, and often upon such frivolous occasions, that it seems evident that neither of them can be derived from any such self-interested consideration. A man is mortified when, after having endeavoured to divert the company, he looks round and sees that

nobody laughs at his jests but himself. On the contrary, the mirth of the company is highly agreeable to him, and he regards this correspondence of their sentiments with his own as the greatest applause.

Neither does his pleasure seem to arise altogether from the additional vivacity which his mirth may receive from sympathy with theirs, nor his pain from the disappointment he meets with when he misses this pleasure; though both the one and the other, no doubt, do in some measure. When we have read a book or poem so often that we can no longer find any amusement in reading it by ourselves, we can still take pleasure in reading it to a companion. To him it has all the graces of novelty; we enter into the surprise and admiration which it naturally excites in him, but which it is no longer capable of exciting in us; we consider all the ideas which it presents rather in the light in which they appear to him, than in that in which they appear to ourselves, and we are amused by sympathy with his amusement which thus enlivens our own. On the contrary, we should be vexed if he did not seem to be entertained with it, and we could no longer take any pleasure in reading it to him. It is the same case here. The mirth of the company, no doubt, enlivens our own mirth, and their silence, no doubt, disappoints us. But though this may contribute both to the pleasure which we derive from the one, and to the pain which we feel from the other, it is by no means the sole cause of either; and this correspondence of the sentiments of others with our own appears to be a cause of pleasure, and the want of it a cause of pain, which cannot be accounted for in this manner. The sympathy, which my friends express with my joy, might, indeed, give me pleasure by enlivening that joy: but that which they express with my grief could give me none, if it served only to enliven that grief. Sympathy, however, enlivens joy and alleviates grief. It enlivens joy by presenting another source of satisfaction; and it alleviates grief by insinuating into the heart almost the only agreeable sensation which it

is at that time capable of receiving.

It is to be observed accordingly, that we are still more anxious to communicate to our friends our disagreeable than our agreeable passions, that we derive still more satisfaction from their sympathy with the former than from that with the latter, and that we are still more shocked by the want of it.

How are the unfortunate relieved when they have found out a person to whom they can communicate the cause of their sorrow? Upon his sympathy they seem to disburthen themselves of a part of their distress: he is not improperly said to share it with them. He not only feels a sorrow of the same kind with that which they feel, but as if he had derived a part of it to himself, what he feels seems to alleviate the weight of what they feel. Yet by relating their misfortunes they in some measure renew their grief. They awaken in their memory the remembrance of those circumstances which occasioned their affliction. Their tears accordingly flow faster than before, and they are apt to abandon themselves to all the weakness of sorrow. They take pleasure, however, in all this, and, it is evident, are sensibly relieved by it; because the sweetness of his sympathy more than compensates the bitterness of that sorrow, which, in order to excite this sympathy, they had thus enlivened and renewed. The cruelest insult, on the contrary, which can be offered to the unfortunate, is to appear to make light of their calamities. To seem not to be affected with the joy of our companions is but want of politeness; but not to wear a serious countenance when they tell us their afflictions, is real and gross inhumanity.

Love is an agreeable; resentment, a disagreeable passion; and accordingly we are not half so anxious that our friends should adopt our friendships, as that they should enter into our resentments. We can forgive them though they seem to be little affected with the favours which we may have received, but lose all patience if they

seem indifferent about the injuries which may have been done to us: nor are we half so angry with them for not entering into our gratitude, as for not sympathizing with our resentment. They can easily avoid being friends to our friends, but can hardly avoid being enemies to those with whom we are at variance. We seldom resent their being at enmity with the first, though upon that account we may sometimes affect to make an awkward quarrel with them; but we quarrel with them in good earnest if they live in friendship with the last. The agreeable passions of love and joy can satisfy and support the heart without any auxiliary pleasure. The bitter and painful emotions of grief and resentment more strongly require the healing consolation of sympathy.

As the person who is principally interested in any event is pleased with our sympathy, and hurt by the want of it, so we, too, seem to be pleased when we are able to sympathize with him, and to be hurt when we are unable to do so. We run not only to congratulate the successful, but to condole with the afflicted; and the pleasure which we find in the conversation of one whom in all the passions of his heart we can entirely sympathize with, seems to do more than compensate the painfulness of that sorrow with which the view of his situation affects us. On the contrary, it is always disagreeable to feel that we cannot sympathize with him, and instead of being pleased with this exemption from sympathetic pain, it hurts us to find that we cannot share his uneasiness. If we hear a person loudly lamenting his misfortunes, which, however, upon bringing the case home to ourselves, we feel, can produce no such violent effect upon us, we are shocked at his grief; and, because we cannot enter into it, call it pusillanimity and weakness. It gives us the spleen, on the other hand, to see another too happy or too much elevated, as we call it, with any little piece of good fortune. We are disobliged even with his joy; and, because we cannot go along with it, call it levity and folly. We are even put out of humour if our companion laughs louder or longer at a

joke than we think it deserves; that is, than we feel that we ourselves could laugh at it.

Chap. III Of the manner in which we judge of the propriety or impropriety of the affections of other men, by their concord or dissonance with out own.

When the original passions of the person principally concerned are in perfect concord with the sympathetic emotions of the spectator, they necessarily appear to this last just and proper, and suitable to their objects; and, on the contrary, when, upon bringing the case home to himself, he finds that they do not coincide with what he feels, they necessarily appear to him unjust and improper, and unsuitable to the causes which excite them. To approve of the passions of another, therefore, as suitable to their objects, is the same thing as to observe that we entirely sympathize with them; and not to approve of them as such, is the same thing as to observe that we do not entirely sympathize with them. The man who resents the injuries that have been done to me, and observes that I resent them precisely as he does, necessarily approves of my resentment. The man whose sympathy keeps time to my grief, cannot but admit the reasonableness of my sorrow. He who admires the same poem, or the same picture, and admires them exactly as I do, must surely allow the justness of my admiration. He who laughs at the same joke, and laughs along with me, cannot well deny the propriety of my laughter. On the contrary, the person who, upon these different occasions, either feels no such emotion as that which I feel, or feels none that bears any proportion to mine, cannot avoid disapproving my sentiments on account of their dissonance with his own. If my animosity goes beyond what the indignation of my friend can correspond to; if my grief exceeds what his most tender compassion can go along with; if my admiration is

either too high or too low to tally with his own; if I laugh loud and heartily when he only smiles, or, on the contrary, only smile when he laughs loud and heartily; in all these cases, as soon as he comes from considering the object, to observe how I am affected by it, according as there is more or less disproportion between his sentiments and mine, I must incur a greater or less degree of his disapprobation: and upon all occasions his own sentiments are the standards and measures by which he judges of mine.

To approve of another man's opinions is to adopt those opinions, and to adopt them is to approve of them. If the same arguments which convince you convince me likewise, I necessarily approve of your conviction; and if they do not, I necessarily disapprove of it: neither can I possibly conceive that I should do the one without the other. To approve or disapprove, therefore, of the opinions of others is acknowledged, by every body, to mean no more than to observe their agreement or disagreement with our own. But this is equally the case with regard to our approbation or disapprobation of the sentiments or passions of others.

There are, indeed, some cases in which we seem to approve without any sympathy or correspondence of sentiments, and in which, consequently, the sentiment of approbation would seem to be different from the perception of this coincidence. A little attention, however, will convince us that even in these cases our approbation is ultimately founded upon a sympathy or correspondence of this kind. I shall give an instance in things of a very frivolous nature, because in them the judgments of mankind are less apt to be perverted by wrong systems. We may often approve of a jest, and think the laughter of the company quite just and proper, though we ourselves do not laugh, because, perhaps, we are in a grave humour, or happen to have our attention engaged with other objects. We have learned, however, from experience, what sort of pleasantry is upon most occasions capable of

making us laugh, and we observe that this is one of that kind. We approve, therefore, of the laughter of the company, and feel that it is natural and suitable to its object; because, though in our present mood we cannot easily enter into it, we are sensible that upon most occasions we should very heartily join in it.

The same thing often happens with regard to all the other passions. A stranger passes by us in the street with all the marks of the deepest affliction; and we are immediately told that he has just received the news of the death of his father. It is impossible that, in this case, we should not approve of his grief. Yet it may often happen, without any defect of humanity on our part, that, so far from entering into the violence of his sorrow, we should scarce conceive the first movements of concern upon his account. Both he and his father, perhaps, are entirely unknown to us, or we happen to be employed about other things, and do not take time to picture out in our imagination the different circumstances of distress which must occur to him. We have learned, however, from experience, that such a misfortune naturally excites such a degree of sorrow, and we know that if we took time to consider his situation, fully and in all its parts, we should, without doubt, most sincerely sympathize with him. It is upon the consciousness of this conditional sympathy, that our approbation of his sorrow is founded, even in those cases in which that sympathy does not actually take place; and the general rules derived from our preceding experience of what our sentiments would commonly correspond with, correct upon this, as upon many other occasions, the impropriety of our present emotions.

The sentiment or affection of the heart from which any action proceeds, and upon which its whole virtue or vice must ultimately depend, may be considered under two different aspects, or in two different relations; first, in relation to the cause which excites it, or the motive which gives occasion to it; and secondly, in relation to the

end which it proposes, or the effect which it tends to produce.

In the suitableness or unsuitableness, in the proportion or disproportion which the affection seems to bear to the cause or object which excites it, consists the propriety or impropriety, the decency or ungracefulness of the consequent action.

In the beneficial or hurtful nature of the effects which the affection aims at, or tends to produce, consists the merit or demerit of the action, the qualities by which it is entitled to reward, or is deserving of punishment.

Philosophers have, of late years, considered chiefly the tendency of affections, and have given little attention to the relation which they stand in to the cause which excites them. In common life, however, when we judge of any person's conduct, and of the sentiments which directed it, we constantly consider them under both these aspects. When we blame in another man the excesses of love, of grief, of resentment, we not only consider the ruinous effects which they tend to produce, but the little occasion which was given for them. The merit of his favourite, we say, is not so great, his misfortune is not so dreadful, his provocation is not so extraordinary, as to justify so violent a passion. We should have indulged, we say; perhaps, have approved of the violence of his emotion, had the cause been in any respect proportioned to it.

When we judge in this manner of any affection, as proportioned or disproportioned to the cause which excites it, it is scarce possible that we should make use of any other rule or canon but the correspondent affection in ourselves. If, upon bringing the case home to our own breast, we find that the sentiments which it gives occasion to, coincide and tally with our own, we necessarily approve of them as proportioned and suitable to their objects; if otherwise, we necessarily disapprove of them, as extravagant and out of proportion.

Every faculty in one man is the measure by which he judges of the like faculty in another. I judge of your sight by my sight, of your ear by my ear, of your reason by my reason, of your resentment by my resentment, of your love by my love. I neither have, nor can have, any other way of judging about them.

Chap. IV The same subject continued

We may judge of the propriety or impropriety of the sentiments of another person by their correspondence or disagreement with our own, upon two different occasions; either, first, when the objects which excite them are considered without any peculiar relation, either to ourselves or to the person whose sentiments we judge of; or, secondly, when they are considered as peculiarly affecting one or other of us.

1. With regard to those objects which are considered without any peculiar relation either to ourselves or to the person whose sentiments we judge of; wherever his sentiments entirely correspond with our own, we ascribe to him the qualities of taste and good judgment. The beauty of a plain, the greatness of a mountain, the ornaments of a building, the expression of a picture, the composition of a discourse, the conduct of a third person, the proportions of different quantities and numbers, the various appearances which the great machine of the universe is perpetually exhibiting, with the secret wheels and springs which produce them; all the general subjects of science and taste, are what we and our companion regard as having no peculiar relation to either of us. We both look at them from the same point of view, and we have no occasion for sympathy, or for that imaginary change of situations from which it arises, in order to produce, with regard to these, the most perfect harmony of sentiments and affections. If, notwithstanding, we are often differently affected, it arises either from the different degrees of attention, which our different habits of life

allow us to give easily to the several parts of those complex objects, or from the different degrees of natural acuteness in the faculty of the mind to which they are addressed.

When the sentiments of our companion coincide with our own in things of this kind, which are obvious and easy, and in which, perhaps, we never found a single person who differed from us, though we, no doubt, must approve of them, yet he seems to deserve no praise or admiration on account of them. But when they not only coincide with our own, but lead and direct our own; when in forming them he appears to have attended to many things which we had overlooked, and to have adjusted them to all the various circumstances of their objects; we not only approve of them, but wonder and are surprised at their uncommon and unexpected acuteness and comprehensiveness, and he appears to deserve a very high degree of admiration and applause. For approbation heightened by wonder and surprise, constitutes the sentiment which is properly called admiration, and of which applause is the natural expression. The decision of the man who judges that exquisite beauty is preferable to the grossest deformity, or that twice two are equal to four, must certainly be approved of by all the world, but will not, surely, be much admired. It is the acute and delicate discernment of the man of taste, who distinguishes the minute, and scarce perceptible differences of beauty and deformity; it is the comprehensive accuracy of the experienced mathematician, who unravels, with ease, the most intricate and perplexed proportions; it is the great leader in science and taste, the man who directs and conducts our own sentiments, the extent and superior justness of whose talents astonish us with wonder and surprise, who excites our admiration, and seems to deserve our applause: and upon this foundation is grounded the greater part of the praise which is bestowed upon what are called the intellectual virtues.

The utility of those qualities, it may be thought, is what first

recommends them to us; and, no doubt, the consideration of this, when we come to attend to it, gives them a new value. Originally, however, we approve of another man's judgment, not as something useful, but as right, as accurate, as agreeable to truth and reality: and it is evident we attribute those qualities to it for no other reason but because we find that it agrees with our own. Taste, in the same manner, is originally approved of, not as useful, but as just, as delicate, and as precisely suited to its object. The idea of the utility of all qualities of this kind, is plainly an after-thought, and not what first recommends them to our approbation.

2. With regard to those objects, which affect in a particular manner either ourselves or the person whose sentiments we judge of, it is at once more difficult to preserve this harmony and correspondence, and at the same time, vastly more important. My companion does not naturally look upon the misfortune that has befallen me, or the injury that has been done me, from the same point of view in which I consider them. They affect me much more nearly. We do not view them from the same station, as we do a picture, or a poem, or a system of philosophy, and are, therefore, apt to be very differently affected by them. But I can much more easily overlook the want of this correspondence of sentiments with regard to such indifferent objects as concern neither me nor my companion, than with regard to what interests me so much as the misfortune that has befallen me, or the injury that has been done me. Though you despise that picture, or that poem, or even that system of philosophy, which I admire, there is little danger of our quarrelling upon that account. Neither of us can reasonably be much interested about them. They ought all of them to be matters of great indifference to us both; so that, though our opinions may be opposite, our affections may still be very nearly the same. But it is quite otherwise with regard to those objects by which either you or I are particularly affected. Though your judgments in matters of speculation, though your sentiments in

matters of taste, are quite opposite to mine, I can easily overlook this opposition; and if I have any degree of temper, I may still find some entertainment in your conversation, even upon those very subjects. But if you have either no fellow-feeling for the misfortunes I have met with, or none that bears any proportion to the grief which distracts me; or if you have either no indignation at the injuries I have suffered, or none that bears any proportion to the resentment which transports me, we can no longer converse upon these subjects. We become intolerable to one another. I can neither support your company, nor you mine. You are confounded at my violence and passion, and I am enraged at your cold insensibility and want of feeling.

In all such cases, that there may be some correspondence of sentiments between the spectator and the person principally concerned, the spectator must, first of all, endeavour, as much as he can, to put himself in the situation of the other, and to bring home to himself every little circumstance of distress which can possibly occur to the sufferer. He must adopt the whole case of his companion with all its minutest incidents; and strive to render as perfect as possible, that imaginary change of situation upon which his sympathy is founded.

After all this, however, the emotions of the spectator will still be very apt to fall short of the violence of what is felt by the sufferer. Mankind, though naturally sympathetic, never conceive, for what has befallen another, that degree of passion which naturally animates the person principally concerned. That imaginary change of situation, upon which their sympathy is founded, is but momentary. The thought of their own safety, the thought that they themselves are not really the sufferers, continually intrudes itself upon them; and though it does not hinder them from conceiving a passion somewhat analogous to what is felt by the sufferer, hinders them from conceiving any thing that approaches to the same degree of violence.

The person principally concerned is sensible of this, and at the same time passionately desires a more complete sympathy. He longs for that relief which nothing can afford him but the entire concord of the affections of the spectators with his own. To see the emotions of their hearts, in every respect, beat time to his own, in the violent and disagreeable passions, constitutes his sole consolation. But he can only hope to obtain this by lowering his passion to that pitch, in which the spectators are capable of going along with him. He must flatten, if I may be allowed to say so, the sharpness of its natural tone, in order to reduce it to harmony and concord with the emotions of those who are about him. What they feel, will, indeed, always be, in some respects, different from what he feels, and compassion can never be exactly the same with original sorrow; because the secret consciousness that the change of situations, from which the sympathetic sentiment arises, is but imaginary, not only lowers it in degree, but, in some measure, varies it in kind, and gives it a quite different modification. These two sentiments, however, may, it is evident, have such a correspondence with one another, as is sufficient for the harmony of society. Though they will never be unisons, they may be concords, and this is all that is wanted or required.

In order to produce this concord, as nature teaches the spectators to assume the circumstances of the person principally concerned, so she teaches this last in some measure to assume those of the spectators. As they are continually placing themselves in his situation, and thence conceiving emotions similar to what he feels; so he is as constantly placing himself in theirs, and thence conceiving some degree of that coolness about his own fortune, with which he is sensible that they will view it. As they are constantly considering what they themselves would feel, if they actually were the sufferers, so he is as constantly led to imagine in what manner he would be affected if he was only one of the spectators of his own situation. As their sympathy makes them look at it, in some measure, with his eyes, so

his sympathy makes him look at it, in some measure, with theirs, especially when in their presence and acting under their observation: and as the reflected passion, which he thus conceives, is much weaker than the original one, it necessarily abates the violence of what he felt before he came into their presence, before he began to recollect in what manner they would be affected by it, and to view his situation in this candid and impartial light.

The mind, therefore, is rarely so disturbed, but that the company of a friend will restore it to some degree of tranquillity and sedateness. The breast is, in some measure, calmed and composed the moment we come into his presence. We are immediately put in mind of the light in which he will view our situation, and we begin to view it ourselves in the same light; for the effect of sympathy is instantaneous. We expect less sympathy from a common acquaintance than from a friend: we cannot open to the former all those little circumstances which we can unfold to the latter: we assume, therefore, more tranquillity before him, and endeavour to fix our thoughts upon those general outlines of our situation which he is willing to consider. We expect still less sympathy from an assembly of strangers, and we assume, therefore, still more tranquillity before them, and always endeavour to bring down our passion to that pitch, which the particular company we are in may be expected to go along with. Nor is this only an assumed appearance: for if we are at all masters of ourselves, the presence of a mere acquaintance will really compose us, still more than that of a friend; and that of an assembly of strangers still more than that of an acquaintance.

Society and conversation, therefore, are the most powerful remedies for restoring the mind to its tranquillity, if, at any time, it has unfortunately lost it; as well as the best preservatives of that equal and happy temper, which is so necessary to self-satisfaction and enjoyment. Men of retirement and speculation, who are apt to sit

brooding at home over either grief or resentment, though they may often have more humanity, more generosity, and a nicer sense of honour, yet seldom possess that equality of temper which is so common among men of the world.

Chap. IV Of the amiable and respectable virtues

Upon these two different efforts, upon that of the spectator to enter into the sentiments of the person principally concerned, and upon that of the person principally concerned, to bring down his emotions to what the spectator can go along with, are founded two different sets of virtues. The soft, the gentle, the amiable virtues, the virtues of candid condescension and indulgent humanity, are founded upon the one: the great, the awful and respectable, the virtues of self-denial, of self-government, of that command of the passions which subjects all the movements of our nature to what our own dignity and honour, and the propriety of our own conduct require, take their origin from the other.

How amiable does he appear to be, whose sympathetic heart seems to re-echo all the sentiments of those with whom he converses, who grieves for their calamities, who resents their injuries, and who rejoices at their good fortune! When we bring home to ourselves the situation of his companions, we enter into their gratitude, and feel what consolation they must derive from the tender sympathy of so affectionate a friend. And for a contrary reason, how disagreeable does he appear to be, whose hard and obdurate heart feels for himself only, but is altogether insensible to the happiness or misery of others! We enter, in this case too, into the pain which his presence must give to every mortal with whom he converses, to those especially with whom we are most apt to sympathize, the unfortunate and the injured.

On the other hand, what noble propriety and grace do we feel in

the conduct of those who, in their own case, exert that recollection and self-command which constitute the dignity of every passion, and which bring it down to what others can enter into! We are disgusted with that clamorous grief, which, without any delicacy, calls upon our compassion with sighs and tears and importunate lamentations. But we reverence that reserved, that silent and majestic sorrow, which discovers itself only in the swelling of the eyes, in the quivering of the lips and cheeks, and in the distant, but affecting, coldness of the whole behaviour. It imposes the like silence upon us. We regard it with respectful attention, and watch with anxious concern over our whole behaviour, lest by any impropriety we should disturb that concerted tranquillity, which it requires so great an effort to support.

The insolence and brutality of anger, in the same manner, when we indulge its fury without check or restraint, is, of all objects, the most detestable. But we admire that noble and generous resentment which governs its pursuit of the greatest injuries, not by the rage which they are apt to excite in the breast of the sufferer, but by the indignation which they naturally call forth in that of the impartial spectator; which allows no word, no gesture, to escape it beyond what this more equitable sentiment would dictate; which never, even in thought, attempts any greater vengeance, nor desires to inflict any greater punishment, than what every indifferent person would rejoice to see executed.

And hence it is, that to feel much for others and little for ourselves, that to restrain our selfish, and to indulge our benevolent affections, constitutes the perfection of human nature; and can alone produce among mankind that harmony of sentiments and passions in which consists their whole grace and propriety. As to love our neighbour as we love ourselves is the great law of Christianity, so it is the great precept of nature to love ourselves only as we love our neighbour, or what comes to the same thing, as our neighbour is

capable of loving us.

As taste and good judgment, when they are considered as qualities which deserve praise and admiration, are supposed to imply a delicacy of sentiment and an acuteness of understanding not commonly to be met with; so the virtues of sensibility and self-command are not apprehended to consist in the ordinary, but in the uncommon degrees of those qualities. The amiable virtue of humanity requires, surely, a sensibility, much beyond what is possessed by the rude vulgar of mankind. The great and exalted virtue of magnanimity undoubtedly demands much more than that degree of self-command, which the weakest of mortals is capable of exerting. As in the common degree of the intellectual qualities, there is no abilities; so in the common degree of the moral, there is no virtue. Virtue is excellence, something uncommonly great and beautiful, which rises far above what is vulgar and ordinary. The amiable virtues consist in that degree of sensibility which surprises by its exquisite and unexpected delicacy and tenderness. The awful and respectable, in that degree of self-command which astonishes by its amazing superiority over the most ungovernable passions of human nature.

There is, in this respect, a considerable difference between virtue and mere propriety; between those qualities and actions which deserve to be admired and celebrated, and those which simply deserve to be approved of. Upon many occasions, to act with the most perfect propriety, requires no more than that common and ordinary degree of sensibility or self-command which the most worthless of mankind are possess of, and sometimes even that degree is not necessary. Thus, to give a very low instance, to eat when we are hungry, is certainly, upon ordinary occasions, perfectly right and proper, and cannot miss being approved of as such by every body. Nothing, however, could be more absurd than to say it was virtuous.

On the contrary, there may frequently be a considerable degree of

virtue in those actions which fall short of the most perfect propriety; because they may still approach nearer to perfection than could well be expected upon occasions in which it was so extremely difficult to attain it: and this is very often the case upon those occasions which require the greatest exertions of self-command. There are some situations which bear so hard upon human nature, that the greatest degree of self-government, which can belong to so imperfect a creature as man, is not able to stifle, altogether, the voice of human weakness, or reduce the violence of the passions to that pitch of moderation, in which the impartial spectator can entirely enter into them. Though in those cases, therefore, the behaviour of the sufferer fall short of the most perfect propriety, it may still deserve some applause, and even in a certain sense, may be denominated virtuous. It may still manifest an effort of generosity and magnanimity of which the greater part of men are incapable; and though it fails of absolute perfection, it may be a much nearer approximation towards perfection, than what, upon such trying occasions, is commonly either to be found or to be expected.

In cases of this kind, when we are determining the degree of blame or applause which seems due to any action, we very frequently make use of two different standards. The first is the idea of complete propriety and perfection, which, in those difficult situations, no human conduct ever did, or ever can come, up to; and in comparison with which the actions of all men must for ever appear blameable and imperfect. The second is the idea of that degree of proximity or distance from this complete perfection, which the actions of the greater part of men commonly arrive at. Whatever goes beyond this degree, how far soever it may be removed from absolute perfection, seems to deserve applause; and whatever falls short of it, to deserve blame.

It is in the same manner that we judge of the productions of all

the arts which address themselves to the imagination. When a critic examines the work of any of the great masters in poetry or painting, he may sometimes examine it by an idea of perfection, in his own mind, which neither that nor any other human work will ever come up to; and as long as he compares it with this standard, he can see nothing in it but faults and imperfections. But when he comes to consider the rank which it ought to hold among other works of the same kind, he necessarily compares it with a very different standard, the common degree of excellence which is usually attained in this particular art; and when he judges of it by this new measure, it may often appear to deserve the highest applause, upon account of its approaching much nearer to perfection than the greater part of those works which can be brought into competition with it.

Section II Of the Degrees of the Different Passions Which Are Consistent with Propriety

Introduction

The propriety of every passion excited by objects peculiarly related to ourselves, the pitch which the spectator can go along with, must lie, it is evident, in a certain mediocrity. If the passion is too high, or if it is too low, he cannot enter into it. Grief and resentment for private misfortunes and injuries may easily, for example, be too high, and in the greater part of mankind they are so. They may likewise, though this more rarely happens, be too low. We denominate the excess, weakness and fury: and we call the defect stupidity, insensibility, and want of spirit. We can enter into neither of them, but are astonished and confounded to see them.

This mediocrity, however, in which the point of propriety consists, is different in different passions. It is high in some, and low in others. There are some passions which it is indecent to express very strongly, even upon those occasions, in which it is acknowledged that we cannot avoid feeling them in the highest degree. And there are others of which the strongest expressions are upon many occasions extremely graceful, even though the passions themselves do not, perhaps, arise so necessarily. The first are those passions with which, for certain reasons, there is little or no sympathy: the second are those with which, for other reasons, there is the greatest. And if we consider all the different passions of human nature, we shall find that they are regarded as decent, or indecent, just in proportion as mankind are more or less disposed to sympathize with them.

Chap. I Of the Passions which take their origin from the body

1. It is indecent to express any strong degree of those passions which arise from a certain situation or disposition of the body; because the company, not being in the same disposition, cannot be expected to sympathize with them. Violent hunger, for example, though upon many occasions not only natural, but unavoidable, is always indecent, and to eat voraciously is universally regarded as a piece of ill manners. There is, however, some degree of sympathy, even with hunger. It is agreeable to see our companions eat with a good appetite, and all expressions of loathing are offensive. The disposition of body which is habitual to a man in health, makes his stomach easily keep time, if I may be allowed so coarse an expression, with the one, and not with the other. We can sympathize with the distress which excessive hunger occasions when we read the description of it in the journal of a siege, or of a sea voyage. We imagine ourselves in the situation of the sufferers, and thence readily conceive the grief, the fear and consternation, which must necessarily distract them. We feel, ourselves, some degree of those passions, and therefore sympathize with them: but as we do not grow hungry by reading the description, we cannot properly, even in this case, be said to sympathize with their hunger.

It is the same case with the passion by which Nature unites the two sexes. Though naturally the most furious of all the passions, all strong expressions of it are upon every occasion indecent, even between persons in whom its most complete indulgence is acknowledged by all laws, both human and divine, to be perfectly innocent. There seems, however, to be some degree of sympathy even with this passion. To talk to a woman as we would to a man is improper: it is expected that their company should inspire us with more gaiety, more pleasantry, and more attention; and an intire

insensibility to the fair sex, renders a man contemptible in some measure even to the men.

Such is our aversion for all the appetites which take their origin from the body: all strong expressions of them are loathsome and disagreeable. According to some ancient philosophers, these are the passions which we share in common with the brutes, and which having no connexion with the characteristical qualities of human nature, are upon that account beneath its dignity. But there are many other passions which we share in common with the brutes, such as resentment, natural affection, even gratitude, which do not, upon that account, appear to be so brutal. The true cause of the peculiar disgust which we conceive for the appetites of the body when we see them in other men, is that we cannot enter into them. To the person himself who feels them, as soon as they are gratified, the object that excited them ceases to be agreeable: even its presence often becomes offensive to him; he looks round to no purpose for the charm which transported him the moment before, and he can now as little enter into his own passion as another person. When we have dined, we order the covers to be removed; and we should treat in the same manner the objects of the most ardent and passionate desires, if they were the objects of no other passions but those which take their origin from the body.

In the command of those appetites of the body consists that virtue which is properly called temperance. To restrain them within those bounds, which regard to health and fortune prescribes, is the part of prudence. But to confine them within those limits, which grace, which propriety, which delicacy, and modesty require, is the office of temperance.

2. It is for the same reason that to cry out with bodily pain, how intolerable soever, appears always unmanly and unbecoming. There is, however, a good deal of sympathy even with bodily pain. If, as has already been observed, I see a stroke aimed, and just ready to fall

upon the leg, or arm, of another person, I naturally shrink and draw back my own leg, or my own arm: and when it does fall, I feel it in some measure, and am hurt by it as well as the sufferer. My hurt, however, is, no doubt, excessively slight, and, upon that account, if he makes any violent out-cry, as I cannot go along with him, I never fail to despise him. And this is the case of all the passions which take their origin from the body: they excite either no sympathy at all, or such a degree of it, as is altogether disproportioned to the violence of what is felt by the sufferer.

It is quite otherwise with those passions which take their origin from the imagination. The frame of my body can be but little affected by the alterations which are brought about upon that of my companion: but my imagination is more ductile, and more readily assumes, if I may say so, the shape and configuration of the imaginations of those with whom I am familiar. A disappointment in love, or ambition, will, upon this account, call forth more sympathy than the greatest bodily evil. Those passions arise altogether from the imagination. The person who has lost his whole fortune, if he is in health, feels nothing in his body. What he suffers is from the imagination only, which represents to him the loss of his dignity, neglect from his friends, contempt from his enemies, dependance, want, and misery, coming fast upon him; and we sympathize with him more strongly upon this account, because our imaginations can more readily mould themselves upon his imagination, than our bodies can mould themselves upon his body.

The loss of a leg may generally be regarded as a more real calamity than the loss of a mistress. It would be a ridiculous tragedy, however, of which the catastrophe was to turn upon a loss of that kind. A misfortune of the other kind, how frivolous soever it may appear to be, has given occasion to many a fine one.

Nothing is so soon forgot as pain. The moment it is gone the

whole agony of it is over, and the thought of it can no longer give us any sort of disturbance. We ourselves cannot then enter into the anxiety and anguish which we had before conceived. An unguarded word from a friend will occasion a more durable uneasiness. The agony which this creates is by no means over with the word. What at first disturbs us is not the object of the senses, but the idea of the imagination. As it is an idea, therefore, which occasions our uneasiness, till time and other accidents have in some measure effaced it from our memory, the imagination continues to fret and rankle within, from the thought of it.

Pain never calls forth any very lively sympathy unless it is accompanied with danger. We sympathize with the fear, though not with the agony of the sufferer. Fear, however, is a passion derived altogether from the imagination, which represents, with an uncertainty and fluctuation that increases our anxiety, not what we really feel, but what we may hereafter possibly suffer. The gout or the tooth-ach, though exquisitely painful, excite very little sympathy; more dangerous diseases, though accompanied with very little pain, excite the highest.

Some people faint and grow sick at the sight of a chirurgical operation, and that bodily pain which is occasioned by tearing the flesh, seems, in them, to excite the most excessive sympathy. We conceive in a much more lively and distinct manner the pain which proceeds from an external cause, than we do that which arises from an internal disorder. I can scarce form an idea of the agonies of my neighbour when he is tortured with the gout, or the stone; but I have the clearest conception of what he must suffer from an incision, a wound, or a fracture. The chief cause, however, why such objects produce such violent effects upon us, is their novelty. One who has been witness to a dozen dissections, and as many amputations, sees, ever after, all operations of this kind with great indifference, and often

with perfect insensibility. Though we have read or seen represented more than five hundred tragedies, we shall seldom feel so entire an abatement of our sensibility to the objects which they represent to us.

In some of the Greek tragedies there is an attempt to excite compassion, by the representation of the agonies of bodily pain. Philoctetes^[6] cries out and faints from the extremity of his sufferings. Hippolytus and Hercules^[7] are both introduced as expiring under the severest tortures, which, it seems, even the fortitude of Hercules was incapable of supporting. In all these cases, however, it is not the pain which interests us, but some other circumstances. It is not the sore foot, but the solitude, of Philoctetes which affects us, and diffuses over that charming tragedy, that romantic wildness, which is so agreeable to the imagination. The agonies of Hercules and Hippolytus are interesting only because we foresee that death is to be the consequence. If those heroes were to recover, we should think the representation of their sufferings perfectly ridiculous. What a tragedy would that be of which the distress consisted in a colic. Yet no pain is more exquisite. These attempts to excite compassion by the representation of bodily pain, may be regarded as among the greatest breaches of decorum of which the Greek theatre has set the example.

The little sympathy which we feel with bodily pain is the foundation of the propriety of constancy and patience in enduring it. The man, who under the severest tortures allows no weakness to escape him, vents no groan, gives way to no passion which we do not entirely enter into, commands our highest admiration. His firmness enables him to keep time with our indifference and insensibility. We admire and entirely go along with the magnanimous effort which he makes for this purpose. We approve of his behaviour, and from our experience of the common weakness of human nature, we are surprised, and wonder how he should be able to act so as to deserve approbation. Approbation, mixed and animated by wonder and

surprise, constitutes the sentiment which is properly called admiration, of which, applause is the natural expression, as has already been observed.

Chap. II Of those Passions which take their origin from a particular turn or habit of the Imagination

Even of the passions derived from the imagination, those which take their origin from a peculiar turn or habit it has acquired, though they may be acknowledged to be perfectly natural, are, however, but little sympathized with. The imaginations of mankind, not having acquired that particular turn, cannot enter into them; and such passions, though they may be allowed to be almost unavoidable in some part of life, are always, in some measure, ridiculous. This is the case with that strong attachment which naturally grows up between two persons of different sexes, who have long fixed their thoughts upon one another. Our imagination not having run in the same channel with that of the lover, we cannot enter into the eagerness of his emotions. If our friend has been injured, we readily sympathize with his resentment, and grow angry with the very person with whom

he is angry. If he has received a benefit, we readily enter into his gratitude, and have a very high sense of the merit of his benefactor. But if he is in love, though we may think his passion just as reasonable as any of the kind, yet we never think ourselves bound to conceive a passion of the same kind, and for the same person for whom he has conceived it. The passion appears to every body, but the man who feels it, entirely disproportioned to the value of the object; and love, though it is pardoned in a certain age because we know it is natural, is always laughed at, because we cannot enter into it. All serious and strong expressions of it appear ridiculous to a third person; and though a lover may be good company to his mistress, he is so to nobody else. He himself is sensible of this; and as long as he continues in his sober senses, endeavours to treat his own passion with raillery and ridicule. It is the only style in which we care to hear of it; because it is the only style in which we ourselves are disposed to talk of it. We grow weary of the grave, pedantic, and long-sentenced love of Cowley^[8] and Petrarca^[9], who never have done with exaggerating the violence of their attachments; but the gaiety of Ovid^[10], and the gallantry of Horace^[11], are always agreeable.

But though we feel no proper sympathy with an attachment of this kind, though we never approach even in imagination towards conceiving a passion for that particular person, yet as we either have conceived, or may be disposed to conceive, passions of the same kind, we readily enter into those high hopes of happiness which are proposed from its gratification, as well as into that exquisite distress which is feared from its disappointment. It interests us not as a passion, but as a situation that gives occasion to other passions which interest us; to hope, to fear, and to distress of every kind: in the same manner as in a description of a sea voyage, it is not the hunger which interests us, but the distress which that hunger occasions. Though we do not properly enter into the attachment of the lover, we readily go along with those expectations of romantic happiness which he derives

from it. We feel how natural it is for the mind, in a certain situation, relaxed with indolence, and fatigued with the violence of desire, to long for serenity and quiet, to hope to find them in the gratification of that passion which distracts it, and to frame to itself the idea of that life of pastoral tranquillity and retirement which the elegant, the tender, and the passionate Tibullus takes so much pleasure in describing; a life like what the poets describe in the Fortunate Islands, a life of friendship, liberty, and repose; free from labour, and from care, and from all the turbulent passions which attend them. Even scenes of this kind interest us most, when they are painted rather as what is hoped, than as what is enjoyed. The grossness of that passion, which mixes with, and is, perhaps, the foundation of love, disappears when its gratification is far off and at a distance; but renders the whole offensive, when described as what is immediately possessed. The happy passion, upon this account, interests us much less than the fearful and the melancholy. We tremble for whatever can disappoint such natural and agreeable hopes: and thus enter into all the anxiety, and concern, and distress of the lover.

图I—3：Abraham Cowley (1618—1667)

Hence it is, that, in some modern tragedies and romances, this

passion appears so wonderfully interesting. It is not so much the love of Castalio and Monimia which attaches us in the Orphan^[12], as the distress which that love occasions. The author who should introduce two lovers, in a scene of perfect security, expressing their mutual fondness for one another, would excite laughter, and not sympathy. If a scene of this kind is ever admitted into a tragedy, it is always, in some measure, improper, and is endured, not from any sympathy with the passion that is expressed in it, but from concern for the dangers and difficulties with which the audience foresee that its gratification is likely to be attended.

The reserve which the laws of society impose upon the fair sex, with regard to this weakness, renders it more peculiarly distressful in them, and, upon that very account, more deeply interesting. We are charmed with the love of Phaedra^[13], as it is expressed in the French tragedy of that name, notwithstanding all the extravagance and guilt which attend it. That very extravagance and guilt may be said, in some measure, to recommend it to us. Her fear, her shame, her remorse, her horror, her despair, become thereby more natural and interesting. All the secondary passions, if I may be allowed to call them so, which arise from the situation of love, become necessarily more furious and violent; and it is with these secondary passions only that we can properly be said to sympathize.

图I—4：《菲德拉》第一版中的插图

Of all the passions, however, which are so extravagantly disproportioned to the value of their objects, love is the only one that appears, even to the weakest minds, to have any thing in it that is either graceful or agreeable. In itself, first of all, though it may be ridiculous, it is not naturally odious; and though its consequences are often fatal and dreadful, its intentions are seldom mischievous. And then, though there is little propriety in the passion itself, there is a good deal in some of those which always accompany it. There is in love a strong mixture of humanity, generosity, kindness, friendship, esteem; passions with which, of all others, for reasons which shall be explained immediately, we have the greatest propensity to sympathize, even notwithstanding we are sensible that they are, in some measure, excessive. The sympathy which we feel with them, renders the passion which they accompany less disagreeable, and

supports it in our imagination, notwithstanding all the vices which commonly go along with it; though in the one sex it necessarily leads to the last ruin and infamy; and though in the other, where it is apprehended to be least fatal, it is almost always attended with an incapacity for labour, a neglect of duty, a contempt of fame, and even of common reputation. Notwithstanding all this, the degree of sensibility and generosity with which it is supposed to be accompanied, renders it to many the object of vanity. and they are fond of appearing capable of feeling what would do them no honour if they had really felt it.

It is for a reason of the same kind, that a certain reserve is necessary when we talk of our own friends, our own studies, our own professions. All these are objects which we cannot expect should interest our companions in the same degree in which they interest us. And it is for want of this reserve, that the one half of mankind make bad company to the other. A philosopher is company to a philosopher, only; the member of a club, to his own little knot of companions.

Chap. III Of the unsocial Passions

There is another set of passions, which, though derived from the imagination, yet before we can enter into them, or regard them as graceful or becoming, must always be brought down to a pitch much lower than that to which undisciplined nature would raise them. These are, hatred and resentment, with all their different modifications. With regard to all such passions, our sympathy is divided between the person who feels them, and the person who is the object of them. The interests of these two are directly opposite. What our sympathy with the person who feels them would prompt us to wish for, our fellow-feeling with the other would lead us to fear. As they are both men, we are concerned for both, and our fear for what the one may suffer, damps our resentment for what the other has

suffered. Our sympathy, therefore, with the man who has received the provocation, necessarily falls short of the passion which naturally animates him, not only upon account of those general causes which render all sympathetic passions inferior to the original ones, but upon account of that particular cause which is peculiar to itself, our opposite sympathy with another person. Before resentment, therefore, can become graceful and agreeable, it must be more humbled and brought down below that pitch to which it would naturally rise, than almost any other passion.

Mankind, at the same time, have a very strong sense of the injuries that are done to another. The villain, in a tragedy or romance, is as much the object of our indignation, as the hero is that of our sympathy and affection. We detest Iago as much as we esteem Othello^[14]; and delight as much in the punishment of the one, as we are grieved at the distress of the other. But though mankind have so strong a fellow-feeling with the injuries that are done to their brethren, they do not always resent them the more that the sufferer appears to resent them. Upon most occasions, the greater his patience, his mildness, his humanity, provided it does not appear that he wants spirit, or that fear was the motive of his forbearance, the higher their resentment against the person who injured him. The amiableness of the character exasperates their sense of the atrocity of the injury.

Those passions, however, are regarded as necessary parts of the character of human nature. A person becomes contemptible who tamely sits still, and submits to insults, without attempting either to repel or to revenge them. We cannot enter into his indifference and insensibility. we call his behaviour mean-spiritedness, and are as really provoked by it as by the insolence of his adversary. Even the mob are enraged to see any man submit patiently to affronts and ill usage. They desire to see this insolence resented, and resented by the person who suffers from it. They cry to him with fury, to defend, or to

revenge himself. If his indignation rouses at last, they heartily applaud, and sympathize with it. It enlivens their own indignation against his enemy, whom they rejoice to see him attack in his turn, and are as really gratified by his revenge, provided it is not immoderate, as if the injury had been done to themselves.

图1—5：《奥赛罗》的海报

But though the utility of those passions to the individual, by rendering it dangerous to insult or injure him, be acknowledged; and though their utility to the public, as the guardians of justice, and of the equality of its administration, be not less considerable, as shall be shewn hereafter^[15]; yet there is still something disagreeable in the passions themselves, which makes the appearance of them in other men the natural object of our aversion. The expression of anger towards any body present, if it exceeds a bare intimation that we are sensible of his ill usage, is regarded not only as an insult to that particular person, but as a rudeness to the whole company. Respect for them ought to have restrained us from giving way to so boisterous

and offensive an emotion. It is the remote effects of these passions which are agreeable; the immediate effects are mischief to the person against whom they are directed. But it is the immediate, and not the remote effects of objects which render them agreeable or disagreeable to the imagination. A prison is certainly more useful to the public than a palace; and the person who founds the one is generally directed by a much juster spirit of patriotism, than he who builds the other. But the immediate effects of a prison, the confinement of the wretches shut up in it, are disagreeable; and the imagination either does not take time to trace out the remote ones, or sees them at too great a distance to be much affected by them. A prison, therefore, will always be a disagreeable object; and the fitter it is for the purpose for which it was intended, it will be the more so. A palace, on the contrary, will always be agreeable; yet its remote effects may often be inconvenient to the public. It may serve to promote luxury, and set the example of the dissolution of manners. Its immediate effects, however, the conveniency, the pleasure, and the gaiety of the people who live in it, being all agreeable, and suggesting to the imagination a thousand agreeable ideas, that faculty generally rests upon them, and seldom goes further in tracing its more distant consequences. Trophies of the instruments of music or of agriculture, imitated in painting or in stucco, make a common and an agreeable ornament of our halls and dining-rooms. A trophy of the same kind, composed of the instruments of surgery, of dissecting and amputation-knives, of saws for cutting the bones, of trepanning instruments, etc. would be absurd and shocking. Instruments of surgery, however, are always more finely polished, and generally more nicely adapted to the purposes for which they are intended, than instruments of agriculture. The remote effects of them too, the health of the patient, is agreeable; yet as the immediate effect of them is pain and suffering, the sight of them always displeases us. Instruments of war are agreeable, though their immediate effect may seem to be in the same manner pain and suffering. But then it is the pain and suffering of our enemies, with

whom we have no sympathy. With regard to us, they are immediately connected with the agreeable ideas of courage, victory, and honour. They are themselves, therefore, supposed to make one of the noblest parts of dress, and the imitation of them one of the finest ornaments of architecture. It is the same case with the qualities of the mind. The ancient stoics were of opinion, that as the world was governed by the all-ruling providence of a wise, powerful, and good God, every single event ought to be regarded, as making a necessary part of the plan of the universe, and as tending to promote the general order and happiness of the whole: that the vices and follies of mankind, therefore, made as necessary a part of this plan as their wisdom or their virtue; and by that eternal art which educes good from ill, were made to tend equally to the prosperity and perfection of the great system of nature^[16]. No speculation of this kind, however, how deeply soever it might be rooted in the mind, could diminish our natural abhorrence for vice, whose immediate effects are so destructive, and whose remote ones are too distant to be traced by the imagination.

It is the same case with those passions we have been just now considering. Their immediate effects are so disagreeable, that even when they are most justly provoked, there is still something about them which disgusts us. These, therefore, are the only passions of which the expressions, as I formerly observed, do not dispose and prepare us to sympathize with them, before we are informed of the cause which excites them. The plaintive voice of misery, when heard at a distance, will not allow us to be indifferent about the person from whom it comes. As soon as it strikes our ear, it interests us in his fortune, and, if continued, forces us almost involuntarily to fly to his assistance. The sight of a smiling countenance, in the same manner, elevates even the pensive into that gay and airy mood, which disposes him to sympathize with, and share the joy which it expresses; and he feels his heart, which with thought and care was before that shrunk and depressed, instantly expanded and elated. But it is quite otherwise

with the expressions of hatred and resentment. The hoarse, boisterous, and discordant voice of anger, when heard at a distance, inspires us either with fear or aversion. We do not fly towards it, as to one who cries out with pain and agony. Women, and men of weak nerves, tremble and are overcome with fear, though sensible that themselves are not the objects of the anger. They conceive fear, however, by putting themselves in the situation of the person who is so. Even those of stouter hearts are disturbed; not indeed enough to make them afraid, but enough to make them angry; for anger is the passion which they would feel in the situation of the other person. It is the same case with hatred. Mere expressions of spite inspire it against nobody, but the man who uses them. Both these passions are by nature the objects of our aversion. Their disagreeable and boisterous appearance never excites, never prepares, and often disturbs our sympathy. Grief does not more powerfully engage and attract us to the person in whom we observe it, than these, while we are ignorant of their cause, disgust and detach us from him. It was, it seems, the intention of Nature, that those rougher and more unamiable emotions, which drive men from one another, should be less easily and more rarely communicated.

When music imitates the modulations of grief or joy, it either actually inspires us with those passions, or at least puts us in the mood which disposes us to conceive them. But when it imitates the notes of anger, it inspires us with fear. Joy, grief, love, admiration, devotion, are all of them passions which are naturally musical. Their natural tones are all soft, clear, and melodious; and they naturally express themselves in periods which are distinguished by regular pauses, and which upon that account are easily adapted to the regular returns of the correspondent airs of a tune. The voice of anger, on the contrary, and of all the passions which are akin to it, is harsh and discordant. Its periods too are all irregular, sometimes very long, and sometimes very short, and distinguished by no regular pauses. It is with difficulty, therefore, that music can imitate any of those passions; and the music

which does imitate them is not the most agreeable. A whole entertainment may consist, without any impropriety, of the imitation of the social and agreeable passions. It would be a strange entertainment which consisted altogether of the imitations of hatred and resentment.

If those passions are disagreeable to the spectator, they are not less so to the person who feels them. Hatred and anger are the greatest poison to the happiness of a good mind. There is, in the very feeling of those passions, something harsh, jarring, and convulsive, something that tears and distracts the breast, and is altogether destructive of that composure and tranquillity of mind which is so necessary to happiness, and which is best promoted by the contrary passions of gratitude and love. It is not the value of what they lose by the perfidy and ingratitude of those they live with, which the generous and humane are most apt to regret. Whatever they may have lost, they can generally be very happy without it. What most disturbs them is the idea of perfidy and ingratitude exercised towards themselves; and the discordant and disagreeable passions which this excites, constitute, in their own opinion, the chief part of the injury which they suffer.

How many things are requisite to render the gratification of resentment completely agreeable, and to make the spectator thoroughly sympathize with our revenge? The provocation must first of all be such that we should become contemptible, and be exposed to perpetual insults, if we did not, in some measure, resent it. Smaller offences are always better neglected; nor is there any thing more despicable than that froward and captious humour which takes fire upon every slight occasion of quarrel. We should resent more from a sense of the propriety of resentment, from a sense that mankind expect and require it of us, than because we feel in ourselves the furies of that disagreeable passion. There is no passion, of which the human mind is capable, concerning whose justness we ought to be so

doubtful, concerning whose indulgence we ought so carefully to consult our natural sense of propriety, or so diligently to consider what will be the sentiments of the cool and impartial spectator. Magnanimity, or a regard to maintain our own rank and dignity in society, is the only motive which can ennoble the expressions of this disagreeable passion. This motive must characterize our whole stile and deportment. These must be plain, open, and direct; determined without positiveness, and elevated without insolence; not only free from petulance and low scurrility, but generous, candid, and full of all proper regards, even for the person who has offended us. It must appear, in short, from our whole manner, without our labouring affectedly to express it, that passion has not extinguished our humanity; and that if we yield to the dictates of revenge, it is with reluctance, from necessity, and in consequence of great and repeated provocations. When resentment is guarded and qualified in this manner, it may be admitted to be even generous and noble.

Chap. IV Of the social Passions

As it is a divided sympathy which renders the whole set of passions just now mentioned, upon most occasions, so ungraceful and disagreeable; so there is another set opposite to these, which a redoubled sympathy renders almost always peculiarly agreeable and becoming. Generosity, humanity, kindness, compassion, mutual friendship and esteem, all the social and benevolent affections, when expressed in the countenance or behaviour, even towards those who are not peculiarly connected with ourselves, please the indifferent spectator upon almost every occasion. His sympathy with the person who feels those passions, exactly coincides with his concern for the person who is the object of them. The interest, which, as a man, he is obliged to take in the happiness of this last, enlivens his fellow-feeling with the sentiments of the other, whose emotions are employed about the same object. We have always, therefore, the strongest disposition

to sympathize with the benevolent affections. They appear in every respect agreeable to us. We enter into the satisfaction both of the person who feels them, and of the person who is the object of them. For as to be the object of hatred and indignation gives more pain than all the evil which a brave man can fear from his enemies; so there is a satisfaction in the consciousness of being beloved, which, to a person of delicacy and sensibility, is of more importance to happiness, than all the advantage which he can expect to derive from it. What character is so detestable as that of one who takes pleasure to sow dissension among friends, and to turn their most tender love into mortal hatred? Yet wherein does the atrocity of this so much abhorred injury consist? Is it in depriving them of the frivolous good offices, which, had their friendship continued, they might have expected from one another? It is in depriving them of that friendship itself, in robbing them of each other's affections, from which both derived so much satisfaction; it is in disturbing the harmony of their hearts, and putting an end to that happy commerce which had before subsisted between them. These affections, that harmony, this commerce, are felt, not only by the tender and the delicate, but by the rudest vulgar of mankind, to be of more importance to happiness than all the little services which could be expected to flow from them.

The sentiment of love is, in itself, agreeable to the person who feels it. It soothes and composes the breast, seems to favour the vital motions, and to promote the healthful state of the human constitution; and it is rendered still more delightful by the consciousness of the gratitude and satisfaction which it must excite in him who is the object of it. Their mutual regard renders them happy in one another, and sympathy, with this mutual regard, makes them agreeable to every other person. With what pleasure do we look upon a family, through the whole of which reign mutual love and esteem, where the parents and children are companions for one another, without any other difference than what is made by respectful affection on the one

side, and kind indulgence on the other, where freedom and fondness, mutual raillery and mutual kindness, show that no opposition of interest divides the brothers, nor any rivalry of favour sets the sisters at variance, and where every thing presents us with the idea of peace, cheerfulness, harmony, and contentment? On the contrary, how uneasy are we made when we go into a house in which jarring contention sets one half of those who dwell in it against the other; where amidst affected smoothness and complaisance, suspicious looks and sudden starts of passion betray the mutual jealousies which burn within them, and which are every moment ready to burst out through all the restraints which the presence of the company imposes?

Those amiable passions, even when they are acknowledged to be excessive, are never regarded with aversion. There is something agreeable even in the weakness of friendship and humanity. The too tender mother, the too indulgent father, the too generous and affectionate friend, may sometimes, perhaps, on account of the softness of their natures, be looked upon with a species of pity, in which, however, there is a mixture of love, but can never be regarded with hatred and aversion, nor even with contempt, unless by the most brutal and worthless of mankind. It is always with concern, with sympathy and kindness, that we blame them for the extravagance of their attachment. There is a helplessness in the character of extreme humanity which more than any thing interests our pity. There is nothing in itself which renders it either ungraceful or disagreeable. We only regret that it is unfit for the world, because the world is unworthy of it, and because it must expose the person who is endowed with it as a prey to the perfidy and ingratitude of insinuating falsehood, and to a thousand pains and uneasinesses, which, of all men, he the least deserves to feel, and which generally too he is, of all men, the least capable of supporting. It is quite otherwise with hatred and resentment. Too violent a propensity to those detestable passions, renders a person the object of universal dread and abhorrence, who,

like a wild beast, ought, we think, to be hunted out of all civil society.

Chap. IV Of the selfish Passions

Besides those two opposite sets of passions, the social and unsocial, there is another which holds a sort of middle place between them; is never either so graceful as is sometimes the one set, nor is ever so odious as is sometimes the other. Grief and joy, when conceived upon account of our own private good or bad fortune, constitute this third set of passions. Even when excessive, they are never so disagreeable as excessive resentment, because no opposite sympathy can ever interest us against them: and when most suitable to their objects, they are never so agreeable as impartial humanity and just benevolence; because no double sympathy can ever interest us for them. There is, however, this difference between grief and joy, that we are generally most disposed to sympathize with small joys and great sorrows. The man who, by some sudden revolution of fortune, is lifted up all at once into a condition of life, greatly above what he had formerly lived in, may be assured that the congratulations of his best friends are not all of them perfectly sincere. An upstart, though of the greatest merit, is generally disagreeable, and a sentiment of envy commonly prevents us from heartily sympathizing with his joy. If he has any judgment, he is sensible of this, and instead of appearing to be elated with his good fortune, he endeavours, as much as he can, to smother his joy, and keep down that elevation of mind with which his new circumstances naturally inspire him. He affects the same plainness of dress, and the same modesty of behaviour, which became him in his former station. He redoubles his attention to his old friends, and endeavours more than ever to be humble, assiduous, and complaisant. And this is the behaviour which in his situation we most approve of; because we expect, it seems, that he should have more sympathy with our envy and aversion to his happiness, than we have with his happiness. It is seldom that with all this he succeeds. We

suspect the sincerity of his humility, and he grows weary of this constraint. In a little time, therefore, he generally leaves all his old friends behind him, some of the meanest of them excepted, who may, perhaps, condescend to become his dependents: nor does he always acquire any new ones; the pride of his new connections is as much affronted at finding him their equal, as that of his old ones had been by his becoming their superior: and it requires the most obstinate and persevering modesty to atone for this mortification to either. He generally grows weary too soon, and is provoked, by the sullen and suspicious pride of the one, and by the saucy contempt of the other, to treat the first with neglect, and the second with petulance, till at last he grows habitually insolent, and forfeits the esteem of all. If the chief part of human happiness arises from the consciousness of being beloved, as I believe it does, those sudden changes of fortune seldom contribute much to happiness. He is happiest who advances more gradually to greatness, whom the public destines to every step of his preferment long before he arrives at it, in whom, upon that account, when it comes, it can excite no extravagant joy, and with regard to whom it cannot reasonably create either any jealousy in those he overtakes, or any envy in those he leaves behind.

Mankind, however, more readily sympathize with those smaller joys which flow from less important causes. It is decent to be humble amidst great prosperity; but we can scarce express too much satisfaction in all the little occurrences of common life, in the company with which we spent the evening last night, in the entertainment that was set before us, in what was said and what was done, in all the little incidents of the present conversation, and in all those frivolous nothings which fill up the void of human life. Nothing is more graceful than habitual cheerfulness, which is always founded upon a peculiar relish for all the little pleasures which common occurrences afford. We readily sympathize with it: it inspires us with the same joy, and makes every trifle turn up to us in the same

agreeable aspect in which it presents itself to the person endowed with this happy disposition. Hence it is that youth, the season of gaiety, so easily engages our affections. That propensity to joy which seems even to animate the bloom, and to sparkle from the eyes of youth and beauty, though in a person of the same sex, exalts, even the aged, to a more joyous mood than ordinary. They forget, for a time, their infirmities, and abandon themselves to those agreeable ideas and emotions to which they have long been strangers, but which, when the presence of so much happiness recalls them to their breast, take their place there, like old acquaintance, from whom they are sorry to have ever been parted, and whom they embrace more heartily upon account of this long separation.

It is quite otherwise with grief. Small vexations excite no sympathy, but deep affliction calls forth the greatest. The man who is made uneasy by every little disagreeable incident, who is hurt if either the cook or the butler have failed in the least article of their duty, who feels every defect in the highest ceremonial of politeness, whether it be shewn to himself or to any other person, who takes it amiss that his intimate friend did not bid him good-morrow when they met in the forenoon, and that his brother hummed a tune all the time he himself was telling a story; who is put out of humour by the badness of the weather when in the country, by the badness of the roads when upon a journey, and by the want of company, and dulness of all public diversions when in town; such a person, I say, though he should have some reason, will seldom meet with much sympathy. Joy is a pleasant emotion, and we gladly abandon ourselves to it upon the slightest occasion. We readily, therefore, sympathize with it in others, whenever we are not prejudiced by envy. But grief is painful, and the mind, even when it is our own misfortune, naturally resists and recoils from it. We would endeavour either not to conceive it at all, or to shake it off as soon as we have conceived it. Our aversion to grief will not, indeed, always hinder us from conceiving it in our own case upon

very trifling occasions, but it constantly prevents us from sympathizing with it in others when excited by the like frivolous causes: for our sympathetic passions are always less irresistible than our original ones. There is, besides, a malice in mankind, which not only prevents all sympathy with little uneasinesses, but renders them in some measure diverting. Hence the delight which we all take in raillery, and in the small vexation which we observe in our companion, when he is pushed, and urged, and teased upon all sides. Men of the most ordinary good-breeding dissemble the pain which any little incident may give them; and those who are more thoroughly formed to society, turn, of their own accord, all such incidents into raillery, as they know their companions will do for them. The habit which a man, who lives in the world, has acquired of considering how every thing that concerns himself will appear to others, makes those frivolous calamities turn up in the same ridiculous light to him, in which he knows they will certainly be considered by them.

Our sympathy, on the contrary, with deep distress, is very strong and very sincere. It is unnecessary to give an instance. We weep even at the feigned representation of a tragedy. If you labour, therefore, under any signal calamity, if by some extraordinary misfortune you are fallen into poverty, into diseases, into disgrace and disappointment; even though your own fault may have been, in part, the occasion, yet you may generally depend upon the sincerest sympathy of all your friends, and, as far as interest and honour will permit, upon their kindest assistance too. But if your misfortune is not of this dreadful kind, if you have only been a little baulked in your ambition, if you have only been jilted by your mistress, or are only hen-pecked by your wife, lay your account with the raillery of all your acquaintance.

Section III Of the Effects of Prosperity and Adversity upon the Judgment of Mankind with regard to the Propriety of Action; and why it is more easy to obtain their Approbation in the one state than in the other

Chap. I That though our sympathy with sorrow is generally a more lively sensation than our sympathy with joy, it commonly falls much more short of the violence of what is naturally felt by the person principally concerned

Our sympathy with sorrow, though not more real, has been more taken notice of than our sympathy with joy. The word sympathy, in its most proper and primitive signification, denotes our fellow-feeling with the sufferings, not that with the enjoyments, of others. A late ingenious and subtile philosopher thought it necessary to prove, by arguments, that we had a real sympathy with joy, and that congratulation was a principle of human nature.^[17] Nobody, I believe, ever thought it necessary to prove that compassion was such.

First of all, our sympathy with sorrow is, in some sense, more universal than that with joy. Though sorrow is excessive, we may still have some fellow-feeling with it. What we feel does not, indeed, in this case, amount to that complete sympathy, to that perfect harmony and correspondence of sentiments which constitutes approbation. We do not weep, and exclaim, and lament, with the sufferer. We are sensible, on the contrary, of his weakness and of the extravagance of his passion, and yet often feel a very sensible concern upon his

account. But if we do not entirely enter into, and go along with, the joy of another, we have no sort of regard or fellow-feeling for it. The man who skips and dances about with that intemperate and senseless joy which we cannot accompany him in, is the object of our contempt and indignation.

Pain besides, whether of mind or body, is a more pungent sensation than pleasure, and our sympathy with pain, though it falls greatly short of what is naturally felt by the sufferer, is generally a more lively and distinct perception than our sympathy with pleasure, though this last often approaches more nearly, as I shall shew immediately, to the natural vivacity of the original passion.

Over and above all this, we often struggle to keep down our sympathy with the sorrow of others. Whenever we are not under the observation of the sufferer, we endeavour, for our own sake, to suppress it as much as we can, and we are not always successful. The opposition which we make to it, and the reluctance with which we yield to it, necessarily oblige us to take more particular notice of it. But we never have occasion to make this opposition to our sympathy with joy. If there is any envy in the case, we never feel the least propensity towards it; and if there is none, we give way to it without any reluctance. On the contrary, as we are always ashamed of our own envy, we often pretend, and sometimes really wish to sympathize with the joy of others, when by that disagreeable sentiment we are disqualified from doing so. We are glad, we say on account of our neighbour's good fortune, when in our hearts, perhaps, we are really sorry. We often feel a sympathy with sorrow when we would wish to be rid of it; and we often miss that with joy when we would be glad to have it. The obvious observation, therefore, which it naturally falls in our way to make, is, that our propensity to sympathize with sorrow must be very strong, and our inclination to sympathize with joy very weak.

Notwithstanding this prejudice, however, I will venture to affirm, that, when there is no envy in the case, our propensity to sympathize with joy is much stronger than our propensity to sympathize with sorrow; and that our fellow-feeling for the agreeable emotion approaches much more nearly to the vivacity of what is naturally felt by the persons principally concerned, than that which we conceive for the painful one.

We have some indulgence for that excessive grief which we cannot entirely go along with. We know what a prodigious effort is requisite before the sufferer can bring down his emotions. to complete harmony and concord with those of the spectator. Though he fails, therefore, we easily pardon him. But we have no such indulgence for the intemperance of joy; because we are not conscious that any such vast effort is requisite to bring it down to what we can entirely enter into. The man who, under the greatest calamities, can command his sorrow, seems worthy of the highest admiration; but he who, in the fulness of prosperity, can in the same manner master his joy, seems hardly to deserve any praise. We are sensible that there is a much wider interval in the one case than in the other, between what is naturally felt by the person principally concerned, and what the spectator can entirely go along with.

What can be added to the happiness of the man who is in health, who is out of debt, and has a clear conscience? To one in this situation, all accessions of fortune may properly be said to be superfluous; and if he is much elevated upon account of them, it must be the effect of the most frivolous levity. This situation, however, may very well be called the natural and ordinary state of mankind. Notwithstanding the present misery and depravity of the world, so justly lamented, this really is the state of the greater part of men. The greater part of men, therefore, cannot find any great difficulty in elevating themselves to all the joy which any accession to this

situation can well excite in their companion.

But though little can be added to this state, much may be taken from it. Though between this condition and the highest pitch of human prosperity, the interval is but a trifle; between it and the lowest depth of misery the distance is immense and prodigious. Adversity, on this account, necessarily depresses the mind of the sufferer much more below its natural state, than prosperity can elevate him above it. The spectator therefore, must find it much more difficult to sympathize entirely, and keep perfect time, with his sorrow, than thoroughly to enter into his joy, and must depart much further from his own natural and ordinary temper of mind in the one case than in the other. It is on this account, that though our sympathy with sorrow is often a more pungent sensation than our sympathy with joy, it always falls much more short of the violence of what is naturally felt by the person principally concerned.

It is agreeable to sympathize with, joy; and wherever envy does not oppose it, our heart abandons itself with satisfaction to the highest transports of that delightful sentiment. But it is painful to go along with grief, and we always enter into it with reluctance.^[18] When we attend to the representation of a tragedy, we struggle against that sympathetic sorrow which the entertainment inspires as long as we can, and we give way to it at last only when we can no longer avoid it: we even then endeavour to cover our concern from the company. If we shed any tears, we carefully conceal them, and are afraid, lest the spectators, not entering into this excessive tenderness, should regard it as effeminacy and weakness. The wretch whose misfortunes call upon our compassion feels with what reluctance we are likely to enter into his sorrow, and therefore proposes his grief to us with fear and hesitation: he even smothers the half of it, and is ashamed, upon account of this hard-heartedness of mankind, to give vent to the fulness of his affliction. It is otherwise with the man who riots in joy

and success. Wherever envy does not interest us against him, he expects our completest sympathy. He does not fear, therefore, to announce himself with shouts of exultation, in full confidence that we are heartily disposed to go along with him.

Why should we be more ashamed to weep than to laugh before company? We may often have as real occasion to do the one as to do the other; but we always feel that the spectators are more likely to go along with us in the agreeable, than in the painful emotion. It is always miserable to complain, even when we are oppressed by the most dreadful calamities. But the triumph of victory is not always ungraceful. Prudence, indeed, would often advise us to bear our prosperity with more moderation; because prudence would teach us to avoid that envy which this very triumph is, more than any thing, apt to excite.

How hearty are the acclamations of the mob, who never bear any envy to their superiors, at a triumph or a public entry? And how sedate and moderate is commonly their grief at an execution? Our sorrow at a funeral generally amounts to no more than an affected gravity; but our mirth at a christening or a marriage, is always from the heart, and without any affectation. Upon these, and all such joyous occasions, our satisfaction, though not so durable, is often as lively as that of the persons principally concerned. Whenever we cordially congratulate our friends, which, however, to the disgrace of human nature, we do but seldom, their joy literally becomes our joy. we are, for the moment, as happy as they are: our heart swells and overflows with real pleasure: joy and complacency sparkle from our eyes, and animate every feature of our countenance, and every gesture of our body.

But, on the contrary, when we condole with our friends in their afflictions, how little do we feel, in comparison of what they feel? We sit down by them, we look at them, and while they relate to us the

circumstances of their misfortune, we listen to them with gravity and attention. But while their narration is every moment interrupted by those natural bursts of passion which often seem almost to choak them in the midst of it; how far are the languid emotions of our hearts from keeping time to the transports of theirs? We may be sensible, at the same time, that their passion is natural, and no greater than what we ourselves might feel upon the like occasion. We may even inwardly reproach ourselves with our own want of sensibility, and perhaps, on that account, work ourselves up into an artificial sympathy, which, however, when it is raised, is always the slightest and most transitory imaginable; and generally, as soon as we have left the room, vanishes, and is gone for ever. Nature, it seems, when she loaded us with our own sorrows, thought that they were enough, and therefore did not command us to take any further share in those of others, than what was necessary to prompt us to relieve them.

It is on account of this dull sensibility to the afflictions of others, that magnanimity amidst great distress appears always so divinely graceful. His behaviour is genteel and agreeable who can maintain his cheerfulness amidst a number of frivolous disasters. But he appears to be more than mortal who can support in the same manner the most dreadful calamities. We feel what an immense effort is requisite to silence those violent emotions which naturally agitate and distract those in his situation. We are amazed to find that he can command himself so entirely. His firmness, at the same time, perfectly coincides with our insensibility. He makes no demand upon us for that more exquisite degree of sensibility which we find, and which we are mortified to find, that we do not possess. There is the most perfect correspondence between his sentiments and ours, and on that account the most perfect propriety in his behaviour. It is a propriety too, which, from our experience of the usual weakness of human nature, we could not reasonably have expected he should be able to maintain. We wonder with surprise and astonishment at that strength of mind

which is capable of so noble and generous an effort. The sentiment of complete sympathy and approbation, mixed and animated with wonder and surprise, constitutes what is properly called admiration, as has already been more than once taken notice of^[19] Cato^[20], surrounded on all sides by his enemies, unable to resist them, disdaining to submit to them, and reduced, by the proud maxims of that age, to the necessity of destroying himself; yet never shrinking from his misfortunes, never supplicating with the lamentable voice of wretchedness, those miserable sympathetic tears which we are always so unwilling to give; but on the contrary, arming himself with manly fortitude, and the moment before he executes his fatal resolution, giving, with his usual tranquillity, all necessary orders for the safety of his friends; appears to Seneca^[21], that great preacher of insensibility, a spectacle which even the gods themselves might behold with pleasure and admiration.^[22]

图I—6：Marcus Porcius Cato Uticensis（95 BC, Rome—46 BC, Utica）

图I—7 : Lucius Annaeus Seneca (ca.4 BC–AD 65)

Whenever we meet, in common life, with any examples of such heroic magnanimity, we are always extremely affected. We are more apt to weep and shed tears for such as, in this manner, seem to feel nothing for them. and in selves, than for those who give way to all the weakness of sorrow: this particular case, the sympathetic grief of the spectator appears to go beyond the original passion in the person principally concerned. The friends of Socrates all wept when he drank the last potion, while he himself expressed the gayest and most cheerful tranquillity.^[23] Upon all such occasions the spectator makes no effort, and has no occasion to make any, in order to conquer his sympathetic sorrow. He is under no fear that it will transport him to any thing that is extravagant and improper; he is rather pleased with the sensibility of his own heart, and gives way to it with complacence and self-approbation. He gladly indulges, therefore, the most melancholy views which can naturally occur to him, concerning the calamity of his friend, for whom, perhaps, he never felt so exquisitely before, the tender and tearful passion of love. But it is quite otherwise with the person principally concerned. He is obliged, as much as possible, to turn away his eyes from whatever is either naturally

terrible or disagreeable in his situation. Too serious an attention to those circumstances, he fears, might make so violent an impression upon him, that he could no longer keep within the bounds of moderation, or render himself the object of the complete sympathy and approbation of the spectators. He fixes his thoughts, therefore, upon those only which are agreeable, the applause and admiration which he is about to deserve by the heroic magnanimity of his behaviour. To feel that he is capable of so noble and generous an effort, to feel that in this dreadful situation he can still act as he would desire to act, animates and transports him with joy, and enables him to support that triumphant gaiety which seems to exult in the victory he thus gains over his misfortunes.

图I—8：苏格拉底生前的最后时刻

On the contrary, he always appears, in some measure, mean and despicable, who is sunk in sorrow and dejection upon account of any calamity of his own. We cannot bring ourselves to feel for him what he feels for himself, and what, perhaps, we should feel for ourselves if in his situation: we, therefore, despise him; unjustly, perhaps, if any sentiment could be regarded as unjust, to which we are by nature irresistibly determined. The weakness of sorrow never appears in any respect agreeable, except when it arises from what we feel for others

more than from what we feel for ourselves. A son, upon the death of an indulgent and respectable father, may give way to it without much blame. His sorrow is chiefly founded upon a sort of sympathy with his departed parent and we readily enter into this humane emotion. But if he should indulge the same weakness upon account of any misfortune which affected himself only, he would no longer meet with any such indulgence. If he should be reduced to beggary and ruin, if he should be exposed to the most dreadful dangers, if he should even be led out to a public execution, and there shed one single tear upon the scaffold, he would disgrace himself for ever in the opinion of all the gallant and generous part of mankind. Their compassion for him, however, would be very strong, and very sincere; but as it would still fall short of this excessive weakness, they would have no pardon for the man who could thus expose himself in the eyes of the world. His behaviour would affect them with shame rather than with sorrow; and the dishonour which he had thus brought upon himself would appear to them the most lamentable circumstance in his misfortune. How did it disgrace the memory of the intrepid Duke of Biron,^[24] who had so often braved death in the field, that he wept upon the scaffold, when he beheld the state to which he was fallen, and remembered the favour and the glory from which his own rashness had so unfortunately thrown him!

Chap. II Of the origin of Ambition, and of the distinction of Ranks

It is because mankind are disposed to sympathize more entirely with our joy than with our sorrow, that we make parade of our riches, and conceal our poverty. Nothing is so mortifying as to be obliged to expose our distress to the view of the public, and to feel, that though our situation is open to the eyes of all mankind, no mortal conceives for us the half of what we suffer. Nay, it is chiefly from this regard to

the sentiments of mankind, that we pursue riches and avoid poverty. For to what purpose is all the toil and bustle of this world? what is the end of avarice and ambition, of the pursuit of wealth, of power, and preheminance? Is it to supply the necessities of nature? The wages of the meanest labourer can supply them. We see that they afford him food and clothing, the comfort of a house, and of a family. If we examined his economy with rigour, we should find that he spends a great part of them upon conveniencies, which may be regarded as superfluities, and that, upon extraordinary occasions, he can give something even to vanity and distinction. What then is the cause of our aversion to his situation, and why should those who have been educated in the higher ranks of life, regard it as worse than death, to be reduced to live, even without labour, upon the same simple fare with him, to dwell under the same lowly roof, and to be clothed in the same humble attire? Do they imagine that their stomach is better, or their sleep sounder in a palace than in a cottage? The contrary has been so often observed, and, indeed, is so very obvious, though it had never been observed, that there is nobody ignorant of it. From whence, then, arises that emulation which runs through all the different ranks of men, and what are the advantages which we propose by that great purpose of human life which we call bettering our condition? To be observed, to be attended to, to be taken notice of with sympathy, complacency, and approbation, are all the advantages which we can propose to derive from it. It is the vanity, not the ease, or the pleasure, which interests us. But vanity is always founded upon the belief of our being the object of attention and approbation. The rich man glories in his riches, because he feels that they naturally draw upon him the attention of the world, and that mankind are disposed to go along with him in all those agreeable emotions with which the advantages of his situation so readily inspire him. At the thought of this, his heart seems to swell and dilate itself within him, and he is fonder of his wealth, upon this account, than for all the other advantages it procures him. The poor man, on the contrary, is

ashamed of his poverty. He feels that it either places him out of the sight of mankind, or, that if they take any notice of him, they have, however, scarce any fellow-feeling with the misery and distress which he suffers. He is mortified upon both accounts. for though to be overlooked, and to be disapproved of, are things entirely different, yet as obscurity covers us from the daylight of honour and approbation, to feel that we are taken no notice of, necessarily damps the most agreeable hope, and disappoints the most ardent desire, of human nature. The poor man goes out and comes in unheeded, and when in the midst of a crowd is in the same obscurity as if shut up in his own hovel. Those humble cares and painful attentions which occupy those in his situation, afford no amusement to the dissipated and the gay. They turn away their eyes from him, or if the extremity of his distress forces them to look at him, it is only to spurn so disagreeable an object from among them. The fortunate and the proud wonder at the insolence of human wretchedness, that it should dare to present itself before them, and with the loathsome aspect of its misery presume to disturb the serenity of their happiness. The man of rank and distinction, on the contrary, is observed by all the world. Every body is eager to look at him, and to conceive, at least by sympathy, that joy and exultation with which his circumstances naturally inspire him. His actions are the objects of the public care. Scarce a word, scarce a gesture, can fall from him that is altogether neglected. In a great assembly he is the person upon whom all direct their eyes; it is upon him that their passions seem all to wait with expectation, in order to receive that movement and direction which he shall impress upon them; and if his behaviour is not altogether absurd, he has, every moment, an opportunity of interesting mankind, and of rendering himself the object of the observation and fellow-feeling of every body about him. It is this, which, notwithstanding the restraint it imposes, notwithstanding the loss of liberty with which it is attended, renders greatness the object of envy, and compensates, in the opinion of all those mortifications which must mankind, all that toil, all that

anxiety, be undergone in the pursuit of it; and what is of yet more consequence, all that leisure, all that ease, all that careless security, which are forfeited for ever by the acquisition.

When we consider the condition of the great, in those delusive colours in which the imagination is apt to paint it, it seems to be almost the abstract idea of a perfect and happy state. It is the very state which, in all our waking dreams and idle reveries, we had sketched out to ourselves as the final object of all our desires. We feel, therefore, a peculiar sympathy with the satisfaction of those who are in it. We favour all their inclinations, and forward all their wishes. What pity, we think, that any thing should spoil and corrupt so agreeable a situation! We could even wish them immortal; and it seems hard to us, that death should at last put an end to such perfect enjoyment. It is cruel, we think, in Nature to compel them from their exalted stations to that humble, but hospitable home, which she has provided for all her children. Great King, live for ever! is the compliment, which, after the manner of eastern adulation, we should readily make them, if experience did not teach us its absurdity. Every calamity that befalls them, every injury that is done them, excites in the breast of the spectator ten times more compassion and resentment than he would have felt, had the same things happened to other men. It is the misfortunes of Kings only which afford the proper subjects for tragedy. They resemble, in this respect, the misfortunes of lovers. Those two situations are the chief which interest us upon the theatre; because, in spite of all that reason and experience can tell us to the contrary, the prejudices of the imagination attach to these two states a happiness superior to any other. To disturb, or to put an end to such perfect enjoyment, seems to be the most atrocious of all injuries. The traitor who conspires against the life of his monarch, is thought a greater monster than any other murderer. All the innocent blood that was shed in the civil wars, provoked less indignation than the death of Charles I. A stranger to human nature, who saw the indifference of

men about the misery of their inferiors, and the regret and indignation which they feel for the misfortunes and sufferings of those above them, would be apt to imagine, that pain must be more agonizing, and the convulsions of death more terrible to persons of higher rank, than to those of meaner stations.

Upon this disposition of mankind, to go along with all the passions of the rich and the powerful, is founded the distinction of ranks, and the order of society. Our obsequiousness to our superiors more frequently arises from our admiration for the advantages of their situation, than from any private expectations of benefit from their good-will.^[25] Their benefits can extend but to a few; but their fortunes interest almost every body. We are eager to assist them in completing a system of happiness that approaches so near to perfection; and we desire to serve them for their own sake, without any other recompense but the vanity or the honour of obliging them. Neither is our deference to their inclinations founded chiefly, or altogether, upon a regard to the utility of such submission, and to the order of society, which is best supported by it. Even when the order of society seems to require that we should oppose them, we can hardly bring ourselves to do it. That kings are the servants of the people, to be obeyed, resisted, deposed, or punished, as the public conveniency may require, is the doctrine of reason and philosophy; but it is not the doctrine of Nature. Nature would teach us to submit to them for their own sake, to tremble and bow down before their exalted station, to regard their smile as a reward sufficient to compensate any services, and to dread their displeasure, though no other evil were to follow from it, as the severest of all mortifications. To treat them in any respect as men, to reason and dispute with them upon ordinary occasions, requires such resolution, that there are few men whose magnanimity can support them in it, unless they are likewise assisted by familiarity and acquaintance. The strongest motives, the most furious passions, fear, hatred, and resentment, are scarce sufficient to balance this natural

disposition to respect them: and their conduct must, either justly or unjustly, have excited the highest degree of all those passions, before the bulk of the people can be brought to oppose them with violence, or to desire to see them either punished or deposed. Even when the people have been brought this length, they are apt to relent every moment, and easily relapse into their habitual state of deference to those whom they have been accustomed to look upon as their natural superiors. They cannot stand the mortification of their monarch. Compassion soon takes the place of resentment, they forget all past provocations, their old principles of loyalty revive, and they run to re-establish the ruined authority of their old masters, with the same violence with which they had opposed it. The death of Charles I brought about the Restoration of the royal family. Compassion for James II when he was seized by the populace in making his escape on ship-board, had almost prevented the Revolution, and made it go on more heavily than before. [26]

图I—9：休谟的雕像

Do the great seem insensible of the easy price at which they may acquire the public admiration; or do they seem to imagine that to

them, as to other men, it must be the purchase either of sweat or of blood? By what important accomplishments is the young nobleman instructed to support the dignity of his rank, and to render himself worthy of that superiority over his fellow-citizens, to which the virtue of his ancestors had raised them? Is it by knowledge, by industry, by patience, by self-denial, or by virtue of any kind? As all his words, as all his motions are attended to, he learns an habitual regard to every circumstance of ordinary behaviour, and studies to perform all those small duties with the most exact propriety. As he is conscious how much he is observed, and how much mankind are disposed to favour all his inclinations, he acts, upon the most indifferent occasions, with that freedom and elevation which the thought of this naturally inspires. His air, his manner, his deportment, all mark that elegant and graceful sense of his own superiority, which those who are born to inferior stations can hardly ever arrive at. These are the arts by which he proposes to make mankind more easily submit to his authority, and to govern their inclinations according to his own pleasure: and in this he is seldom disappointed. These arts, supported by rank and preheminance, are, upon ordinary occasions, sufficient to govern the world. Lewis XIV^[27] during the greater part of his reign, was regarded, not only in France, but over all Europe, as the most perfect model of a great prince. But what were the talents and virtues by which he acquired this great reputation? Was it by the scrupulous and inflexible justice of all his undertakings, by the immense dangers and difficulties with which they were attended, or by the unwearied and unrelenting application with which he pursued them? Was it by his extensive knowledge, by his exquisite judgment, or by his heroic valour? It was by none of these qualities. But he was, first of all, the most powerful prince in Europe, and consequently held the highest rank among kings; and then, says his historian, 'he surpassed all his courtiers in the gracefulness of his shape, and the majestic beauty of his features. The sound of his voice, noble and affecting, gained those hearts which his presence intimidated. He had a step and a

deportment which could suit only him and his rank, and which would have been ridiculous in any other person. The embarrassment which he occasioned to those who spoke to him, flattered that secret satisfaction with which he felt his own superiority. The old officer, who was confounded and faltered in asking him a favour, and not being able to conclude his discourse, said to him: Sir, your majesty, I hope, will believe that I do not tremble thus before your enemies: had no difficulty to obtain what he demanded.' These frivolous accomplishments, supported by his rank, and, no doubt too, by a degree of other talents and virtues, which seems, however, not to have been much above mediocrity, established this prince in the esteem of his own age, and have drawn, even from posterity, a good deal of respect for his memory. Compared with these, in his own times, and in his own presence, no other virtue, it seems, appeared to have any merit. Knowledge, industry, valour, and beneficence, trembled, were abashed, and lost all dignity before them.

But it is not by accomplishments of this kind, that the man of inferior rank must hope to distinguish himself. Politeness is so much the virtue of the great, that it will do little honour to any body but themselves. The coxcomb, who imitates their manner, and affects to be eminent by the superior propriety of his ordinary behaviour, is rewarded with a double share of contempt for his folly and presumption. Why should the man, whom nobody thinks it worth while to look at, be very anxious about the manner in which he holds up his head, or disposes of his arms while he walks through a room? He is occupied surely with a very superfluous attention, and with an attention too that marks a sense of his own importance, which no other mortal can go along with. The most perfect modesty and plainness, joined to as much negligence as is consistent with the respect due to the company, ought to be the chief characteristics of the behaviour of a private man. If ever he hopes to distinguish himself, it must be by more important virtues. He must acquire

dependants to balance the dependants of the great, and he has no other fund to pay them from, but the labour of his body, and the activity of his mind. He must cultivate these therefore: he must acquire superior knowledge in his profession, and superior industry in the exercise of it. He must be patient in labour, resolute in danger, and firm in distress. These talents he must bring into public view, by the difficulty, importance, and, at the same time, good judgment of his undertakings, and by the severe and unrelenting application with which he pursues them. Probity and prudence, generosity and frankness, must characterize his behaviour upon all ordinary occasions; and he must, at the same time, be forward to engage in all those situations, in which it requires the greatest talents and virtues to act with propriety, but in which the greatest applause is to be acquired by those who can acquit themselves with honour. With what impatience does the man of spirit and ambition, who is depressed by his situation, look round for some great opportunity to distinguish himself? No circumstances, which can afford this, appear to him undesirable. He even looks forward with satisfaction to the prospect of foreign war, or civil dissension; and, with secret transport and delight, sees through all the confusion and bloodshed which attend them, the probability of those wished-for occasions presenting themselves, in which he may draw upon himself the attention and admiration of mankind. The man of rank and distinction, on the contrary, whose whole glory consists in the propriety of his ordinary behaviour, who is contented with the humble renown which this can afford him, and has no talents to acquire any other, is unwilling to embarrass himself with what can be attended either with difficulty or distress. To figure at a ball is his great triumph, and to succeed in an intrigue of gallantry, his highest exploit. He has an aversion to all public confusions, not from the love of mankind, for the great never look upon their inferiors as their fellow-creatures; nor yet from want of courage, for in that he is seldom defective; but from a consciousness that he possesses none of the virtues which are required in such situations, and that the public

attention will certainly be drawn away from him by others. He may be willing to expose himself to some little danger, and to make a campaign when it happens to be the fashion. But he shudders with horror at the thought of any situation which demands the continual and long exertion of patience, industry, fortitude, and application^[28] of thought. These virtues are hardly ever to be met with in men who are born to those high stations. In all governments accordingly, even in monarchies, the highest offices are generally possessed, and the whole detail of the administration conducted, by men who were educated in the middle and inferior ranks of life, who have been carried forward by their own industry and abilities, though loaded with the jealousy, and opposed by the resentment, of all those who were born their superiors, and to whom the great, after having regarded them first with contempt, and afterwards with envy, are at last contented to truckle with the same abject meanness with which they desire that the rest of mankind should behave to themselves.

图I—10 : Louis-Dieudonné (1638—1715)

It is the loss of this easy empire over the affections of mankind

which renders the fall from greatness so insupportable. When the family of the king of Macedon was led in triumph by Paulus Aemilius, their misfortunes, it is said, made them divide with their conqueror the attention of the Roman people.^[29] The sight of the royal children, whose tender age rendered them insensible of their situation, struck the spectators, amidst the public rejoicings and prosperity, with the tenderest sorrow and compassion. The king appeared next in the procession; and seemed like one confounded and astonished, and bereft of all sentiment, by the greatness of his calamities. His friends and ministers followed after him. As they moved along, they often cast their eyes upon their fallen sovereign, and always burst into tears at the sight; their whole behaviour demonstrating that they thought not of their own misfortunes, but were occupied entirely by the superior greatness of his. The generous Romans, on the contrary, beheld him with disdain and indignation, and regarded as unworthy of all compassion the man who could be so mean-spirited as to bear to live under such calamities. Yet what did those calamities amount to? According to the greater part of historians, he was to spend the remainder of his days, under the protection of a powerful and humane people, in a state which in itself should seem worthy of envy, a state of plenty, ease, leisure, and security, from which it was impossible for him even by his own folly to fall. But he was no longer to be surrounded by that admiring mob of fools, flatterers, and dependants, who had formerly been accustomed to attend upon all his motions. He was no longer to be gazed upon by multitudes, nor to have it in his power to render himself the object of their respect, their gratitude, their love, their admiration. The passions of nations were no longer to mould themselves upon his inclinations. This was that insupportable calamity which bereaved the king of all sentiment; which made his friends forget their own misfortunes; and which the Roman magnanimity could scarce conceive how any man could be so mean-spirited as to bear to survive.

‘Love,’ says my Lord Rochfaucault,^[30] ‘is commonly succeeded by ambition; but ambition is hardly ever succeeded by love.’ That passion, when once it has got entire possession of the breast, will admit neither a rival nor a successor. To those who have been accustomed to the possession, or even to the hope of public admiration, all other pleasures sicken and decay. Of all the discarded statesmen who for their own ease have studied to get the better of ambition, and to despise those honours which they could no longer arrive at, how few have been able to succeed? The greater part have spent their time in the most listless and insipid indolence, chagrined at the thoughts of their own insignificancy, incapable of being interested in the occupations of private life, without enjoyment, except when they talked of their former greatness, and without satisfaction, except when they were employed in some vain project to recover it. Are you in earnest resolved never to barter your liberty for the lordly servitude of a court, but to live free, fearless, and independent? There seems to be one way to continue in that virtuous resolution; and perhaps but one. Never enter the place from whence so few have been able to return; never come within the circle of ambition; nor ever bring yourself into comparison with those masters of the earth who have already engrossed the attention of half mankind before you.

Of such mighty importance does it appear to be, in the imaginations of men, to stand in that situation which sets them most in the view of general sympathy and attention. And thus, place, that great object which divides the wives of aldermen, is the end of half the labours of human life; and is the cause of all the tumult and bustle, all the rapine and injustice, which avarice and ambition have introduced into this world. People of sense, it is said, indeed despise place; that is, they despise sitting at the head of the table, and are indifferent who it is that is pointed out to the company by that frivolous circumstance, which the smallest advantage is capable of overbalancing. But rank, distinction pre-eminence, no man despises, unless he is either raised

very much above, or sunk very much below, the ordinary standard of human nature; unless he is either so confirmed in wisdom and real philosophy, as to be satisfied that, while the propriety of his conduct renders him the just object of approbation, it is of little consequence though he be neither attended to, nor approved of; or so habituated to the idea of his own meanness, so sunk in slothful and sottish indifference, as entirely to have forgot the desire, and almost the very wish, for superiority.

As to become the natural object of the joyous congratulations and sympathetic attentions of mankind is, in this manner, the circumstance which gives to prosperity all its dazzling splendour; so nothing darkens so much the gloom of adversity as to feel that our misfortunes are the objects, not of the fellow-feeling, but of the contempt and aversion of our brethren. It is upon this account that the most dreadful calamities are not always those which it is most difficult to support. It is often more mortifying to appear in public under small disasters, than under great misfortunes. The first excite no sympathy; but the second, though they may excite none that approaches to the anguish of the sufferer, call forth, however, a very lively compassion. The sentiments of the spectators are, in this last case, less wide of those of the sufferer, and their imperfect fellow-feeling lends him some assistance in supporting his misery. Before a gay assembly, a gentleman would be more mortified to appear covered with filth and rags than with blood and wounds. This last situation would interest their pity; the other would provoke their laughter. The judge who orders a criminal to be set in the pillory, dishonours him more than if he had condemned him to the scaffold. The great prince, who, some years ago, caned a general officer at the head of his army, disgraced him irrecoverably.^[31] The punishment would have been much less had he shot him through the body. By the laws of honour, to strike with a cane dishonours, to strike with a sword does not, for an obvious reason. Those slighter punishments, when inflicted on a

gentleman, to whom dishonour is the greatest of all evils, come to be regarded among a humane and generous people, as the most dreadful of any. With regard to persons of that rank, therefore, they are universally laid aside, and the law, while it takes their life upon many occasions, respects their honour upon almost all. To scourge a person of quality, or to set him in the pillory, upon account of any crime whatever, is a brutality of which no European government, except that of Russia, is capable.

A brave man is not rendered contemptible by being brought to the scaffold; he is, by being set in the pillory. His behaviour in the one situation may gain him universal esteem and admiration. No behaviour in the other can render him agreeable. The sympathy of the spectators supports him in the one case, and saves him from that shame, that consciousness that his misery is felt by himself only, which is of all sentiments the most unsupportable. There is no sympathy in the other; or, if there is any, it is not with his pain, which is a trifle, but with his consciousness of the want of sympathy with which this pain is attended. It is with his shame, not with his sorrow. Those who pity him, blush and hang down their heads for him. He droops in the same manner, and feels himself irrecoverably degraded by the punishment, though not by the crime. The man, on the contrary, who dies with resolution, as he is naturally regarded with the erect aspect of esteem and approbation, so he wears himself the same undaunted countenance; and, if the crime does not deprive him of the respect of others, the punishment never will. He has no suspicion that his situation is the object of contempt or derision to any body, and he can, with propriety, assume the air, not only of perfect serenity, but of triumph and exultation.

‘Great dangers,’ says the Cardinal de Retz, ‘have their charms, because there is some glory to be got, even when we miscarry. But moderate dangers have nothing but what is horrible, because the loss

of reputation always attends the want of success.’^[32] His maxim has the same foundation with what we have been just now observing with regard to punishments.

Human virtue is superior to pain, to poverty, to danger, and to death; nor does it even require its utmost efforts do despise them. But to have its misery exposed to insult and derision, to be led in triumph, to be set up for the hand of scorn to point at, is a situation in which its constancy is much more apt to fail. Compared with the contempt of mankind, all other external evils are easily supported.

[33] Chap. III Of the corruption of our moral sentiments, which is occasioned by this disposition to admire the rich and the great, and to despise or neglect persons of poor and mean condition

This disposition to admire, and almost to worship, the rich and the powerful, and to despise, or, at least, to neglect persons of poor and mean condition, though necessary both to establish and to maintain the distinction of ranks and the order of society, is, at the same time, the great and most universal cause of the corruption of our moral sentiments. That wealth and greatness are often regarded with the respect and admiration which are due only to wisdom and virtue; and that the contempt, of which vice and folly are the only proper objects, is often most unjustly bestowed upon poverty and weakness, has been the complaint of moralists in all ages.

We desire both to be respectable and to be respected. We dread both to be contemptible and to be contemned. But, upon coming into the world, we soon find that wisdom and virtue are by no means the sole objects of respect; nor vice and folly, of contempt. We frequently

see the respectful attentions of the world more strongly directed towards the rich and the great, than towards the wise and the virtuous. We see frequently the vices and follies of the powerful much less despised than the poverty and weakness of the innocent. To deserve, to acquire, and to enjoy the respect and admiration of mankind, are the great objects of ambition and emulation. Two different roads are presented to us, equally leading to the attainment of this so much desired object; the one, by the study of wisdom and the practice of virtue; the other, by the acquisition of wealth and greatness. Two different characters are presented to our emulation; the one, of proud ambition and ostentatious avidity. the other, of humble modesty and equitable justice. Two different models, two different pictures, are held out to us, according to which we may fashion our own character and behaviour; the one more gaudy and glittering in its colouring; the other more correct and more exquisitely beautiful in its outline: the one forcing itself upon the notice of every wandering eye; the other, attracting the attention of scarce any body but the most studious and careful observer. They are the wise and the virtuous chiefly, a select, though, I am afraid, but a small party, who are the real and steady admirers of wisdom and virtue. The great mob of mankind are the admirers and worshippers, and, what may seem more extraordinary, most frequently the disin-terested admirers and worshippers, of wealth and greatness.

The respect which we feel for wisdom and virtue is, no doubt, different from that which we conceive for wealth and greatness; and it requires no very nice discernment to distinguish the difference. But, notwithstanding this difference, those sentiments bear a very considerable resemblance to one another. In some particular features they are, no doubt, different, but, in the general air of the countenance, they seem to be so very nearly the same, that inattentive observers are very apt to mistake the one for the other.

In equal degrees of merit there is scarce any man who does not respect more the rich and the great, than the poor and the humble. With most men the presumption and vanity of the former are much more admired, than the real and solid merit of the latter. It is scarce agreeable to good morals, or even to good language, perhaps, to say, that mere wealth and greatness, abstracted from merit and virtue, deserve our respect. We must acknowledge, however, that they almost constantly obtain it; and that they may, therefore, be considered as, in some respects, the natural objects of it. Those exalted stations may, no doubt, be completely degraded by vice and folly. But the vice and folly must be very great, before they can operate this complete degradation. The profligacy of a man of fashion is looked upon with much less contempt and aversion, than that of a man of meaner condition. In the latter, a single transgression of the rules of temperance and propriety, is commonly more resented, than the constant and avowed contempt of them ever is in the former.

In the middling and inferior stations of life, the road to virtue and that to fortune, to such fortune, at least, as men in such stations can reasonably expect to acquire, are, happily in most cases, very nearly the same. In all the middling and inferior professions, real and solid professional abilities, joined to prudent, just, firm, and temperate conduct, can very seldom fail of success. Abilities will even sometimes prevail where the conduct is by no means correct. Either habitual imprudence, however, or injustice, or weakness, or profligacy, will always cloud, and sometimes depress altogether, the most splendid professional abilities. Men in the inferior and middling stations of life, besides, can never be great enough to be above the law, which must generally overawe them into some sort of respect for, at least, the more important rules of justice. The success of such people, too, almost always depends upon the favour and good opinion of their neighbours and equals; and without a tolerably regular conduct these can very seldom be obtained. The good old proverb, therefore, That

honesty is the best policy, holds, in such situations, almost always perfectly true. In such situations, therefore, we may generally expect a considerable degree of virtue; and, fortunately for the good morals of society, these are the situations of by far the greater part of mankind.

In the superior stations of life the case is unhappily not always the same. In the courts of princes, in the drawing-rooms of the great, where success and preferment depend, not upon the esteem of intelligent and well-informed equals, but upon the fanciful and foolish favour of ignorant, presumptuous, and proud superiors; flattery and falsehood too often prevail over merit and abilities. In such societies the abilities to please, are more regarded than the abilities to serve. In quiet and peaceable times, when the storm is at a distance, the prince, or great man, wishes only to be amused, and is even apt to fancy that he has scarce any occasion for the service of any body, or that those who amuse him are sufficiently able to serve him. The external graces, the frivolous accomplishments of that impertinent and foolish thing called a man of fashion, are commonly more admired than the solid and masculine virtues of a warrior, a statesman, a philosopher, or a legislator. All the great and awful virtues, all the virtues which can fit, either for the council, the senate, or the field, are, by the insolent and insignificant flatterers, who commonly figure the most in such corrupted societies, held in the utmost contempt and derision. When the duke of Sully was called upon by Lewis the Thirteenth,^[34] to give his advice in some great emergency, he observed the favourites and courtiers whispering to one another, and smiling at his unfashionable appearance. 'Whenever your majesty's father,' said the old warrior and statesman, 'did me the honour to consult me, he ordered the buffoons of the court to retire into the antechamber.'

It is from our disposition to admire, and consequently to imitate, the rich and the great, that they are enabled to set, or to lead what is called the fashion. Their dress is the fashionable dress; the language of

their conversation, the fashionable style; their air and deportment, the fashionable behaviour. Even their vices and follies are fashionable; and the greater part of men are proud to imitate and resemble them in the very qualities which dishonour and degrade them. Vain men often give themselves airs of a fashionable profligacy, which, in their hearts, they do not approve of, and of which, perhaps, they are really not guilty. They desire to be praised for what they themselves do not think praise-worthy, and are ashamed of unfashionable virtues which they sometimes practise in secret, and for which they have secretly some degree of real veneration. There are hypocrites of wealth and greatness, as well as of religion and virtue; and a vain man is as apt to pretend to be what he is not, in the one way, as a cunning man is in the other. He assumes the equipage and splendid way of living of his superiors, without considering that whatever may be praise-worthy in any of these, derives its whole merit and propriety from its suitableness to that situation and fortune which both require and can easily support the expence. Many a poor man places his glory in being thought rich, without considering that the duties (if one may call such follies by so very venerable a name) which that reputation imposes upon him, must soon reduce him to beggary, and render his situation still more unlike that of those whom he admires and imitates, than it had been originally.

To attain to this envied situation, the candidates for fortune too frequently abandon the paths of virtue; for unhappily, the road which leads to the one, and that which leads to the other, lie sometimes in very opposite directions. But the ambitious man flatters himself that, in the splendid situation to which he advances, he will have so many means of commanding the respect and admiration of mankind, and will be enabled to act with such superior propriety and grace, that the lustre of his future conduct will entirely cover, or efface, the foulness of the steps by which he arrived at that elevation. In many governments the candidates for the highest stations are above the law;

and, if they can attain the object of their ambition, they have no fear of being called to account for the means by which they acquired it. They often endeavour, therefore, not only by fraud and falsehood, the ordinary and vulgar arts of intrigue and cabal; but sometimes by the perpetration of the most enormous crimes, by murder and assassination, by rebellion and civil war, to supplant and destroy those who oppose or stand in the way of their greatness. They more frequently miscarry than succeed; and commonly gain nothing but the disgraceful punishment which is due to their crimes. But, though they should be so lucky as to attain that wished-for greatness, they are always most miserably disappointed in the happiness which they expect to enjoy in it. It is not ease or pleasure, but always honour, of one kind or another, though frequently an honour very ill understood, that the ambitious man really pursues. But the honour of his exalted station appears, both in his own eyes and in those of other people, polluted and defiled by the baseness of the means through which he rose to it. Though by the profusion of every liberal expence; though by excessive indulgence in every profligate pleasure, the wretched, but usual, resource of ruined characters; though by the hurry of public business, or by the prouder and more dazzling tumult of war, he may endeavour to efface, both from his own memory and from that of other people, the remembrance of what he has done; that remembrance never fails to pursue him. He invokes in vain the dark and dismal powers of forgetfulness and oblivion. He remembers himself what he has done, and that remembrance tells him that other people must likewise remember it. Amidst all the gaudy pomp of the most ostentatious greatness; amidst the venal and vile adulation of the great and of the learned; amidst the more innocent, though more foolish, acclamations of the common people; amidst all the pride of conquest and the triumph of successful war, he is still secretly pursued by the avenging furies of shame and remorse; and, while glory seems to surround him on all sides, he himself, in his own imagination, sees black and foul infamy fast pursuing him, and every moment ready to

overtake him from behind. Even the great Caesar, though he had the magnanimity to dismiss his guards, could not dismiss his suspicions. The remembrance of Pharsalia still haunted and pursued him. When, at the request of the senate, he had the generosity to pardon Marcellus, he told that assembly, that he was not unaware of the designs which were carrying on against his life; but that, as he had lived long enough both for nature and for glory, he was contented to die, and therefore despised all conspiracies.[35] He had, perhaps, lived long enough for nature. But the man who felt himself the object of such deadly resentment, from those whose favour he wished to gain, and whom he still wished to consider as his friends, had certainly lived too long for real glory; or for all the happiness which he could ever hope to enjoy in the love and esteem of his equals.

[18] 原注：It has been objected to me that as I found the sentiment of approbation, which is always agreeable, upon sympathy, it is inconsistent with my system to admit any disagreeable sympathy. I answer, that in the sentiment of approbation there are two things to be taken notice of; first, the sympathetic passion of the spectator; and, secondly, the emotion which arises from his observing the perfect coincidence between this sympathetic passion in himself, and the original passion in the person principally concerned. This last emotion, in which the sentiment of approbation properly consists, is always agreeable and delightful. The other may either be agreeable or disagreeable, according to the nature of the original passion, whose features it must always, in some measure, retain.

Part II Of Merit and Demerit; or, of the Objects of Reward

Section I Of the Sense of Merit and Demerit

Introduction

There is another set of qualities ascribed to the actions and conduct of mankind, distinct from their propriety or impropriety, their decency or ungracefulness, and which are the objects of a distinct species of approbation and disapprobation. These are Merit and Demerit, the qualities of deserving reward, and of deserving punishment.

It has already been observed,^[1] that the sentiment or affection of the heart, from which any action proceeds, and upon which its whole virtue or vice depends, may be considered under two different aspects, or in two different relations: first, in relation to the cause or object which excites it; and, secondly, in relation to the end which it proposes, or to the effect which it tends to produce: that upon the suitability or unsuitability, upon the proportion or disproportion, which the affection seems to bear to the cause or object which excites it, depends the propriety or impropriety, the decency or ungracefulness of the consequent action; and that upon the beneficial or hurtful effects which the affection proposes or tends to produce, depends the merit or demerit, the good or ill desert of the action to which it gives occasion. Wherein consists our sense of the propriety or impropriety of actions, has been explained in the former part of this discourse. We come now to consider, wherein consists that of their good or ill desert.

Chap. I That whatever appears to be the proper object of gratitude, appears to deserve reward;

and that, in the same manner, whatever appears to be the proper object of resentment appears to deserve punishment

To us, therefore, that action must appear to deserve reward, which appears to be the proper and approved object of that sentiment, which most immediately and directly prompts us to reward, or to do good to another. And in the same manner, that action must appear to deserve punishment, which appears to be the proper and approved object of that sentiment which most immediately and directly prompts us to punish, or to inflict evil upon another.

The sentiment which most immediately and directly prompts us to reward, is gratitude; that which most immediately and directly prompts us to punish, is resentment.

To us, therefore, that action must appear to deserve reward, which appears to be the proper and approved object of gratitude; as, on the other hand, that action must appear to deserve punishment, which appears to be the proper and approved object of resentment.

To reward, is to recompense, to remunerate, to return good for good received. To punish, too, is to recompense, to remunerate, though in a different manner; it is to return evil for evil that has been done.

There are some other passions, besides gratitude and resentment, which interest us in the happiness or misery of others; but there are none which so directly excite us to be the instruments of either. The love and esteem which grow upon acquaintance and habitual approbation, necessarily lead us to be pleased with the good fortune of the man who is the object of such agreeable emotions, and consequently, to be willing to lend a hand to promote it. Our love, however, is fully satisfied, though his good fortune should be brought

about without our assistance. All that this passion desires is to see him happy, without regarding who was the author of his prosperity. But gratitude is not to be satisfied in this manner. If the person to whom we owe many obligations, is made happy without our assistance, though it pleases our love, it does not content our gratitude. Till we have recompensed him, till we ourselves have been instrumental in promoting his happiness, we feel ourselves still loaded with that debt which his past services have laid upon us.

The hatred and dislike, in the same manner, which grow upon habitual disapprobation, would often lead us to take a malicious pleasure in the misfortune of the man whose conduct and character excite so painful a passion. But though dislike and hatred harden us against all sympathy, and sometimes dispose us even to rejoice at the distress of another, yet, if there is no resentment in the case, if neither we nor our friends have received any great personal provocation, these passions would not naturally lead us to wish to be instrumental in bringing it about. Though we could fear no punishment in consequence of our having had some hand in it, we would rather that it should happen by other means. To one under the dominion of violent hatred it would be agreeable, perhaps, to hear, that the person whom he abhorred and detested was killed by some accident. But if he had the least spark of justice, which, though this passion is not very favourable to virtue, he might still have, it would hurt him excessively to have been himself, even without design, the occasion of this misfortune. Much more would the very thought of voluntarily contributing to it shock him beyond all measure. He would reject with horror even the imagination of so execrable a design; and if he could imagine himself capable of such an enormity, he would begin to regard himself in the same odious light in which he had considered the person who was the object of his dislike. But it is quite otherwise with resentment: if the person who had done us some great injury, who had murdered our father or our brother, for example, should

soon afterwards die of a fever, or even be brought to the scaffold upon account of some other crime, though it might sooth our hatred, it would not fully gratify our resentment. Resentment would prompt us to desire, not only that he should be punished, but that he should be punished by our means, and upon account of that particular injury which he had done to us. Resentment cannot be fully gratified, unless the offender is not only made to grieve in his turn, but to grieve for that particular wrong which we have suffered from him. He must be made to repent and be sorry for this very action, that others, through fear of the like punishment, may be terrified from being guilty of the like offence. The natural gratification of this passion tends, of its own accord, to produce all the political ends of punishment; the correction of the criminal, and the example to the public.

Gratitude and resentment, therefore, are the sentiments which most immediately and directly prompt to reward and to punish. To us, therefore, he must appear to deserve reward, who appears to be the proper and approved object of gratitude; and he to deserve punishment, who appears to be that of resentment.

Chap. II Of the proper objects of gratitude and resentment

To be the proper and approved object either of gratitude or resentment, can mean nothing but to be the object of that gratitude, and of that resentment, which naturally seems proper, and is approved of.

But these, as well as all the other passions of human nature, seem proper and are approved of, when the heart of every impartial spectator entirely sympathizes with them, when every indifferent bystander entirely enters into, and goes along with them.

He, therefore, appears to deserve reward, who, to some person or

persons, is the natural object of a gratitude which every human heart is disposed to beat time to, and thereby applaud: and he, on the other hand, appears to deserve punishment, who in the same manner is to some person or persons the natural object of a resentment which the breast of every reasonable man is ready to adopt and sympathize with. To us, surely, that action must appear to deserve reward, which every body who knows of it would wish to reward, and therefore delights to see rewarded: and that action must as surely appear to deserve punishment, which every body who hears of it is angry with, and upon that account rejoices to see punished.

1. As we sympathize with the joy of our companions when in prosperity, so we join with them in the complacency and satisfaction with which they naturally regard whatever is the cause of their good fortune. We enter into the love and affection which they conceive for it, and begin to love it too. We should be sorry for their sakes if it was destroyed, or even if it was placed at too great a distance from them, and out of the reach of their care and protection, though they should lose nothing by its absence except the pleasure of seeing it. If it is man who has thus been the fortunate instrument of the happiness of his brethren, this is still more peculiarly the case. When we see one man assisted, protected, relieved by another, our sympathy with the joy of the person who receives the benefit serves only to animate our fellow-feeling with his gratitude towards him who bestows it. When we look upon the person who is the cause of his pleasure with the eyes with which we imagine he must look upon him, his benefactor seems to stand before us in the most engaging and amiable light. We readily therefore sympathize with the grateful affection which he conceives for a person to whom he has been so much obliged; and consequently applaud the returns which he is disposed to make for the good offices conferred upon him. As we entirely enter into the affection from which these returns proceed, they necessarily seem every way proper and suitable to their object.

2. In the same manner, as we sympathize with the sorrow of our fellow-creature whenever we see his distress, so we likewise enter into his abhorrence and aversion for whatever has given occasion to it. Our heart, as it adopts and beats time to his grief, so is it likewise animated with that spirit by which he endeavours to drive away or destroy the cause of it. The indolent and passive fellow-feeling, by which we accompany him in his sufferings, readily gives way to that more vigorous and active sentiment by which we go along with him in the effort he makes, either to repel them, or to gratify his aversion to what has given occasion to them. This is still more peculiarly the case, when it is man who has caused them. When we see one man oppressed or injured by another, the sympathy which we feel with the distress of the sufferer seems to serve only to animate our fellow-feeling with his resentment against the offender. We are rejoiced to see him attack his adversary in his turn, and are eager and ready to assist him whenever he exerts himself for defence, or even for vengeance within a certain degree. If the injured should perish in the quarrel, we not only sympathize with the real resentment of his friends and relations, but with the imaginary resentment which in fancy we lend to the dead, who is no longer capable of feeling that or any other human sentiment. But as we put ourselves in his situation, as we enter, as it were, into his body, and in our imaginations, in some measure, animate anew the deformed and mangled carcass of the slain, when we bring home in this manner his case to our own bosoms, we feel upon this, as upon many other occasions, an emotion which the person principally concerned is incapable of feeling, and which yet we feel by an illusive sympathy with him. The sympathetic tears which we shed for that immense and irretrievable loss, which in our fancy he appears to have sustained, seem to be but a small part of the duty which we owe him. The injury which he has suffered demands, we think, a principal part of our attention. We feel that resentment which we imagine he ought to feel, and which he would feel, if in his cold and lifeless body there remained any consciousness

of what passes upon earth. His blood, we think, calls aloud for vengeance. The very ashes of the dead seem to be disturbed at the thought that his injuries are to pass unrevenged. The horrors which are supposed to haunt the bed of the murderer, the ghosts which, superstition imagines, rise from their graves to demand vengeance upon those who brought them to an untimely end, all take their origin from this natural sympathy with the imaginary resentment of the slain. And with regard, at least, to this most dreadful of all crimes, Nature, antecedent to all reflections upon the utility of punishment, has in this manner stamped upon the human heart, in the strongest and most indelible characters, an immediate and instinctive approbation of the sacred and necessary law of retaliation.

Chap. III That where there is no approbation of the conduct of the person who confers the benefit, there is little sympathy with the gratitude of him who receives it: and that, on the contrary, where there is no disapprobation of the motives of the person who does the mischief, there is no sort of sympathy with the resentment of him who suffers it

It is to be observed, however, that, how beneficial soever on the one hand, or how hurtful soever on the other, the actions or intentions of the person who acts may have been to the person who is, if I may say so, acted upon, yet if in the one case there appears to have been no propriety in the motives of the agent, if we cannot enter into the affections which influenced his conduct, we have little sympathy with the gratitude of the person who receives the benefit: or if, in the other case, there appears to have been no impropriety in the motives of the agent, if, on the contrary, the affections which influenced his conduct

are such as we must necessarily enter into, we can have no sort of sympathy with the resentment of the person who suffers. Little gratitude seems due in the one case, and all sort of resentment seems unjust in the other. The one action seems to merit little reward, the other to deserve no punishment.

1. First, I say, That wherever we cannot sympathize with the affections of the agent, wherever there seems to be no propriety in the motives which influenced his conduct, we are less disposed to enter into the gratitude of the person who received the benefit of his actions. A very small return seems due to that foolish and profuse generosity which confers the greatest benefits from the most trivial motives, and gives an estate to a man merely because his name and surname happen to be the same with those of the giver. Such services do not seem to demand any proportionable recompense. Our contempt for the folly of the agent hinders us from thoroughly entering into the gratitude of the person to whom the good office has been done. His benefactor seems unworthy of it. As when we place ourselves in the situation of the person obliged, we feel that we could conceive no great reverence for such a benefactor, we easily absolve him from a great deal of that submissive veneration and esteem which we should think due to a more respectable character; and provided he always treats his weak friend with kindness and humanity, we are willing to excuse him from many attentions and regards which we should demand to a worthier patron. Those Princes, who have heaped, with the greatest profusion, wealth, power, and honours, upon their favourites, have seldom excited that degree of attachment to their persons which has often been experienced by those who were more frugal of their favours. The well-natured, but injudicious prodigality of James the First of Great Britain seems to have attached nobody to his person; and that Prince, notwithstanding his social and harmless disposition, appears to have lived and died without a friend. The whole gentry and nobility of England exposed their lives and fortunes

in the cause of his more frugal and distinguishing son, notwithstanding the coldness and distant severity of his ordinary deportment.^[2]

2. Secondly, I say, That wherever the conduct of the agent appears to have been entirely directed by motives and affections which we thoroughly enter into and approve of, we can have no sort of sympathy with the resentment of the sufferer, how great soever the mischief which may have been done to him. When two people quarrel, if we take part with, and entirely adopt the resentment of one of them, it is impossible that we should enter into that of the other. Our sympathy with the person whose motives we go along with, and whom therefore we look upon as in the right, cannot but harden us against all fellow-feeling with the other, whom we necessarily regard as in the wrong. Whatever this last, therefore, may have suffered, while it is no more than what we ourselves should have wished him to suffer, while it is no more than what our own sympathetic indignation would have prompted us to inflict upon him, it cannot either displease or provoke us. When an inhuman murderer is brought to the scaffold, though we have some compassion for his misery, we can have no sort of fellow-feeling with his resentment, if he should be so absurd as to express any against either his prosecutor or his judge. The natural tendency of their just indignation against so vile a criminal is indeed the most fatal and ruinous to him. But it is impossible that we should be displeased with the tendency of a sentiment, which, when we bring the case home to ourselves, we feel that we cannot avoid adopting.

Chap. IV Recapitulation of the foregoing chapters

1. We do not, therefore, thoroughly and heartily sympathize with the gratitude of one man towards another, merely because this other has been the cause of his good fortune, unless he has been the cause of it from motives which we entirely go along with. Our heart must

adopt the principles of the agent, and go along with all the affections which influenced his conduct, before it can entirely sympathize with, and beat time to, the gratitude of the person who has been benefited by his actions. If in the conduct of the benefactor there appears to have been no propriety, how beneficial soever its effects, it does not seem to demand, or necessarily to require, any proportionable recompense.

图II—1：詹姆斯一世及其皇室子嗣

But when to the beneficent tendency of the action is joined the propriety of the affection from which it proceeds, when we entirely sympathize and go along with the motives of the agent, the love which we conceive for him upon his own account, enhances and enlivens our fellow-feeling with the gratitude of those who owe their prosperity to his good conduct. His actions seem then to demand, and, if I may say so, to call aloud for a proportionable recompense. We then entirely enter into that gratitude which prompts to bestow it. The benefactor seems then to be the proper object of reward, when we thus entirely sympathize with, and approve of, that sentiment which prompts to reward him. When we approve of, and go along with, the affection from which the action proceeds, we must necessarily approve of the action, and regard the person towards whom it is

directed, as its proper and suitable object.

2. In the same manner, we cannot at all sympathize with the resentment of one man against another, merely because this other has been the cause of his misfortune, unless he has been the cause of it from motives which we cannot enter into. Before we can adopt the resentment of the sufferer, we must disapprove of the motives of the agent, and feel that our heart renounces all sympathy with the affections which influenced his conduct. If there appears to have been no impropriety in these, how fatal soever the tendency of the action which proceeds from them to those against whom it is directed, it does not seem to deserve any punishment, or to be the proper object of any resentment.

But when to the hurtfulness of the action is joined the impropriety of the affection from whence it proceeds, when our heart rejects with abhorrence all fellow-feeling with the motives of the agent, we then heartily and entirely sympathize with the resentment of the sufferer. Such actions seem then to deserve, and, if I may say so, to call aloud for, a proportionable punishment; and we entirely enter into, and thereby approve of, that resentment which prompts to inflict it. The offender necessarily seems then to be the proper object of punishment, when we thus entirely sympathize with, and thereby approve of, that sentiment which prompts to punish. In this case too, when we approve, and go along with, the affection from which the action proceeds, we must necessarily approve of the action, and regard the person against whom it is directed, as its proper and suitable object.

Chap. V The analysis of the sense of Merit and Demerit

1. As our sense, therefore, of the propriety of conduct arises from

what I shall call a direct sympathy with the affections and motives of the person who acts, so our sense of its merit arises from what I shall call an indirect sympathy with the gratitude of the person who is, if I may say so, acted upon.

As we cannot indeed enter thoroughly into the gratitude of the person who receives the benefit, unless we beforehand approve of the motives of the benefactor, so, upon this account, the sense of merit seems to be a compounded sentiment, and to be made up of two distinct emotions; a direct sympathy with the sentiments of the agent, and an indirect sympathy with the gratitude of those who receive the benefit of his actions.

We may, upon many different occasions, plainly distinguish those two different emotions combining and uniting together in our sense of the good desert of a particular character or action. When we read in history concerning actions of proper and beneficent greatness of mind, how eagerly do we enter into such designs? How much are we animated by that high-spirited generosity which directs them? How keen are we for their success? How grieved at their disappointment? In imagination we become the very person whose actions are represented to us: we transport ourselves in fancy to the scenes of those distant and forgotten adventures, and imagine ourselves acting the part of a Scipio or a Camillus, a Timoleon or an Aristides.^[3] So far our sentiments are founded upon the direct sympathy with the person who acts. Nor is the indirect sympathy with those who receive the benefit of such actions less sensibly felt. Whenever we place ourselves in the situation of these last, with what warm and affectionate fellow-feeling do we enter into their gratitude towards those who served them so essentially? We embrace, as it were, their benefactor along with them. Our heart readily sympathizes with the highest transports of their grateful affection. No honours, no rewards, we think, can be too great for them to bestow upon him. When they make this proper

return for his services, we heartily applaud and go along with them; but are shocked beyond all measure, if by their conduct they appear to have little sense of the obligations conferred upon them. Our whole sense, in short, of the merit and good desert of such actions, of the propriety and fitness of recompensing them, and making the person who performed them rejoice in his turn, arises from the sympathetic emotions of gratitude and love, with which, when we bring home to our own breast the situation of those principally concerned, we feel ourselves naturally transported towards the man who could act with such proper and noble beneficence.

2. In the same manner as our sense of the impropriety of conduct arises from a want of sympathy, or from a direct antipathy to the affections and motives of the agent, so our sense of its demerit arises from what I shall here too call an indirect sympathy with the resentment of the sufferer.

As we cannot indeed enter into the resentment of the sufferer, unless our heart beforehand disapproves the motives of the agent, and renounces all fellow-feeling with them; so upon this account the sense of demerit, as well as that of merit, seems to be a compounded sentiment, and to be made up of two distinct emotions; a direct antipathy to the sentiments of the agent, and an indirect sympathy with the resentment of the sufferer.

We may here too, upon many different occasions, plainly distinguish those two different emotions combining and uniting together in our sense of the ill desert of a particular character or action. When we read in history concerning the perfidy and cruelty of a Borgia or a Nero^[4], our heart rises up against the detestable sentiments which influenced their conduct, and renounces with horror and abomination all fellow-feeling with such execrable motives. So far our sentiments are founded upon the direct antipathy to the affections of the agent: and the indirect sympathy with the resentment of the

sufferers is still more sensibly felt. When we bring home to ourselves the situation of the persons whom those scourges of mankind insulted, murdered, or betrayed, what indignation do we not feel against such insolent and inhuman oppressors of the earth? Our sympathy with the unavoidable distress of the innocent sufferers is not more real nor more lively, than our fellow-feeling with their just and natural resentment: The former sentiment only heightens the latter, and the idea of their distress serves only to inflame and blow up our animosity against those who occasioned it. When we think of the anguish of the sufferers, we take part with them more earnestly against their oppressors; we enter with more eagerness into all their schemes of vengeance, and feel ourselves every moment wreaking, in imagination, upon such violators of the laws of society, that punishment which our sympathetic indignation tells us is due to their crimes. Our sense of the horror and dreadful atrocity of such conduct, the delight which we take in hearing that it was properly punished, the indignation which we feel when it escapes this due retaliation, our whole sense and feeling, in short, of its ill desert, of the propriety and fitness of inflicting evil upon the person who is guilty of it, and of making him grieve in his turn, arises from the sympathetic indignation which naturally boils up in the breast of the spectator, whenever he thoroughly brings home to himself the case of the sufferer.¹

Section II Of Justice and Beneficence

Chap. I Comparison of those two virtues

Actions of a beneficent tendency, which proceed from proper motives, seem alone to require reward, because such alone are the approved objects of gratitude, or excite the sympathetic gratitude of the spectator.

Actions of a hurtful tendency, which proceed from improper motives, seem alone to deserve punishment; because such alone are the approved objects of resentment, or excite the sympathetic resentment of the spectator.

Beneficence is always free, it cannot be extorted by force, the mere want of it exposes to no punishment; because the mere want of beneficence tends to do no real positive evil. It may disappoint of the good which might reasonably have been expected, and upon that account it may justly excite dislike and disapprobation: it cannot, however, provoke any resentment which mankind will go along with. The man who does not recompense his benefactor when he has it in his power, and when his benefactor needs his assistance, is, no doubt, guilty of the blackest ingratitude. The heart of every impartial spectator rejects all fellow-feeling with the selfishness of his motives, and he is the proper object of the highest disapprobation. But still he does no positive hurt to any body. He only does not do that good which in propriety he ought to have done. He is the object of hatred, a passion which is naturally excited by impropriety of sentiment and behaviour. not of resentment, a passion which is never properly called forth but by actions which tend to do real and positive hurt to some particular persons. His want of gratitude, therefore, cannot be punished. To oblige him by force to perform what in gratitude he

ought to perform, and what every impartial spectator would approve of him for performing, would, if possible, be still more improper than his neglecting to perform it. His benefactor would dishonour himself if he attempted by violence to constrain him to gratitude, and it would be impertinent for any third person, who was not the superior of either, to intermeddle. But of all the duties of beneficence, those which gratitude recommends to us approach nearest to what is called a perfect and complete obligation. What friendship, what generosity, what charity, would prompt us to do with universal approbation, is still more free, and can still less be extorted by force than the duties of gratitude. We talk of the debt of gratitude, not of charity, or generosity, nor even of friendship, when friendship is mere esteem, and has not been enhanced and complicated with gratitude for good offices.

Resentment seems to have been given us by nature for defence, and for defence only. It is the safeguard of justice and the security of innocence. It prompts us to beat off the mischief which is attempted to be done to us, and to retaliate that which is already done; that the offender may be made to repent of his injustice, and that others, through fear of the like punishment, may be terrified from being guilty of the like offence. It must be reserved therefore for these purposes, nor can the spectator ever go along with it when it is exerted for any other. But the mere want of the beneficent virtues, though it may disappoint us of the good which might reasonably be expected, neither does, nor attempts to do, any mischief from which we can have occasion to defend ourselves.

There is, however, another virtue, of which the observance is not left to the freedom of our own wills, which may be extorted by force, and of which the violation exposes to resentment, and consequently to punishment. This virtue is justice^[5]: the violation of justice is injury: it does real and positive hurt to some particular persons, from motives

which are naturally disapproved of. It is, therefore, the proper object of resentment, and of punishment, which is the natural consequence of resentment. As mankind go along with, and approve of the violence employed to avenge the hurt which is done by injustice, so they much more go along with, and approve of, that which is employed to prevent and beat off the injury, and to restrain the offender from hurting his neighbours. The person himself who meditates an injustice is sensible of this, and feels that force may, with the utmost propriety, be made use of, both by the person whom he is about to injure, and by others, either to obstruct the execution of his crime, or to punish him when he has executed it. And upon this is founded that remarkable distinction between justice and all the other social virtues, which has of late been particularly insisted upon by an author^[6] of very great and original genius, that we feel ourselves to be under a stricter obligation to act according to justice, than agreeably to friendship, charity, or generosity; that the practice of these last mentioned virtues seems to be left in some measure to our own choice, but that, somehow or other, we feel ourselves to be in a peculiar manner tied, bound, and obliged to the observation of justice. We feel, that is to say, that force may, with the utmost propriety, and with the approbation of all mankind, be made use of to constrain us to observe the rules of the one, but not to follow the precepts of the other.

We must always, however, carefully distinguish what is only blamable, or the proper object of disapprobation, from what force may be employed either to punish or to prevent. That seems blamable which falls short of that ordinary degree of proper beneficence which experience teaches us to expect of every body; and on the contrary, that seems praise-worthy which goes beyond it. The ordinary degree itself seems neither blamable nor praise-worthy. A father, a son, a brother, who behaves to the correspondent relation neither better nor worse than the greater part of men commonly do, seems properly to deserve neither praise nor blame. He who surprises us by

extraordinary and unexpected, though still proper and suitable kindness, or on the contrary by extraordinary and unexpected, as well as unsuitable unkindness, seems praise-worthy in the one case, and blamable in the other.

Even the most ordinary degree of kindness or beneficence, however, cannot, among equals, be extorted by force. Among equals each individual is naturally, and antecedent to the institution of civil government, regarded as having a right both to defend himself from injuries, and to exact a certain degree of punishment for those which have been done to him. Every generous spectator not only approves of his conduct when he does this, but enters so far into his sentiments as often to be willing to assist him. When one man attacks, or robs, or attempts to murder another, all the neighbours take the alarm, and think that they do right when they run, either to revenge the person who has been injured, or to defend him who is in danger of being so. But when a father fails in the ordinary degree of parental affection towards a son; when a son seems to want that filial reverence which might be expected to his father; when brothers are without the usual degree of brotherly affection; when a man shuts his breast against compassion, and refuses to relieve the misery of his fellow-creatures, when he can with the greatest ease; in all these cases, though every body blames the conduct, nobody imagines that those who might have reason, perhaps, to expect more kindness, have any right to extort it by force. The sufferer can only complain, and the spectator can intermeddle no other way than by advice and persuasion. Upon all such occasions, for equals to use force against one another, would be thought the highest degree of insolence and presumption.

A superior may, indeed, sometimes, with universal approbation, oblige those under his jurisdiction to behave, in this respect, with a certain degree of propriety to one another. The laws of all civilized nations oblige parents to maintain their children, and children to

maintain their parents, and impose upon men many other duties of beneficence. The civil magistrate is entrusted with the power not only of preserving the public peace by restraining injustice, but of promoting the prosperity of the commonwealth, by establishing good discipline, and by discouraging every sort of vice and impropriety; he may prescribe rules, therefore, which not only prohibit mutual injuries among fellow-citizens, but command mutual good offices to a certain degree. When the sovereign commands what is merely indifferent, and what, antecedent to his orders, might have been omitted without any blame, it becomes not only blamable but punishable to disobey him. When he commands, therefore, what, antecedent to any such order, could not have been omitted without the greatest blame, it surely becomes much more punishable to be wanting in obedience. Of all the duties of a law-giver, however, this, perhaps, is that which it requires the greatest delicacy and reserve to execute with propriety and judgment. To neglect it altogether exposes the commonwealth to many gross disorders and shocking enormities, and to push it too far is destructive of all liberty, security, and justice.

Though the mere want of beneficence seems to merit no punishment from equals, the greater exertions of that virtue appear to deserve the highest reward. By being productive of the greatest good, they are the natural and approved objects of the liveliest gratitude. Though the breach of justice, on the contrary, exposes to punishment, the observance of the rules of that virtue seems scarce to deserve any reward. There is, no doubt, a propriety in the practice of justice, and it merits, upon that account, all the approbation which is due to propriety. But as it does no real positive good, it is entitled to very little gratitude. Mere justice is, upon most occasions, but a negative virtue, and only hinders us from hurting our neighbour. The man who barely abstains from violating either the person, or the estate, or the reputation of his neighbours, has surely very little positive merit. He fulfils, however, all the rules of what is peculiarly called justice, and

does every thing which his equals can with propriety force him to do, or which they can punish him for not doing. We may often fulfil all the rules of justice by sitting still and doing nothing.

As every man doth, so shall it be done to him, and retaliation seems to be the great law which is dictated to us by Nature. Beneficence and generosity we think due to the generous and beneficent. Those whose hearts never open to the feelings of humanity, should, we think, be shut out, in the same manner, from the affections of all their fellow-creatures, and be allowed to live in the midst of society, as in a great desert where there is nobody to care for them, or to inquire after them. The violator of the laws of justice ought to be made to feel himself that evil which he has done to another; and since no regard to the sufferings of his brethren is capable of restraining him, he ought to be over-awed by the fear of his own. The man who is barely innocent, who only observes the laws of justice with regard to others, and merely abstains from hurting his neighbours, can merit only that his neighbours in their turn should respect his innocence, and that the same laws should be religiously observed with regard to him.

Chap. II Of the sense of Justice, of Remorse, and of the consciousness of Merit

There can be no proper motive for hurting our neighbour, there can be no incitement to do evil to another, which mankind will go along with, except just indignation for evil which that other has done to us. To disturb his happiness merely because it stands in the way of our own, to take from him what is of real use to him merely because it may be of equal or of more use to us, or to indulge, in this manner, at the expence of other people, the natural preference which every man has for his own happiness above that of other people, is what no impartial spectator can go along with. Every man is, no doubt, by

nature, first and principally recommended to his own care; and as he is fitter to take care of himself than of any other person, it is fit and right that it should be so. Every man, therefore, is much more deeply interested in whatever immediately concerns himself, than in what concerns any other man: and to hear, perhaps, of the death of another person, with whom we have no particular connexion, will give us less concern, will spoil our stomach, or break our rest much less than a very insignificant disaster which has befallen ourselves. But though the ruin of our neighbour may affect us much less than a very small misfortune of our own, we must not ruin him to prevent that small misfortune, nor even to prevent our own ruin. We must, here, as in all other cases, view ourselves not so much according to that light in which we may naturally appear to ourselves, as according to that in which we naturally appear to others. Though every man may, according to the proverb, be the whole world to himself, to the rest of mankind he is a most insignificant part of it. Though his own happiness may be of more importance to him than that of all the world besides, to every other person it is of no more consequence than that of any other man. Though it may be true, therefore, that every individual, in his own breast, naturally prefers himself to all mankind, yet he dares not look mankind in the face, and avow that he acts according to this principle. He feels that in this preference they can never go along with him, and that how natural soever it may be to him, it must always appear excessive and extravagant to them. When he views himself in the light in which he is conscious that others will view him, he sees that to them he is but one of the multitude in no respect better than any other in it. If he would act so as that the impartial spectator may enter into the principles of his conduct, which is what of all things he has the greatest desire to do, he must, upon this, as upon all other occasions, humble the arrogance of his self-love, and bring it down to something which other men can go along with. They will indulge it so far as to allow him to be more anxious about, and to pursue with more earnest assiduity, his own happiness than

that of any other person. Thus far, whenever they place themselves in his situation, they will readily go along with him. In the race for wealth, and honours, and preferments, he may run as hard as he can, and strain every nerve and every muscle, in order to outstrip all his competitors. But if he should jostle, or throw down any of them, the indulgence of the spectators is entirely at an end. It is a violation of fair play, which they cannot admit of.^[7] This man is to them, in every respect, as good as he: they do not enter into that self-love by which he prefers himself so much to this other, and cannot go along with the motive from which he hurt him. They readily, therefore, sympathize with the natural resentment of the injured, and the offender becomes the object of their hatred and indignation. He is sensible that he becomes so, and feels that those sentiments are ready to burst out from all sides against him.

As the greater and more irreparable the evil that is done, the resentment of the sufferer runs naturally the higher; so does likewise the sympathetic indignation of the spectator, as well as the sense of guilt in the agent. Death is the greatest evil which one man can inflict upon another, and excites the highest degree of resentment in those who are immediately connected with the slain. Murder, therefore, is the most atrocious of all crimes which affect individuals only, in the sight both of mankind, and of the person who has committed it. To be deprived of that which we are possessed of, is a greater evil than to be disappointed of what we have only the expectation. Breach of property, therefore, theft and robbery, which take from us what we are possessed of, are greater crimes than breach of contract, which only disappoints us of what we expected. The most sacred laws of justice, therefore, those whose violation seems to call loudest for vengeance and punishment, are the laws which guard the life and person of our neighbour; the next are those which guard his property and possessions; and last of all come those which guard what are called his personal rights, or what is due to him from the promises of

The violator of the more sacred laws of justice can never reflect on the sentiments which mankind must entertain with regard to him, without feeling all the agonies of shame, and horror, and consternation. When his passion is gratified, and he begins coolly to reflect on his past conduct, he can enter into none of the motives which influenced it. They appear now as detestable to him as they did always to other people. By sympathizing with the hatred and abhorrence which other men must entertain for him, he becomes in some measure the object of his own hatred and abhorrence. The situation of the person, who suffered by his injustice, now calls upon his pity. He is grieved at the thought of it; regrets the unhappy effects of his own conduct, and feels at the same time that they have rendered him the proper object of the resentment and indignation of mankind, and of what is the natural consequence of resentment, vengeance and punishment. The thought of this perpetually haunts him, and fills him with terror and amazement. He dares no longer look society in the face, but imagines himself as it were rejected, and thrown out from the affections of all mankind. He cannot hope for the consolation of sympathy in this his greatest and most dreadful distress. The remembrance of his crimes has shut out all fellow-feeling with him from the hearts of his fellow-creatures. The sentiments which they entertain with regard to him, are the very thing which he is most afraid of. Every thing seems hostile, and he would be glad to fly to some inhospitable desert, where he might never more behold the face of a human creature, nor read in the countenance of mankind the condemnation of his crimes. But solitude is still more dreadful than society. His own thoughts can present him with nothing but what is black, unfortunate, and disastrous, the melancholy forebodings of incomprehensible misery and ruin. The horror of solitude drives him back into society, and he comes again into the presence of mankind, astonished to appear before them, loaded with shame and distracted

with fear, in order to supplicate some little protection from the countenance of those very judges, who he knows have already all unanimously condemned him. Such is the nature of that sentiment, which is properly called remorse; of all the sentiments which can enter the human breast the most dreadful. It is made up of shame from the sense of the impropriety of past conduct; of grief for the effects of it; of pity for those who suffer by it; and of the dread and terror of punishment from the consciousness of the justly provoked resentment of all rational creatures.

The opposite behaviour naturally inspires the opposite sentiment. The man who, not from frivolous fancy, but from proper motives, has performed a generous action, when he looks forward to those whom he has served, feels himself to be the natural object of their love and gratitude, and, by sympathy with them, of the esteem and approbation of all mankind. And when he looks backward to the motive from which he acted, and surveys it in the light in which the indifferent spectator will survey it, he still continues to enter into it, and applauds himself by sympathy with the approbation of this supposed impartial judge. In both these points of view his own conduct appears to him every way agreeable. His mind, at the thought of it, is filled with cheerfulness, serenity, and composure. He is in friendship and harmony with all mankind, and looks upon his fellow-creatures with confidence and benevolent satisfaction, secure that he has rendered himself worthy of their most favourable regards. In the combination of all these sentiments consists the consciousness of merit, or of deserved reward.

Chap. III Of the utility of this constitution of Nature

It is thus that man, who can subsist only in society, was fitted by nature to that situation for which he was made. All the members of

human society stand in need of each others assistance, and are likewise exposed to mutual injuries. Where the necessary assistance is reciprocally afforded from love, from gratitude, from friendship, and esteem, the society flourishes and is happy. All the different members of it are bound together by the agreeable bands of love and affection, and are, as it were, drawn to one common centre of mutual good offices.

But though the necessary assistance should not be afforded from such generous and disinterested motives, though among the different members of the society there should be no mutual love and affection, the society, though less happy and agreeable, will not necessarily be dissolved. Society may subsist among different men, as among different merchants, from a sense of its utility, without any mutual love or affection; and though no man in it should owe any obligation, or be bound in gratitude to any other, it may still be upheld by a mercenary exchange of good offices according to an agreed valuation.

Society, however, cannot subsist among those who are at all times ready to hurt and injure one another. The moment that injury begins, the moment that mutual resentment and animosity take place, all the bands of it are broke asunder, and the different members of which it consisted are, as it were, dissipated and scattered abroad by the violence and opposition of their discordant affections. If there is any society among robbers and murderers, they must at least, according to the trite observation, abstain from robbing and murdering one another.^[9] Beneficence, therefore, is less essential to the existence of society than justice. Society may subsist, though not in the most comfortable state, without beneficence; hut the prevalence of injustice must utterly destroy it.

Though Nature, therefore, exhorts mankind to acts of beneficence, by the pleasing consciousness of deserved reward, she has not thought it necessary to guard and enforce the practice of it by the

terrors of merited punishment in case it should be neglected. It is the ornament which embellishes, not the foundation which supports the building, and which it was, therefore, sufficient to recommend, but by no means necessary to impose. Justice, on the contrary, is the main pillar that upholds the whole edifice. If it is removed, the great, the immense fabric of human society, that fabric which to raise and support seems in this world, if I may say so, to have been the peculiar and darling care of Nature, must in a moment crumble into atoms. In order to enforce the observation of justice, therefore, Nature has implanted in the human breast that consciousness of ill-desert, those terrors of merited punishment which attend upon its violation, as the great safe-guards of the association of mankind, to protect the weak, to curb the violent, and to chastise the guilty. Men, though naturally sympathetic, feel so little for another, with whom they have no particular connexion, in comparison of what they feel for themselves; the misery of one, who is merely their fellow-creature, is of so little importance to them in comparison even of a small conveniency of their own; they have it so much in their power to hurt him, and may have so many temptations to do so, that if this principle did not stand up within them in his defence, and overawe them into a respect for his innocence, they would, like wild beasts, be at all times ready to fly upon him; and a man would enter an assembly of men as he enters a den of lions.

In every part of the universe we observe means adjusted with the nicest artifice to the ends which they are intended to produce; and in the mechanism of a plant, or animal body, admire how every thing is contrived for advancing the two great purposes of nature, the support of the individual, and the propagation of the species. But in these, and in all such objects, we still distinguish the efficient from the final cause of their several motions and organizations. The digestion of the food, the circulation of the blood, and the secretion of the several juices which are drawn from it, are operations all of them necessary

for the great purposes of animal life. Yet we never endeavour to account for them from those purposes as from their efficient causes, nor imagine that the blood circulates, or that the food digests of its own accord, and with a view or intention to the purposes of circulation or digestion. The wheels of the watch are all admirably adjusted to the end for which it was made, the pointing of the hour. All their various motions conspire in the nicest manner to produce this effect. If they were endowed with a desire and intention to produce it, they could not do it better. Yet we never ascribe any such desire or intention to them, but to the watch-maker, and we know that they are put into motion by a spring, which intends the effect it produces as little as they do. But though, in accounting for the operations of bodies, we never fail to distinguish in this manner the efficient from the final cause, in accounting for those of the mind we are very apt to confound these two different things with one another. When by natural principles we are led to advance those ends, which a refined and enlightened reason would recommend to us, we are very apt to impute to that reason, as to their efficient cause, the sentiments and actions by which we advance those ends, and to imagine that to be the wisdom of man, which in reality is the wisdom of God. Upon a superficial view, this cause seems sufficient to produce the effects which are ascribed to it; and the system of human nature seems to be more simple and agreeable when all its different operations are in this manner deduced from a single principle.

As society cannot subsist unless the laws of justice are tolerably observed, as no social intercourse can take place among men who do not generally abstain from injuring one another; the consideration of this necessity, it has been thought, was the ground upon which we approved of the enforcement of the laws of justice by the punishment of those who violated them. Man, it has been said, has a natural love for society, and desires that the union of mankind should be preserved for its own sake, and though he himself was to derive no benefit from

it.^[10] The orderly and flourishing state of society is agreeable to him, and he takes delight in contemplating it. Its disorder and confusion, on the contrary, is the object of his aversion, and he is chagrined at whatever tends to produce it. He is sensible too that his own interest is connected with the prosperity of society, and that the happiness, perhaps the preservation of his existence, depends upon its preservation. Upon every account, therefore, he has an abhorrence at whatever can tend to destroy society, and is willing to make use of every means, which can hinder so hated and so dreadful an event. Injustice necessarily tends to destroy it. Every appearance of injustice, therefore, alarms him, and he runs, if I may say so, to stop the progress of what, if allowed to go on, would quickly put an end to every thing that is dear to him. If he cannot restrain it by gentle and fair means, he must beat it down by force and violence, and at any rate must put a stop to its further progress. Hence it is, they say, that he often approves of the enforcement of the laws of justice even by the capital punishment of those who violate them. The disturber of the public peace is hereby removed out of the world, and others are terrified by his fate from imitating his example.

Such is the account commonly given of our approbation of the punishment of injustice. And so far this account is undoubtedly true, that we frequently have occasion to confirm our natural sense of the propriety and fitness of punishment, by reflecting how necessary it is for preserving the order of society. When the guilty is about to suffer that just retaliation, which the natural indignation of mankind tells them is due to his crimes; when the insolence of his injustice is broken and humbled by the terror of his approaching punishment; when he ceases to be an object of fear, with the generous and humane he begins to be an object of pity. The thought of what he is about to suffer extinguishes their resentment for the sufferings of others to which he has given occasion. They are disposed to pardon and forgive him, and to save him from that punishment, which in all their cool

hours they had considered as the retribution due to such crimes. Here, therefore, they have occasion to call to their assistance the consideration of the general interest of society. They counterbalance the impulse of this weak and partial humanity by the dictates of a humanity that is more generous and comprehensive. They reflect that mercy to the guilty is cruelty to the innocent, and oppose to the emotions of compassion which they feel for a particular person, a more enlarged compassion which they feel for mankind.

Sometimes too we have occasion to defend the propriety of observing the general rules of justice by the consideration of their necessity to the support of society. We frequently hear the young and the licentious ridiculing the most sacred rules of morality, and professing, sometimes from the corruption, but more frequently from the vanity of their hearts, the most abominable maxims of conduct. Our indignation rouses, and we are eager to refute and expose such detestable principles. But though it is their intrinsic hatefulness and detestableness, which originally inflames us against them, we are unwilling to assign this as the sole reason why we condemn them, or to pretend that it is merely because we ourselves hate and detest them. The reason, we think, would not appear to be conclusive. Yet why should it not; if we hate and detest them because they are the natural and proper objects of hatred and detestation? But when we are asked why we should not act in such or such a manner, the very question seems to suppose that, to those who ask it, this manner of acting does not appear to be for its own sake the natural and proper object of those sentiments. We must show them, therefore, that it ought to be so for the sake of something else. Upon this account we generally cast about for other arguments, and the consideration which first occurs to us, is the disorder and confusion of society which would result from the universal prevalence of such practices. We seldom fail, therefore, to insist upon this topic.

But though it commonly requires no great discernment to see the destructive tendency of all licentious practices to the welfare of society, it is seldom this consideration which first animates us against them. All men, even the most stupid and unthinking, abhor fraud, perfidy, and injustice, and delight to see them punished. But few men have reflected upon the necessity of justice to the existence of society, how obvious soever that necessity may appear to be.

That it is not a regard to the preservation of society, which originally interests us in the punishment of crimes committed against individuals, may be demonstrated by many obvious considerations. The concern which we take in the fortune and happiness of individuals does not, in common cases, arise from that which we take in the fortune and happiness of society. We are no more concerned for the destruction or loss of a single man, because this man is a member or part of society, and because we should be concerned for the destruction of society, than we are concerned for the loss of a single guinea, because this guinea is a part of a thousand guineas, and because we should be concerned for the loss of the whole sum. In neither case does our regard for the individuals arise from our regard for the multitude: but in both cases our regard for the multitude is compounded and made up of the particular regards which we feel for the different individuals of which it is composed. As when a small sum is unjustly taken from us, we do not so much prosecute the injury from a regard to the preservation of our whole fortune, as from a regard to that particular sum which we have lost; so when a single man is injured, or destroyed, we demand the punishment of the wrong that has been done to him, not so much from a concern for the general interest of society, as from a concern for that very individual who has been injured. It is to be observed, however, that this concern does not necessarily include in it any degree of those exquisite sentiments which are commonly called love, esteem, and affection, and by which we distinguish our particular friends and acquaintance. The concern

which is requisite for this, is no more than the general fellow-feeling which we have with every man merely because he is our fellow-creature. We enter into the resentment even of an odious person, when he is injured by those to whom he has given no provocation. Our disapprobation of his ordinary character and conduct does not in this case altogether prevent our fellow-feeling with his natural indignation; though with those who are not either extremely candid, or who have not been accustomed to correct and regulate their natural sentiments by general rules, it is very apt to damp it.

Upon some occasions, indeed, we both punish and approve of punishment, merely from a view to the general interest of society, which, we imagine, cannot otherwise be secured. Of this kind are all the punishments inflicted for breaches of what is called either civil police, or military discipline. Such crimes do not immediately or directly hurt any particular person; but their remote consequences, it is supposed, do produce, or might produce, either a considerable inconveniency, or a great disorder in the society. A centinel, for example, who falls asleep upon his watch, suffers death by the laws of war, because such carelessness might endanger the whole army. This severity may, upon many occasions, appear necessary, and, for that reason, just and proper. When the preservation of an individual is inconsistent with the safety of a multitude, nothing can be more just than that the many should be preferred to the one. Yet this punishment, how necessary soever, always appears to be excessively severe. The natural atrocity of the crime seems to be so little, and the punishment so great, that it is with great difficulty that our heart can reconcile itself to it. Though such carelessness appears very blamable, yet the thought of this crime does not naturally excite any such resentment, as would prompt us to take such dreadful revenge. A man of humanity must recollect himself, must make an effort, and exert his whole firmness and resolution, before he can bring himself either to inflict it, or to go along with it when it is inflicted by others. It is not,

however, in this manner, that he looks upon the just punishment of an ungrateful murderer or parricide. His heart, in this case, applauds with ardour, and even with transport, the just retaliation which seems due to such detestable crimes, and which, if, by any accident, they should happen to escape, he would be highly enraged and disappointed. The very different sentiments with which the spectator views those different punishments, is a proof that his approbation of the one is far from being founded upon the same principles with that of the other. He looks upon the centinel as an unfortunate victim, who, indeed, must, and ought to be, devoted to the safety of numbers, but whom still, in his heart, he would be glad to save; and he is only sorry, that the interest of the many should oppose it. But if the murderer should escape from punishment, it would excite his highest indignation, and he would call upon God to avenge, in another world, that crime which the injustice of mankind had neglected to chastise upon earth.

For it well deserves to be taken notice of, that we are so far from imagining that injustice ought to be punished in this life, merely on account of the order of society, which cannot otherwise be maintained, that Nature teaches us to hope, and religion, we suppose, authorises us to expect, that it will be punished, even in a life to come. Our sense of its ill desert pursues it, if I may say so, even beyond the grave, though the example of its punishment there cannot serve to deter the rest of mankind, who see it not, who know it not, from being guilty of the like practices here. The justice of God, however, we think, still requires, that he should hereafter avenge the injuries of the widow and the fatherless, who are here so often insulted with impunity. In every religion, and in every superstition that the world has ever beheld, accordingly, there has been a Tartarus as well as an Elysium; a place provided for the punishment of the wicked, as well as one for the reward of the just^[11].

Section III Of the Influence of Fortune upon the Sentiments of Mankind, with regard to the Merit or Demerit of Actions

Whatever praise or blame can be due to any action, must belong either, first, to the intention or affection of the heart, from which it proceeds; or, secondly, to the external action or movement of the body, which this affection gives occasion to; or, lastly, to the good or bad consequences, which actually, and in fact, proceed from it. These three different things constitute the whole nature and circumstances of the action, and must be the foundation of whatever quality can belong to it.

That the two last of these three circumstances cannot be the foundation of any praise or blame, is abundantly evident; nor has the contrary ever been asserted by any body. The external action or movement of the body is often the same in the most innocent and in the most blameable actions. He who shoots a bird, and he who shoots a man, both of them perform the same external movement: each of them draws the trigger of a gun. The consequences which actually, and in fact, happen to proceed from any action, are, if possible, still more indifferent either to praise or blame, than even the external movement of the body. As they depend, not upon the agent, but upon fortune, they cannot be the proper foundation for any sentiment, of which his character and conduct are the objects.

The only consequences for which he can be answerable, or by which he can deserve either approbation or disapprobation of any kind, are those which were somehow or other intended, or those which, at least, show some agreeable or disagreeable quality in the intention of the heart, from which he acted. To the intention or

affection of the heart, therefore, to the propriety or impropriety, to the beneficence or hurtfulness of the design, all praise or blame, all approbation or disapprobation, of any kind, which can justly be bestowed upon any action, must ultimately belong.

When this maxim is thus proposed, in abstract and general terms, there is nobody who does not agree to it. Its self-evident justice is acknowledged by all the world, and there is not a dissenting voice among all mankind. Every body allows, that how different soever the accidental, the unintended and unforeseen consequences of different actions, yet, if the intentions or affections from which they arose were, on the one hand, equally proper and equally beneficent, or, on the other, equally improper and equally malevolent, the merit or demerit of the actions is still the same, and the agent is equally the suitable object either of gratitude or of resentment.

But how well soever we may seem to be persuaded of the truth of this equitable maxim, when we consider it after this manner, in abstract, yet when we come to particular cases, the actual consequences which happen to proceed from any action, have a very great effect upon our sentiments concerning its merit or demerit, and almost always either enhance or diminish our sense of both. Scarce, in any one instance, perhaps, will our sentiments be found, after examination, to be entirely regulated by this rule, which we all acknowledge ought entirely to regulate them.

This irregularity of sentiment, which every body feels, which scarce any body is sufficiently aware of, and which nobody is willing to acknowledge, I proceed now to explain; and I shall consider, first, the cause which gives occasion to it, or the mechanism by which nature produces it; secondly, the extent of its influence; and, last of all, the end which it answers, or the purpose which the Author of nature seems to have intended by it.

Chap. I Of the Causes of this Influence of Fortune

The causes of pain and pleasure, whatever they are, or however they operate, seem to be the objects, which, in all animals, immediately excite those two passions of gratitude and resentment. They are excited by inanimated, as well as by animated objects. We are angry, for a moment, even at the stone that hurts us. A child beats it, a dog barks at it, a cholerick man is apt to curse it. The least reflection, indeed, corrects this sentiment, and we soon become sensible, that what has no feeling is a very improper object of revenge. When the mischief, however, is very great, the object which caused it becomes disagreeable to us ever after, and we take pleasure to burn or destroy it. We should treat, in this manner, the instrument which had accidentally been the cause of the death of a friend, and we should often think ourselves guilty of a sort of inhumanity, if we neglected to vent this absurd sort of vengeance upon it.^[12]

We conceive, in the same manner, a sort of gratitude for those inanimated objects, which have been the causes of great, or frequent pleasure to us. The sailor, who, as soon as he got ashore, should mend his fire with the plank upon which he had just escaped from a shipwreck, would seem to be guilty of an unnatural action. We should expect that he would rather preserve it with care and affection, as a monument that was, in some measure, dear to him. A man grows fond of a snuff-box, of a pen-knife, of a staff which he has long made use of, and conceives something like a real love and affection for them. If he breaks or loses them, he is vexed out of all proportion to the value of the damage. The house which we have long lived in, the tree, whose verdure and shade we have long enjoyed, are both looked upon with a sort of respect that seems due to such benefactors. The decay of the one, or the ruin of the other, affects us with a kind of melancholy, though we should sustain no loss by it. The Dryads and the Lares of the ancients, a sort of genii of trees and houses, were probably first

suggested by this sort of affection, which the authors of those superstitions felt for such objects, and which seemed unreasonable, if there was nothing animated about them.

But, before any thing can be the proper object of gratitude or resentment, it must not only be the cause of pleasure or pain, it must likewise be capable of feeling them. Without this other quality, those passions cannot vent themselves with any sort of satisfaction upon it. As they are excited by the causes of pleasure and pain, so their gratification consists in retaliating those sensations upon what gave occasion to them; which it is to no purpose to attempt upon what has no sensibility. Animals, therefore, are less improper objects of gratitude and resentment than inanimated objects. The dog that bites, the ox that gores, are both of them punished. If they have been the causes of the death of any person, neither the public, nor the relations of the slain, can be satisfied, unless they are put to death in their turn: nor is this merely for the security of the living, but, in some measure, to revenge the injury of the dead. Those animals, on the contrary, that have been remarkably serviceable to their masters, become the objects of a very lively gratitude. We are shocked at the brutality of that officer, mentioned in the Turkish Spy, who stabbed the horse that had carried him across an arm of the sea, lest that animal should afterwards distinguish some other person by a similar adventure.^[13]

But, though animals are not only the causes of pleasure and pain, but are also capable of feeling those sensations, they are still far from being complete and perfect objects, either of gratitude or resentment; and those passions still feel, that there is something wanting to their entire gratification. What gratitude chiefly desires, is not only to make the benefactor feel pleasure in his turn, but to make him conscious that he meets with this reward on account of his past conduct, to make him pleased with that conduct, and to satisfy him that the person upon whom he bestowed his good offices was not unworthy of

them. What most of all charms us in our benefactor, is the concord between his sentiments and our own, with regard to what interests us so nearly as the worth of our own character, and the esteem that is due to us. We are delighted to find a person who values us as we value ourselves, and distinguishes us from the rest of mankind, with an attention not unlike that with which we distinguish ourselves. To maintain in him these agreeable and flattering sentiments, is one of the chief ends proposed by the returns we are disposed to make to him. A generous mind often disdains the interested thought of extorting new favours from its benefactor, by what may be called the importunities of its gratitude. But to preserve and to increase his esteem, is an interest which the greatest mind does not think unworthy of its attention. And this is the foundation of what I formerly observed, that when we cannot enter into the motives of our benefactor, when his conduct and character appear unworthy of our approbation, let his services have been ever so great, our gratitude is always sensibly diminished. We are less flattered by the distinction. and to preserve the esteem of so weak, or so worthless a patron, seems to be an object which does not deserve to be pursued for its own sake.

The object, on the contrary, which resentment is chiefly intent upon, is not so much to make our enemy feel pain in his turn, as to make him conscious that he feels it upon account of his past conduct, to make him repent of that conduct, and to make him sensible, that the person whom he injured did not deserve to be treated in that manner. What chiefly enrages us against the man who injures or insults us, is the little account which he seems to make of us, the unreasonable preference which he gives to himself above us, and that absurd self-love, by which he seems to imagine, that other people may be sacrificed at any time, to his conveniency or his humour. The glaring impropriety of this conduct, the gross insolence and injustice which it seems to involve in it, often shock and exasperate us more than all the mischief which we have suffered. To bring him back to a

more just sense of what is due to other people, to make him sensible of what he owes us, and of the wrong that he has done to us, is frequently the principal end proposed in our revenge, which is always imperfect when it cannot accomplish this. When our enemy appears to have done us no injury, when we are sensible that he acted quite properly, that, in his situation, we should have done the same thing, and that we deserved from him all the mischief we met with; in that case, if we have the least spark either of candour or justice, we can entertain no sort of resentment.

Before any thing, therefore, can be the complete and proper object, either of gratitude or resentment, it must possess three different qualifications. First, it must be the cause of pleasure in the one case, and of pain in the other. Secondly, it must be capable of feeling those sensations. And, thirdly, it must not only have produced those sensations, but it must in have produced them from design, and from a design that is approved of the one case, and disapproved of in the other. It is by the first qualification, that any object is capable of exciting those passions: it is by the second, that it is in any respect capable of gratifying them: the third qualification is not only necessary for their complete satisfaction, but as it gives a pleasure or pain that is both exquisite and peculiar, it is likewise an additional exciting cause of those passions.

As what gives pleasure or pain, either in one way or another, is the sole exciting cause of gratitude and resentment; though the intentions of any person should be ever so proper and beneficent on the one hand, or ever so improper and malevolent on the other; yet, if he has failed in producing either the good or the evil which he intended, as one of the exciting causes is wanting in both cases, less gratitude seems due to him in the one, and less resentment in the other. And, on the contrary, though in the intentions of any person, there was either no laudable degree of benevolence on the one hand,

or no blameable degree of malice on the other; yet, if his actions should produce either great good or great evil, as one of the exciting causes takes place upon both these occasions, some gratitude is apt to arise towards him in the one, and some resentment in the other. A shadow of merit seems to fall upon him in the first, a shadow of demerit in the second. And, as the consequences of actions are altogether under the empire of Fortune, hence arises her influence upon the sentiments of mankind with regard to merit and demerit.

Chap. II Of the extent of this Influence of Fortune

The effect of this influence of fortune is, first, to diminish our sense of the merit or demerit of those actions which arose from the most laudable or blamable intentions, when they fail of producing their proposed effects: and, secondly, to increase our sense of the merit or demerit of actions, beyond what is due to the motives or affections from which they proceed, when they accidentally give occasion either to extraordinary pleasure or pain.

1. First, I say, though the intentions of any person should be ever so proper and beneficent, on the one hand, or ever so improper and malevolent, on the other, yet, if they fail in producing their effects, his merit seems imperfect in the one case, and his demerit incomplete in the other. Nor is this irregularity of sentiment felt only by those who are immediately affected by the consequences of any action. It is felt, in some measure, even by the impartial spectator. The man who solicits an office for another, without obtaining it, is regarded as his friend, and seems to deserve his love and affection. But the man who not only solicits, but procures it, is more peculiarly considered as his patron and benefactor, and is entitled to his respect and gratitude. The person obliged, we are apt to think, may, with some justice, imagine himself on a level with the first: but we cannot enter into his sentiments, if he does not feel himself inferior to the second. It is

common indeed to say, that we are equally obliged to the man who has endeavoured to serve us, as to him who actually did so. It is the speech which we constantly make upon every unsuccessful attempt of this kind; but which, like all other fine speeches, must be understood with a grain of allowance. The sentiments which a man of generosity entertains for the friend who fails, may often indeed be nearly the same with those which he conceives for him who succeeds: and the more generous he is, the more nearly will those sentiments approach to an exact level. With the truly generous, to be beloved, to be esteemed by those whom they themselves think worthy of esteem, gives more pleasure, and thereby excites more gratitude, than all the advantages which they can ever expect from those sentiments. When they lose those advantages therefore, they seem to lose but a trifle, which is scarce worth regarding. They still however lose something. Their pleasure therefore, and consequently their gratitude, is not perfectly complete: and accordingly if, between the friend who fails and the friend who succeeds, all other circumstances are equal, there will, even in the noblest and the best mind, be some little difference of affection in favour of him who succeeds. Nay, so unjust are mankind in this respect, that though the intended benefit should be procured, yet if it is not procured by the means of a particular benefactor, they are apt to think that less gratitude is due to the man, who with the best intentions in the world could do no more than help it a little forward. As their gratitude is in this case divided among the different persons who contributed to their pleasure, a smaller share of it seems due to any one. Such a person, we hear men commonly say, intended no doubt to serve us; and we really believe exerted himself to the utmost of his abilities for that purpose. We are not, however, obliged to him for this benefit; since, had it not been for the concurrence of others, all that he could have done would never have brought it about. This consideration, they imagine, should, even in the eyes of the impartial spectator, diminish the debt which they owe to him. The person himself who has unsuccessfully endeavoured to confer a

benefit, has by no means the same dependency upon the gratitude of the man whom he meant to oblige, nor the same sense of his own merit towards him, which he would have had in the case of success.

Even the merit of talents and abilities which some accident has hindered from producing their effects, seems in some measure imperfect, even to those who are fully convinced of their capacity to produce them. The general who has been hindered by the envy of ministers from gaining some great advantage over the enemies of his country, regrets the loss of the opportunity for ever after. Nor is it only upon account of the public that he regrets it. He laments that he was hindered from performing an action which would have added a new lustre to his character in his own eyes, as well as in those of every other person. It satisfies neither himself nor others to reflect that the plan or design was all that depended on him, that no greater capacity was required to execute it than what was necessary to concert it: that he was allowed to be every way capable of executing it, and that had he been permitted to go on, success was infallible. He still did not execute it; and though he might deserve all the approbation which is due to a magnanimous and great design, he still wanted the actual merit of having performed a great action. To take the management of any affair of public concern from the man who has almost brought it to a conclusion, is regarded as the most invidious injustice. As he had done so much, he should, we think, have been allowed to acquire the complete merit of putting an end to it. It was objected to Pompey, that he came in upon the victories of Lucullus, and gathered those laurels which were due to the fortune and valour of another. The glory of Lucullus, it seems, was less complete even in the opinion of his own friends, when he was not permitted to finish that conquest which his conduct and courage had put in the power of almost any man to finish.^[14] It mortifies an architect when his plans are either not executed at all, or when they are so far altered as to spoil the effect of the building. The plan, however, is all that depends upon the

architect. The whole of his genius is, to good judges, as completely discovered in that as in the actual execution. But a plan does not, even to the most intelligent, give the same pleasure as a noble and magnificent building. They may discover as much both of taste and genius in the one as in the other. But their effects are still vastly different, and the amusement derived from the first, never approaches to the wonder and admiration which are sometimes excited by the second. We may believe of many men, that their talents are superior to those of Caesar and Alexander; and that in the same situations they would perform still greater actions. In the mean time, however, we do not behold them with that astonishment and admiration with which those two heroes have been regarded in all ages and nations. The calm judgments of the mind may approve of them more, but they want the splendour of great actions to dazzle and transport it. The superiority of virtues and talents has not, even upon those who acknowledge that superiority, the same effect with the superiority of achievements.

As the merit of an unsuccessful attempt to do good seems thus, in the eyes of ungrateful mankind, to be diminished by the miscarriage, so does likewise the demerit of an unsuccessful attempt to do evil. The design to commit a crime, how clearly soever it may be proved, is scarce ever punished with the same severity as the actual commission of it. The case of treason is perhaps the only exception.^[15] That crime immediately affecting the being of the government itself, the government is naturally more jealous of it than of any other. In the punishment of treason, the sovereign resents the injuries which are immediately done to himself: in the punishment of other crimes, he resents those which are done to other men. It is his own resentment which he indulges in the one case: it is that of his subjects which by sympathy he enters into in the other. In the first case, therefore, as he judges in his own cause, he is very apt to be more violent and sanguinary in his punishments than the impartial spectator can approve of. His resentment too rises here upon smaller occasions, and

does not always, as in other cases, wait for the perpetration of the crime, or even for the attempt to commit it. A treasonable concert, though nothing has been done, or even attempted in consequence of it, nay, a treasonable conversation, is in many countries punished in the same manner as the actual commission of treason. With regard to all other crimes, the mere design, upon which no attempt has followed, is seldom punished at all, and is never punished severely. A criminal design, and a criminal action, it may be said indeed, do not necessarily suppose the same degree of depravity, and ought not therefore to be subjected to the same punishment. We are capable, it may be said, of resolving, and even of taking measures to execute, many things which, when it comes to the point, we feel ourselves altogether incapable of executing. But this reason can have no place when the design has been carried the length of the last attempt. The man, however, who fires a pistol at his enemy but misses him, is punished with death by the laws of scarce any country. By the old law of Scotland, though he should wound him, yet, unless death ensues within a certain time, the assassin is not liable to the last punishment. The resentment of mankind, however, runs so high against this crime, their terror for the man who shows himself capable of committing it, is so great, that the mere attempt to commit it ought in all countries to be capital. The attempt to commit smaller crimes is almost always punished very lightly, and sometimes is not punished at all. The thief, whose hand has been caught in his neighbour's pocket before he had taken any thing out of it, is punished with ignominy only. If he had got time to take away an handkerchief, he would have been put to death. The house-breaker, who has been found setting a ladder to his neighbour's window, but had not got into it, is not exposed to the capital punishment. The attempt to ravish is not punished as a rape. The attempt to seduce a married woman is not punished at all, though seduction is punished severely. Our resentment against the person who only attempted to do a mischief, is seldom so strong as to bear us out in inflicting the same punishment upon him, which we should

have thought due if he had actually done it. In the one case, the joy of our deliverance alleviates our sense of the atrocity of his conduct; in the other, the grief of our misfortune increases it. His real demerit, however, is undoubtedly the same in both cases, since his intentions were equally criminal; and there is in this respect, therefore, an irregularity in the sentiments of all men, and a consequent relaxation of discipline in the laws of, I believe, all nations, of the most civilized, as well as of the most barbarous. The humanity of a civilized people disposes them either to dispense with, or to mitigate punishments wherever their natural indignation is not goaded on by the consequences of the crime. Barbarians, on the other hand, when no actual consequence has happened from any action, are not apt to be very delicate or inquisitive about the motives.

图II—3 : Lucius Licinius Lucullus (118—57/56 B.C)

The person himself who either from passion, or from the influence of bad company, has resolved, and perhaps taken measures to perpetrate some crime, but who has fortunately been prevented by

an accident which put it out of his power, is sure, if he has any remains of conscience, to regard this event all his life after as a great and signal deliverance. He can never think of it without returning thanks to Heaven for having been thus graciously pleased to save him from the guilt in which he was just ready to plunge himself, and to hinder him from rendering all the rest of his life a scene of horror, remorse, and repentance. But though his hands are innocent, he is conscious that his heart is equally guilty as if he had actually executed what he was so fully resolved upon. It gives great ease to his conscience, however, to consider that the crime was not executed, though he knows that the failure arose from no virtue in him. He still considers himself as less deserving of punishment and resentment; and this good fortune either diminishes, or takes away altogether, all sense of guilt. To remember how much he was resolved upon it, has no other effect than to make him regard his escape as the greater and more miraculous: for he still fancies that he has escaped, and he looks back upon the danger to which his peace of mind was exposed, with that terror, with which one who is in safety may sometimes remember the hazard he was in of falling over a precipice, and shudder with horror at the thought.

2. The second effect of this influence of fortune, is to increase our sense of the merit or demerit of actions beyond what is due to the motives or affection from which they proceed, when they happen to give occasion to extraordinary pleasure or pain. The agreeable or disagreeable effects of the action often throw a shadow of merit or demerit upon the agent, though in his intention there was nothing that deserved either praise or blame, or at least that deserved them in the degree in which we are apt to bestow them. Thus, even the messenger of bad news is disagreeable to us, and, on the contrary, we feel a sort of gratitude for the man who brings us good tidings. For a moment we look upon them both as the authors, the one of our good, the other of our bad fortune, and regard them in some measure as if

they had really brought about the events which they only give an account of. The first author of our joy is naturally the object of a transitory gratitude: we embrace him with warmth and affection, and should be glad, during the instant of our prosperity, to reward him as for some signal service. By the custom of all courts, the officer, who brings the news of a victory, is entitled to considerable preferments, and the general always chuses one of his principal favourites to go upon so agreeable an errand. The first author of our sorrow is, on the contrary, just as naturally the object of a transitory resentment. We can scarce avoid looking upon him with chagrin and uneasiness; and the rude and brutal are apt to vent upon him that spleen which his intelligence gives occasion to. Tigranes, king of Armenia, struck off the head of the man who brought him the first account of the approach of a formidable enemy.^[16] To punish in this manner the author of bad tidings, seems barbarous and inhuman: yet, to reward the messenger of good news, is not disagreeable to us; we think it suitable to the bounty of kings. But why do we make this difference, since, if there is no fault in the one, neither is there any merit in the other? It is because any sort of reason seems sufficient to authorize the exertion of the social and benevolent affections. but it requires the most solid and substantial to make us enter into that of the unsocial and malevolent.^[17]

But though in general we are averse to enter into the unsocial and malevolent affections, though we lay it down for a rule that we ought never to approve of their gratification, unless so far as the malicious and unjust intention of the person, against whom they are directed, renders him their proper object; yet, upon some occasions, we relax of this severity. When the negligence of one man has occasioned some unintended damage to another, we generally enter so far into the resentment of the sufferer, as to approve of his inflicting a punishment upon the offender much beyond what the offence would have appeared to deserve, had no such unlucky consequence followed from

it.

There is a degree of negligence, which would appear to deserve some chastisement though it should occasion no damage to any body. Thus, if a person should throw a large stone over a wall into a public street without giving warning to those who might be passing by, and without regarding where it was likely to fall, he would undoubtedly deserve some chastisement. A very accurate police would punish so absurd an action, even though it had done no mischief. The person who has been guilty of it, shows an insolent contempt of the happiness and safety of others. There is real injustice in his conduct. He wantonly exposes his neighbour to what no man in his senses would chuse to expose himself, and evidently wants that sense of what is due to his fellow-creatures which is the basis of justice and of society. Gross negligence therefore is, in the law, said to be almost equal to malicious design.²^[18] When any unlucky consequences happen from such carelessness, the person who has been guilty of it is often punished as if he had really intended those consequences; and his conduct, which was only thoughtless and insolent, and what deserved some chastisement, is considered as atrocious, and as liable to the severest punishment. Thus if, by the imprudent action above-mentioned, he should accidentally kill a man, he is, by the laws of many countries, particularly by the old law of Scotland, liable to the last punishment.^[19] And though this is no doubt excessively severe, it is not altogether inconsistent with our natural sentiments. Our just indignation against the folly and inhumanity of his conduct is exasperated by our sympathy with the unfortunate sufferer. Nothing, however, would appear more shocking to our natural sense of equity, than to bring a man to the scaffold merely for having thrown a stone carelessly into the street without hurting any body. The folly and inhumanity of his conduct, however, would in this case be the same; but still our sentiments would be very different. The consideration of this difference may satisfy us how much the indignation, even of the

spectator, is apt to be animated by the actual consequences of the action. In cases of this kind there will, if I am not mistaken, be found a great degree of severity in the laws of almost all nations; as I have already observed that in those of an opposite kind there was a very general relaxation of discipline.

There is another degree of negligence which does not involve in it any sort of injustice. The person who is guilty of it treats his neighbours as he treats himself, means no harm to any body, and is far from entertaining any insolent contempt for the safety and happiness of others. He is not, however, so careful and circumspect in his conduct as he ought to be, and deserves upon this account some degree of blame and censure, but no sort of punishment. Yet if by a negligence³[\[20\]](#) of this kind he should occasion some damage to another person, he is by the laws of, I believe, all countries, obliged to compensate it. And though this is no doubt a real punishment, and what no mortal would have thought of inflicting upon him, had it not been for the unlucky accident which his conduct gave occasion to; yet this decision of the law is approved of by the natural sentiments of all mankind. Nothing, we think, can be more just than that one man should not suffer by the carelessness of another; and that the damage occasioned by blamable negligence, should be made up by the person who was guilty of it.

There is another species of negligence,⁴[\[21\]](#) which consists merely in a want of the most anxious timidity and circumspection, with regard to all the possible consequences of our actions. The want of this painful attention, when no bad consequences follow from it, is so far from being regarded as blamable, that the contrary quality is rather considered as such. That timid circumspection which is afraid of every thing, is never regarded as a virtue, but as a quality which more than any other incapacitates for action and business. Yet when, from a want of this excessive care, a person happens to occasion some

damage to another, he is often by the law obliged to compensate it. Thus, by the Aquilian law, the man, who not being able to manage a horse that had accidentally taken fright, should happen to ride down his neighbour's slave, is obliged to compensate the damage.^[22] When an accident of this kind happens, we are apt to think that he ought not to have rode such a horse, and to regard his attempting it as an unpardonable levity; though without this accident we should not only have made no such reflection, but should have regarded his refusing it as the effect of timid weakness, and of an anxiety about merely possible events, which it is to no purpose to be aware of. The person himself, who by an accident even of this kind has involuntarily hurt another, seems to have some sense of his own ill desert, with regard to him. He naturally runs up to the sufferer to express his concern for what has happened, and to make every acknowledgment in his power. If he has any sensibility, he necessarily desires to compensate the damage, and to do every thing he can to appease that animal resentment, which he is sensible will be apt to arise in the breast of the sufferer. To make no apology, to offer no atonement, is regarded as the highest brutality. Yet why should he make an apology more than any other person? Why should he, since he was equally innocent with any other bystander, be thus singled out from among all mankind, to make up for the bad fortune of another? This task would surely never be imposed upon him, did not even the impartial spectator feel some indulgence for what may be regarded as the unjust resentment of that other.

图II—4 : Justinian I

Chap. III Of the final cause of this Irregularity of Sentiments

Such is the effect of the good or bad consequences of actions upon the sentiments both of the person who performs them, and of others; and thus, Fortune, which governs the world, has some influence where we should be least willing to allow her any, and directs in some measure the sentiments of mankind, with regard to the character and conduct both of themselves and others. That the world judges by the event, and not by the design, has been in all ages the complaint, and is the great discouragement of virtue. Every body agrees to the general maxim, that as the event does not depend on the agent, it ought to have no influence upon our sentiments, with regard to the merit or propriety of his conduct. But when we come to particulars, we find that our sentiments are scarce in any one instance exactly conformable to what this equitable maxim would direct. The happy or unprosperous event of any action, is not only apt to give us a good or bad opinion of the prudence with which it was conducted, but almost

always too animates our gratitude or resentment, our sense of the merit or demerit of the design.

Nature, however, when she implanted the seeds of this irregularity in the human breast, seems, as upon all other occasions, to have intended the happiness and perfection of the species. If the hurtfulness of the design, if the malevolence of the affection, were alone the causes which excited our resentment, we should feel all the furies of that passion against any person in whose breast we suspected or believed such designs or affections were harboured, though they had never broke out into any action. Sentiments, thoughts, intentions, would become the objects of punishment; and if the indignation of mankind run as high against them as against actions; if the baseness of the thought which had given birth to no action, seemed in the eyes of the world as much to call aloud for vengeance as the baseness of the action, every court of judicature would become a real inquisition. There would be no safety for the most innocent and circumspect conduct. Bad wishes, bad views, bad designs, might still be suspected; and while these excited the same indignation with bad conduct, while bad intentions were as much resented as bad actions, they would equally expose the person to punishment and resentment. Actions, therefore, which either produce actual evil, or attempt to produce it, and thereby put us in the immediate fear of it, are by the Author of nature rendered the only proper and approved objects of human punishment and resentment. Sentiments, designs, affections, though it is from these that according to cool reason human actions derive their whole merit or demerit, are placed by the great Judge of hearts beyond the limits of every human jurisdiction, and are reserved for the cognizance of his own unerring tribunal. That necessary rule of justice, therefore, that men in this life are liable to punishment for their actions only, not for their designs and intentions, is founded upon this salutary and useful irregularity in human sentiments concerning merit or demerit, which at first sight appears so absurd

and unaccountable. But every part of nature, when attentively surveyed, equally demonstrates the providential care of its Author, and we may admire the wisdom and goodness of God even in the weakness and folly of man.^[23]

Nor is that irregularity of sentiments altogether without its utility, by which the merit of an unsuccessful attempt to serve, and much more that of mere good inclinations and kind wishes, appears to be imperfect. Man was made for action, and to promote by the exertion of his faculties such changes in the external circumstances both of himself and others, as may seem most favourable to the happiness of all. He must not be satisfied with indolent benevolence, nor fancy himself the friend of mankind, because in his heart he wishes well to the prosperity of the world. That he may call forth the whole vigour of his soul, and strain every nerve, in order to produce those ends which it is the purpose of his being to advance, Nature has taught him, that neither himself nor mankind can be fully satisfied with his conduct, nor bestow upon it the full measure of applause, unless he has actually produced them. He is made to know, that the praise of good intentions, without the merit of good offices, will be but of little avail to excite either the loudest acclamations of the world, or even the highest degree of self-applause. The man who has performed no single action of importance, but whose whole conversation and deportment express the justest, the noblest, and most generous sentiments, can be entitled to demand no very high reward, even though his inutility should be owing to nothing but the want of an opportunity to serve. We can still refuse it him without blame. We can still ask him, What have you done? What actual service can you produce, to entitle you to so great a recompense? We esteem you, and love you; but we owe you nothing. To reward indeed that latent virtue which has been useless only for want of an opportunity to serve, to bestow upon it those honours and preferments, which, though in some measure it may be said to deserve them, it could not with propriety have insisted upon, is

the effect of the most divine benevolence. To punish, on the contrary, for the affections of the heart only, where no crime has been committed, is the most insolent and barbarous tyranny. The benevolent affections seem to deserve most praise, when they do not wait till it becomes almost a crime for them not to exert themselves. The malevolent, on the contrary, can scarce be too tardy, too slow, or deliberate.

It is even of considerable importance, that the evil which is done without design should be regarded as a misfortune to the doer as well as to the sufferer. Man is thereby taught to reverence the happiness of his brethren, to tremble lest he should, even unknowingly, do any thing that can hurt them, and to dread that animal resentment which, he feels, is ready to burst out against him, if he should, without design, be the unhappy instrument of their calamity.^[24] As, in the ancient heathen religion, that holy ground which had been consecrated to some god, was not to be trod upon but upon solemn and necessary occasions, and the man who had even ignorantly violated it, became piacular from that moment, and, until proper atonement should be made, incurred the vengeance of that powerful and invisible being to whom it had been set apart^[25]; so, by the wisdom of Nature, the happiness of every innocent man is, in the same manner, rendered holy, consecrated, and hedged round against the approach of every other man; not to be wantonly trod upon, not even to be, in any respect, ignorantly and involuntarily violated, without requiring some expiation, some atonement in proportion to the greatness of such undesigned violation. A man of humanity, who accidentally, and without the smallest degree of blamable negligence, has been the cause of the death of another man, feels himself piacular, though not guilty. During his whole life he considers this accident as one of the greatest misfortunes that could have befallen him. If the family of the slain is poor, and he himself in tolerable circumstances, he immediately takes them under his protection, and, without any

other merit, thinks them entitled to every degree of favour and kindness. If they are in better circumstances, he endeavours by every submission, by every expression of sorrow, by rendering them every good office which he can devise or they accept of, to atone for what has happened, and to propitiate, as much as possible, their, perhaps natural, though no doubt most unjust resentment, for the great, though involuntary, offence which he has given them.

The distress which an innocent person feels, who, by some accident, has been led to do something which, if it had been done with knowledge and design, would have justly exposed him to the deepest reproach, has given occasion to some of the finest and most interesting scenes both of the ancient and of the modern drama. It is this fallacious sense of guilt, if I may call it so, which constitutes the whole distress of Oedipus and Jocasta upon the Greek, of Monimia and Isabella upon the English, theatre.^[26] They are all of them in the highest degree piacular, though not one of them is in the smallest degree guilty.

Notwithstanding, however, all these seeming irregularities of sentiment, if man should unfortunately either give occasion to those evils which he did not intend, or fail in producing that good which he intended, Nature has not left his innocence altogether without consolation, nor his virtue altogether without reward. He then calls to his assistance that just and equitable maxim, That those events which did not depend upon our conduct, ought not to diminish the esteem that is due to us. He summons up his whole magnanimity and firmness of soul, and strives to regard himself, not in the light in which he at present appears, but in that in which he ought to appear, in which he would have appeared had his generous designs been crowned with success, and in which he would still appear, notwithstanding their miscarriage, if the sentiments of mankind were either altogether candid and equitable, or even perfectly consistent with themselves.

The more candid and humane part of mankind entirely go along with the effort which he thus makes to support himself in his own opinion. They exert their whole generosity and greatness of mind, to correct in themselves this irregularity of human nature, and endeavour to regard his unfortunate magnanimity in the same light in which, had it been successful, they would, without any such generous exertion, have naturally been disposed to consider it.

图II—5：俄狄浦斯

NOTES: 1. To ascribe in this manner our natural sense of the ill desert of human actions to a sympathy with the resentment of the sufferer, may seem, to the greater part of people, to be a degradation of that sentiment. Resentment is commonly regarded as so odious a passion, that they will be apt to think it impossible that so laudable a principle, as the sense of the ill desert of vice, should in any respect be founded upon it. They will be more willing, perhaps, to admit that our sense of the merit of good actions is founded upon a sympathy with the gratitude of the persons who receive the benefit of them; because gratitude, as well as all the other benevolent passions, is regarded as an amiable principle, which can take nothing from the worth of

whatever is founded upon it. Gratitude and resentment, however, are in every respect, it is evident, counterparts to one another; and if our sense of merit arises from a sympathy with the one, our sense of demerit can scarce miss to proceed from a fellow-feeling with the other.

Let it be considered too that resentment, though, in the degrees in which we too often see it, the most odious, perhaps, of all the passions, is not disapproved of when properly humbled and entirely brought down to the level of the sympathetic indignation of the spectator. When we, who are the bystanders, feel that our own animosity entirely corresponds with that of the sufferer, when the resentment of this last does not in any respect go beyond our own, when no word, no gesture, escapes him that denotes an emotion more violent than what we can keep time to, and when he never aims at inflicting any punishment beyond what we should rejoice to see inflicted, or what we ourselves would upon this account even desire to be the instruments of inflicting, it is impossible that we should not entirely approve of his sentiments. Our own emotion in this case must, in our eyes, undoubtedly justify his. And as experience teaches us how much the greater part of mankind are incapable of this moderation, and how great an effort must be made in order to bring down the rude and undisciplined impulse of resentment to this suitable temper, we cannot avoid conceiving a considerable degree of esteem and admiration for one who appears capable of exerting so much self-command over one of the most ungovernable passions of his nature. When indeed the animosity of the sufferer exceeds, as it almost always does, what we can go along with, as we cannot enter into it, we necessarily disapprove of it. We even disapprove of it more than we should of an equal excess of almost any other passion derived from the imagination. And this too violent resentment, instead of carrying us along with it, becomes itself the object of our resentment and indignation. We enter into the opposite resentment of the person who

is the object of this unjust emotion, and who is in danger of suffering from it. Revenge, therefore, the excess of resentment, appears to be the most detestable of all the passions, and is the object of the horror and indignation of every body. And as in the way in which this passion commonly discovers itself among mankind, it is excessive a hundred times for once that it is moderate, we are very apt to consider it as altogether odious and detestable, because in its most ordinary appearances it is so. Nature, however, even in the present depraved state of mankind, does not seem to have dealt so unkindly with us, as to have endowed us with any principle which is wholly and in every respect evil, or which, in no degree and in no direction, can be the proper object of praise and approbation. Upon some occasions we are sensible that this passion, which is generally too strong, may likewise be too weak. We sometimes complain that a particular person shows too little spirit, and has too little sense of the injuries that have been done to him; and we are as ready to despise him for the defect, as to hate him for the excess of this passion.

The inspired writers would not surely have talked so frequently or so strongly of the wrath and anger of God, if they had regarded every degree of those passions as vicious and evil, even in so weak and imperfect a creature as man.

Let it be considered too, that the present inquiry is not concerning a matter of right, if I may say so, but concerning a matter of fact. We are not at present examining upon what principles a perfect being would approve of the punishment of bad actions; but upon what principles so weak and imperfect a creature as man actually and in fact approves of it. The principles which I have just now mentioned, it is evident, have a very great effect upon his sentiments; and it seems wisely ordered that it should be so. The very existence of society requires that unmerited and unprovoked malice should be restrained by proper punishments; and consequently, that to inflict those

punishments should be regarded as a proper and laudable action. Though man, therefore, be naturally endowed with a desire of the welfare and preservation of society, yet the Author of nature has not entrusted it to his reason to find out that a certain application of punishments is the proper means of attaining this end; but has endowed him with an immediate and instinctive approbation of that very application which is most proper to attain it. The economy of nature is in this respect exactly of a piece with what it is upon many other occasions. With regard to all those ends which, upon account of their peculiar importance, may be regarded, if such an expression is allowable, as the favourite ends of nature, she has constantly in this manner not only endowed mankind with an appetite for the end which she proposes, but likewise with an appetite for the means by which alone this end can be brought about, for their own sakes, and independent of their tendency to produce it. Thus self-preservation, and the propagation of the species, are the great ends which Nature seems to have proposed in the formation of all animals. Mankind are endowed with a desire of those ends, and an aversion to the contrary; with a love of life, and a dread of dissolution; with a desire of the continuance and perpetuity of the species, and with an aversion to the thoughts of its intire extinction. But though we are in this manner endowed with a very strong desire of those ends, it has not been intrusted to the slow and uncertain determinations of our reason, to find out the proper means of bringing them about. Nature has directed us to the greater part of these by original and immediate instincts. Hunger, thirst, the passion which unites the two sexes, the love of pleasure, and the dread of pain, prompt us to apply those means for their own sakes, and without any consideration of their tendency to those beneficent ends which the great Director of nature intended to produce by them. Before I conclude this note, I must take notice of a difference between the approbation of propriety and that of merit or beneficence. Before we approve of the sentiments of any person as proper and suitable to their objects, we must not only be affected in

the same manner as he is, but we must perceive this harmony and correspondence of sentiments between him and ourselves. Thus, though upon hearing of a misfortune that had befallen my friend, I should conceive precisely that degree of concern which he gives way to; yet till I am informed of the manner in which he behaves, till I perceive the harmony between his emotions and mine, I cannot be said to approve of the sentiments which influence his behaviour. The approbation of propriety therefore requires, not only that we should entirely sympathize with the person who acts, but that we should perceive this perfect concord between his sentiments and our own. On the contrary, when I hear of a benefit that has been bestowed upon another person, let him who has received it be affected in what manner he pleases, if, by bringing his case home to myself, I feel gratitude arise in my own breast, I necessarily approve of the conduct of his benefactor, and regard it as meritorious, and the proper object of reward. Whether the person who has received the benefit conceives gratitude or not, cannot, it is evident, in any degree alter our sentiments with regard to the merit of him who has bestowed it. No actual correspondence of sentiments, therefore, is here required. It is sufficient that if he was grateful, they would correspond; and our sense of merit is often founded upon one of those illusive sympathies, by which, when we bring home to ourselves the case of another, we are often affected in a manner in which the person principally concerned is incapable of being affected. There is a similar difference between our disapprobation of demerit, and that of impropriety. 2. *Lata culpa prope dolum est.* 3. *Culpa levis.* 4. *Culpa levissima.*

[9] 这一观点起初出现于柏拉图的《理想国》中，后被很多学者引证。

[10] 斯密认为公共利益是正义的源泉，这种观点很可能受到休谟的影响，具体参见：休谟《道德原则研究》Enquiry concerning the Principles of Morals (1751), III.

[11] 本段的最后一句话是在第六版中添加的，代替了之前的一长段文本，之前的文本如下：

That the Deity loves virtue and hates vice, as a voluptuous man loves riches and hates poverty, not for their own sakes, but for the effects which they tend to produce; that he loves the one, only because it promotes the happiness of society, which his benevolence prompts him to desire; and that he hates the other, only because it occasions the misery of mankind, which the same divine quality renders the object of his aversion; is not the doctrine of nature, but of an artificial, though ingenious, refinement of philosophy. All our natural sentiments prompt us to believe, that as perfect virtue is supposed necessarily to appear to the Deity, as it does to us, for its own sake, and without any further view, the natural and proper object of love and reward, so must vice, of hatred and punishment. That the gods neither resent nor hurt, was the general maxim of all the different sects of the ancient philosophy: and if, by resenting, be understood, that violent and disorderly perturbation, which often distracts and confounds the human breast; or if, by hurting, be understood, the doing mischief want only, and without regard to propriety or justice, such weakness is undoubtedly unworthy of the divine

perfection. But if it be meant, that vice does not appear to the Deity to be, for its own sake, the object of abhorrence and aversion, and what, for its own sake, it is fit and right should be punished, the truth of this maxim can, by no means, be so easily admitted. If we consult our natural sentiments, we are apt to fear, lest before the holiness of God, vice should appear to be more worthy of punishment than the weakness and imperfection of human virtue can ever seem to be of reward. Man, when about to appear before a being of infinite perfection, can feel but little confidence in his own merit, or in the imperfect propriety of his own conduct. In the presence of his fellow-creatures, he may often justly elevate himself, and may often have reason to think highly of his own character and conduct, compared to the still greater imperfection of theirs. But the case is quite different when about to appear before his infinite Creator. To such a being, he can scarce imagine, that his littleness and weakness should ever seem to be the proper object, either of esteem or of reward. But he can easily conceive, how the numberless violations of duty, of which he has been guilty, should render him the proper object of aversion and punishment; neither can he see any reason why the divine indignation should not be let loose without any restraint, upon so vile an insect, as he is sensible that he himself must appear to be.

If he would still hope for happiness, he is conscious that he cannot demand it from the justice, but that he must entreat it from the mercy of God. Repentance, sorrow, humiliation, contrition at the thought of his past conduct, are, upon this account, the sentiments which become him, and seem to be the only means which he has left for appeasing that wrath which, he knows, he has justly provoked. He even distrusts the efficacy of all these, and naturally fears, lest the wisdom of God should not, like the weakness of man, be prevailed upon to spare the crime, by the most importunate lamentations of the criminal. Some other intercession, some other sacrifice, some other atonement, he imagines, must be made for him, beyond what he himself is capable of making, before the purity of the divine justice can be reconciled to his manifold offences. The doctrines of revelation coincide, in every respect, with those original anticipations of nature; and, as they teach us how little we can depend upon the imperfection of our own virtue, so they show us, at the same time, that the most powerful intercession has been made, and that the most dreadful atonement has been paid for our manifold transgressions and iniquities.

[12] 此处斯密不仅仅是从人类天性出发，同时也在从历史角度考虑到这种天性在古代法律体系中的反映。

[13] 此处亦体现出古代法律体系对斯密的影响，《旧约·出埃及记21：28》中记载：“若有牛抵死了人，就得用石头打死它，但它的肉不可吃；牛的主人不必受罚。”

[14] Lucius Licinius Lucullus于公元前74至66年间指挥罗马军队抵御Mithridates。起初取得胜利，但前68年战役的失败导致其失去了对军队的控制，最终于前66年交出领导权。（参见：图II—3）

[15] 参见：LJ（A）V.61～62；LJ（B）80。

[16] Tigranes, 公元前1世纪亚美尼亚国王, 与Mithridates结盟, 文中的敌军指的是Lucullus。

[17] 参见: Part I. Section II. 3 ~ 4。

[18] 原注: *Lata culpa prope dolum est.* (诡诈近似于严重过失。)

此处斯密的注解似乎是错误的, 查士丁尼《民法大全》(*Corpus Iuris Civilis*) 并没有斯密所注的这句话, 原文应该是*late culpa plane dolo compatabitur*, 或者是*magna culpa dolus est*。

[19] 参见: LJ (A) II. 112; (B) 187。

[20] 原注: *Culpa levis*。

[21] 原注: *Culpa levis*。

[22] 参见: 查士丁尼《法学阶梯》(*Justinian, Institutes*,) IV.iii.8。 (图II —4)

[23] 参见: Part VI. Section III. Para.30。

[24] 从“*As, in the ancient*”开始到第五段的最后是在第六版中新添加的。

[25] 此处斯密考虑到的是一种古老的罗马宗教, *Piaculum* 在拉丁语中的意思是对侵犯神祇行为的一种补偿方式, 即献祭和迁徙; 同时这个词语也指对神的冒犯行为。

[26] 该四人均在无意中触犯了婚姻的神圣原则: 在索福克勒斯 (*Sophocles*) 的悲剧《俄狄浦斯王》中, 俄狄浦斯在不知情的情况下娶了自己的母亲求卡斯塔 (参见: 图II—5); 在奥特维 (*Otway*) 的戏剧《孤儿》中, 罗米尼亚把丈夫的弟弟误认为了自己的丈夫; 在萨瑟恩 (*Southerne*) 的戏剧《致命的婚姻》中, 伊莎贝拉并不知晓丈夫仍在世的情况下再婚。

**Part III Of the Foundation of
Our Judgments Concerning Our
Own Sentiments and Conduct,
and of the Sense of Duty**

Chap. I Of the Principle of Self-approbation and of Self-disapprobation

In the two foregoing parts of this discourse, I have chiefly considered the origin and foundation of our judgments concerning the sentiments and conduct of others. I come now to consider more particularly the origin of those concerning our own.

The principle by which we naturally either approve or disapprove of our own conduct, seems to be altogether the same with that by which we exercise the like judgments concerning the conduct of other people. We either approve or disapprove of the conduct of another man according as we feel that, when we bring his case home to ourselves, we either can or cannot entirely sympathize with the sentiments and motives which directed it. And, in the same manner, we either approve or disapprove of our own conduct, according as we feel that, when we place ourselves in the situation of another man, and view it, as it were, with his eyes and from his station, we either can or cannot entirely enter into and sympathize with the sentiments and motives which influenced it. We can never survey our own sentiments and motives, we can never form any judgment concerning them; unless we remove ourselves, as it were, from our own natural station, and endeavour to view them as at a certain distance from us. But we can do this in no other way than by endeavouring to view them with the eyes of other people, or as other people are likely to view them. Whatever judgment we can form concerning them, accordingly, must always bear some secret reference, either to what are, or to what, upon a certain condition, would be, or to what, we imagine, ought to be the judgment of others. We endeavour to examine our own conduct as we imagine any other fair and impartial spectator would examine it. If, upon placing ourselves in his situation, we thoroughly enter into all the passions and motives which

influenced it, we approve of it, by sympathy with the approbation of this supposed equitable judge. If otherwise, we enter into his disapprobation, and condemn it.

Were it possible that a human creature could grow up to manhood in some solitary place, without any communication with his own species, he could no more think of his own character, of the propriety or demerit of his own sentiments and conduct, of the beauty or deformity of his own mind, than of the beauty or deformity of his own face. All these are objects which he cannot easily see, which naturally he does not look at, and with regard to which he is provided with no mirror which can present them to his view. Bring him into society, and he is immediately provided with the mirror which he wanted before.^[1] It is placed in the countenance and behaviour of those he lives with, which always mark when they enter into, and when they disapprove of his sentiments; and it is here that he first views the propriety and impropriety of his own passions, the beauty and deformity of his own mind. To a man who from his birth was a stranger to society, the objects of his passions, the external bodies which either pleased or hurt him, would occupy his whole attention. The passions themselves, the desires or aversions, the joys or sorrows, which those objects excited, though of all things the most immediately present to him, could scarce ever be the objects of his thoughts. The idea of them could never interest him so much as to call upon his attentive consideration. The consideration of his joy could in him excite no new joy, nor that of his sorrow any new sorrow, though the consideration of the causes of those passions might often excite both. Bring him into society, and all his own passions will immediately become the causes of new passions. He will observe that mankind approve of some of them, and are disgusted by others. He will be elevated in the one case, and cast down in the other; his desires and aversions, his joys and sorrows, will now often become the causes of new desires and new aversions, new joys and new sorrows: they will

now, therefore, interest him deeply, and often call upon his most attentive consideration.^[2]

Our first ideas of personal beauty and deformity, are drawn from the shape and appearance of others, not from our own. We soon become sensible, however, that others exercise the same criticism upon us. We are pleased when they approve of our figure, and are disobliged when they seem to be disgusted. We become anxious to know how far our appearance deserves either their blame or approbation. We examine our persons limb by limb, and by placing ourselves before a looking-glass, or by some such expedient, endeavour, as much as possible, to view ourselves at the distance and with the eyes of other people. If, after this examination, we are satisfied with our own appearance, we can more easily support the most disadvantageous judgments of others. If, on the contrary, we are sensible that we are the natural objects of distaste, every appearance of their disapprobation mortifies us beyond all measure. A man who is tolerably handsome, will allow you to laugh at any little irregularity in his person; but all such jokes are commonly unsupportable to one who is really deformed. It is evident, however, that we are anxious about our own beauty and deformity, only upon account of its effect upon others. If we had no connexion with society, we should be altogether indifferent about either.

In the same manner our first moral criticisms are exercised upon the characters and conduct of other people; and we are all very forward to observe how each of these affects us. But we soon learn, that other people are equally frank with regard to our own. We become anxious to know how far we deserve their censure or applause, and whether to them we must necessarily appear those agreeable or disagreeable creatures which they represent us. We begin, upon this account, to examine our own passions and conduct, and to consider how these must appear to them, by considering how

they would appear to us if in their situation. We suppose ourselves the spectators of our own behaviour, and endeavour to imagine what effect it would, in this light, produce upon us. This is the only looking-glass by which we can, in some measure, with the eyes of other people, scrutinize the propriety of our own conduct. If in this view it pleases us, we are tolerably satisfied. We can be more indifferent about the applause, and, in some measure, despise the censure of the world secure that, however misunderstood or misrepresented, we are the natural and proper objects of approbation. On the contrary, if we are doubtful about it, we are often, upon that very account, more anxious to gain their approbation, and, provided we have not already, as they say, shaken hands with infamy, we are altogether distracted at the thoughts of their censure, which then strikes us with double severity.^[3]

When I endeavour to examine my own conduct, when I endeavour to pass sentence upon it, and either to approve or condemn it, it is evident that, in all such cases, I divide myself, as it were, into two persons; and that I, the examiner and judge, represent a different character from that other I, the person whose conduct is examined into and judged of. The first is the spectator, whose sentiments with regard to my own conduct I endeavour to enter into, by placing myself in his situation, and by considering how it would appear to me, when seen from that particular point of view. The second is the agent, the person whom I properly call myself, and of whose conduct, under the character of a spectator, I was endeavouring to form some opinion. The first is the judge; the second the person judged of. But that the judge should, in every respect, be the same with the person judged of, is as impossible, as that the cause should, in every respect, be the same with the effect.

To be amiable and to be meritorious; that is, to deserve love and to deserve reward, are the great characters of virtue; and to be odious

and punishable, of vice. But all these characters have an immediate reference to the sentiments of others. Virtue is not said to be amiable, or to be meritorious, because it is the object of its own love, or of its own gratitude; but because it excites those sentiments in other men. The consciousness that it is the object of such favourable regards, is the source of that inward tranquillity and self-satisfaction with which it is naturally attended, as the suspicion of the contrary gives occasion to the torments of vice. What so great happiness as to be beloved, and to know that we deserve to be beloved? What so great misery as to be hated, and to know that we deserve to be hated?

Chap. II Of the love of Praise, and of that of Praise-worthiness; and of the dread of Blame, and of that of Blame-worthiness

[4]Man naturally desires, not only to be loved, but to be lovely; or to be that thing which is the natural and proper object of love. He naturally dreads, not only to be hated, but to be hateful; or to be that thing which is the natural and proper object of hatred. He desires, not only praise, but praiseworthiness; or to be that thing which, though it should be praised by nobody, is, however, the natural and proper object of praise. He dreads, not only blame, but blame-worthiness; or to be that thing which, though it should be blamed by nobody, is, however, the natural and proper object of blame.

The love of praise-worthiness is by no means derived altogether from the love of praise. Those two principles, though they resemble one another, though they are connected, and often blended with one another, are yet, in many respects, distinct and independent of one another.

The love and admiration which we naturally conceive for those whose character and conduct we approve of, necessarily dispose us to

desire to become ourselves the objects of the like agreeable sentiments, and to be as amiable and as admirable as those whom we love and admire the most. Emulation, the anxious desire that we ourselves should excel, is originally founded in our admiration of the excellence of others. Neither can we be satisfied with being merely admired for what other people are admired. We must at least believe ourselves to be admirable for what they are admirable. But, in order to attain this satisfaction, we must become the impartial spectators of our own character and conduct. We must endeavour to view them with the eyes of other people, or as other people are likely to view them. When seen in this light, if they appear to us as we wish, we are happy and contented. But it greatly confirms this happiness and contentment when we find that other people, viewing them with those very eyes with which we, in imagination only, were endeavouring to view them, see them precisely in the same light in which we ourselves had seen them. Their approbation necessarily confirms our own self-approbation. Their praise necessarily strengthens our own sense of our own praiseworthiness. In this case, so far is the love of praiseworthiness from being derived altogether from that of praise; that the love of praise seems, at least in a great measure, to be derived from that of praise-worthiness.

The most sincere praise can give little pleasure when it cannot be considered as some sort of proof of praise-worthiness. It is by no means sufficient that, from ignorance or mistake, esteem and admiration should, in some way or other, be bestowed upon us. If we are conscious that we do not deserve to be so favourably thought of, and that if the truth were known, we should be regarded with very different sentiments, our satisfaction is far from being complete. The man who applauds us either for actions which we did not perform, or for motives which had no sort of influence upon our conduct, applauds not us, but another person. We can derive no sort of satisfaction from his praises. To us they should be more mortifying

than any censure, and should perpetually call to our minds, the most humbling of all reflections, the reflection of what we ought to be, but what we are not. A woman who paints, could derive, one should imagine, but little vanity from the compliments that are paid to her complexion. These, we should expect, ought rather to put her in mind of the sentiments which her real complexion would excite, and mortify her the more by the contrast. To be pleased with such groundless applause is a proof of the most superficial levity and weakness. It is what is properly called vanity, and is the foundation of the most ridiculous and contemptible vices, the vices of affectation and common lying; follies which, if experience did not teach us how common they are, one should imagine the least spark of common sense would save us from. The foolish liar, who endeavours to excite the admiration of the company by the relation of adventures which never had any existence; the important coxcomb, who gives himself airs of rank and distinction which he well knows he has no just pretensions to; are both of them, no doubt, pleased with the applause which they fancy they meet with. But their vanity arises from so gross an illusion of the imagination, that it is difficult to conceive how any rational creature should be imposed upon by it. When they place themselves in the situation of those whom they fancy they have deceived, they are struck with the highest admiration for their own persons. They look upon themselves, not in that light in which, they know, they ought to appear to their companions, but in that in which they believe their companions actually look upon them. Their superficial weakness and trivial folly hinder them from ever turning their eyes inwards, or from seeing themselves in that despicable point of view in which their own consciences must tell them that they would appear to every body, if the real truth should ever come to be known.

As ignorant and groundless praise can give no solid joy, no satisfaction that will bear any serious examination, so, on the

contrary, it often gives real comfort to reflect, that though no praise should actually be bestowed upon us, our conduct, however, has been such as to deserve it, and has been in every respect suitable to those measures and rules by which praise and approbation are naturally and commonly bestowed. We are pleased, not only with praise, but with having done what is praise-worthy. We are pleased to think that we have rendered ourselves the natural objects of approbation, though no approbation should ever actually be bestowed upon us: and we are mortified to reflect that we have justly merited the blame of those we live with, though that sentiment should never actually be exerted against us. The man who is conscious to himself that he has exactly observed those measures of conduct which experience informs him are generally agreeable, reflects with satisfaction on the propriety of his own behaviour. When he views it in the light in which the impartial spectator would view it, he thoroughly enters into all the motives which influenced it. He looks back upon every part of it with pleasure and approbation, and though mankind should never be acquainted with what he has done, he regards himself, not so much according to the light in which they actually regard him, as according to that in which they would regard him if they were better informed. He anticipates the applause and admiration which in this case would be bestowed upon him, and he applauds and admires himself by sympathy with sentiments, which do not indeed actually take place, but which the ignorance of the public alone hinders from taking place, which he knows are the natural and ordinary effects of such conduct, which his imagination strongly connects with it, and which he has acquired a habit of conceiving as something that naturally and in propriety ought to follow from it. Men have voluntarily thrown away life to acquire after death a renown which they could no longer enjoy. Their imagination, in the mean time, anticipated that fame which was in future times to be bestowed upon them. Those applauses which they were never to hear rung in their ears; the thoughts of that admiration, whose effects they were never to feel, played about their

hearts, banished from their breasts the strongest of all natural fears, and transported them to perform actions which seem almost beyond the reach of human nature. But in point of reality there is surely no great difference between that approbation which is not to be bestowed till we can no longer enjoy it, and that which, indeed, is never to be bestowed, but which would be bestowed, if the world was ever made to understand properly the real circumstances of our behaviour. If the one often produces such violent effects, we cannot wonder that the other should always be highly regarded.

Nature, when she formed man for society, endowed him with an original desire to please, and an original aversion to offend his brethren. She taught him to feel pleasure in their favourable, and pain in their unfavourable regard. She rendered their approbation most flattering and most agreeable to him for its own sake; and their disapprobation most mortifying and most offensive.

But this desire of the approbation, and this aversion to the disapprobation of his brethren, would not alone have rendered him fit for that society for which he was made. Nature, accordingly, has endowed him, not only with a desire of being approved of, but with a desire of being what ought to be approved of; or of being what he himself approves of in other men. The first desire could only have made him wish to appear to be fit for society. The second was necessary in order to render him anxious to be really fit. The first could only have prompted him to the affectation of virtue, and to the concealment of vice. The second was necessary in order to inspire him with the real love of virtue, and with the real abhorrence of vice. In every well-formed mind this second desire seems to be the strongest of the two. It is only the weakest and most superficial of mankind who can be much delighted with that praise which they themselves know to be altogether unmerited. A weak man may sometimes be pleased with it, but a wise man rejects it upon all occasions. But, though a

wise man feels little pleasure from praise where he knows there is no praise-worthiness, he often feels the highest in doing what he knows to be praise-worthy, though he knows equally well that no praise is ever to be bestowed upon it. To obtain the approbation of mankind, where no approbation is due, can never be an object of any importance to him. To obtain that approbation where it is really due, may sometimes be an object of no great importance to him. But to be that thing which deserves approbation, must always be an object of the highest.

To desire, or even to accept of praise, where no praise is due, can be the effect only of the most contemptible vanity. To desire it where it is really due, is to desire no more than that a most essential act of justice should be done to us. The love of just fame, of true glory, even for its own sake, and independent of any advantage which he can derive from it, is not unworthy even of a wise man. He sometimes, however, neglects, and even despises it; and he is never more apt to do so than when he has the most perfect assurance of the perfect propriety of every part of his own conduct. His self-approbation, in this case, stands in need of no confirmation from the approbation of other men. It is alone sufficient, and he is contented with it. This self-approbation, if not the only, is at least the principal object, about which he can or ought to be anxious. The love of it, is the love of virtue.

As the love and admiration which we naturally conceive for some characters, dispose us to wish to become ourselves the proper objects of such agreeable sentiments; so the hatred and contempt which we as naturally conceive for others, dispose us, perhaps still more strongly, to dread the very thought of resembling them in any respect. Neither is it, in this case, too, so much the thought of being hated and despised that we are afraid of, as that of being hateful and despicable. We dread the thought of doing any thing which can render us the just

and proper objects of the hatred and contempt of our fellow-creatures; even though we had the most perfect security that those sentiments were never actually to be exerted against us. The man who has broke through all those measures of conduct, which can alone render him agreeable to mankind, though he should have the most perfect assurance that what he had done was for ever to be concealed from every human eye, it is all to no purpose. When he looks back upon it, and views it in the light in which the impartial spectator would view it, he finds that he can enter into none of the motives which influenced it. He is abashed and confounded at the thoughts of it, and necessarily feels a very high degree of that shame which he would be exposed to, if his actions should ever come to be generally known. His imagination, in this case too, anticipates the contempt and derision from which nothing saves him but the ignorance of those he lives with. He still feels that he is the natural object of these sentiments, and still trembles at the thought of what he would suffer, if they were ever actually exerted against him. But if what he had been guilty of was not merely one of those improprieties which are the objects of simple disapprobation, but one of those enormous crimes which excite detestation and resentment, he could never think of it, as long as he had any sensibility left, without feeling all the agony of horror and remorse; and though he could be assured that no man was ever to know it, and could even bring himself to believe that there was no God to revenge it, he would still feel enough of both these sentiments to embitter the whole of his life: he would still regard himself as the natural object of the hatred and indignation of all his fellow-creatures; and, if his heart was not grown callous by the habit of crimes, he could not think without terror and astonishment even of the manner in which mankind would look upon him, of what would be the expression of their countenance and of their eyes, if the dreadful truth should ever come to be known. These natural pangs of an affrighted conscience are the daemons, the avenging furies, which, in this life, haunt the guilty, which allow them neither quiet nor repose, which

often drive them to despair and distraction, from which no assurance of secrecy can protect them, from which no principles of irreligion can entirely deliver them, and from which nothing can free them but the vilest and most abject of all states, a complete insensibility to honour and infamy, to vice and virtue. Men of the most detestable characters, who, in the execution of the most dreadful crimes, had taken their measures so coolly as to avoid even the suspicion of guilt, have sometimes been driven, by the horror of their situation, to discover, of their own accord, what no human sagacity could ever have investigated. By acknowledging their guilt, by submitting themselves to the resentment of their offended fellow-citizens, and, by thus satiating that vengeance of which they were sensible that they had become the proper objects, they hoped, by their death to reconcile themselves, at least in their own imagination, to the natural sentiments of mankind; to be able to consider themselves as less worthy of hatred and resentment; to atone, in some measure, for their crimes, and by thus becoming the objects, rather of compassion than of horror, if possible to die in peace and with the forgiveness of all their fellow-creatures. Compared to what they felt before the discovery, even the thought of this, it seems, was happiness.

In such cases, the horror of blame-worthiness seems, even in persons who cannot be suspected of any extraordinary delicacy or sensibility of character, completely to conquer the dread of blame. In order to allay that horror, in order to pacify, in some degree, the remorse of their own consciences, they voluntarily submitted themselves both to the reproach and to the punishment which they knew were due to their crimes, but which, at the same time, they might easily have avoided.

They are the most frivolous and superficial of mankind only who can be much delighted with that praise which they themselves know to be altogether unmerited. Unmerited reproach, however, is

frequently capable of mortifying very severely even men of more than ordinary constancy. Men of the most ordinary constancy, indeed, easily learn to despise those foolish tales which are so frequently circulated in society, and which, from their own absurdity and falsehood, never fail to die away in the course of a few weeks, or of a few days. But an innocent man, though of more than ordinary constancy, is often, not only shocked, but most severely mortified by the serious, though false, imputation of a crime; especially when that imputation happens unfortunately to be supported by some circumstances which give it an air of probability. He is humbled to find that any body should think so meanly of his character as to suppose him capable of being guilty of it. Though perfectly conscious of his own innocence, the very imputation seems often, even in his own imagination, to throw a shadow of disgrace and dishonour upon his character. His just indignation, too, at so very gross an injury, which, however, it may frequently be improper, and sometimes even impossible to revenge, is itself a very painful sensation. There is no greater tormentor of the human breast than violent resentment which cannot be gratified. An innocent man, brought to the scaffold by the false imputation of an infamous or odious crime, suffers the most cruel misfortune which it is possible for innocence to suffer. The agony of his mind may, in this case, frequently be greater than that of those who suffer for the like crimes, of which they have been actually guilty. Profligate criminals, such as common thieves and highwaymen, have frequently little sense of the baseness of their own conduct, and consequently no remorse. Without troubling themselves about the justice or injustice of the punishment, they have always been accustomed to look upon the gibbet as a lot very likely to fall to them. When it does fall to them, therefore, they consider themselves only as not quite so lucky as some of their companions, and submit to their fortune, without any other uneasiness than what may arise from the fear of death; a fear which, even by such worthless wretches, we frequently see, can be so easily, and so very completely conquered.

The innocent man, on the contrary, over and above the uneasiness which this fear may occasion, is tormented by his own indignation at the injustice which has been done to him. He is struck with horror at the thoughts of the infamy which the punishment may shed upon his memory, and foresees, with the most exquisite anguish, that he is hereafter to be remembered by his dearest friends and relations, not with regret and affection, but with shame, and even with horror for his supposed disgraceful conduct: and the shades of death appear to close round him with a darker and more melancholy gloom than naturally belongs to them. Such fatal accidents, for the tranquillity of mankind, it is to be hoped, happen very rarely in any country; but they happen sometimes in all countries, even in those where justice is in general very well administered. The unfortunate Calas, a man of much more than ordinary constancy (broke upon the wheel and burnt at Tholouse for the supposed murder of his own son, of which he was perfectly innocent), seemed, with his last breath, to deprecate, not so much the cruelty of the punishment, as the disgrace which the imputation might bring upon his memory. After he had been broke, and was just going to be thrown into the fire, the monk, who attended the execution, exhorted him to confess the crime for which he had been condemned. My Father, said Calas, can you yourself bring yourself to believe that I am guilty?^[5]

To persons in such unfortunate circumstances, that humble philosophy which confines its views to this life, can afford, perhaps, but little consolation. Every thing that could render either life or death respectable is taken from them. They are condemned to death and to everlasting infamy. Religion can alone afford them any effectual comfort. She alone can tell them, that it is of little importance what man may think of their conduct, while the all-seeing Judge of the world approves of it. She alone can present to them the view of another world; a world of more candour, humanity, and justice, than the present; where their innocence is in due time to be

declared, and their virtue to be finally rewarded: and the same great principle which can alone strike terror into triumphant vice, affords the only effectual consolation to disgraced and insulted innocence.

In smaller offences, as well as in greater crimes, it frequently happens that a person of sensibility is much more hurt by the unjust imputation, than the real criminal is by the actual guilt. A woman of gallantry laughs even at the well-founded surmises which are circulated concerning her conduct. The worst founded surmise of the same kind is a mortal stab to an innocent virgin. The person who is deliberately guilty of a disgraceful action, we may lay it down, I believe, as a general rule, can seldom have much sense of the disgrace; and the person who is habitually guilty of it, can scarce ever have any.

图III—1：卡拉斯被施以车刑

When every man, even of middling understanding, so readily despises unmerited applause, how it comes to pass that unmerited reproach should often be capable of mortifying so severely men of the soundest and best judgment, may, perhaps, deserve some consideration.

Pain, I have already had occasion to observe,^[6] is, in almost all

cases, a more pungent sensation than the opposite and correspondent pleasure. The one, almost always, depresses us much more below the ordinary, or what may be called the natural state of our happiness, than the other ever raises us above it. A man of sensibility is apt to be more humiliated by just censure than he is ever elevated by just applause. Unmerited applause a wise man rejects with contempt upon all occasions; but he often feels very severely the injustice of unmerited censure. By suffering himself to be applauded for what he has not performed, by assuming a merit which does not belong to him, he feels that he is guilty of a mean falsehood, and deserves, not the admiration, but the contempt of those very persons who, by mistake, had been led to admire him. It may, perhaps, give him some well-founded pleasure to find that he has been, by many people, thought capable of performing what he did not perform. But, though he may be obliged to his friends for their good opinion, he would think himself guilty of the greatest baseness if he did not immediately undeceive them. It gives him little pleasure to look upon himself in the light in which other people actually look upon him, when he is conscious that, if they knew the truth, they would look upon him in a very different light. A weak man, however, is often much delighted with viewing himself in this false and delusive light. He assumes the merit of every laudable action that is ascribed to him, and pretends to that of many which nobody ever thought of ascribing to him. He pretends to have done what he never did, to have written what another wrote, to have invented what another discovered; and is led into all the miserable vices of plagiarism and common lying. But though no man of middling good sense can derive much pleasure from the imputation of a laudable action which he never performed, yet a wise man may suffer great pain from the serious imputation of a crime which he never committed. Nature, in this case, has rendered the pain, not only more pungent than the opposite and correspondent pleasure, but she has rendered it so in a much greater than the ordinary degree. A denial rids a man at once of the foolish and

ridiculous pleasure; but it will not always rid him of the pain. When he refuses the merit which is ascribed to him, nobody doubts his veracity. It may be doubted when he denies the crime which he is accused of. He is at once enraged at the falsehood of the imputation, and mortified to find that any credit should be given to it. He feels that his character is not sufficient to protect him. He feels that his brethren, far from looking upon him in that light in which he anxiously desires to be viewed by them, think him capable of being guilty of what he is accused of. He knows perfectly that he has not been guilty. He knows perfectly what he has done; but, perhaps, scarce any man can know perfectly what he himself is capable of doing. What the peculiar constitution of his own mind may or may not admit of, is, perhaps, more or less a matter of doubt to every man. The trust and good opinion of his friends and neighbours, tends more than any thing to relieve him from this most disagreeable doubt; their distrust and unfavourable opinion to increase it. He may think himself very confident that their unfavourable judgment is wrong: but this confidence can seldom be so great as to hinder that judgment from making some impression upon him; and the greater his sensibility, the greater his delicacy, the greater his worth in short, this impression is likely to be the greater.

The agreement or disagreement both of the sentiments and judgments of other people with our own, is, in all cases, it must be observed, of more or less importance to us, exactly in proportion as we ourselves are more or less uncertain about the propriety of our own sentiments, about the accuracy of our own judgments.

A man of sensibility may sometimes feel great uneasiness lest he should have yielded too much even to what may be called an honourable passion; to his just indignation, perhaps, at the injury which may have been done either to himself or to his friend. He is anxiously afraid lest, meaning only to act with spirit, and to do justice,

he may, from the too great vehemence of his emotion, have done a real injury to some other person; who, though not innocent, may not have been altogether so guilty as he at first apprehended. The opinion of other people becomes, in this case, of the utmost importance to him. Their approbation is the most healing balsam; their disapprobation, the bitterest and most tormenting poison that can be poured into his uneasy mind. When he is perfectly satisfied with every part of his own conduct, the judgment of other people is often of less importance to him.

There are some very noble and beautiful arts, in which the degree of excellence can be determined only by a certain nicety of taste, of which the decisions, however, appear always, in some measure, uncertain. There are others, in which the success admits, either of clear demonstration, or very satisfactory proof. Among the candidates for excellence in those different arts, the anxiety about the public opinion is always much greater in the former than in the latter.

The beauty of poetry is a matter of such nicety, that a young beginner can scarce ever be certain that he has attained it. Nothing delights him so much, therefore, as the favourable judgments of his friends and of the public; and nothing mortifies him so severely as the contrary. The one establishes, the other shakes, the good opinion which he is anxious to entertain concerning his own performances. Experience and success may in time give him a little more confidence in his own judgment. He is at all times, however, liable to be most severely mortified by the unfavourable judgments of the public. Racine was so disgusted by the indifferent success of his *Phaedra*, the finest tragedy, perhaps, that is extant in any language, that, though in the vigour of his life, and at the height of his abilities, he resolved to write no more for the stage. That great poet used frequently to tell his son, that the most paltry and impertinent criticism had always given him more pain, than the highest and justest eulogy had ever given him

pleasure.^[7] The extreme sensibility of Voltaire to the slightest censure of the same kind is well known to every body.^[8] The Dunciad of Mr Pope is an everlasting monument of how much the most correct, as well as the most elegant and harmonious of all the English poets, had been hurt by the criticisms of the lowest and most contemptible authors.^[9] Gray (who joins to the sublimity of Milton the elegance and harmony of Pope, and to whom nothing is wanting to render him, perhaps, the first poet in the English language, but to have written a little more) is said to have been so much hurt, by a foolish and impertinent parody of two of his finest odes, that he never afterwards attempted any considerable work.^[10] Those men of letters who value themselves upon what is called fine writing in prose, approach somewhat to the sensibility of poets.

图III—2 : Alexander Pope (1688—1744)

Mathematicians, on the contrary, who may have the most perfect assurance, both of the truth and of the importance of their discoveries, are frequently very indifferent about the reception which they may meet with from the public. The two greatest mathematicians that I ever have had the honour to be known to, and, I believe, the two greatest that have lived in my time, Dr Robert Simpson of Glasgow,

and Dr Matthew Stewart of Edinburgh, never seemed to feel even the slightest uneasiness from the neglect with which the ignorance of the public received some of their most valuable works.^[11] The great work of Sir Isaac Newton, his *Mathematical Principles of Natural Philosophy*, I have been told, was for several years neglected by the public. The tranquillity of that great man, it is probable, never suffered, upon that account, the interruption of a single quarter of an hour. Natural philosophers, in their independency upon the public opinion, approach nearly to mathematicians, and, in their judgments concerning the merit of their own discoveries and observations, enjoy some degree of the same security and tranquillity.

The morals of those different classes of men of letters are, perhaps, sometimes somewhat affected by this very great difference in their situation with regard to the public.

Mathematicians and natural philosophers, from their independency upon the public opinion, have little temptation to form themselves into factions and cabals, either for the support of their own reputation, or for the depression of that of their rivals. They are almost always men of the most amiable simplicity of manners, who live in good harmony with one another, are the friends of one another's reputation, enter into no intrigue in order to secure the public applause, but are pleased when their works are approved of, without being either much vexed or very angry when they are neglected.

It is not always the same case with poets, or with those who value themselves upon what is called fine writing. They are very apt to divide themselves into a sort of literary factions; each cabal being often avowedly, and almost always secretly, the mortal enemy of the reputation of every other, and employing all the mean arts of intrigue and solicitation to preoccupy the public opinion in favour of the works of its own members, and against those of its enemies and rivals. In

France, Despreaux and Racine did not think it below them to set themselves at the head of a literary cabal, in order to depress the reputation, first of Quinault and Perreault, and afterwards of Fontenelle and La Motte, and even to treat the good La Fontaine with a species of most disrespectful kindness.^[12] In England, the amiable Mr Addison did not think it unworthy of his gentle and modest character to set himself at the head of a little cabal of the same kind, in order to keep down the rising reputation of Mr Pope. Mr Fontenelle, in writing the lives and characters of the members of the academy of sciences, a society of mathematicians and natural philosophers, has frequent opportunities of celebrating the amiable simplicity of their manners; a quality which, he observes, was so universal among them as to be characteristical, rather of that whole class of men of letters, than of any individual Mr D'Alembert, in writing the lives and characters of the members of the French academy, a society of poets and fine writers, or of those who are supposed to be such, seems not to have had such frequent opportunities of making any remark of this kind, and nowhere pretends to represent this amiable quality as characteristical of that class of men of letters whom he celebrates.

Our uncertainty concerning our own merit, and our anxiety to think favourably of it, should together naturally enough make us desirous to know the opinion of other people concerning it; to be more than ordinarily elevated when that opinion is favourable, and to be more than ordinarily mortified when it is otherwise: but they should not make us desirous either of obtaining the favourable, or of avoiding the unfavourable opinion, by intrigue and cabal. When a man has bribed all the judges, the most unanimous decision of the court, though it may gain him his law-suit, cannot give him any assurance that he was in the right: and had he carried on his lawsuit merely to satisfy himself that he was in the right, he never would have bribed the judges. But though he wished to find himself in the right, he wished likewise to gain his law-suit; and therefore he bribed the

judges. If praise were of no consequence to us, but as a proof of our own praiseworthiness, we never should endeavour to obtain it by unfair means. But, though to wise men it is, at least in doubtful cases, of principal consequence upon this account; it is likewise of some consequence upon its own account: and therefore (we cannot, indeed, upon such occasions, call them wise men, but) men very much above the common level have sometimes attempted both to obtain praise, and to avoid blame, by very unfair means.

Praise and blame express what actually are; praise-worthiness and blameworthiness, what naturally ought to be the sentiments of other people with regard to our character and conduct. The love of praise is the desire of obtaining the favourable sentiments of our brethren. The love of praiseworthiness is the desire of rendering ourselves the proper objects of those sentiments. So far those two principles resemble and are akin to one another. The like affinity and resemblance take place between the dread of blame and that of blame-worthiness.

The man who desires to do, or who actually does, a praise-worthy action, may likewise desire the praise which is due to it, and sometimes, perhaps, more than is due to it. The two principles are in this case blended together. How far his conduct may have been influenced by the one, and how far by the other, may frequently be unknown even to himself. It must almost always be so to other people. They who are disposed to lessen the merit of his conduct, impute it chiefly or altogether to the mere love of praise, or to what they call mere vanity. They who are disposed to think more favourably of it, impute it chiefly or altogether to the love of praise-worthiness; to the love of what is really honourable and noble in human conduct; to the desire, not merely of obtaining, but of deserving the approbation and applause of his brethren. The imagination of the spectator throws upon it either the one colour or the other, according either to his habits of thinking, or to the favour or dislike which he may bear to the

person whose conduct he is considering.

Some splenetic philosophers, in judging of human nature, have done as peevish individuals are apt to do in judging of the conduct of one another, and have imputed to the love of praise, or to what they call vanity , every action which ought to be ascribed to that of praise-worthiness. I shall hereafter have occasion to give an account of some of their systems, and shall not at present stop to examine them. [13]

Very few men can be satisfied with their own private consciousness that they have attained those qualities, or performed those actions, which they admire and think praise-worthy in other people; unless it is, at the same time, generally acknowledged that they possess the one, or have performed the other; or, in other words, unless they have actually obtained that praise which they think due both to the one and to the other. In this respect, however, men differ considerably from one another. Some seem indifferent about the praise, when, in their own minds, they are perfectly satisfied that they have attained the praise-worthiness. Others appear much less anxious about the praise-worthiness than about the praise.

No man can be completely, or even tolerably satisfied, with having avoided every thing blame-worthy in his conduct; unless he has likewise avoided the blame or the reproach. A wise man may frequently neglect praise, even when he has best deserved it; but, in all matters of serious consequence, he will most carefully endeavour so to regulate his conduct as to avoid, not only blame-worthiness, but, as much as possible, every probable imputation of blame. He will never, indeed, avoid blame by doing any thing which he judges blame-worthy; by omitting any part of his duty, or by neglecting any opportunity of doing any thing which he judges to be really and greatly praise-worthy. But, with these modifications, he will most anxiously and carefully avoid it. To show much anxiety about praise, even for praise-worthy actions, is seldom a mark of great wisdom, but

generally of some degree of weakness. But, in being anxious to avoid the shadow of blame or reproach, there may be no weakness, but frequently the most praise-worthy prudence.

‘Many people,’ says Cicero, ‘despise glory, who are yet most severely mortified by unjust reproach; and that most inconsistently.’^[14] This inconsistency, however, seems to be founded in the unalterable principles of human nature.

The all-wise Author of Nature has, in this manner, taught man to respect the sentiments and judgments of his brethren; to be more or less pleased when they approve of his conduct, and to be more or less hurt when they disapprove of it. He has made man, if I may say so, the immediate judge of mankind; and has, in this respect, as in many others, created him after his own image, and appointed him his vicegerent upon earth, to superintend the behaviour of his brethren. They are taught by nature, to acknowledge that power and jurisdiction which has thus been conferred upon him, to be more or less humbled and mortified when they have incurred his censure, and to be more or less elated when they have obtained his applause.^[15]

But though man has, in this manner, been rendered the immediate judge of mankind, he has been rendered so only in the first instance; and an appeal lies from his sentence to a much higher tribunal, to the tribunal of their own consciences, to that of the supposed impartial and well-informed spectator, to that of the man within the breast, the great judge and arbiter of their conduct. The jurisdictions of those two tribunals are founded upon principles which, though in some respects resembling and akin, are, however, in reality different and distinct. The jurisdiction of the man without, is founded altogether in the desire of actual praise, and in the aversion to actual blame. The jurisdiction of the man within, is founded altogether in the desire of praise-worthiness, and in the aversion to blame-worthiness; in the desire of possessing those qualities, and performing those

actions, which we love and admire in other people; and in the dread of possessing those qualities, and performing those actions, which we hate and despise in other people. If the man without should applaud us, either for actions which we have not performed, or for motives which had no influence upon us; the man within can immediately humble that pride and elevation of mind which such groundless acclamations might otherwise occasion, by telling us, that as we know that we do not deserve them, we render ourselves despicable by accepting them. If, on the contrary, the man without should reproach us, either for actions which we never performed, or for motives which had no influence upon those which we may have performed; the man within may immediately correct this false judgment, and assure us, that we are by no means the proper objects of that censure which has so unjustly been bestowed upon us. But in this and in some other cases, the man within seems sometimes, as it were, astonished and confounded by the vehemence and clamour of the man without. The violence and loudness, with which blame is sometimes poured out upon us, seems to stupify and benumb our natural sense of praiseworthiness and blame-worthiness; and the judgments of the man within, though not, perhaps, absolutely altered or perverted, are, however, so much shaken in the steadiness and firmness of their decision, that their natural effect, in securing the tranquillity of the mind, is frequently in a great measure destroyed. We scarce dare to absolve ourselves, when all our brethren appear loudly to condemn us. The supposed impartial spectator of our conduct seems to give his opinion in our favour with fear and hesitation; when that of all the real spectators, when that of all those with whose eyes and from whose station he endeavours to consider it, is unanimously and violently against us. In such cases, this demigod within the breast appears, like the demigods of the poets, though partly of immortal, yet partly too of mortal extraction. When his judgments are steadily and firmly directed by the sense of praiseworthiness and blame-worthiness, he seems to act suitably to his divine extraction: But when

he suffers himself to be astonished and confounded by the judgments of ignorant and weak man, he discovers his connexion with mortality, and appears to act suitably, rather to the human, than to the divine, part of his origin.^[16]

In such cases, the only effectual consolation of humbled and afflicted man lies in an appeal to a still higher tribunal, to that of the all-seeing Judge of the world, whose eye can never be deceived, and whose judgments can never be perverted. A firm confidence in the unerring rectitude of this great tribunal, before which his innocence is in due time to be declared, and his virtue to be finally rewarded, can alone support him under the weakness and despondency of his own mind, under the perturbation and astonishment of the man within the breast, whom nature has set up as, in this life, the great guardian, not only of his innocence, but of his tranquillity. Our happiness in this life is thus, upon many occasions, dependent upon the humble hope and expectation of a life to come: a hope and expectation deeply rooted in human nature; which can alone support its lofty ideas of its own dignity; can alone illumine the dreary prospect of its continually approaching mortality, and maintain its cheerfulness under all the heaviest calamities to which, from the disorders of this life, it may sometimes be exposed. That there is a world to come, where exact justice will be done to every man, where every man will be ranked with those who, in the moral and intellectual qualities, are really his equals; where the owner of those humble talents and virtues which, from being depressed by fortune, had, in this life, no opportunity of displaying themselves; which were unknown, not only to the public, but which he himself could scarce be sure that he possessed, and for which even the man within the breast could scarce venture to afford him any distinct and clear testimony; where that modest, silent, and unknown merit, will be placed upon a level, and sometimes above those who, in this world, had enjoyed the highest reputation, and who, from the advantage of their situation, had been enabled to

perform the most splendid and dazzling actions; is a doctrine, in every respect so venerable, so comfortable to the weakness, so flattering to the grandeur of human nature, that the virtuous man who has the misfortune to doubt of it, cannot possibly avoid wishing most earnestly and anxiously to believe it. It could never have been exposed to the derision of the scoffer, had not the distributions of rewards and punishments, which some of its most zealous assertors have taught us was to be made in that world to come, been too frequently in direct opposition to all our moral sentiments.

That the assiduous courtier is often more favoured than the faithful and active servant; that attendance and adulation are often shorter and surer roads to preferment than merit or service; and that a campaign at Versailles or St James's^[17] is often worth two either in Germany or Flanders, is a complaint which we have all heard from many a venerable, but discontented, old officer. But what is considered as the greatest reproach even to the weakness of earthly sovereigns, has been ascribed, as an act of justice, to divine perfection; and the duties of devotion, the public and private worship of the Deity, have been represented, even by men of virtue and abilities, as the sole virtues which can either entitle to reward or exempt from punishment in the life to come. They were the virtues, perhaps, most suitable to their station, and in which they themselves chiefly excelled; and we are all naturally disposed to over-rate the excellencies of our own characters. In the discourse which the eloquent and philosophical Massillon pronounced, on giving his benediction to the standards of the regiment of Catinat, there is the following address to the officers: 'What is most deplorable in your situation, Gentlemen, is, that in a life hard and painful, in which the services and the duties sometimes go beyond the rigour and severity. of the most austere cloisters; you suffer always in vain for the life to come, and frequently even for this life. Alas! the solitary monk in his cell, obliged to mortify the flesh and to subject it to the spirit, is

supported by the hope of an assured recompence, and by the secret unction of that grace which softens the yoke of the Lord. But you, on the bed of death, can you dare to represent to Him your fatigues and the daily hardships of your employment? Can you dare to solicit Him for any recompence? And in all the exertions that you have made, in all the violences that you have done to yourselves, what is there that He ought to place to His own account? The best days of your life, however, have been sacrificed to your profession, and ten years service has more worn out your body, than would, perhaps, have done a whole life of repentance and mortification. Alas! My brother, one single day of those sufferings, consecrated to the Lord, would, perhaps, have obtained you an eternal happiness. One single action, painful to nature, and offered up to Him, would, perhaps, have secured to you the inheritance of the Saints. And you have done all this, and in vain, for this world.’^[18]

To compare, in this manner, the futile mortifications of a monastery, to the ennobling hardships and hazards of war; to suppose that one day, or one hour, employed in the former should, in the eye of the great Judge of the world, have more merit than a whole life spent honourably in the latter, is surely contrary to all our moral sentiments; to all the principles by which nature has taught us to regulate our contempt or admiration. It is this spirit, however, which, while it has reserved the celestial regions for monks and friars, or for those whose conduct and conversation resembled those of monks and friars, has condemned to the infernal all the heroes, all the statesmen and lawgivers, all the poets and philosophers of former ages; all those who have invented, improved, or excelled in the arts which contribute to the subsistence, to the conveniency, or to the ornament of human life; all the great protectors, instructors, and benefactors of mankind; all those to whom our natural sense of praise-worthiness forces us to ascribe the highest merit and most exalted virtue. Can we wonder that so strange an application of this most respectable doctrine should

sometimes have exposed it to contempt and derision; with those at least who had themselves, perhaps, no great taste or turn for the devout and contemplative virtues? [19]

Chap. III Of the Influences and Authority of Conscience

But though the approbation of his own conscience can scarce, upon some extraordinary occasions, content the weakness of man; though the testimony of the supposed impartial spectator, of the great inmate of the breast, cannot always alone support him; yet the influence and authority of this principle is, upon all occasions, very great; and it is only by consulting this judge within, that we can ever see what relates to ourselves in its proper shape and dimensions; or that we can ever make any proper comparison between our own interests and those of other people.

As to the eye of the body, objects appear great or small, not so much according to their real dimensions, as according to the nearness

or distance of their situation; so do they likewise to what may be called the natural eye of the mind: and we remedy the defects of both these organs pretty much in the same manner. In my present situation an immense landscape of lawns, and woods, and distant mountains, seems to do no more than cover the little window which I write by and to be out of all proportion less than the chamber in which I am sitting. I can form a just comparison between those great objects and the little objects around me, in no other way, than by transporting myself, at least in fancy, to a different station, from whence I can survey both at nearly equal distances, and thereby form some judgment of their real proportions. Habit and experience have taught me to do this so easily and so readily, that I am scarce sensible that I do it; and a man must be, in some measure, acquainted with the philosophy of vision, before he can be thoroughly convinced, how little those distant objects would appear to the eye, if the imagination, from a knowledge of their real magnitudes, did not swell and dilate them.

[20] In the same manner, to the selfish and original passions of human nature, the loss or gain of a very small interest of our own, appears to be of vastly more importance, excites a much more passionate joy or sorrow, a much more ardent desire or aversion, than the greatest concern of another with whom we have no particular connexion. His interests, as long as they are surveyed from this station, can never be put into the balance with our own, can never restrain us from doing. whatever may tend to promote our own, how ruinous soever to him. Before we can make any proper comparison of those opposite interests, we must change our position. We must view them, neither from our own place nor yet from his, neither with our own eyes nor yet with his, but from the place and with the eyes of a third person, who has no particular connexion with either, and who judges with impartiality between us. Here, too, habit and experience have taught us to do this so easily and so readily, that we are scarce

sensible that we do it; and it requires, in this case too, some degree of reflection, and even of philosophy, to convince us, how little interest we should take in the greatest concerns of our neighbour, how little we should be affected by whatever relates to him, if the sense of propriety and justice did not correct the otherwise natural inequality of our sentiments.

Let us suppose that the great empire of China, with all its myriads of inhabitants, was suddenly swallowed up by an earthquake, and let us consider how a man of humanity in Europe, who had no sort of connexion with that part of the world, would be affected upon receiving intelligence of this dreadful calamity. He would, I imagine, first of all, express very strongly his sorrow for the misfortune of that unhappy people, he would make many melancholy reflections upon the precariousness of human life, and the vanity of all the labours of man, which could thus be annihilated in a moment. He would too, perhaps, if he was a man of speculation, enter into many reasonings concerning the effects which this disaster might produce upon the commerce of Europe, and the trade and business of the world in general. And when all this fine philosophy was over, when all these humane sentiments had been once fairly expressed, he would pursue his business or his pleasure, take his repose or his diversion, with the same ease and tranquillity, as if no such accident had happened. The most frivolous disaster which could befall himself would occasion a more real disturbance. If he was to lose his little finger to-morrow, he would not sleep to-night; but, provided he never saw them, he will snore with the most profound security over the ruin of a hundred millions of his brethren, and the destruction of that immense multitude seems plainly an object less interesting to him, than this paltry misfortune of his own. To prevent, therefore, this paltry misfortune to himself, would a man of humanity be willing to sacrifice the lives of a hundred millions of his brethren, provided he had never seen them? Human nature startles with horror at the thought, and the

world, in its greatest depravity and corruption, never produced such a villain as could be capable of entertaining it. But what makes this difference? When our passive feelings are almost always so sordid and so selfish, how comes it that our active principles should often be so generous and so noble? When we are always so much more deeply affected by whatever concerns ourselves, than by whatever concerns other men; what is it which prompts the generous, upon all occasions, and the mean upon many, to sacrifice their own interests to the greater interests of others? It is not the soft power of humanity, it is not that feeble spark of benevolence which Nature has lighted up in the human heart, that is thus capable of counteracting the strongest impulses of self-love. It is a stronger power, a more forcible motive, which exerts itself upon such occasions. It is reason, principle, conscience, the inhabitant of the breast, the man within, the great judge and arbiter of our conduct. It is he who, whenever we are about to act so as to affect the happiness of others, calls to us, with a voice capable of astonishing the most presumptuous of our passions, that we are but one of the multitude, in no respect better than any other in it; and that when we prefer ourselves so shamefully and so blindly to others, we become the proper objects of resentment, abhorrence, and execration. It is from him only that we learn the real littleness of ourselves, and of whatever relates to ourselves, and the natural misrepresentations of self-love can be corrected only by the eye of this impartial spectator. It is he who shows us the propriety of generosity and the deformity of injustice; the propriety of resigning the greatest interests of our own, for the yet greater interests of others, and the deformity of doing the smallest injury to another, in order to obtain the greatest benefit to ourselves. It is not the love of our neighbour, it is not the love of mankind, which upon many occasions prompts us to the practice of those divine virtues. It is a stronger love, a more powerful affection, which generally takes place upon such occasions; the love of what is honourable and noble, of the grandeur, and dignity, and superiority of our own characters.

When the happiness or misery of others depends in any respect upon our conduct, we dare not, as self-love might suggest to us, prefer the interest of one to that of many. The man within immediately calls to us, that we value ourselves too much and other people too little, and that, by doing so, we render ourselves the proper object of the contempt and indignation of our brethren.^[21] Neither is this sentiment confined to men of extraordinary magnanimity and virtue. It is deeply impressed upon every tolerably good soldier, who feels that he would become the scorn of his companions, if he could be supposed capable of shrinking from danger, or of hesitating, either to expose or to throw away his life, when the good of the service required it.

One individual must never prefer himself so much even to any other individual, as to hurt or injure that other, in order to benefit himself, though the benefit to the one should be much greater than the hurt or injury to the other. The poor man must neither defraud nor steal from the rich, though the acquisition might be much more beneficial to the one than the loss could be hurtful to the other. The man within immediately calls to him, in this case too, that he is no better than his neighbour, and that by this unjust preference he renders himself the proper object of the contempt and indignation of mankind; as well as of the punishment which that contempt and indignation must naturally dispose them to inflict, for having thus violated one of those sacred rules, upon the tolerable observation of which depend the whole security and peace of human society. There is no commonly honest man who does not more dread the inward disgrace of such an action, the indelible stain which it would for ever stamp upon his own mind, than the greatest external calamity which, without any fault of his own, could possibly befall him; and who does not inwardly feel the truth of that great stoical maxim, that for one man to deprive another unjustly of any thing, or unjustly to promote his own advantage by the loss or disadvantage of another, is more contrary to nature, than death, than poverty, than pain, than all the

misfortunes which can affect him, either in his body, or in his external circumstances.^[22]

When the happiness or misery of others, indeed, in no respect depends upon our conduct, when our interests are altogether separated and detached from theirs, so that there is neither connexion nor competition between them, we do not always think it so necessary to restrain, either our natural and, perhaps, improper anxiety about our own affairs, or our natural and, perhaps, equally improper indifference about those of other men. The most vulgar education teaches us to act, upon all important occasions, with some sort of impartiality between ourselves and others, and even the ordinary commerce of the world is capable of adjusting our active principles to some degree of propriety. But it is the most artificial and refined education only, it has been said, which can correct the inequalities of our passive feelings; and we must for this purpose, it has been pretended, have recourse to the severest, as well as to the profoundest philosophy.

Two different sets of philosophers have attempted to teach us this hardest of all the lessons of morality. One set have laboured to increase our sensibility to the interests of others; another, to diminish that to our own. The first would have us feel for others as we naturally feel for ourselves. The second would have us feel for ourselves as we naturally feel for others. Both, perhaps, have carried their doctrines a good deal beyond the just standard of nature and propriety.

The first are those whining and melancholy moralists, who are perpetually reproaching us with our happiness, while so many of our brethren are in misery,^[23] who regard as impious the natural joy of prosperity, which does not think of the many wretches that are at every instant labouring under all sorts of calamities, in the languor of poverty, in the agony of disease, in the horrors of death, under the

insults and oppression of their enemies. Commiseration for those miseries which we never saw, which we never heard of, but which we may be assured are at all times infesting such numbers of our fellow-creatures, ought, they think, to damp the pleasures of the fortunate, and to render a certain melancholy dejection habitual to all men. But first of all, this extreme sympathy with misfortunes which we know nothing about, seems altogether absurd and unreasonable. Take the whole earth at an average, for one man who suffers pain or misery, you will find twenty in prosperity and joy, or at least in tolerable circumstances. No reason, surely, can be assigned why we should rather weep with the one than rejoice with the twenty. This artificial commiseration, besides, is not only absurd, but seems altogether unattainable; and those who affect this character have commonly nothing but a certain affected and sentimental sadness, which, without reaching the heart, serves only to render the countenance and conversation impertinently dismal and disagreeable. And last of all, this disposition of mind, though it could be attained, would be perfectly useless, and could serve no other purpose than to render miserable the person who possessed it. Whatever interest we take in the fortune of those with whom we have no acquaintance or connexion, and who are placed altogether out of the sphere of our activity, can produce only anxiety to ourselves, without any manner of advantage to them. To what purpose should we trouble ourselves about the world in the moon? All men, even those at the greatest distance, are no doubt entitled to our good wishes, and our good wishes we naturally give them. But if, notwithstanding, they should be unfortunate, to give ourselves any anxiety upon that account, seems to be no part of our duty. That we should be but little interested, therefore, in the fortune of those whom we can neither serve nor hurt, and who are in every respect so very remote from us, seems wisely ordered by Nature; and if it were possible to alter in this respect the original constitution of our frame, we could yet gain nothing by the change.

It is never objected to us that we have too little fellow-feeling with the joy of success. Wherever envy does not prevent it, the favour which we bear to prosperity is rather apt to be too great; and the same moralists who blame us for want of sufficient sympathy with the miserable, reproach us for the levity with which we are too apt to admire and almost to worship the fortunate, the powerful, and the rich.

Among the moralists who endeavour to correct the natural inequality of our passive feelings by diminishing our sensibility to what peculiarly concerns ourselves, we may count all the ancient sects of philosophers, but particularly the ancient Stoics. Man, according to the Stoics, ought to regard himself, not as something separated and detached, but as a citizen of the world, a member of the vast commonwealth of nature. To the interest of this great community, he ought at all times to be willing that his own little interest should be sacrificed. Whatever concerns himself, ought to affect him no more than whatever concerns any other equally important part of this immense system. We should view ourselves, not in the light in which our own selfish passions are apt to place us, but in the light in which any other citizen of the world would view us. What befalls ourselves we should regard as what befalls our neighbour, or, what comes to the same thing, as our neighbour regards what befalls us. ‘When our neighbour,’ says Epictetus, ‘loses his wife, or his son, there is nobody who is not sensible that this is a human calamity, a natural event altogether according to the ordinary course of things; but, when the same thing happens to ourselves, then we cry out, as if we had suffered the most dreadful misfortune. We ought, however, to remember how we were affected when this accident happened to another, and such as we were in his case, such ought we to be in our own.’^[24]

Those private misfortunes, for which our feelings are apt to go

beyond the bounds of propriety, are of two different kinds. They are either such as affect us only indirectly, by affecting, in the first place, some other persons who are particularly dear to us; such as our parents, our children, our brothers and sisters, our intimate friends; or they are such as affect ourselves immediately and directly, either in our body, in our fortune, or in our reputation; such as pain, sickness, approaching death, poverty, disgrace, etc. [25]

In misfortunes of the first kind, our emotions may, no doubt, go very much beyond what exact propriety will admit of; but they may likewise fall short of it, and they frequently do so. The man who should feel no more for the death or distress of his own father, or son, than for those of any other man's father or son, would appear neither a good son nor a good father. Such unnatural indifference, far from exciting our applause, would incur our highest disapprobation. Of those domestic affections, however, some are most apt to offend by their excess, and others by their defect. Nature, for the wisest purposes, has rendered, in most men, perhaps in all men, parental tenderness a much stronger affection than filial piety. The continuance and propagation of the species depend altogether upon the former, and not upon the latter. In ordinary cases, the existence and preservation of the child depend altogether upon the care of the parents. Those of the parents seldom depend upon that of the child. Nature, therefore, has rendered the former affection so strong, that it generally requires not to be excited, but to be moderated; and moralists seldom endeavour to teach us how to indulge, but generally how to restrain our fondness, our excessive attachment, the unjust preference which we are disposed to give to our own children above those of other people. They exhort us, on the contrary, to an affectionate attention to our parents, and to make a proper return to them, in their old age, for the kindness which they had shown to us in our infancy and youth. In the Decalogue we are commanded to honour our fathers and mothers. No mention is made of the love of

our children. Nature had sufficiently prepared us for the performance of this latter duty. Men are seldom accused of affecting to be fonder of their children than they really are. They have sometimes been suspected of displaying their piety to their parents with too much ostentation. The ostentatious sorrow of widows has, for a like reason, been suspected of insincerity. We should respect, could we believe it sincere, even the excess of such kind affections; and though we might not perfectly approve, we should not severely condemn it. That it appears praise-worthy, at least in the eyes of those who affect it, the very affectation is a proof.

Even the excess of those kind affections which are most apt to offend by their excess, though it may appear blameable, never appears odious. We blame the excessive fondness and anxiety of a parent, as something which may, in the end, prove hurtful to the child, and which, in the mean time, is excessively inconvenient to the parent; but we easily pardon it, and never regard it with hatred and detestation. But the defect of this usually excessive affection appears always peculiarly odious. The man who appears to feel nothing for his own children, but who treats them upon all occasions with unmerited severity and harshness, seems of all brutes the most detestable. The sense of propriety, so far from requiring us to eradicate altogether that extraordinary sensibility, which we naturally feel for the misfortunes of our nearest connections, is always much more offended by the defect, than it ever is by the excess of that sensibility. The stoical apathy is,^[26] in such cases, never agreeable, and all the metaphysical sophisms by which it is supported can seldom serve any other purpose than to blow up the hard insensibility of a coxcomb to ten times its native impertinence. The poets and romance writers, who best paint the refinements and delicacies of love and friendship, and of all other private and domestic affections, Racine and Voltaire; Richardson, Maurivaux, and Riccoboni^[27]; are, in such cases, much better instructors than Zeno, Chrysippus, or Epictetus.^[28]

That moderated sensibility to the misfortunes of others, which does not disqualify us for the performance of any duty; the melancholy and affectionate remembrance of our departed friends; the pang, as Gray says, to secret sorrow dear; are by no means undelicious sensations. Though they outwardly wear the features of pain and grief, they are all inwardly stamped with the ennobling characters of virtue and self-approbation.

图III—4 : Zeno of Citium

图III—5 : Chrysippus

图III—6 : Epictetus

It is otherwise in the misfortunes which affect ourselves immed-

iately and directly, either in our body, in our fortune, or in our reputation. The sense of propriety is much more apt to be offended by the excess, than by the defect of our sensibility, and there are but very few cases in which we can approach too near to the stoical apathy and indifference.

That we have very little fellow-feeling with any of the passions which take their origin from the body, has already been observed. That pain which is occasioned by an evident cause; such as, the cutting or tearing of the flesh; is, perhaps, the affection of the body with which the spectator feels the most lively sympathy. The approaching death of his neighbour, too, seldom fails to affect him a good deal. In both cases, however, he feels so very little in comparison of what the person principally concerned feels, that the latter can scarce ever offend the former by appearing to suffer with too much ease.

The mere want of fortune, mere poverty, excites little compassion. Its complaints are too apt to be the objects rather of contempt than of fellow-feeling. We despise a beggar; and, though his importunities may extort an alms from us, he is scarce ever the object of any serious commiseration. The fall from riches to poverty, as it commonly occasions the most real distress to the sufferer, so it seldom fails to excite the most sincere commiseration in the spectator. Though, in the present state of society, this misfortune can seldom happen without some misconduct, and some very considerable misconduct too, in the sufferer; yet he is almost always so much pitied that he is scarce ever allowed to fall into the lowest state of poverty; but by the means of his friends, frequently by the indulgence of those very creditors who have much reason to complain of his imprudence, is almost always supported in some degree of decent, though humble, mediocrity. To persons under such misfortunes, we could, perhaps, easily pardon some degree of weakness; but, at the same time, they

who carry the firmest countenance, who accommodate themselves with the greatest ease to their new situation, who seem to feel no humiliation from the change, but to rest their rank in the society, not upon their fortune, but upon their character and conduct, are always the most approved of, and never fail to command our highest and most affectionate admiration.

As, of all the external misfortunes which can affect an innocent man immediately and directly, the undeserved loss of reputation is certainly the greatest; so a considerable degree of sensibility to whatever can bring on so great a calamity, does not always appear ungraceful or disagreeable. We often esteem a young man the more, when he resents, though with some degree of violence, any unjust reproach that may have been thrown upon his character or his honour. The affliction of an innocent young lady, on account of the groundless surmises which may have been circulated concerning her conduct, appears often perfectly amiable. Persons of an advanced age, whom long experience of the folly and injustice of the world, has taught to pay little regard, either to its censure or to its applause, neglect and despise obloquy, and do not even deign to honour its futile authors with any serious resentment. This indifference, which is founded altogether on a firm confidence in their own well-tried and well-established characters, would be disagreeable in young people, who neither can nor ought to have any such confidence. It might in them be supposed to forebode, in their advancing years, a most improper insensibility to real honour and infamy.

In all other private misfortunes which affect ourselves immediately and directly, we can very seldom offend by appearing to be too little affected. We frequently remember our sensibility to the misfortunes of others with pleasure and satisfaction. We can seldom remember that to our own, without some degree of shame and humiliation.

If we examine the different shades and gradations of weakness and self-command, as we meet with them in common life, we shall very easily satisfy ourselves that this control of our passive feelings must be acquired, not from the abstruse syllogisms of a quibbling dialectic, but from that great discipline which Nature has established for the acquisition of this and of every other virtue; a regard to the sentiments of the real or supposed spectator of our conduct.

A very young child has no self-command; but, whatever are its emotions, whether fear, or grief, or anger, it endeavours always, by the violence of its outcries, to alarm, as much as it can, the attention of its nurse, or of its parents. While it remains under the custody of such partial protectors, its anger is the first and, perhaps, the only passion which it is taught to moderate. By noise and threatening they are, for their own ease, often obliged to frighten it into good temper; and the passion which incites it to attack, is restrained by that which teaches it to attend to its own safety. When it is old enough to go to school, or to mix with its equals, it soon finds that they have no such indulgent partiality. It naturally wishes to gain their favour, and to avoid their hatred or contempt. Regard even to its own safety teaches it to do so; and it soon finds that it can do so in no other way than by moderating, not only its anger, but all its other passions, to the degree which its play-fellows and companions are likely to be pleased with. It thus enters into the great school of self-command, it studies to be more and more master of itself, and begins to exercise over its own feelings a discipline which the practice of the longest life is very seldom sufficient to bring to complete perfection.

In all private misfortunes, in pain, in sickness, in sorrow, the weakest man, when his friend, and still more when a stranger visits him, is immediately impressed with the view in which they are likely to look upon his situation. Their view calls off his attention from his own view; and his breast is, in some measure, becalmed the moment

they come into his presence. This effect is produced instantaneously and, as it were, mechanically; but, with a weak man, it is not of long continuance. His own view of his situation immediately recurs upon him. He abandons himself, as before, to sighs and tears and lamentations; and endeavours, like a child that has not yet gone to school, to produce some sort of harmony between his own grief and the compassion of the spectator, not by moderating the former, but by importunately calling upon the latter.

With a man of a little more firmness, the effect is somewhat more permanent. He endeavours, as much as he can, to fix his attention upon the view which the company are likely to take of his situation. He feels, at the same time, the esteem and approbation which they naturally conceive for him when he thus preserves his tranquillity; and, though under the pressure of some recent and great calamity, appears to feel for himself no more than what they really feel for him. He approves and applauds himself by sympathy with their approbation, and the pleasure which he derives from this sentiment supports and enables him more easily to continue this generous effort. In most cases he avoids mentioning his own misfortune; and his company, if they are tolerably well bred, are careful to say nothing which can put him in mind of it. He endeavours to entertain them, in his usual way, upon indifferent subjects, or, if he feels himself strong enough to venture to mention his misfortune, he endeavours to talk of it as, he thinks, they are capable of talking of it, and even to feel it no further than they are capable of feeling it. If he has not, however, been well inured to the hard discipline of self-command, he soon grows weary of this restraint. A long visit fatigues him; and, towards the end of it, he is constantly in danger of doing, what he never fails to do the moment it is over, of abandoning himself to all the weakness of excessive sorrow. Modern good manners, which are extremely indulgent to human weakness, forbid, for some time, the visits of strangers to persons under great family distress, and permit those only

of the nearest relations and most intimate friends. The presence of the latter, it is thought, will impose less restraint than that of the former; and the sufferers can more easily accommodate themselves to the feelings of those, from whom they have reason to expect a more indulgent sympathy. Secret enemies, who fancy that they are not known to be such, are frequently fond of making those charitable visits as early as the most intimate friends. The weakest man in the world, in this case, endeavours to support his manly countenance, and, from indignation and contempt of their malice, to behave with as much gaiety and ease as he can.

The man of real constancy and firmness, the wise and just man who has been thoroughly bred in the great school of self-command, in the bustle and business of the world, exposed, perhaps, to the violence and injustice of faction, and to the hardships and hazards of war, maintains this control of his passive feelings upon all occasions; and whether in solitude or in society, wears nearly the same countenance, and is affected very nearly in the same manner. In success and in disappointment, in prosperity and in adversity, before friends and before enemies, he has often been under the necessity of supporting this manhood. He has never dared to forget for one moment the judgment which the impartial spectator would pass upon his sentiments and conduct. He has never dared to suffer the man within the breast to be absent one moment from his attention. With the eyes of this great inmate he has always been accustomed to regard whatever relates to himself. This habit has become perfectly familiar to him. He has been in the constant practice, and, indeed, under the constant necessity, of modelling, or of endeavouring to model, not only his outward conduct and behaviour, but, as much as he can, even his inward sentiments and feelings, according to those of this awful and respectable judge. He does not merely affect the sentiments of the impartial spectator. He really adopts them. He almost identifies himself with, he almost becomes himself that impartial spectator, and

scarce even feels but as that great arbiter of his conduct directs him to feel.

The degree of the self-approbation with which every man, upon such occasions, surveys his own conduct, is higher or lower, exactly in proportion to the degree of self-command which is necessary in order to obtain that self-approbation. Where little self-command is necessary, little self-approbation is due. The man who has only scratched his finger, cannot much applaud himself, though he should immediately appear to have forgot this paltry misfortune. The man who has lost his leg by a cannon shot, and who, the moment after, speaks and acts with his usual coolness and tranquillity, as he exerts a much higher degree of self-command, so he naturally feels a much higher degree of self-approbation. With most men, upon such an accident, their own natural view of their own misfortune would force itself upon them with such a vivacity and strength of colouring, as would entirely efface all thought of every other view. They would feel nothing, they could attend to nothing, but their own pain and their own fear; and not only the judgment of the ideal man within the breast, but that of the real spectators who might happen to be present, would be entirely overlooked and disregarded.

The reward which Nature bestows upon good behaviour under misfortune, is thus exactly proportioned to the degree of that good behaviour. The only compensation she could possibly make for the bitterness of pain and distress is thus too, in equal degrees of good behaviour, exactly proportioned to the degree of that pain and distress. In proportion to the degree of the self-command which is necessary in order to conquer our natural sensibility, the pleasure and pride of the conquest are so much the greater; and this pleasure and pride are so great that no man can be altogether unhappy who completely enjoys them. Misery and wretchedness can never enter the breast in which dwells complete self-satisfaction; and though it may

be too much, perhaps, to say, with the Stoics, that, under such an accident as that above mentioned, the happiness of a wise man is in every respect equal to what it could have been under any other circumstances; yet it must be acknowledged, at least, that this complete enjoyment of his own self-applause, though it may not altogether extinguish, must certainly very much alleviate his sense of his own sufferings.

In such paroxysms of distress, if I may be allowed to call them so, the wisest and firmest man, in order to preserve his equanimity, is obliged, I imagine, to make a considerable, and even a painful exertion. His own natural feeling of his own distress, his own natural view of his own situation, presses hard upon him, and he cannot, without a very great effort, fix his attention upon that of the impartial spectator. Both views present themselves to him at the same time. His sense of honour, his regard to his own dignity, directs him to fix his whole attention upon the one view. His natural, his untaught and undisciplined feelings, are continually calling it off to the other. He does not, in this case, perfectly identify himself with the ideal man within the breast, he does not become himself the impartial spectator of his own conduct. The different views of both characters exist in his mind separate and distinct from one another, and each directing him to a behaviour different from that to which the other directs him. When he follows that view which honour and dignity point out to him, Nature does not, indeed, leave him without a recompense. He enjoys his own complete self-approbation, and the applause of every candid and impartial spectator. By her unalterable laws, however, he still suffers; and the recompense which she bestows, though very considerable, is not sufficient completely to compensate the sufferings which those laws inflict. Neither is it fit that it should. If it did completely compensate them, he could, from self-interest, have no motive for avoiding an accident which must necessarily diminish his utility both to himself and to society; and Nature, from her parental

care of both, meant that he should anxiously avoid all such accidents. He suffers, therefore, and though, in the agony of the paroxysm, he maintains, not only the manhood of his countenance, but the sedateness and sobriety of his judgment, it requires his utmost and most fatiguing exertions, to do so.

By the constitution of human nature, however, agony can never be permanent; and, if he survives the paroxysm, he soon comes, without any effort, to enjoy his ordinary tranquillity. A man with a wooden leg suffers, no doubt, and foresees that he must continue to suffer during the remainder of his life, a very considerable inconveniency. He soon comes to view it, however, exactly as every impartial spectator views it; as an inconveniency under which he can enjoy all the ordinary pleasures both of solitude and of society. He soon identifies himself with the ideal man within the breast, he soon becomes himself the impartial spectator of his own situation. He no longer weeps, he no longer laments, he no longer grieves over it, as a weak man may sometimes do in the beginning. The view of the impartial spectator becomes so perfectly habitual to him, that, without any effort, without any exertion, he never thinks of surveying his misfortune in any other view.

The never-failing certainty with which all men, sooner or later, accommodate themselves to whatever becomes their permanent situation, may, perhaps, induce us to think that the Stoics were, at least, thus far very nearly in the right; that, between one permanent situation and another, there was, with regard to real happiness, no essential difference: or that, if there were any difference, it was no more than just sufficient to render some of them the objects of simple choice or preference; but not of any earnest or anxious desire: and others, of simple rejection, as being fit to be set aside or avoided; but not of any earnest or anxious aversion. Happiness consists in tranquillity and enjoyment. Without tranquillity there can be no

enjoyment; and where there is perfect tranquillity there is scarce any thing which is not capable of amusing. But in every permanent situation, where there is no expectation of change, the mind of every man, in a longer or shorter time, returns to its natural and usual state of tranquillity. In prosperity, after a certain time, it falls back to that state; in adversity, after a certain time, it rises up to it. In the confinement and solitude of the Bastile, after a certain time, the fashionable and frivolous Count de Lauzun recovered tranquillity enough to be capable of amusing himself with feeding a spider.^[29] A mind better furnished would, perhaps, have both sooner recovered its tranquillity, and sooner found, in its own thoughts, a much better amusement.

The great source of both the misery and disorders of human life, seems to arise from over-rating the difference between one permanent situation and another. Avarice over-rates the difference between poverty and riches: ambition, that between a private and a public station: vain-glory, that between obscurity and extensive reputation. The person under the influence of any of those extravagant passions, is not only miserable in his actual situation, but is often disposed to disturb the peace of society, in order to arrive at that which he so foolishly admires. The slightest observation, however, might satisfy him, that, in all the ordinary situations of human life, a well-disposed mind may be equally calm, equally cheerful, and equally contented. Some of those situations may, no doubt, deserve to be preferred to others: but none of them can deserve to be pursued with that passionate ardour which drives us to violate the rules either of prudence or of justice; or to corrupt the future tranquillity of our minds, either by shame from the remembrance of our own folly, or by remorse from the horror of our own injustice. Wherever prudence does not direct, wherever justice does not permit, the attempt to change our situation, the man who does attempt it, plays at the most unequal of all games of hazard, and stakes every thing against scarce

any thing. What the favourite of the king of Epirus said to his master, may be applied to men in all the ordinary situations of human life. When the King had recounted to him, in their proper order, all the conquests which he proposed to make, and had come to the last of them; And what does your Majesty propose to do then? said the Favourite.^[30] I propose then, said the King, to enjoy myself with my friends, and endeavour to be good company over a bottle. And what hinders your Majesty from doing so now? replied the Favourite. In the most glittering and exalted situation that our idle fancy can hold out to us, the pleasures from which we propose to derive our real happiness, are almost always the same with those which, in our actual, though humble station, we have at all times at hand, and in our power except the frivolous pleasures of vanity and superiority, we may find, in the most humble station, where there is only personal liberty, every other which the most exalted can afford; and the pleasures of vanity and superiority are seldom consistent with perfect tranquillity, the principle and foundation of all real and satisfactory enjoyment. Neither is it always certain that, in the splendid situation which we aim at, those real and satisfactory pleasures can be enjoyed with the same security as in the humble one which we are so very eager to abandon. examine the records of history, recollect what has happened within the circle of your own experience, consider with attention what has been the conduct of almost all the greatly unfortunate, either in private or public life, whom you may have either read of, or heard of, or remember; and you will find that the misfortunes of by far the greater part of them have arisen from their not knowing when they were well, when it was proper for them to sit still and to be contented. The inscription upon the tomb-stone of the man who had endeavoured to mend a tolerable constitution by taking physic; 'I was well, I wished to be better; here I am;^[31] may generally be applied with great justness to the distress of disappointed avarice and ambition.

It may be thought a singular, but I believe it to be a just observation, that, in the misfortunes which admit of some remedy, the greater part of men do not either so readily or so universally recover their natural and usual tranquillity, as in those which plainly admit of none. In misfortunes of the latter kind, it is chiefly in what may be called the paroxysm, or in the first attack, that we can discover any sensible difference between the sentiments and behaviour of the wise and those of the weak man. In the end, Time, the great and universal comforter, gradually composes the weak man to the same degree of tranquillity which a regard to his own dignity and manhood teaches the wise man to assume in the beginning. The case of the man with the wooden leg is an obvious example of this. In the irreparable misfortunes occasioned by the death of children, or of friends and relations, even a wise man may for some time indulge himself in some degree of moderated sorrow. An affectionate, but weak woman, is often, upon such occasions, almost perfectly distracted. Time, however, in a longer or shorter period, never fails to compose the weakest woman to the same degree of tranquillity as the strongest man. In all the irreparable calamities which affect himself immediately and directly, a wise man endeavours, from the beginning, to anticipate and to enjoy before-hand, that tranquillity which he foresees the course of a few months, or a few years, will certainly restore to him in the end.

In the misfortunes for which the nature of things admits, or seems to admit, of a remedy, but in which the means of applying that remedy are not within the reach of the sufferer, his vain and fruitless attempts to restore himself to his former situation, his continual anxiety for their success, his repeated disappointments upon their miscarriage, are what chiefly hinder him from resuming his natural tranquillity, and frequently render miserable, during the whole of his life, a man to whom a greater misfortune, but which plainly admitted of no remedy, would not have given a fortnight's disturbance. In the

fall from royal favour to disgrace, from power to insignificance, from riches to poverty, from liberty to confinement, from strong health to some lingering, chronic, and perhaps incurable disease, the man who struggles the least, who most easily and readily acquiesces in the fortune which has fallen to him, very soon recovers his usual and natural tranquillity, and surveys the most disagreeable circumstances of his actual situation in the same light, or, perhaps, in a much less unfavourable light, than that in which the most indifferent spectator is disposed to survey them. Faction, intrigue, and cabal, disturb the quiet of the unfortunate statesman. extravagant projects, visions of gold mines, interrupt the repose of the ruined bankrupt. The prisoner, who is continually plotting to escape from his confinement, cannot enjoy that careless security which even a prison can afford him. The medicines of the physician are often the greatest torment of the incurable patient. The monk who, in order to comfort Joanna of Castile, upon the death of her husband Philip, told her of a King, who, fourteen years after his decease, had been restored to life again, by the prayers of his afflicted queen, was not likely, by his legendary tale, to restore sedateness to the distempered mind of that unhappy Princess. She endeavoured to repeat the same experiment in hopes of the same success; resisted for a long time the burial of her husband, soon after raised his body from the grave, attended it almost constantly herself, and watched, with all the impatient anxiety of frantic expectation, the happy moment when her wishes were to be gratified by the revival of her beloved Philip.^{3[32]}

Our sensibility to the feelings of others, so far from being inconsistent with the manhood of self-command, is the very principle upon which that manhood is founded. The very same principle or instinct which, in the misfortune of our neighbour, prompts us to compassionate his sorrow; in our own misfortune, prompts us to restrain the abject and miserable lamentations of our own sorrow. The same principle or instinct which, in his prosperity and success,

prompts us to congratulate his joy; in our own prosperity and success, prompts us to restrain the levity and intemperance of our own joy. In both cases, the propriety of our own sentiments and feelings seems to be exactly in proportion to the vivacity and force with which we enter into and conceive his sentiments and feelings.

The man of the most perfect virtue, the man whom we naturally love and revere the most, is he who joins, to the most perfect command of his own original and selfish feelings, the most exquisite sensibility both to the original and sympathetic feelings of others. The man who, to all the soft, the amiable, and the gentle virtues, joins all the great, the awful, and the respectable, must surely be the natural and proper object of our highest love and admiration.^[33]

The person best fitted by nature for acquiring the former of those two sets of virtues, is likewise best fitted for acquiring the latter. The man who feels the most for the joys and sorrows of others, is best fitted for acquiring the most complete control of his own joys and sorrows. The man of the most exquisite humanity, is naturally the most capable of acquiring the highest degree of self-command. He may not, however, always have acquired it; and it very frequently happens that he has not. He may have lived too much in ease and tranquillity. He may have never been exposed to the violence of faction, or to the hardships and hazards of war. He may have never experienced the insolence of his superiors, the jealous and malignant envy of his equals, or the pilfering injustice of his inferiors. When, in an advanced age, some accidental change of fortune exposes him to all these, they all make too great an impression upon him. He has the disposition which fits him for acquiring the most perfect self-command; but he has never had the opportunity of acquiring it. exercise and practice have been wanting; and without these no habit can ever be tolerably established. Hardships, dangers, injuries, misfortunes, are the only masters under whom we can learn the

exercise of this virtue. But these are all masters to whom nobody willingly puts himself to school.

The situations in which the gentle virtue of humanity can be most happily cultivated, are by no means the same with those which are best fitted for forming the austere virtue of self-command. The man who is himself at ease can best attend to the distress of others. The man who is himself exposed to hardships is most immediately called upon to attend to, and to control his own feelings. In the mild sunshine of undisturbed tranquillity, in the calm retirement of undissipated and philosophical leisure, the soft virtue of humanity flourishes the most, and is capable of the highest improvement. But, in such situations, the greatest and noblest exertions of self-command have little exercise. Under the boisterous and stormy sky of war and faction, of public tumult and confusion, the sturdy severity of self-command prospers the most, and can be the most successfully cultivated. But, in such situations, the strongest suggestions of humanity must frequently be stifled or neglected; and every such neglect necessarily tends to weaken the principle of humanity. As it may frequently be the duty of a soldier not to take, so it may sometimes be his duty not to give quarter; and the humanity of the man who has been several times under the necessity of submitting to this disagreeable duty, can scarce fail to suffer a considerable diminution. For his own ease, he is too apt to learn to make light of the misfortunes which he is so often under the necessity of occasioning; and the situations which call forth the noblest exertions of self-command, by imposing the necessity of violating sometimes the property, and sometimes the life of our neighbour, always tend to diminish, and too often to extinguish altogether, that sacred regard to both, which is the foundation of justice and humanity. It is upon this account, that we so frequently find in the world men of great humanity who have little self-command, but who are indolent and irresolute, and easily disheartened, either by difficulty or danger, from

the most honourable pursuits; and, on the contrary men of the most perfect self-command, whom no difficulty can discourage, no danger appal, and who are at all times ready for the most daring and desperate enterprises, but who, at the same time, seem to be hardened against all sense either of justice or humanity.

In solitude, we are apt to feel too strongly whatever relates to ourselves: we are apt to over-rate the good offices we may have done, and the injuries we may have suffered: we are apt to be too much elated by our own good, and too much dejected by our own bad fortune. The conversation of a friend brings us to a better, that of a stranger to a still better temper. The man within the breast, the abstract and ideal spectator of our sentiments and conduct, requires often to be awakened and put in mind of his duty, by the presence of the real spectator: and it is always from that spectator, from whom we can expect the least sympathy and indulgence, that we are likely to learn the most complete lesson of self-command.

Are you in adversity? Do not mourn in the darkness of solitude, do not regulate your sorrow according to the indulgent sympathy of your intimate friends; return, as soon as possible, to the day-light of the world and of society. Live with strangers, with those who know nothing, or care nothing about your misfortune; do not even shun the company of enemies; but give yourself the pleasure of mortifying their malignant joy, by making them feel how little you are affected by your calamity, and how much you are above it.

Are you in prosperity? Do not confine the enjoyment of your good fortune to your own house, to the company of your own friends, perhaps of your flatterers, of those who build upon your fortune the hopes of mending their own; frequent those who are independent of you, who can value you only for your character and conduct, and not for your fortune. Neither seek nor shun, neither intrude yourself into nor run away from the society of those who were once your superiors,

and who may be hurt at finding you their equal, or, perhaps, even their superior. The impertinence of their pride may, perhaps, render their company too disagreeable: but if it should not, be assured that it is the best company you can possibly keep; and if, by the simplicity of your unassuming demeanour, you can gain their favour and kindness, you may rest satisfied that you are modest enough, and that your head has been in no respect turned by your good fortune.

The propriety of our moral sentiments is never so apt to be corrupted, as when the indulgent and partial spectator is at hand, while the indifferent and impartial one is at a great distance.

Of the conduct of one independent nation towards another, neutral nations are the only indifferent and impartial spectators. But they are placed at so great a distance that they are almost quite out of sight. When two nations are at variance, the citizen of each pays little regard to the sentiments which foreign nations may entertain concerning his conduct. His whole ambition is to obtain the approbation of his own fellow-citizens; and as they are all animated by the same hostile passions which animate himself, he can never please them so much as by enraging and offending their enemies. The partial spectator is at hand: the impartial one at a great distance. In war and negotiation, therefore, the laws of justice are very seldom observed. Truth and fair dealing are almost totally disregarded. Treaties are violated; and the violation, if some advantage is gained by it, sheds scarce any dishonour upon the violator. The ambassador who dupes the minister of a foreign nation, is admired and applauded. The just man who disdains either to take or to give any advantage, but who would think it less dishonourable to give than to take one; the man who, in all private transactions, would be the most beloved and the most esteemed; in those public transactions is regarded as a fool and an idiot, who does not understand his business; and he incurs always the contempt, and sometimes even the detestation of his

fellow-citizens. In war, not only what are called the laws of nations, are frequently violated, without bringing (among his own fellow-citizens, whose judgments he only regards) any considerable dishonour upon the violator; but those laws themselves are, the greater part of them, laid down with very little regard to the plainest and most obvious rules of justice. That the innocent, though they may have some connexion or dependency upon the guilty (which, perhaps, they themselves cannot help) , should not, upon that account, suffer or be punished for the guilty, is one of the plainest and most obvious rules of justice. In the most unjust war, however, it is commonly the sovereign or the rulers only who are guilty. The subjects are almost always perfectly innocent. Whenever it suits the conveniency of a public enemy, however, the goods of the peaceable citizens are seized both at land and at sea; their lands are laid waste, their houses are burnt, and they themselves, if they presume to make any resistance, are murdered or led into captivity; and all this in the most perfect conformity to what are called the laws of nations. [\[34\]](#)

The animosity of hostile factions, whether civil or ecclesiastical, is often still more furious than that of hostile nations; and their conduct towards one another is often still more atrocious. What may be called the laws of faction have often been laid down by grave authors with still less regard to the rules of justice than what are called the laws of nations. The most ferocious patriot never stated it as a serious question, Whether faith ought to be kept with public enemies? — Whether faith ought to be kept with rebels? Whether faith ought to be kept with heretics? are questions which have been often furiously agitated by celebrated doctors both civil and ecclesiastical. It is needless to observe, I presume, that both rebels and heretics are those unlucky persons, who, when things have come to a certain degree of violence, have the misfortune to be of the weaker party. In a nation distracted by faction, there are, no doubt, always a few, though commonly but a very few, who preserve their judgment untainted by

the general contagion. They seldom amount to more than, here and there, a solitary individual, without any influence, excluded, by his own candour, from the confidence of either party, and who, though he may be one of the wisest, is necessarily, upon that very account, one of the most insignificant men in the society. All such people are held in contempt and derision, frequently in detestation, by the furious zealots of both parties. A true party-man hates and despises candour; and, in reality, there is no vice which could so effectually disqualify him for the trade of a party-man as that single virtue. The real, revered, and impartial spectator, therefore, is, upon no occasion, at a greater distance than amidst the violence and rage of contending parties. To them, it may be said, that such a spectator scarce exists any where in the universe. Even to the great Judge of the universe, they impute all their own prejudices, and often view that Divine Being as animated by all their own vindictive and implacable passions. Of all the corrupters of moral sentiments, therefore, faction and fanaticism have always been by far the greatest.

Concerning the subject of self-command, I shall only observe further, that our admiration for the man who, under the heaviest and most unexpected misfortunes, continues to behave with fortitude and firmness, always supposes that his sensibility to those misfortunes is very great, and such as it requires a very great effort to conquer or command. The man who was altogether insensible to bodily pain, could deserve no applause from enduring the torture with the most perfect patience and equanimity. The man who had been created without the natural fear of death, could claim no merit from preserving his coolness and presence of mind in the midst of the most dreadful dangers. It is one of the extravagancies of Seneca, that the Stoical wise man was, in this respect, superior even to a God; that the security of the God was altogether the benefit of nature, which had exempted him from suffering; but that the security of the wise man was his own benefit, and derived altogether from himself and from his

own exertions.

The sensibility of some men, however, to some of the objects which immediately affect themselves, is sometimes so strong as to render all self-command impossible. No sense of honour can control the fears of the man who is weak enough to faint, or to fall into convulsions, upon the approach of danger. Whether such weakness of nerves, as it has been called, may not, by gradual exercise and proper discipline, admit of some cure, may, perhaps, be doubtful. It seems certain that it ought never to be trusted or employed.

Chap. IV Of the Nature of Self-deceit, and of the Origin and Use of general Rules

In order to pervert the rectitude of our own judgments concerning the propriety of our own conduct, it is not always necessary that the real and impartial spectator should be at a great distance. When he is at hand, when he is present, the violence and injustice of our own selfish passions are sometimes sufficient to induce the man within the breast to make a report very different from what the real circumstances of the case are capable of authorising.

There are two different occasions upon which we examine our own conduct, and endeavour to view it in the light in which the impartial spectator would view it: first, when we are about to act; and secondly, after we have acted. Our views are apt to be very partial in both cases; but they are apt to be most partial when it is of most importance that they should be otherwise.

When we are about to act, the eagerness of passion will seldom allow us to consider what we are doing, with the candour of an indifferent person. The violent emotions which at that time agitate us, discolour our views of things; even when we are endeavouring to place ourselves in the situation of another, and to regard the objects

that interest us in the light in which they will naturally appear to him, the fury of our own passions constantly calls us back to our own place, where every thing appears magnified and misrepresented by self-love. Of the manner in which those objects would appear to another, of the view which he would take of them, we can obtain, if I may say so, but instantaneous glimpses, which vanish in a moment, and which, even while they last, are not altogether just. We cannot even for that moment divest ourselves entirely of the heat and keenness with which our peculiar situation inspires us, nor consider what we are about to do with the complete impartiality of an equitable judge. The passions, upon this account, as father Malebranche says, all justify themselves, and seem reasonable and proportioned to their objects, as long as we continue to feel them.[35]

When the action is over, indeed, and the passions which prompted it have subsided, we can enter more coolly into the sentiments of the indifferent spectator. What before interested us is now become almost as indifferent to us as it always was to him, and we can now examine our own conduct with his candour and impartiality. The man of to-day is no longer agitated by the same passions which distracted the man of yesterday: and when the paroxysm of emotion, in the same manner as when the paroxysm of distress, is fairly over, we can identify ourselves, as it were, with the ideal man within the breast, and, in our own character, view, as in the one case, our own situation, so in the other, our own conduct, with the severe eyes of the most impartial spectator. But our judgments now are often of little importance in comparison of what they were before; and can frequently produce nothing but vain regret and unavailing repentance; without always securing us from the like errors in time to come. It is seldom, however, that they are quite candid even in this case. The opinion which we entertain of our own character depends entirely on our judgments concerning our past conduct. It is so disagreeable to think ill of ourselves, that we often purposely turn

away our view from those circumstances which might render that judgment unfavourable. He is a bold surgeon, they say, whose hand does not tremble when he performs an operation upon his own person; and he is often equally bold who does not hesitate to pull off the mysterious veil of self-delusion, which covers from his view the deformities of his own conduct. Rather than see our own behaviour under so disagreeable an aspect, we too often, foolishly and weakly, endeavour to exasperate anew those unjust passions which had formerly misled us; we endeavour by artifice to awaken our old hatreds, and irritate afresh our almost forgotten resentments: we even exert ourselves for this miserable purpose, and thus persevere in injustice, merely because we once were unjust, and because we are ashamed and afraid to see that we were so.

So partial are the views of mankind with regard to the propriety of their own conduct, both at the time of action and after it; and so difficult is it for them to view it in the light in which any indifferent spectator would consider it. But if it was by a peculiar faculty, such as the moral sense is supposed to be, that they judged of their own conduct, if they were endued with a particular power of perception, which distinguished the beauty or deformity of passions and affections; as their own passions would be more immediately exposed to the view of this faculty, it would judge with more accuracy concerning them, than concerning those of other men, of which it had only a more distant prospect.

This self-deceit, this fatal weakness of mankind, is the source of half the disorders of human life. If we saw ourselves in the light in which others see us, or in which they would see us if they knew all, a reformation would generally be unavoidable. We could not otherwise endure the sight.

Nature, however, has not left this weakness, which is of so much importance, altogether without a remedy; nor has she abandoned us

entirely to the delusions of self-love. Our continual observations upon the conduct of others, insensibly lead us to form to ourselves certain general rules concerning what is fit and proper either to be done or to be avoided. Some of their actions shock all our natural sentiments. We hear every body about us express the like detestation against them. This still further confirms, and even exasperates our natural sense of their deformity. It satisfies us that we view them in the proper light, when we see other people view them in the same light. We resolve never to be guilty of the like, nor ever, upon any account, to render ourselves in this manner the objects of universal disapprobation. We thus naturally lay down to ourselves a general rule, that all such actions are to be avoided, as tending to render us odious, contemptible, or punishable, the objects of all those sentiments for which we have the greatest dread and aversion. Other actions, on the contrary, call forth our approbation, and we hear every body around us express the same favourable opinion concerning them. Every body is eager to honour and reward them. They excite all those sentiments for which we have by nature the strongest desire; the love, the gratitude, the admiration of mankind. We become ambitious of performing the like; and thus naturally lay down to ourselves a rule of another kind, that every opportunity of acting in this manner is carefully to be sought after.

It is thus that the general rules of morality are formed. They are ultimately founded upon experience of what, in particular instances, our moral faculties, our natural sense of merit and propriety, approve, or disapprove of. We do not originally approve or condemn particular actions; because, upon examination, they appear to be agreeable or inconsistent with a certain general rule. The general rule, on the contrary, is formed, by finding from experience, that all actions of a certain kind, or circumstanced in a certain manner, are approved or disapproved of. To the man who first saw an inhuman murder, committed from avarice, envy, or unjust resentment, and upon one too

that loved and trusted the murderer, who beheld the last agonies of the dying person, who heard him, with his expiring breath, complain more of the perfidy and ingratitude of his false friend, than of the violence which had been done to him, there could be no occasion, in order to conceive how horrible such an action was, that he should reflect, that one of the most sacred rules of conduct was what prohibited the taking away the life of an innocent person, that this was a plain violation of that rule, and consequently a very blamable action. His detestation of this crime, it is evident, would arise instantaneously and antecedent to his having formed to himself any such general rule. The general rule, on the contrary, which he might afterwards form, would be founded upon the detestation which he felt necessarily arise in his own breast, at the thought of this, and every other particular action of the same kind.

When we read in history or romance, the account of actions either of generosity or of baseness, the admiration which we conceive for the one, and the contempt which we feel for the other, neither of them arise from reflecting that there are certain general rules which declare all actions of the one kind admirable, and all actions of the other contemptible. Those general rules, on the contrary, are all formed from the experience we have had of the effects which actions of all different kinds naturally produce upon us.

An amiable action, a respectable action, an horrid action, are all of them actions which naturally excite for the person who performs them, the love, the respect, or the horror of the spectator. The general rules which determine what actions are, and what are not, the objects of each of those sentiments, can be formed no other way than by observing what actions actually and in fact excite them.

When these general rules, indeed, have been formed, when they are universally acknowledged and established, by the concurring sentiments of mankind, we frequently appeal to them as to the

standards of judgment, in debating concerning the degree of praise or blame that is due to certain actions of a complicated and dubious nature. They are upon these occasions commonly cited as the ultimate foundations of what is just and unjust in human conduct; and this circumstance seems to have misled several very eminent authors, to draw up their systems in such a manner, as if they had supposed that the original judgments of mankind with regard to right and wrong, were formed like the decisions of a court of judicatory, by considering first the general rule, and then, secondly, whether the particular action under consideration fell properly within its comprehension.

Those general rules of conduct, when they have been fixed in our mind by habitual reflection, are of great use in correcting the misrepresentations of self-love concerning what is fit and proper to be done in our particular situation. The man of furious resentment, if he was to listen to the dictates of that passion, would perhaps regard the death of his enemy, as but a small compensation for the wrong, he imagines, he has received; which, however, may be no more than a very slight provocation. But his observations upon the conduct of others, have taught him how horrible all such sanguinary revenges appear. Unless his education has been very singular, he has laid it down to himself as an inviolable rule, to abstain from them upon all occasions. This rule preserves its authority with him, and renders him incapable of being guilty of such a violence. Yet the fury of his own temper may be such, that had this been the first time in which he considered such an action, he would undoubtedly have determined it to be quite just and proper, and what every impartial spectator would approve of. But that reverence for the rule which past experience has impressed upon him, checks the impetuosity of his passion, and helps him to correct the too partial views which self-love might otherwise suggest, of what was proper to be done in his situation. If he should allow himself to be so far transported by passion as to violate this rule, yet, even in this case, he cannot throw off altogether the awe and

respect with which he has been accustomed to regard it. At the very time of acting, at the moment in which passion mounts the highest, he hesitates and trembles at the thought of what he is about to do: he is secretly conscious to himself that he is breaking through those measures of conduct which, in all his cool hours, he had resolved never to infringe, which he had never seen infringed by others without the highest disapprobation, and of which the infringement, his own mind forebodes, must soon render him the object of the same disagreeable sentiments. Before he can take the last fatal resolution, he is tormented with all the agonies of doubt and uncertainty; he is terrified at the thought of violating so sacred a rule, and at the same time is urged and goaded on by the fury of his desires to violate it. He changes his purpose every moment; sometimes he resolves to adhere to his principle, and not indulge a passion which may corrupt the remaining part of his life with the horrors of shame and repentance; and a momentary calm takes possession of his breast, from the prospect of that security and tranquillity which he will enjoy when he thus determines not to expose himself to the hazard of a contrary conduct. But immediately the passion rouses anew, and with fresh fury drives him on to commit what he had the instant before resolved to abstain from. Wearied and distracted with those continual irresolutions, he at length, from a sort of despair, makes the last fatal and irrecoverable step; but with that terror and amazement with which one flying from an enemy, throws himself over a precipice, where he is sure of meeting with more certain destruction than from any thing that pursues him from behind. Such are his sentiments even at the time of acting; though he is then, no doubt, less sensible of the impropriety of his own conduct than afterwards, when his passion being gratified and palled, he begins to view what he has done in the light in which others are apt to view it; and actually feels, what he had only foreseen very imperfectly before, the stings of remorse and repentance begin to agitate and torment him.

Chap. V Of the influence and authority of the general Rules of Morality, and that they are justly regarded as the Laws of the Deity

The regard to those general rules of conduct, is what is properly called a sense of duty, a principle of the greatest consequence in human life, and the only principle by which the bulk of mankind are capable of directing their actions. Many men behave very decently, and through the whole of their lives avoid any considerable degree of blame, who yet, perhaps, never felt the sentiment upon the propriety of which we found our approbation of their conduct, but acted merely from a regard to what they saw were the established rules of behaviour. The man who has received great benefits from another person, may, by the natural coldness of his temper, feel but a very small degree of the sentiment of gratitude. If he has been virtuously educated, however, he will often have been made to observe how odious those actions appear which denote a want of this sentiment, and how amiable the contrary. Though his heart therefore is not warmed with any grateful affection, he will strive to act as if it was, and will endeavour to pay all those regards and attentions to his patron which the liveliest gratitude could suggest. He will visit him regularly; he will behave to him respectfully; he will never talk of him but with expressions of the highest esteem, and of the many obligations which he owes to him. And what is more, he will carefully embrace every opportunity of making a proper return for past services. He may do all this too without any hypocrisy or blamable dissimulation, without any selfish intention of obtaining new favours, and without any design of imposing either upon his benefactor or the public. The motive of his actions may be no other than a reverence for the established rule of duty, a serious and earnest desire of acting, in every respect, according to the law of gratitude. A wife, in the same manner, may sometimes not feel that tender regard for her husband

which is suitable to the relation that subsists between them. If she has been virtuously educated, however, she will endeavour to act as if she felt it, to be careful, officious, faithful, and sincere, and to be deficient in none of those attentions which the sentiment of conjugal affection could have prompted her to perform. Such a friend, and such a wife, are neither of them, undoubtedly, the very best of their kinds; and though both of them may have the most serious and earnest desire to fulfil every part of their duty, yet they will fail in many nice and delicate regards, they will miss many opportunities of obliging, which they could never have overlooked if they had possessed the sentiment that is proper to their situation. Though not the very first of their kinds, however, they are perhaps the second; and if the regard to the general rules of conduct has been very strongly impressed upon them, neither of them will fail in any very essential part of their duty. None but those of the happiest mould are capable of suiting, with exact justness, their sentiments and behaviour to the smallest difference of situation, and of acting upon all occasions with the most delicate and accurate propriety. The coarse clay of which the bulk of mankind are formed, cannot be wrought up to such perfection. There is scarce any man, however, who by discipline, education, and example, may not be so impressed with a regard to general rules, as to act upon almost every occasion with tolerable decency, and through the whole of his life to avoid any considerable degree of blame.

Without this sacred regard to general rules, there is no man whose conduct can be much depended upon. It is this which constitutes the most essential difference between a man of principle and honour and a worthless fellow. The one adheres, on all occasions, steadily and resolutely to his maxims, and preserves through the whole of his life one even tenour of conduct. The other, acts variously and accidentally, as humour, inclination, or interest chance to be uppermost. Nay, such are the inequalities of humour to which all men are subject, that without this principle, the man who, in all his cool

hours, had the most delicate sensibility to the propriety of conduct, might often be led to act absurdly upon the most frivolous occasions, and when it was scarce possible to assign any serious motive for his behaving in this manner. Your friend makes you a visit when you happen to be in a humour which makes it disagreeable to receive him: in your present mood his civility is very apt to appear an impertinent intrusion; and if you were to give way to the views of things which at this time occur, though civil in your temper, you would behave to him with coldness and contempt. What renders you incapable of such a rudeness, is nothing but a regard to the general rules of civility and hospitality, which prohibit it. That habitual reverence which your former experience has taught you for these, enables you to act, upon all such occasions, with nearly equal propriety, and hinders those inequalities of temper, to which all men are subject, from influencing your conduct in any very sensible degree. But if without regard to these general rules, even the duties of politeness, which are so easily observed, and which one can scarce have any serious motive to violate, would yet be so frequently violated, what would become of the duties of justice, of truth, of chastity, of fidelity, which it is often so difficult to observe, and which there may be so many strong motives to violate? But upon the tolerable observance of these duties, depends the very existence of human society, which would crumble into nothing if mankind were not generally impressed with a reverence for those important rules of conduct.

This reverence is still further enhanced by an opinion which is first impressed by nature, and afterwards confirmed by reasoning and philosophy, that those important rules of morality are the commands and laws of the Deity, who will finally reward the obedient, and punish the transgressors of their duty.

This opinion or apprehension, I say, seems first to be impressed by nature. Men are naturally led to ascribe to those mysterious beings,

whatever they are, which happen, in any country, to be the objects of religious fear, all their own sentiments and passions. They have no other, they can conceive no other to ascribe to them. Those unknown intelligences which they imagine but see not, must necessarily be formed with some sort of resemblance to those intelligences of which they have experience. During the ignorance and darkness of pagan superstition, mankind seem to have formed the ideas of their divinities with so little delicacy, that they ascribed to them, indiscriminately, all the passions of human nature, those not excepted which do the least honour to our species, such as lust, hunger, avarice, envy, revenge. They could not fail, therefore, to ascribe to those beings, for the excellence of whose nature they still conceived the highest admiration, those sentiments and qualities which are the great ornaments of humanity, and which seem to raise it to a resemblance of divine perfection, the love of virtue and beneficence, and the abhorrence of vice and injustice. The man who was injured, called upon Jupiter to be witness of the wrong that was done to him, and could not doubt, but that divine being would behold it with the same indignation which would animate the meanest of mankind, who looked on when injustice was committed. The man who did the injury, felt himself to be the proper object of the detestation and resentment of mankind; and his natural fears led him to impute the same sentiments to those awful beings, whose presence he could not avoid, and whose power he could not resist. These natural hopes and fears, and suspicions, were propagated by sympathy, and confirmed by education; and the gods were universally represented and believed to be the rewarders of humanity and mercy, and the avengers of perfidy and injustice. And thus religion, even in its rudest form, gave a sanction to the rules of morality, long before the age of artificial reasoning and philosophy. That the terrors of religion should thus enforce the natural sense of duty, was of too much importance to the happiness of mankind, for nature to leave it dependent upon the slowness and uncertainty of philosophical researches.

These researches, however, when they came to take place, confirmed those original anticipations of nature. Upon whatever we suppose that our moral faculties are founded, whether upon a certain modification of reason, upon an original instinct, called a moral sense, or upon some other principle of our nature, it cannot be doubted, that they were given us for the direction of our conduct in this life. They carry along with them the most evident badges of this authority, which denote that they were set up within us to be the supreme arbiters of all our actions, to superintend all our senses, passions, and appetites, and to judge how far each of them was either to be indulged or restrained. Our moral faculties are by no means, as some have pretended, upon a level in this respect with the other faculties and appetites of our nature, endowed with no more right to restrain these last, than these last are to restrain them. No other faculty or principle of action judges of any other. Love does not judge of resentment, nor resentment of love. Those two passions may be opposite to one another, but cannot, with any propriety, be said to approve or disapprove of one another. But it is the peculiar office of those faculties now under our consideration to judge, to bestow censure or applause upon all the other principles of our nature. They may be considered as a sort of senses of which those principles are the objects. Every sense is supreme over its own objects. There is no appeal from the eye with regard to the beauty of colours, nor from the ear with regard to the harmony of sounds, nor from the taste with regard to the agreeableness of flavours. Each of those senses judges in the last resort of its own objects. Whatever gratifies the taste is sweet, whatever pleases the eye is beautiful, whatever soothes the ear is harmonious. The very essence of each of those qualities consists in its being fitted to please the sense to which it is addressed. It belongs to our moral faculties, in the same manner to determine when the ear ought to be soothed, when the eye ought to be indulged, when the taste ought to be gratified, when and how far every other principle of our nature ought either to be indulged or restrained. What is agreeable to our

moral faculties, is fit, and right, and proper to be done; the contrary wrong, unfit, and improper. The sentiments which they approve of, are graceful and becoming: the contrary, ungraceful and unbecoming. The very words, right, wrong, fit, improper, graceful, unbecoming, mean only what pleases or displeases those faculties.

Since these, therefore, were plainly intended to be the governing principles of human nature, the rules which they prescribe are to be regarded as the commands and laws of the Deity, promulgated by those vice-gerents which he has thus set up within us. All general rules are commonly denominated laws: thus the general rules which bodies observe in the communication of motion, are called the laws of motion. But those general rules which our moral faculties observe in approving or condemning whatever sentiment or action is subjected to their examination, may much more justly be denominated such. They have a much greater resemblance to what are properly called laws, those general rules which the sovereign lays down to direct the conduct of his subjects. Like them they are rules to direct the free actions of men: they are prescribed most surely by a lawful superior, and are attended too with the sanction of rewards and punishments. Those vice-gerents of God within us, never fail to punish the violation of them, by the torments of inward shame, and self-condemnation; and on the contrary, always reward obedience with tranquillity of mind, with contentment, and self-satisfaction.

There are innumerable other considerations which serve to confirm the same conclusion. The happiness of mankind, as well as of all other rational creatures, seems to have been the original purpose intended by the Author of nature, when he brought them into existence. No other end seems worthy of that supreme wisdom and divine benignity which we necessarily ascribe to him; and this opinion, which we are led to by the abstract consideration of his infinite perfections, is still more confirmed by the examination of the

works of nature, which seem all intended to promote happiness, and to guard against misery. But by acting according to the dictates of our moral faculties, we necessarily pursue the most effectual means for promoting the happiness of mankind, and may therefore be said, in some sense, to co-operate with the Deity, and to advance as far as in our power the plan of Providence. By acting other ways, on the contrary, we seem to obstruct, in some measure, the scheme which the Author of nature has established for the happiness and perfection of the world, and to declare ourselves, if I may say so, in some measure the enemies of God. Hence we are naturally encouraged to hope for his extraordinary favour and reward in the one case, and to dread his vengeance and punishment in the other.

There are besides many other reasons, and many other natural principles, which all tend to confirm and inculcate the same salutary doctrine. If we consider the general rules by which external prosperity and adversity are commonly distributed in this life, we shall find, that notwithstanding the disorder in which all things appear to be in this world, yet even here every virtue naturally meets with its proper reward, with the recompense which is most fit to encourage and promote it; and this too so surely, that it requires a very extraordinary concurrence of circumstances entirely to disappoint it. What is the reward most proper for encouraging industry, prudence, and circumspection? Success in every sort of business. And is it possible that in the whole of life these virtues should fail of attaining it? Wealth and external honours are their proper recompense, and the recompense which they can seldom fail of acquiring. What reward is most proper for promoting the practice of truth, justice, and humanity? The confidence, the esteem, and love of those we live with. Humanity does not desire to be great, but to be beloved. It is not in being rich that truth and justice would rejoice, but in being trusted and believed, recompenses which those virtues must almost always acquire. By some very extraordinary and unlucky circumstance, a

good man may come to be suspected of a crime of which he was altogether incapable, and upon that account be most unjustly exposed for the remaining part of his life to the horror and aversion of mankind. By an accident of this kind he may be said to lose his all, notwithstanding his integrity and justice; in the same manner as a cautious man, notwithstanding his utmost circumspection, may be ruined by an earthquake or an inundation. Accidents of the first kind, however, are perhaps still more rare, and still more contrary to the common course of things than those of the second; and it still remains true, that the practice of truth, justice, and humanity is a certain and almost infallible method of acquiring what those virtues chiefly aim at, the confidence and love of those we live with. A person may be very easily misrepresented with regard to a particular action; but it is scarce possible that he should be so with regard to the general tenor of his conduct. An innocent man may be believed to have done wrong: this, however, will rarely happen. On the contrary, the established opinion of the innocence of his manners, will often lead us to absolve him where he has really been in the fault, notwithstanding very strong presumptions. A knave, in the same manner, may escape censure, or even meet with applause, for a particular knavery, in which his conduct is not understood. But no man was ever habitually such, without being almost universally known to be so, and without being even frequently suspected of guilt, when he was in reality perfectly innocent. And so far as vice and virtue can be either punished or rewarded by the sentiments and opinions of mankind, they both, according to the common course of things, meet even here with something more than exact and impartial justice.

But though the general rules by which prosperity and adversity are commonly distributed, when considered in this cool and philosophical light, appear to be perfectly suited to the situation of mankind in this life, yet they are by no means suited to some of our natural sentiments. Our natural love and admiration for some virtues

is such, that we should wish to bestow on them all sorts of honours and rewards, even those which we must acknowledge to be the proper recompenses of other qualities, with which those virtues are not always accompanied. Our detestation, on the contrary, for some vices is such, that we should desire to heap upon them every sort of disgrace and disaster, those not excepted which are the natural consequences of very different qualities. Magnanimity, generosity, and justice, command so high a degree of admiration, that we desire to see them crowned with wealth, and power, and honours of every kind, the natural consequences of prudence, industry, and application; qualities with which those virtues are not inseparably connected. Fraud, falsehood, brutality, and violence, on the other hand, excite in every human breast such scorn and abhorrence, that our indignation rouses to see them possess those advantages which they may in some sense be said to have merited, by the diligence and industry with which they are sometimes attended. The industrious knave cultivates the soil; the indolent good man leaves it uncultivated. Who ought to reap the harvest? Who starve, and who live in plenty? The natural course of things decides it in favour of the knave: the natural sentiments of mankind in favour of the man of virtue. Man judges, that the good qualities of the one are greatly over-recompensed by those advantages which they tend to procure him, and that the omissions of the other are by far too severely punished by the distress which they naturally bring upon him; and human laws, the consequences of human sentiments, forfeit the life and the estate of the industrious and cautious traitor, and reward, by extraordinary recompenses, the fidelity and public spirit of the improvident and careless good citizen. Thus man is by Nature directed to correct, in some measure, that distribution of things which she herself would otherwise have made. The rules which for this purpose she prompts him to follow, are different from those which she herself observes. She bestows upon every virtue, and upon every vice, that precise reward or punishment which is best fitted to encourage the one, or to restrain the other. She

is directed by this sole consideration, and pays little regard to the different degrees of merit and demerit, which they may seem to possess in the sentiments and passions of man. Man, on the contrary, pays regard to this only, and would endeavour to render the state of every virtue precisely proportioned to that degree of love and esteem, and of every vice to that degree of contempt and abhorrence, which he himself conceives for it. The rules which she follows are fit for her, those which he follows for him: but both are calculated to promote the same great end, the order of the world, and the perfection and happiness of human nature.

But though man is thus employed to alter that distribution of things which natural events would make, if left to themselves; though, like the gods of the poets, he is perpetually interposing, by extraordinary means, in favour of virtue, and in opposition to vice, and, like them, endeavours to turn away the arrow that is aimed at the head of the righteous, but to accelerate the sword of destruction that is lifted up against the wicked; yet he is by no means able to render the fortune of either quite suitable to his own sentiments and wishes. The natural course of things cannot be entirely controlled by the impotent endeavours of man: the current is too rapid and too strong for him to stop it; and though the rules which direct it appear to have been established for the wisest and best purposes, they sometimes produce effects which shock all his natural sentiments. That a great combination of men should prevail over a small one; that those who engage in an enterprise with forethought and all necessary preparation, should prevail over such as oppose them without any; and that every end should be acquired by those means only which Nature has established for acquiring it, seems to be a rule not only necessary and unavoidable in itself, but even useful and proper for rousing the industry and attention of mankind. Yet, when, in consequence of this rule, violence and artifice prevail over sincerity and justice, what indignation does it not excite in the breast of every

human spectator? What sorrow and compassion for the sufferings of the innocent, and what furious resentment against the success of the oppressor? We are equally grieved and enraged at the wrong that is done, but often find it altogether out of our power to redress it. When we thus despair of finding any force upon earth which can check the triumph of injustice, we naturally appeal to heaven, and hope, that the great Author of our nature will himself execute hereafter, what all the principles which he has given us for the direction of our conduct, prompt us to attempt even here; that he will complete the plan which he himself has thus taught us to begin; and will, in a life to come, render to every one according to the works which he has performed in this world. And thus we are led to the belief of a future state, not only by the weaknesses, by the hopes and fears of human nature, but by the noblest and best principles which belong to it, by the love of virtue, and by the abhorrence of vice and injustice.

‘Does it suit the greatness of God,’ says the eloquent and philosophical bishop of Clermont,^[36] with that passionate and exaggerating force of imagination, which seems sometimes to exceed the bounds of decorum; ‘does it suit the greatness of God, to leave the world which he has created in so universal a disorder? To see the wicked prevail almost always over the just; the innocent dethroned by the usurper; the father become the victim of the ambition of an unnatural son; the husband expiring under the stroke of a barbarous and faithless wife? From the height of his greatness ought God to behold those melancholy events as a fantastical amusement, without taking any share in them? Because he is great, should he be weak, or unjust, or barbarous? Because men are little, ought they to be allowed either to be dissolute without punishment, or virtuous without reward? O God! If this is the character of your Supreme Being; if it is you whom we adore under such dreadful ideas; I can no longer acknowledge you for my father, for my protector, for the comforter of my sorrow, the support of my weakness, the rewarder of my fidelity. You would then

be no more than an indolent and fantastical tyrant, who sacrifices mankind to his insolent vanity, and who has brought them out of nothing, only to make them serve for the sport of his leisure and of his caprice.'

When the general rules which determine the merit and demerit of actions, come thus to be regarded as the laws of an All-powerful Being, who watches over our conduct, and who, in a life to come, will reward the observance, and punish the breach of them; they necessarily acquire a new sacredness from this consideration. That our regard to the will of the Deity ought to be the supreme rule of our conduct, can be doubted of by nobody who believes his existence. The very thought of disobedience appears to involve in it the most shocking impropriety. How vain, how absurd would it be for man, either to oppose or to neglect the commands that were laid upon him by Infinite Wisdom, and Infinite Power. How unnatural, how impiously ungrateful not to reverence the precepts that were prescribed to him by the infinite goodness of his Creator, even though no punishment was to follow their violation. The sense of propriety too is here well supported by the strongest motives of self-interest. The idea that, however we may escape the observation of man, or be placed above the reach of human punishment, yet we are always acting under the eye, and exposed to the punishment of God, the great avenger of injustice, is a motive capable of restraining the most headstrong passions, with those at least who, by constant reflection, have rendered it familiar to them.

It is in this manner that religion enforces the natural sense of duty: and hence it is, that mankind are generally disposed to place great confidence in the probity of those who seem deeply impressed with religious sentiments. Such persons, they imagine, act under an additional tie, besides those which regulate the conduct of other men. The regard to the propriety of action, as well as to reputation, the

regard to the applause of his own breast, as well as to that of others, are motives which they suppose have the same influence over the religious man, as over the man of the world. But the former lies under another restraint, and never acts deliberately but as in the presence of that Great Superior who is finally to recompense him according to his deeds. A greater trust is reposed, upon this account, in the regularity and exactness of his conduct. And wherever the natural principles of religion are not corrupted by the factious and party zeal of some worthless cabal; wherever the first duty which it requires, is to fulfil all the obligations of morality; wherever men are not taught to regard frivolous observances, as more immediate duties of religion, than acts of justice and beneficence; and to imagine, that by sacrifices, and ceremonies, and vain supplications, they can bargain with the Deity for fraud, and perfidy, and violence, the world undoubtedly judges right in this respect, and justly places a double confidence in the rectitude of the religious man's behaviour.

Chap. VI In what cases the Sense of Duty ought to be the sole of our conduct; and in what cases it ought to concur with other motives

Religion affords such strong motives to the practice of virtue, and guards us by such powerful restraints from the temptations of vice, that many have been led to suppose, that religious principles were the sole laudable motives of action. We ought neither, they said, to reward from gratitude, nor punish from resentment; we ought neither to protect the helplessness of our children, nor afford support to the infirmities of our parents, from natural affection. All affections for particular objects, ought to be extinguished in our breast, and one great affection take the place of all others, the love of the Deity, the desire of rendering ourselves agreeable to him, and of directing our conduct, in every respect, according to his will. We ought not to be

grateful from gratitude, we ought not to be charitable from humanity, we ought not to be public-spirited from the love of our country, nor generous and just from the love of mankind. The sole principle and motive of our conduct in the performance of all those different duties, ought to be a sense that God has commanded us to perform them. I shall not at present take time to examine this opinion particularly; I shall only observe, that we should not have expected to have found it entertained by any sect, who professed themselves of a religion in which, as it is the first precept to love the Lord our God with all our heart, with all our soul, and with all our strength, so it is the second to love our neighbour as we love ourselves; and we love ourselves surely for our own sakes, and not merely because we are commanded to do so. That the sense of duty should be the sole principle of our conduct, is no where the precept of Christianity; but that it should be the ruling and the governing one, as philosophy, and as, indeed, common sense directs. It may be a question, however, in what cases our actions ought to arise chiefly or entirely from a sense of duty, or from a regard to general rules; and in what cases some other sentiment or affection ought to concur, and have a principal influence.

The decision of this question, which cannot, perhaps, be given with any very great accuracy, will depend upon two different circumstances; first, upon the natural agreeableness or deformity of the sentiment or affection which would prompt us to any action independent of all regard to general rules; and, secondly, upon the precision and exactness, or the looseness and inaccuracy, of the general rules themselves.

I. First, I say, it will depend upon the natural agreeableness or deformity of the affection itself, how far our actions ought to arise from it, or entirely proceed from a regard to the general rule.

All those graceful and admired actions, to which the benevolent affections would prompt us, ought to proceed as much from the

passions themselves, as from any regard to the general rules of conduct. A benefactor thinks himself but ill requited, if the person upon whom he has bestowed his good offices, repays them merely from a cold sense of duty, and without any affection to his person. A husband is dissatisfied with the most obedient wife, when he imagines her conduct is animated by no other principle besides her regard to what the relation she stands in requires. Though a son should fail in none of the offices of filial duty, yet if he wants that affectionate reverence which it so well becomes him to feel, the parent may justly complain of his indifference. Nor could a son be quite satisfied with a parent who, though he performed all the duties of his situation, had nothing of that fatherly fondness which might have been expected from him. With regard to all such benevolent and social affections, it is agreeable to see the sense of duty employed rather to restrain than to enliven them, rather to hinder us from doing too much, than to prompt us to do what we ought. It gives us pleasure to see a father obliged to check his own fondness, a friend obliged to set bounds to his natural generosity, a person who has received a benefit, obliged to restrain the too sanguine gratitude of his own temper.

The contrary maxim takes place with regard to the malevolent and unsocial passions. We ought to reward from the gratitude and generosity of our own hearts, without any reluctance, and without being obliged to reflect how great the propriety of rewarding: but we ought always to punish with reluctance, and more from a sense of the propriety of punishing, than from any savage disposition to revenge. Nothing is more graceful than the behaviour of the man who appears to resent the greatest injuries, more from a sense that they deserve, and are the proper objects of resentment, than from feeling himself the furies of that disagreeable passion; who, like a judge, considers only the general rule, which determines what vengeance is due for each particular offence; who, in executing that rule, feels less for what himself has suffered, than for what the offender is about to suffer;

who, though in wrath, remembers mercy, and is disposed to interpret the rule in the most gentle and favourable manner, and to allow all the alleviations which the most candid humanity could, consistently with good sense, admit of.

As the selfish passions, according to what has formerly been observed, hold, in other respects, a sort of middle place, between the social and unsocial affections, so do they likewise in this. The pursuit of the objects of private interest, in all common, little, and ordinary cases, ought to flow rather from a regard to the general rules which prescribe such conduct, than from any passion for the objects themselves; but upon more important and extraordinary occasions, we should be awkward, insipid, and ungraceful, if the objects themselves did not appear to animate us with a considerable degree of passion. To be anxious, or to be laying a plot either to gain or to save a single shilling, would degrade the most vulgar tradesman in the opinion of all his neighbours. Let his circumstances be ever so mean, no attention to any such small matters, for the sake of the things themselves, must appear in his conduct. His situation may require the most severe economy and the most exact assiduity: but each particular exertion of that economy and assiduity must proceed, not so much from a regard for that particular saving or gain, as for the general rule which to him prescribes, with the utmost rigour, such a tenor of conduct. His parsimony to-day must not arise from a desire of the particular three-pence which he will save by it, nor his attendance in his shop from a passion for the particular ten-pence which he will acquire by it: both the one and the other ought to proceed solely from a regard to the general rule, which prescribes, with the most unrelenting severity, this plan of conduct to all persons in his way of life. In this consists the difference between the character of a miser and that of a person of exact economy and assiduity. The one is anxious about small matters for their own sake; the other attends to them only in consequence of the scheme of life which he has laid down to himself.

It is quite otherwise with regard to the more extraordinary and important objects of self-interest. A person appears mean-spirited, who does not pursue these with some degree of earnestness for their own sake. We should despise a prince who was not anxious about conquering or defending a province. We should have little respect for a private gentleman who did not exert himself to gain an estate, or even a considerable office, when he could acquire them without either meanness or injustice. A member of parliament who shows no keenness about his own election, is abandoned by his friends, as altogether unworthy of their attachment. Even a tradesman is thought a poor-spirited fellow among his neighbours, who does not bestir himself to get what they call an extraordinary job, or some uncommon advantage. This spirit and keenness constitutes the difference between the man of enterprise and the man of dull regularity. Those great objects of self-interest, of which the loss or acquisition quite changes the rank of the person, are the objects of the passion properly called ambition; a passion, which when it keeps within the bounds of prudence and justice, is always admired in the world, and has even sometimes a certain irregular greatness, which dazzles the imagination, when it passes the limits of both these virtues, and is not only unjust but extravagant. Hence the general admiration for heroes and conquerors, and even for statesmen, whose projects have been very daring and extensive, though altogether devoid of justice; such as those of the Cardinals of Richlieu and of Retz. The objects of avarice and ambition differ only in their greatness. A miser is as furious about a halfpenny, as a man of ambition about the conquest of a kingdom.

II. Secondly, I say, it will depend partly upon the precision and exactness, or the looseness and inaccuracy of the general rules themselves, how far our conduct ought to proceed entirely from a regard to them.

The general rules of almost all the virtues, the general rules which

determine what are the offices of prudence, of charity, of generosity, of gratitude, of friendship, are in many respects loose and inaccurate, admit of many exceptions, and require so many modifications, that it is scarce possible to regulate our conduct entirely by a regard to them. The common proverbial maxims of prudence, being founded in universal experience, are perhaps the best general rules which can be given about it. To affect, however, a very strict and literal adherence to them would evidently be the most absurd and ridiculous pedantry. Of all the virtues I have just now mentioned, gratitude is that, perhaps, of which the rules are the most precise, and admit of the fewest exceptions. That as soon as we can we should make a return of equal, and if possible of superior value to the services we have received, would seem to be a pretty plain rule, and one which admitted of scarce any exceptions. Upon the most superficial examination, however, this rule will appear to be in the highest degree loose and inaccurate, and to admit of ten thousand exceptions. If your benefactor attended you in your sickness, ought you to attend him in his? Or can you fulfil the obligation of gratitude, by making a return of a different kind? If you ought to attend him, how long ought you to attend him? The same time which he attended you, or longer, and how much longer? If your friend lent you money in your distress, ought you to lend him money in his? How much ought you to lend him? When ought you to lend him? Now, or to-morrow, or next month? And for how long a time? It is evident, that no general rule can be laid down, by which a precise answer can, in all cases, be given to any of these questions. The difference between his character and yours, between his circumstances and yours, may be such, that you may be perfectly grateful, and justly refuse to lend him a halfpenny: and, on the contrary, you may be willing to lend, or even to give him ten times the sum which he lent you, and yet justly be accused of the blackest ingratitude, and of not having fulfilled the hundredth part of the obligation you lie under. As the duties of gratitude, however, are perhaps the most sacred of all those which the beneficent virtues

prescribe to us, so the general rules which determine them are, as I said before, the most accurate. Those which ascertain the actions required by friendship, humanity, hospitality, generosity, are still more vague and indeterminate.

There is, however, one virtue of which the general rules determine with the greatest exactness every external action which it requires. This virtue is justice. The rules of justice are accurate in the highest degree, and admit of no exceptions or modifications, but such as may be ascertained as accurately as the rules themselves, and which generally, indeed, flow from the very same principles with them. If I owe a man ten pounds, justice requires that I should precisely pay him ten pounds, either at the time agreed upon, or when he demands it. What I ought to perform, how much I ought to perform, when and where I ought to perform it, the whole nature and circumstances of the action prescribed, are all of them precisely fixt and determined. Though it may be awkward and pedantic, therefore, to affect too strict an adherence to the common rules of prudence or generosity, there is no pedantry in sticking fast by the rules of justice. On the contrary, the most sacred regard is due to them; and the actions which this virtue requires are never so properly performed, as when the chief motive for performing them is a reverential and religious regard to those general rules which require them. In the practice of the other virtues, our conduct should rather be directed by a certain idea of propriety, by a certain taste for a particular tenor of conduct, than by any regard to a precise maxim or rule; and we should consider the end and foundation of the rule, more than the rule itself. But it is otherwise with regard to justice: the man who in that refines the least, and adheres with the most obstinate steadfastness to the general rules themselves, is the most commendable, and the most to be depended upon. Though the end of the rules of justice be, to hinder us from hurting our neighbour, it may frequently be a crime to violate them, though we could pretend, with some pretext of reason,

that this particular violation could do no hurt. A man often becomes a villain the moment he begins, even in his own heart, to chicanery in this manner. The moment he thinks of departing from the most staunch and positive adherence to what those inviolable precepts prescribe to him, he is no longer to be trusted, and no man can say what degree of guilt he may not arrive at. The thief imagines he does no evil, when he steals from the rich, what he supposes they may easily want, and what possibly they may never even know has been stolen from them. The adulterer imagines he does no evil, when he corrupts the wife of his friend, provided he covers his intrigue from the suspicion of the husband, and does not disturb the peace of the family. When once we begin to give way to such refinements, there is no enormity so gross of which we may not be capable.

The rules of justice may be compared to the rules of grammar; the rules of the other virtues, to the rules which critics lay down for the attainment of what is sublime and elegant in composition.^[37] The one, are precise, accurate, and indispensable. The other, are loose, vague, and indeterminate, and present us rather with a general idea of the perfection we ought to aim at, than afford us any certain and infallible directions for acquiring it. A man may learn to write grammatically by rule, with the most absolute infallibility; and so, perhaps, he may be taught to act justly. But there are no rules whose observance will infallibly lead us to the attainment of elegance or sublimity in writing; though there are some which may help us, in some measure, to correct and ascertain the vague ideas which we might otherwise have entertained of those perfections. And there are no rules by the knowledge of which we can infallibly be taught to act upon all occasions with prudence, with just magnanimity, or proper beneficence: though there are some which may enable us to correct and ascertain, in several respects, the imperfect ideas which we might otherwise have entertained of those virtues.

It may sometimes happen, that with the most serious and earnest desire of acting so as to deserve approbation, we may mistake the proper rules of conduct, and thus be misled by that very principle which ought to direct us. It is in vain to expect, that in this case mankind should entirely approve of our behaviour. They cannot enter into that absurd idea of duty which influenced us, nor go along with any of the actions which follow from it. There is still, however, something respectable in the character and behaviour of one who is thus betrayed into vice, by a wrong sense of duty, or by what is called an erroneous conscience. How fatally soever he may be misled by it, he is still, with the generous and humane, more the object of commiseration than of hatred or resentment. They lament the weakness of human nature, which exposes us to such unhappy delusions, even while we are most sincerely labouring after perfection, and endeavouring to act according to the best principle which can possibly direct us. False notions of religion are almost the only causes which can occasion any very gross perversion of our natural sentiments in this way; and that principle which gives the greatest authority to the rules of duty, is alone capable of distorting our ideas of them in any considerable degree. In all other cases common sense is sufficient to direct us, if not to the most exquisite propriety of conduct, yet to something which is not very far from it; and provided we are in earnest desirous to do well, our behaviour will always, upon the whole, be praise-worthy. That to obey the will of the Deity, is the first rule of duty, all men are agreed. But concerning the particular commandments which that will may impose upon us, they differ widely from one another. In this, therefore, the greatest mutual forbearance and toleration is due; and though the defence of society requires that crimes should be punished, from whatever motives they proceed, yet a good man will always punish them with reluctance, when they evidently proceed from false notions of religious duty. He will never feel against those who commit them that indignation which he feels against other criminals, but will rather regret, and sometimes

even admire their unfortunate firmness and magnanimity, at the very time that he punishes their crime. In the tragedy of Mahomet, one of the finest of Mr Voltaire's^[38], it is well represented, what ought to be our sentiments for crimes which proceed from such motives. In that tragedy, two young people of different sexes, of the most innocent and virtuous dispositions, and without any other weakness except what endears them the more to us, a mutual fondness for one another, are instigated by the strongest motives of a false religion, to commit a horrid murder, that shocks all the principles of human nature. A venerable old man, who had expressed the most tender affection for them both, for whom, notwithstanding he was the avowed enemy of their religion, they had both conceived the highest reverence and esteem, and who was in reality their father, though they did not know him to be such, is pointed out to them as a sacrifice which God had expressly required at their hands, and they are commanded to kill him. While they are about executing this crime, they are tortured with all the agonies which can arise from the struggle between the idea of the indispensableness of religious duty on the one side, and compassion, gratitude, reverence for the age, and love for the humanity and virtue of the person whom they are going to destroy, on the other. The representation of this exhibits one of the most interesting, and perhaps the most instructive spectacle that was ever introduced upon any theatre. The sense of duty, however, at last prevails over all the amiable weaknesses of human nature. They execute the crime imposed upon them; but immediately discover their error, and the fraud which had deceived them, and are distracted with horror, remorse, and resentment. Such as are our sentiments for the unhappy Seid and Palmira, such ought we to feel for every person who is in this manner misled by religion, when we are sure that it is really religion which misleads him, and not the pretence of it, which is made a cover to some of the worst of human passions.

As a person may act wrong by following a wrong sense of duty, so

nature may sometimes prevail, and lead him to act right in opposition to it. We cannot in this case be displeased to see that motive prevail, which we think ought to prevail, though the person himself is so weak as to think otherwise. As his conduct, however, is the effect of weakness, not principle, we are far from bestowing upon it any thing that approaches to complete approbation. A bigoted Roman Catholic, who, during the massacre of St Bartholomew, had been so overcome by compassion, as to save some unhappy Protestants, whom he thought it his duty to destroy, would not seem to be entitled to that high applause which we should have bestowed upon him, had he exerted the same generosity with complete self-approbation. We might be pleased with the humanity of his temper, but we should still regard him with a sort of pity which is altogether inconsistent with the admiration that is due to perfect virtue. It is the same case with all the other passions. We do not dislike to see them exert themselves properly, even when a false notion of duty would direct the person to restrain them. A very devout Quaker, who upon being struck upon one cheek, instead of turning up the other, should so far forget his literal interpretation of our Saviour's precept, as to bestow some good discipline upon the brute that insulted him, would not be disagreeable to us. We should laugh and be diverted with his spirit, and rather like him the better for it. But we should by no means regard him with that respect and esteem which would seem due to one who, upon a like occasion, had acted properly from a just sense of what was proper to be done. No action can properly be called virtuous, which is not accompanied with the sentiment of self-approbation.

Divin Homere, eloquent Ciceron, etc.

2. See Thomson's Seasons, Winter:

‘Ah! little think the gay licentious proud, etc., See also Pascal. 3.
See Robertson's Charles V. vol. ii, pp. 14 and 15. first edition.

[1] 参见：休谟《人性论》第二卷第二章第五节：“人们的心灵是互相反映的镜子，这不但是因为心灵互相反映它们的情绪，而且因为情感、心情和意见的那些光线，可以互相反射，并可以不知不觉地消失。”

[2] 在第一版中，该段落后还有其余三段，在之后的版本中被分配到了其他地方，只有如下的段落第六版中被完全删去：

A moral being is an accountable being. An accountable being, as the word expresses, is a being that must give an account of its actions to some other, and that consequently must regulate them according to the good-liking of this other. Man is accountable to God and his fellow creatures. But tho' he is, no doubt, principally accountable to God, in the order of time, he must necessarily conceive himself as accountable to his fellow creatures, before he can for many idea of the Deity, or of

the rules by which that Divine Being will judge of his conduct. A child surely conceives itself as accountable to its parents, and is elevated or cast down by the thought of their merited approbation or disapprobation, long before it forms any idea of its accountableness to the Deity, or of the rules by which that Divine Being will judge of its conduct.

[3] 在第一版中，第五段之后有另一段：Unfortunately this moral looking-glass is not always a very good one. Common looking-glasses, it is said, are extremely deceitful, and by the glare which they throw over the face, conceal from the partial eyes of the person many deformities which are obvious to every body besides. But there is not in the world such a smoother of wrinkles as is every man's imagination, with regard to the blemishes of his own character.

[4] 这一章的大部分内容都是第六版添加和重新编写的：1~3段、6~8段、9段开头、10~30段、33~35段都是新添加的，31~32段以新形式再次表述。

[5] 卡拉斯（Jean Calas）（1698—1762）是图卢斯的商人，加尔文主义者。他的儿子企图要放弃家族信仰而皈依天主教，后来因为悔恨而自杀。卡拉斯被指控谋杀自己的儿子，并在毫无证据的情况下被定罪，于1762年3月10日被施以车刑。1765年3月9号，在伏尔泰的努力下拉卡斯得以雪冤，他的家人也得到了补偿。（参见图III—1）

[7] 拉辛Louis Racine（1692—1763）的悲剧《菲德尔》于1677年首次出版，但起初并没有获得成功，多数学者认为失败的主要原因在于其之后放弃了创作而成为一名皇家史学者，同时皈依了宗教。

[8] Lord Kames 在The Elements of Criticism（1762）中曾经批评伏尔泰的《亨利阿德》（Henriade），伏尔泰因此在此之后数次表示他不会原谅也不会忘记Kames的批评。

[9] 蒲柏——Alexander Pope（1688—1744）——在其诗作《邓西阿德》（The Dunciad）的第一卷中讽刺了自己的批评者，主要针对的是Lewis Theobald——他曾经批判蒲柏对莎士比亚作品编排中的错误。（参见图III—2）

[10] 托马斯·格雷——Thomas de Grey（1716—1771）——所著的两首诗为《诗歌的进程》（The Progress of Poesy）和《巴德》（The Bard）后被Robert Lloyd 和 George Colman the elder模仿。

[11] Robert Simson（1687—1768）；Matthew Stewart（1717—1785）；Stewart和Smith 可能同为Simon课上的学生。

[12] 斯密指的是法国在17世纪末18世纪初在艺术和文学领域展开的名为“古典和现代之争”的持续讨论。

[13] 有关Smith对 Mandeville 的讨论，参见Part VII. Section II. Chap.4。

[14] Cicero, De Officiis, I. xxi. 71.

[15] 在第2~5版中，该段对应的段落如下，个别地方存在轻微调整：The great

judge of the world, has, for the wisest reasons, thought proper to interpose, between the weak eye of human reason, and the throne of his eternal justice, a degree of obscurity and darkness, which though it does not intirely cover that great tribunal from the view of mankind, yet renders the impression of it faint and feeble in comparison of what might be expected from the grandeur and importance of so mighty an object. If those infinite rewards and punishments which the Almighty has prepared for those who obey or transgress his will, were perceived as distinctly as we foresee the frivolous and temporary retaliations which we may expect from one another, the weakness of human nature, astonished at the immensity of objects so little fitted to its comprehension, could no longer attend to the little affairs of this world; and it is absolutely impossible that the business of society could have been carried on, if, in this respect, there had been a fuller revelation of the intentions of providence than that which has already been made. That men, however, might never be without a rule to direct their conduct by, nor without a judge whose authority should enforce its observation, the author of nature has made man the immediate judge of mankind, and has, in this respect, as in many others, created him after his own image, and appointed him his vicegerent upon earth to superintend the behaviour of his brethren. They are taught by nature to acknowledge that power and jurisdiction which has thus been conferred upon him, and to tremble and exult according as they imagine that they have either merited his censure, or deserved his applause.

[16] 该段在第2~5版代替了以下段落（经过轻微调整）：

But what ever may be the authority of this inferiour tribunal which is continually before their eyes, if at any time it should decide contrary to those principles and rules, which nature has established for regulating its judgments, men feel that they may appeal from this unjust decision, and call upon a superiour tribunal, the tribunal established in their own breasts, to redress the injustice of this weak or partial judgment. There are certain principles established by nature for governing our judgments concerning the conduct of those we live with. As long as we decide according to those principles, and neither applaud nor condemn any thing which nature has not rendered the proper object of applause or condemnation, nor any further than she has rendered it such, as our sentence is, in this case, if I may say so, quite agreeable to law, it is liable neither to repeal nor to correction of any kind. The person concerning whom we form these judgments, must himself necessarily approve of them. When he puts himself into our situation, he cannot avoid viewing his own conduct in the very same light in which we appear to view it. He is sensible, that to us, and to every impartial spectator, he must necessarily appear the natural and proper object of those sentiments which we express with regard to him. Those sentiments, therefore, must necessarily produce their full effect upon him, and he cannot fail to conceive all the triumph of self-approbation from, what appears to him, such merited applause, as well as all the horrors of shame from, what, he is sensible, is such deserved condemnation. But it is otherwise, if we

have either applauded or condemned him, contrary to those principles and rules which nature has established for the direction of our judgments concerning every thing of this kind. If we have either applauded or condemned him for what, when he puts himself into our situation, does not appear to him to be the object either of applause or condemnation; as in this case he cannot enter into our sentiments, provided he has any constancy or firmness, he is but little affected by them, and can neither be much elevated by the favourable, nor greatly mortified by the unfavourable decision. The applause of the whole world will avail but little, if our own conscience condemn us; and the disapprobation of all mankind is not capable of oppressing us, when we are absolved by the tribunal within our own breast, and when our own mind tells us that mankind are in the wrong.

But though this tribunal within the breast be thus the supreme arbiter of all our actions, though it can reverse the decisions of all mankind with regard to our character and conduct, and mortify us amidst the applause or support us under the censure of the world; yet, if we enquire into the origin of its institution, its jurisdiction we shall find is in a great measure derived from the authority of that very tribunal, whose decisions it so often and so justly reverses. When we first come into the world, from the natural desire to please, we accustom ourselves to consider what behaviour is likely to be agreeable to every person we converse with, to our parents, to our masters, to our companions. We address ourselves to individuals, and for some time fondly pursue the impossible and absurd project of gaining the goodwill and approbation of every body. We are soon taught by experience, however, that this universal approbation is altogether unattainable. As soon as we come to have more important interests to manage, we find, that by pleasing one man, we almost certainly disoblige another, and that by humouring an individual, we may often irritate a whole people. The fairest and most equitable conduct must frequently obstruct the interests, or thwart the inclinations of particular persons, who will seldom have candour enough to enter into the propriety of our motives, or to see that this conduct, how disagreeable soever to them, is perfectly suitable to our situation. In order to defend ourselves from such partial judgments, we soon learn to set up in our own minds a judge between ourselves and those we live with. We conceive ourselves as acting in the presence of a person quite candid and equitable, of one who has no particular relation either to ourselves, or to those whose interests are affected by our conduct, who is neither father, nor brother, nor friend either to them or to us, but is merely a man in general, an impartial spectator who considers our conduct with the same indifference with which we regard that of other people. If, when we place ourselves in the situation of such a person, our own actions appear to us under an agreeable aspect, if we feel that such a spectator cannot avoid entering into all the motives which influenced us, whatever may be the judgments of the world, we must still be pleased with our own behaviour, and regard ourselves, in spite of the censure of our companions, as the just and proper objects of approbation.

On the contrary, if the man within condemns us, the loudest acclamations of mankind appear but as the noise of ignorance and folly, and whenever we assume the character of this impartial judge, we cannot avoid viewing our own actions with his distaste and dissatisfaction. The weak, the vain, and the frivolous, indeed, may be mortified by the most groundless censure, or elated by the most absurd applause. Such persons are not accustomed to consult the judge within concerning the opinion which they ought to form of their own conduct. This inmate of the breast, this abstract man, the representative of mankind, and substitute of the Deity, whom nature has constituted the supreme judge of all their actions, is seldom appealed to by them. They are contented with the decision of the inferiour tribunal. The approbation of their companions, of the particular persons whom they have lived and conversed with, has generally been the ultimate object of all their wishes. If they obtain this, their joy is compleat; and if they fail, they are entirely disappointed. They never think of appealing to the superior court. They have seldom enquired after its decisions, and are altogether unacquainted with the rules and forms of its procedure. When the world injures them, therefore, they are incapable of doing themselves justice, and are, in consequence, necessarily the slaves of the world. But it is otherwise with the man who has, upon all occasions, been accustomed to have recourse to the judge within, and to consider, not what the world approves or disapproves of, but what appears to this impartial spectator, the natural and proper object of approbation or disapprobation. The judgment of this supreme arbiter of his conduct, is the applause, which he has been accustomed principally to court, is the censure which he has been accustomed principally to fear. Compared with this final decision, the sentiments of all mankind, though not altogether indifferent, appear to be but of small moment; and he is incapable of being either much elevated by their favourable, or greatly depressed by their most disadvantageous judgment.

[17] 即法国和英国的朝廷。

汤姆的《四季·冬季》具体诗句如下：

Ah! little think the gay licentious proud,
Whom pleasure, power, and affluence surround—
They, who their thoughtless hours in giddy mirth,
And wanton, often cruel, riot waste—
Ah! little think they, while they dance along,
How many feel, this very moment, death,
And all the sad variety of pain;

[24] 在第2~5版中，段落之后的内容为：How difficult soever it may be to attain this supreme degree of magnanimity and firmness, it is by no means either absurd or useless to attempt it. Though few men have the stoical idea of what this perfect propriety requires, yet all men endeavour in some measure to command themselves, and to bring down their selfish passions to something which their neighbour can go along with. But this can never be done so effectually as by viewing whatever befalls themselves in the light in which their neighbours are apt to view it. The stoical philosophy, in this respect, does little more than unfold our natural ideas of perfection. There is nothing absurd or improper, therefore, in aiming at this perfect self-command. Neither would the attainment of it be useless, but, on the contrary, the most advantageous of all things, as establishing our happiness upon the most solid and secure foundation, a firm confidence in that wisdom and justice which governs the world, and an intire resignation of ourselves, and of whatever relates to ourselves to the all-wise disposal of this ruling principle in nature. It scarce ever happens, however, that we are capable of adjusting our passive feelings to this perfect propriety. We indulge ourselves, and even the world indulges us, in some degree of irregularity in this respect. Though we should be too much affected by what concerns ourselves, and too little by what concerns other men, yet, if we always act with impartiality between ourselves and others, if we never actually sacrifice any great interest of others, to any little interest of our own, we are easily pardoned: and it were well, if upon all occasions, those who desire to do their duty were capable of maintaining even this degree of impartiality between themselves and others. But this is very far from being the case. Even in good men, the judge within us is often in danger of being corrupted by the violence and injustice of their selfish passions, and is often induced to make a report very different from what the real circumstances of the case are capable of authorising.

Part IV Of the Effect of Utility upon the Sentiment of Approbation

Chap. I Of the beauty which the appearance of Utility bestows upon all the productions of art, and of the extensive influence of this species of Beauty

That utility is one of the principal sources of beauty has been observed by every body, who has considered with any attention what constitutes the nature of beauty. The conveniency of a house gives pleasure to the spectator as well as its regularity, and he is as much hurt when he observes the contrary defect, as when he sees the correspondent windows of different forms, or the door not placed exactly in the middle of the building. That the fitness of any system or machine to produce the end for which it was intended, bestows a certain propriety and beauty upon the whole, and renders the very thought and contemplation of it agreeable, is so very obvious that nobody has overlooked it.

The cause too, why utility pleases, has of late been assigned by an ingenious and agreeable philosopher^[1], who joins the greatest depth of thought to the greatest elegance of expression, and possesses the singular and happy talent of treating the abstrusest subjects not only with the most perfect perspicuity, but with the most lively eloquence. The utility of any object, according to him, pleases the master by perpetually suggesting to him the pleasure or conveniency which it is fitted to promote. Every time he looks at it, he is put in mind of this pleasure; and the object in this manner becomes a source of perpetual satisfaction and enjoyment. The spectator enters by sympathy into the sentiments of the master, and necessarily views the object under the same agreeable aspect. When we visit the palaces of the great, we cannot help conceiving the satisfaction we should enjoy if we ourselves were the masters, and were possessed of so much artful and

ingeniously contrived accommodation. A similar account is given why the appearance of inconveniency should render any object disagreeable both to the owner and to the spectator.

But that this fitness, this happy contrivance of any production of art, should often be more valued, than the very end for which it was intended; and that the exact adjustment of the means for attaining any conveniency or pleasure, should frequently be more regarded, than that very conveniency or pleasure, in the attainment of which their whole merit would seem to consist, has not, so far as I know, been yet taken notice of by any body. That this however is very frequently the case, may be observed in a thousand instances, both in the most frivolous and in the most important concerns of human life.^[2]

When a person comes into his chamber, and finds the chairs all standing in the middle of the room, he is angry with his servant, and rather than see them continue in that disorder, perhaps takes the trouble himself to set them all in their places with their backs to the wall. The whole propriety of this new situation arises from its superior conveniency in leaving the floor free and disengaged. To attain this conveniency he voluntarily puts himself to more trouble than all he could have suffered from the want of it; since nothing was more easy, than to have set himself down upon one of them, which is probably what he does when his labour is over. What he wanted therefore, it seems, was not so much this conveniency, as that arrangement of things which promotes it. Yet it is this conveniency which ultimately recommends that arrangement, and bestows upon it the whole of its propriety and beauty.

A watch, in the same manner, that falls behind above two minutes in a day, is despised by one curious in watches. He sells it perhaps for a couple of guineas, and purchases another at fifty, which will not lose above a minute in a fortnight. The sole use of watches however, is to tell us what o'clock it is, and to hinder us from breaking

any engagement, or suffering any other inconveniency by our ignorance in that particular point. But the person so nice with regard to this machine, will not always be found either more scrupulously punctual than other men, or more anxiously concerned upon any other account, to know precisely what time of day it is. What interests him is not so much the attainment of this piece of knowledge, as the perfection of the machine which serves to attain it.

How many people ruin themselves by laying out money on trinkets of frivolous utility? What pleases these lovers of toys is not so much the utility, as the aptness of the machines which are fitted to promote it. All their pockets are stuffed with little conveniencies. They contrive new pockets, unknown in the clothes of other people, in order to carry a greater number. They walk about loaded with a multitude of baubles, in weight and sometimes in value not inferior to an ordinary Jew's-box, some of which may sometimes be of some little use, but all of which might at all times be very well spared, and of which the whole utility is certainly not worth the fatigue of bearing the burden.

Nor is it only with regard to such frivolous objects that our conduct is influenced by this principle; it is often the secret motive of the most serious and important pursuits of both private and public life.

The poor man's son, whom heaven in its anger has visited with ambition, when he begins to look around him, admires the condition of the rich. He finds the cottage of his father too small for his accommodation, and fancies he should be lodged more at his ease in a palace. He is displeased with being obliged to walk a-foot, or to endure the fatigue of riding on horseback. He sees his superiors carried about in machines, and imagines that in one of these he could travel with less inconveniency. He feels himself naturally indolent, and willing to serve himself with his own hands as little as possible;

and judges, that a numerous retinue of servants would save him from a great deal of trouble. He thinks if he had attained all these, he would sit still contentedly, and be quiet, enjoying himself in the thought of the happiness and tranquillity of his situation. He is enchanted with the distant idea of this felicity. It appears in his fancy like the life of some superior rank of beings, and, in order to arrive at it, he devotes himself for ever to the pursuit of wealth and greatness. To obtain the conveniencies which these afford, he submits in the first year, nay in the first month of his application, to more fatigue of body and more uneasiness of mind than he could have suffered through the whole of his life from the want of them. He studies to distinguish himself in some laborious profession. With the most unrelenting industry he labours night and day to acquire talents superior to all his competitors. He endeavours next to bring those talents into public view, and with equal assiduity solicits every opportunity of employment. For this purpose he makes his court to all mankind; he serves those whom he hates, and is obsequious to those whom he despises. Through the whole of his life he pursues the idea of a certain artificial and elegant repose which he may never arrive at, for which he sacrifices a real tranquillity that is at all times in his power, and which, if in the extremity of old age he should at last attain to it, he will find to be in no respect preferable to that humble security and contentment which he had abandoned for it. It is then, in the last dregs of life, his body wasted with toil and diseases, his mind galled and ruffled by the memory of a thousand injuries and disappointments which he imagines he has met with from the injustice of his enemies, or from the perfidy and ingratitude of his friends, that he begins at last to find that wealth and greatness are mere trinkets of frivolous utility, no more adapted for procuring ease of body or tranquillity of mind than the tweezer-cases of the lover of toys; and like them too, more troublesome to the person who carries them about with him than all the advantages they can afford him are commodious. There is no other real difference between them, except that the conveniencies

of the one are somewhat more observable than those of the other. The palaces, the gardens, the equipage, the retinue of the great, are objects of which the obvious conveniency strikes every body. They do not require that their masters should point out to us wherein consists their utility. Of our own accord we readily enter into it, and by sympathy enjoy and thereby applaud the satisfaction which they are fitted to afford him. But the curiosity of a tooth-pick, of an ear-picker, of a machine for cutting the nails, or of any other trinket of the same kind, is not so obvious. Their conveniency may perhaps be equally great, but it is not so striking, and we do not so readily enter into the satisfaction of the man who possesses them. They are therefore less reasonable subjects of vanity than the magnificence of wealth and greatness; and in this consists the sole advantage of these last. They more effectually gratify that love of distinction so natural to man. To one who was to live alone in a desolate island it might be a matter of doubt, perhaps, whether a palace, or a collection of such small conveniencies as are commonly contained in a tweezer-case, would contribute most to his happiness and enjoyment. If he is to live in society, indeed, there can be no comparison, because in this, as in all other cases, we constantly pay more regard to the sentiments of the spectator, than to those of the person principally concerned, and consider rather how his situation will appear to other people, than how it will appear to himself. If we examine, however, why the spectator distinguishes with such admiration the condition of the rich and the great, we shall find that it is not so much upon account of the superior ease or pleasure which they are supposed to enjoy, as of the numberless artificial and elegant contrivances for promoting this ease or pleasure. He does not even imagine that they are really happier than other people: but he imagines that they possess more means of happiness. And it is the ingenious and artful adjustment of those means to the end for which they were intended, that is the principal source of his admiration. But in the languor of disease and the weariness of old age, the pleasures of the vain and empty distinctions

of greatness disappear. To one, in this situation, they are no longer capable of recommending those toilsome pursuits in which they had formerly engaged him. In his heart he curses ambition, and vainly regrets the ease and the indolence of youth, pleasures which are fled for ever, and which he has foolishly sacrificed for what, when he has got it, can afford him no real satisfaction. In this miserable aspect does greatness appear to every man when reduced either by spleen or disease to observe with attention his own situation, and to consider what it is that is really wanting to his happiness. Power and riches appear then to be, what they are, enormous and operose machines contrived to produce a few trifling conveniencies to the body, consisting of springs the most nice and delicate, which must be kept in order with the most anxious attention, and which in spite of all our care are ready every moment to burst into pieces, and to crush in their ruins their unfortunate possessor. They are immense fabrics, which it requires the labour of a life to raise, which threaten every moment to overwhelm the person that dwells in them, and which while they stand, though they may save him from some smaller inconveniencies, can protect him from none of the severer inclemencies of the season. They keep off the summer shower, not the winter storm, but leave him always as much, and sometimes more exposed than before, to anxiety, to fear, and to sorrow; to diseases, to danger, and to death.

But though this splenetic philosophy, which in time of sickness or low spirits is familiar to every man, thus entirely depreciates those great objects of human desire, when in better health and in better humour, we never fail to regard them under a more agreeable aspect. Our imagination, which in pain and sorrow seems to be confined and cooped up within our own persons, in times of ease and prosperity expands itself to every thing around us. We are then charmed with the beauty of that accommodation which reigns in the palaces and economy of the great; and admire how every thing is adapted to promote their ease, to prevent their wants, to gratify their wishes, and

to amuse and entertain their most frivolous desires. If we consider the real satisfaction which all these things are capable of affording, by itself and separated from the beauty of that arrangement which is fitted to promote it, it will always appear in the highest degree contemptible and trifling. But we rarely view it in this abstract and philosophical light. We naturally confound it in our imagination with the order, the regular and harmonious movement of the system, the machine or economy by means of which it is produced. The pleasures of wealth and greatness, when considered in this complex view, strike the imagination as something grand and beautiful and noble, of which the attainment is well worth all the toil and anxiety which we are so apt to bestow upon it.

And it is well that nature imposes upon us in this manner.^[3] It is this deception which rouses and keeps in continual motion the industry of mankind. It is this which first prompted them to cultivate the ground, to build houses, to found cities and commonwealths, and to invent and improve all the sciences and arts, which ennoble and embellish human life; which have entirely changed the whole face of the globe, have turned the rude forests of nature into agreeable and fertile plains, and made the trackless and barren ocean a new fund of subsistence, and the great high road of communication to the different nations of the earth. The earth by these labours of mankind has been obliged to redouble her natural fertility, and to maintain a greater multitude of inhabitants. It is to no purpose, that the proud and unfeeling landlord views his extensive fields, and without a thought for the wants of his brethren, in imagination consumes himself the whole harvest that grows upon them. The homely and vulgar proverb, that the eye is larger than the belly, never was more fully verified than with regard to him. The capacity of his stomach bears no proportion to the immensity of his desires, and will receive no more than that of the meanest peasant. The rest he is obliged to distribute among those, who prepare, in the nicest manner, that little which he

himself makes use of, among those who fit up the palace in which this little is to be consumed, among those who provide and keep in order all the different baubles and trinkets, which are employed in the economy of greatness; all of whom thus derive from his luxury and caprice, that share of the necessities of life, which they would in vain have expected from his humanity or his justice. The produce of the soil maintains at all times nearly that number of inhabitants which it is capable of maintaining. The rich only select from the heap what is most precious and agreeable. They consume little more than the poor, and in spite of their natural selfishness and rapacity, though they mean only their own conveniency, though the sole end which they propose from the labours of all the thousands whom they employ, be the gratification of their own vain and insatiable desires, they divide with the poor the produce of all their improvements. They are led by an invisible hand^[4] to make nearly the same distribution of the necessities of life, which would have been made, had the earth been divided into equal portions among all its inhabitants, and thus without intending it, without knowing it, advance the interest of the society, and afford means to the multiplication of the species. When Providence divided the earth among a few lordly masters, it neither forgot nor abandoned those who seemed to have been left out in the partition. These last too enjoy their share of all that it produces. In what constitutes the real happiness of human life, they are in no respect inferior to those who would seem so much above them. In ease of body and peace of mind, all the different ranks of life are nearly upon a level, and the beggar, who suns himself by the side of the highway, possesses that security which kings are fighting for.

The same principle, the same love of system, the same regard to the beauty of order, of art and contrivance, frequently serves to recommend those institutions which tend to promote the public welfare. When a patriot exerts himself for the improvement of any part of the public police, his conduct does not always arise from pure

sympathy with the happiness of those who are to reap the benefit of it. It is not commonly from a fellow-feeling with carriers and waggoners that a public-spirited man encourages the mending of high roads. When the legislature establishes premiums and other encouragements to advance the linen or woollen manufactures, its conduct seldom proceeds from pure sympathy with the wearer of cheap or fine cloth, and much less from that with the manufacturer or merchant. The perfection of police, the extension of trade and manufactures, are noble and magnificent objects. The contemplation of them pleases us, and we are interested in whatever can tend to advance them. They make part of the great system of government, and the wheels of the political machine seem to move with more harmony and ease by means of them. We take pleasure in beholding the perfection of so beautiful and grand a system, and we are uneasy till we remove any obstruction that can in the least disturb or encumber the regularity of its motions. All constitutions of government, however, are valued only in proportion as they tend to promote the happiness of those who live under them. This is their sole use and end. From a certain spirit of system^[5], however, from a certain love of art and contrivance, we sometimes seem to value the means more than the end, and to be eager to promote the happiness of our fellow-creatures, rather from a view to perfect and improve a certain beautiful and orderly system, than from any immediate sense or feeling of what they either suffer or enjoy. There have been men of the greatest public spirit, who have shown themselves in other respects not very sensible to the feelings of humanity. And on the contrary, there have been men of the greatest humanity, who seem to have been entirely devoid of public spirit. Every man may find in the circle of his acquaintance instances both of the one kind and the other. Who had ever less humanity, or more public spirit, than the celebrated legislator of Muscovy^[6]? The social and well-natured James the First of Great Britain seems, on the contrary, to have had scarce any passion, either for the glory or the interest of his country.

Would you awaken the industry of the man who seems almost dead to ambition, it will often be to no purpose to describe to him the happiness of the rich and the great; to tell him that they are generally sheltered from the sun and the rain, that they are seldom hungry, that they are seldom cold, and that they are rarely exposed to weariness, or to want of any kind. The most eloquent exhortation of this kind will have little effect upon him. If you would hope to succeed, you must describe to him the conveniency and arrangement of the different apartments in their palaces; you must explain to him the propriety of their equipages, and point out to him the number, the order, and the different offices of all their attendants. If any thing is capable of making impression upon him, this will. Yet all these things tend only to keep off the sun and the rain, to save them from hunger and cold, from want and weariness. In the same manner, if you would implant public virtue in the breast of him who seems heedless of the interest of his country, it will often be to no purpose to tell him, what superior advantages the subjects of a well-governed state enjoy; that they are better lodged, that they are better clothed, that they are better fed. These considerations will commonly make no great impression. You will be more likely to persuade, if you describe the great system of public police which procures these advantages, if you explain the connexions and dependencies of its several parts, their mutual subordination to one another, and their general subserviency to the happiness of the society; if you show how this system might be introduced into his own country, what it is that hinders it from taking place there at present, how those obstructions might be removed, and all the several wheels of the machine of government be made to move with more harmony and smoothness, without grating upon one another, or mutually retarding one another's motions. It is scarce possible that a man should listen to a discourse of this kind, and not feel himself animated to some degree of public spirit. He will, at least for the moment, feel some desire to remove those obstructions, and to put into motion so beautiful and so orderly a machine. Nothing tends

so much to promote public spirit as the study of politics, of the several systems of civil government, their advantages and disadvantages, of the constitution of our own country, its situation, and interest with regard to foreign nations, its commerce, its defence, the disadvantages it labours under, the dangers to which it may be exposed, how to remove the one, and how to guard against the other. Upon this account political disquisitions, if just, and reasonable, and practicable, are of all the works of speculation the most useful. Even the weakest and the worst of them are not altogether without their utility. They serve at least to animate the public passions of men, and rouse them to seek out the means of promoting the happiness of the society.

Chap. II Of the beauty which the appearance of Utility bestows upon the characters and actions of men; and how far the perception of this beauty may be regarded as one of the original principles of approbation

The characters of men, as well as the contrivances of art, or the institutions of civil government, may be fitted either to promote or to disturb the happiness both of the individual and of the society. The prudent, the equitable, the active, resolute, and sober character promises prosperity and satisfaction, both to the person himself and to every one connected with him. The rash, the insolent, the slothful, effeminate, and voluptuous, on the contrary, forebodes ruin to the individual, and misfortune to all who have any thing to do with him. The first turn of mind has at least all the beauty which can belong to the most perfect machine that was ever invented for promoting the most agreeable purpose: and the second, all the deformity of the most awkward and clumsy contrivance. What institution of government could tend so much to promote the happiness of mankind as the general prevalence of wisdom and virtue? All government is but an

imperfect remedy for the deficiency of these. Whatever beauty, therefore, can belong to civil government upon account of its utility, must in a far superior degree belong to these. On the contrary, what civil policy can be so ruinous and destructive as the vices of men? The fatal effects of bad government arise from nothing, but that it does not sufficiently guard against the mischiefs which human wickedness gives occasion to.

图IV—1：彼得一世

This beauty and deformity which characters appear to derive from their usefulness or inconveniency, are apt to strike, in a peculiar manner, those who consider, in an abstract and philosophical light, the actions and conduct of mankind. When a philosopher goes to examine why humanity is approved of, or cruelty condemned, he does not always form to himself, in a very clear and distinct manner, the conception of any one particular action either of cruelty or of humanity, but is commonly contented with the vague and indeterminate idea which the general names of those qualities suggest to him. But it is in particular instances only that the propriety or

impropriety, the merit or demerit of actions is very obvious and discernible. It is only when particular examples are given that we perceive distinctly either the concord or disagreement between our own affections and those of the agent, or feel a social gratitude arise towards him in the one case, or a sympathetic resentment in the other. When we consider virtue and vice in an abstract and general manner, the qualities by which they excite these several sentiments seem in a great measure to disappear, and the sentiments themselves become less obvious and discernible. On the contrary, the happy effects of the one and the fatal consequences of the other seem then to rise up to the view, and as it were to stand out and distinguish themselves from all the other qualities of either.

The same ingenious and agreeable author who first explained why utility pleases, has been so struck with this view of things, as to resolve our whole approbation of virtue into a perception of this species of beauty which results from the appearance of utility. No qualities of the mind, he observes, are approved of as virtuous, but such as are useful or agreeable either to the person himself or to others;^[7] and no qualities are disapproved of as vicious but such as have a contrary tendency. And Nature, indeed, seems to have so happily adjusted our sentiments of approbation and disapprobation, to the conveniency both of the individual and of the society, that after the strictest examination it will be found, I believe, that this is universally the case. But still I affirm, that it is not the view of this utility or hurtfulness which is either the first or principal source of our approbation and disapprobation. These sentiments are no doubt enhanced and enlivened by the perception of the beauty or deformity which results from this utility or hurtfulness. But still, I say, they are originally and essentially different from this perception.

For first of all, it seems impossible that the approbation of virtue should be a sentiment of the same kind with that by which we

approve of a convenient and well-contrived building; or that we should have no other reason for praising a man than that for which we commend a chest of drawers.^[8]

And secondly, it will be found, upon examination, that the usefulness of any disposition of mind is seldom the first ground of our approbation; and that the sentiment of approbation always involves in it a sense of propriety quite distinct from the perception of utility. We may observe this with regard to all the qualities which are approved of as virtuous, both those which, according to this system, are originally valued as useful to ourselves, as well as those which are esteemed on account of their usefulness to others.

The qualities most useful to ourselves are, first of all, superior reason and understanding, by which we are capable of discerning the remote consequences of all our actions, and of foreseeing the advantage or detriment which is likely to result from them: and secondly, self-command, by which we are enabled to abstain from present pleasure or to endure present pain, in order to obtain a greater pleasure or to avoid a greater pain in some future time. In the union of those two qualities consists the virtue of prudence, of all the virtues that which is most useful to the individual.

With regard to the first of those qualities, it has been observed on a former occasion^[9], that superior reason and understanding are originally approved of as just and right and accurate, and not merely as useful or advantageous. It is in the abstruser sciences, particularly in the higher parts of mathematics, that the greatest and most admired exertions of human reason have been displayed. But the utility of those sciences, either to the individual or to the public, is not very obvious, and to prove it, requires a discussion which is not always very easily comprehended. It was not, therefore, their utility which first recommended them to the public admiration. This quality was but little insisted upon, till it became necessary to make some reply to

the reproaches of those, who, having themselves no taste for such sublime discoveries, endeavoured to depreciate them as useless.

That self-command, in the same manner, by which we restrain our present appetites, in order to gratify them more fully upon another occasion, is approved of, as much under the aspect of propriety, as under that of utility. When we act in this manner, the sentiments which influence our conduct seem exactly to coincide with those of the spectator. The spectator does not feel the solicitations of our present appetites. To him the pleasure which we are to enjoy a week hence, or a year hence, is just as interesting as that which we are to enjoy this moment. When for the sake of the present, therefore, we sacrifice the future, our conduct appears to him absurd and extravagant in the highest degree, and he cannot enter into the principles which influence it. On the contrary, when we abstain from present pleasure, in order to secure greater pleasure to come, when we act as if the remote object interested us as much as that which immediately presses upon the senses, as our affections exactly correspond with his own, he cannot fail to approve of our behaviour: and as he knows from experience, how few are capable of this self-command, he looks upon our conduct with a considerable degree of wonder and admiration. Hence arises that eminent esteem with which all men naturally regard a steady perseverance in the practice of frugality, industry, and application, though directed to no other purpose than the acquisition of fortune. The resolute firmness of the person who acts in this manner, and in order to obtain a great though remote advantage, not only gives up all present pleasures, but endures the greatest labour both of mind and body, necessarily commands our approbation. That view of his interest and happiness which appears to regulate his conduct, exactly tallies with the idea which we naturally form of it. There is the most perfect correspondence between his sentiments and our own, and at the same time, from our experience of the common weakness of human nature, it is a correspondence which

we could not reasonably have expected. We not only approve, therefore, but in some measure admire his conduct, and think it worthy of a considerable degree of applause. It is the consciousness of this merited approbation and esteem which is alone capable of supporting the agent in this tenour of conduct. The pleasure which we are to enjoy ten years hence interests us so little in comparison with that which we may enjoy to-day, the passion which the first excites, is naturally so weak in comparison with that violent emotion which the second is apt to give occasion to, that the one could never be any balance to the other, unless it was supported by the sense of propriety, by the consciousness that we merited the esteem and approbation of every body, by acting in the one way, and that we became the proper objects of their contempt and derision by behaving in the other.

Humanity, justice, generosity, and public spirit, are the qualities most useful to others. Wherein consists the propriety of humanity and justice has been explained upon a former occasion, where it was shewn how much our esteem and approbation of those qualities depended upon the concord between the affections of the agent and those of the spectators.

The propriety of generosity and public spirit is founded upon the same principle with that of justice. Generosity is different from humanity. Those two qualities, which at first sight seem so nearly allied, do not always belong to the same person. Humanity is the virtue of a woman, generosity of a man. The fair-sex, who have commonly much more tenderness than ours, have seldom so much generosity. That women rarely make considerable donations, is an observation of the civil law.¹[\[10\]](#) Humanity consists merely in the exquisite fellow-feeling which the spectator entertains with the sentiments of the persons principally concerned, so as to grieve for their sufferings, to resent their injuries, and to rejoice at their good fortune. The most humane actions require no self-denial, no self-

command, no great exertion of the sense of propriety. They consist only in doing what this exquisite sympathy would of its own accord prompt us to do. But it is otherwise with generosity. We never are generous except when in some respect we prefer some other person to ourselves, and sacrifice some great and important interest of our own to an equal interest of a friend or of a superior. The man who gives up his pretensions to an office that was the great object of his ambition, because he imagines that the services of another are better entitled to it; the man who exposes his life to defend that of his friend, which he judges to be of more importance; neither of them act from humanity, or because they feel more exquisitely what concerns that other person than what concerns themselves. They both consider those opposite interests, not in the light in which they naturally appear to themselves, but in that in which they appear to others. To every bystander, the success or preservation of this other person may justly be more interesting than their own; but it cannot be so to themselves. When to the interest of this other person, therefore, they sacrifice their own, they accommodate themselves to the sentiments of the spectator, and by an effort of magnanimity act according to those views of things which, they feel, must naturally occur to any third person. The soldier who throws away his life in order to defend that of his officer, would perhaps be but little affected by the death of that officer, if it should happen without any fault of his own; and a very small disaster which had befallen himself might excite a much more lively sorrow. But when he endeavours to act so as to deserve applause, and to make the impartial spectator enter into the principles of his conduct, he feels, that to every body but himself, his own life is a trifle compared with that of his officer, and that when he sacrifices the one to the other, he acts quite properly and agreeably to what would be the natural apprehensions of every impartial bystander.

It is the same case with the greater exertions of public spirit. When a young officer exposes his life to acquire some inconsiderable

addition to the dominions of his sovereign, it is not because the acquisition of the new territory is, to himself, an object more desirable than the preservation of his own life. To him his own life is of infinitely more value than the conquest of a whole kingdom for the state which he serves. But when he compares those two objects with one another, he does not view them in the light in which they naturally appear to himself, but in that in which they appear to the nation he fights for. To them the success of the war is of the highest importance; the life of a private person of scarce any consequence. When he puts himself in their situation, he immediately feels that he cannot be too prodigal of his blood, if, by shedding it, he can promote so valuable a purpose. In thus thwarting, from a sense of duty and propriety, the strongest of all natural propensities, consists the heroism of his conduct. There is many an honest Englishman, who, in his private station, would be more seriously disturbed by the loss of a guinea, than by the national loss of Minorca, who yet, had it been in his power to defend that fortress, would have sacrificed his life a thousand times rather than, through his fault, have let it fall into the hands of the enemy.^[11] When the first Brutus led forth his own sons to a capital punishment, because they had conspired against the rising liberty of Rome, he sacrificed what, if he had consulted his own breast only, would appear to be the stronger to the weaker affection. Brutus ought naturally to have felt much more for the death of his own sons, than for all that probably Rome could have suffered from the want of so great an example. But he viewed them, not with the eyes of a father, but with those of a Roman citizen. He entered so thoroughly into the sentiments of this last character, that he paid no regard to that tie, by which he himself was connected with them; and to a Roman citizen, the sons even of Brutus seemed contemptible, when put into the balance with the smallest interest of Rome.^[12] In these and in all other cases of this kind, our admiration is not so much founded upon the utility, as upon the unexpected, and on that account the great, the noble, and exalted propriety of such actions. This utility,

when we come to view it, bestows upon them, undoubtedly, a new beauty, and upon that account still further recommends them to our approbation. This beauty, however, is chiefly perceived by men of reflection and speculation, and is by no means the quality which first recommends such actions to the natural sentiments of the bulk of mankind.

It is to be observed, that so far as the sentiment of approbation arises from the perception of this beauty of utility, it has no reference of any kind to the sentiments of others. If it was possible, therefore, that a person should grow up to manhood without any communication with society, his own actions might, notwithstanding, be agreeable or disagreeable to him on account of their tendency to his happiness or disadvantage. He might perceive a beauty of this kind in prudence, temperance, and good conduct, and a deformity in the opposite behaviour: he might view his own temper and character with that sort of satisfaction with which we consider a well-contrived machine, in the one case; or with that sort of distaste and dissatisfaction with which we regard a very awkward and clumsy contrivance, in the other. As these perceptions, however, are merely a matter of taste, and have all the feebleness and delicacy of that species of perceptions, upon the justness of which what is properly called taste is founded, they probably would not be much attended to by one in this solitary and miserable condition. Even though they should occur to him, they would by no means have the same effect upon him, antecedent to his connexion with society, which they would have in consequence of that connexion. He would not be cast down with inward shame at the thought of this deformity; nor would he be elevated with secret triumph of mind from the consciousness of the contrary beauty. He would not exult from the notion of deserving reward in the one case, nor tremble from the suspicion of meriting punishment in the other. All such sentiments suppose the idea of some other being, who is the natural judge of the person that feels them; and it is only by sympathy

with the decisions of this arbiter of his conduct, that he can conceive, either the triumph of self-applause, or the shame of self-condemnation.

**Part V Of the Influence of
Custom and Fashion upon the
Sentiments of Moral
Approbation and Disapprobation**

Chap. I Of the Influence of Custom and Fashion upon our Notions of Beauty and Deformity

There are other principles besides those already enumerated, which have a considerable influence upon the moral sentiments of mankind, and are the chief causes of the many irregular and discordant opinions which prevail in different ages and nations concerning what is blameable or praise-worthy. These principles are custom and fashion, principles which extend their dominion over our judgments concerning beauty of every kind.

When two objects have frequently been seen together, the imagination acquires a habit of passing easily from the one to the other. If the first appear, we lay our account that the second is to follow. Of their own accord they put us in mind of one another, and the attention glides easily along them. Though, independent of custom, there should be no real beauty in their union, yet when custom has thus connected them together, we feel an impropriety in their separation. The one we think is awkward when it appears without its usual companion. We miss something which we expected to find, and the habitual arrangement of our ideas is disturbed by the disappointment. A suit of clothes, for example, seems to want something if they are without the most insignificant ornament which usually accompanies them, and we find a meanness or awkwardness in the absence even of a haunch button. When there is any natural propriety in the union, custom increases our sense of it, and makes a different arrangement appear still more disagreeable than it would otherwise seem to be. Those who have been accustomed to see things in a good taste, are more disgusted by whatever is clumsy or awkward. Where the conjunction is improper, custom either diminishes, or takes away altogether, our sense of the impropriety. Those who have been accustomed to slovenly disorder lose all sense of

neatness or elegance. The modes of furniture or dress which seem ridiculous to strangers, give no offence to the people who are used to them.

Fashion is different from custom, or rather is a particular species of it. That is not the fashion which every body wears, but which those wear who are of a high rank, or character. The graceful, the easy, and commanding manners of the great, joined to the usual richness and magnificence of their dress, give a grace to the very form which they happen to bestow upon it. As long as they continue to use this form, it is connected in our imaginations with the idea of something that is genteel and magnificent, and though in itself it should be indifferent, it seems, on account of this relation, to have something about it that is genteel and magnificent too. As soon as they drop it, it loses all the grace, which it had appeared to possess before, and being now used only by the inferior ranks of people, seems to have something of their meanness and awkwardness.

Dress and furniture are allowed by all the world to be entirely under the dominion of custom and fashion. The influence of those principles, however, is by no means confined to so narrow a sphere, but extends itself to whatever is in any respect the object of taste, to music, to poetry, to architecture. The modes of dress and furniture are continually changing, and that fashion appearing ridiculous to-day which was admired five years ago, we are experimentally convinced that it owed its vogue chiefly or entirely to custom and fashion. Clothes and furniture are not made of very durable materials. A well-fancied coat is done in a twelve-month, and cannot continue longer to propagate, as the fashion, that form according to which it was made. The modes of furniture change less rapidly than those of dress; because furniture is commonly more durable. In five or six years, however, it generally undergoes an entire revolution, and every man in his own time sees the fashion in this respect change many different

ways. The productions of the other arts are much more lasting, and, when happily imagined, may continue to propagate the fashion of their make for a much longer time. A well-contrived building may endure many centuries: a beautiful air may be delivered down by a sort of tradition, through many successive generations: a well-written poem may last as long as the world; and all of them continue for ages together, to give the vogue to that particular style, to that particular taste or manner, according to which each of them was composed. Few men have an opportunity of seeing in their own times the fashion in any of these arts change very considerably. Few men have so much experience and acquaintance with the different modes which have obtained in remote ages and nations, as to be thoroughly reconciled to them, or to judge with impartiality between them, and what takes place in their own age and country. Few men therefore are willing to allow, that custom or fashion have much influence upon their judgments concerning what is beautiful, or otherwise, in the productions of any of those arts; but imagine, that all the rules, which they think ought to be observed in each of them, are founded upon reason and nature, not upon habit or prejudice. A very little attention, however, may convince them of the contrary, and satisfy them, that the influence of custom and fashion over dress and furniture, is not more absolute than over architecture, poetry, and music.

Can any reason, for example, be assigned why the Doric capital should be appropriated to a pillar, whose height is equal to eight diameters; the Ionic volute to one of nine; and the Corinthian foliage to one of ten? The propriety of each of those appropriations can be founded upon nothing but habit and custom. The eye having been used to see a particular proportion connected with a particular ornament, would be offended if they were not joined together. Each of the five orders has its peculiar ornaments, which cannot be changed for any other, without giving offence to all those who know any thing of the rules of architecture. According to some architects, indeed, such

is the exquisite judgment with which the ancients have assigned to each order its proper ornaments, that no others can be found which are equally suitable. It seems, however, a little difficult to be conceived that these forms, though, no doubt, extremely agreeable, should be the only forms which can suit those proportions, or that there should not be five hundred others which, antecedent to established custom, would have fitted them equally well. When custom, however, has established particular rules of building, provided they are not absolutely unreasonable, it is absurd to think of altering them for others which are only equally good, or even for others which, in point of elegance and beauty, have naturally some little advantage over them. A man would be ridiculous who should appear in public with a suit of clothes quite different from those which are commonly worn, though the new dress should in itself be ever so graceful or convenient. And there seems to be an absurdity of the same kind in ornamenting a house after a quite different manner from that which custom and fashion have prescribed; though the new ornaments should in themselves be somewhat superior to the common ones.

According to the ancient rhetoricians, a certain measure of verse was by nature appropriated to each particular species of writing, as being naturally expressive of that character, sentiment, or passion, which ought to predominate in it.^[1] One verse, they said, was fit for grave and another for gay works, which could not, they thought, be interchanged without the greatest impropriety. The experience of modern times, however, seems to contradict this principle, though in itself it would appear to be extremely probable. What is the burlesque verse in English, is the heroic verse in French. The tragedies of Racine and the *Henriad* of Voltaire, are nearly in the same verse with,

Let me have your advice in a weighty affair. The burlesque verse in French, on the contrary, is pretty much the same with the heroic

verse of ten syllables in English. Custom has made the one nation associate the ideas of gravity, sublimity, and seriousness, to that measure which the other has connected with whatever is gay, flippancy, and ludicrous. Nothing would appear more absurd in English, than a tragedy written in the Alexandrine verses of the French; or in French, than a work of the same kind in verses of ten syllables.^[2]

图V—1 : Aristotle (384 BC–322 BC)

An eminent artist will bring about a considerable change in the established modes of each of those arts, and introduce a new fashion of writing, music, or architecture. As the dress of an agreeable man of high rank recommends itself, and how peculiar and fantastical soever, comes soon to be admired and imitated; so the excellencies of an eminent master recommend his peculiarities, and his manner becomes the fashionable style in the art which he practises. The taste of the Italians in music and architecture has, within these fifty years, undergone a considerable change, from imitating the peculiarities of some eminent masters in each of those arts. Seneca is accused by Quintilian^[3] of having corrupted the taste of the Romans, and of having introduced a frivolous prettiness in the room of majestic reason

and masculine eloquence. Sallust and Tacitus have by others been charged with the same accusation, though in a different manner. They gave reputation, it is pretended, to a style, which though in the highest degree concise, elegant, expressive, and even poetical, wanted, however, ease, simplicity, and nature, and was evidently the production of the most laboured and studied affectation. How many great qualities must that writer possess, who can thus render his very faults agreeable? After the praise of refining the taste of a nation, the highest eulogy, perhaps, which can be bestowed upon any author, is to say, that he corrupted it. In our own language, Mr Pope and Dr Swift have each of them introduced a manner different from what was practised before, into all works that are written in rhyme, the one in long verses, the other in short. The quaintness of Butler has given place to the plainness of Swift. The rambling freedom of Dryden, and the correct but often tedious and prosaic languor of Addison, are no longer the objects of imitation, but all long verses are now written after the manner of the nervous precision of Mr Pope.^[4]

Neither is it only over the productions of the arts, that custom and fashion exert their dominion. They influence our judgments, in the same manner, with regard to the beauty of natural objects. What various and opposite forms are deemed beautiful in different species of things ? The proportions which are admired in one animal, are altogether different from those which are esteemed in another. Every class of things has its own peculiar conformation, which is approved of, and has a beauty of its own, distinct from that of every other species. It is upon this account that a learned Jesuit, father Buffier,^[5] has determined that the beauty of every object consists in that form and colour, which is most usual among things of that particular sort to which it belongs. Thus, in the human form, the beauty of each feature lies in a certain middle, equally removed from a variety of other forms that are ugly. A beautiful nose, for example, is one that is neither very long, nor very short, neither very straight, nor very crooked, but a sort

of middle among all these extremes, and less different from any one of them, than all of them are from one another. It is the form which Nature seems to have aimed at in them all, which, however, she deviates from in a great variety of ways, and very seldom hits exactly; but to which all those deviations still bear a very strong resemblance. When a number of drawings are made after one pattern, though they may all miss it in some respects, yet they will all resemble it more than they resemble one another; the general character of the pattern will run through them all; the most singular and odd will be those which are most wide of it; and though very few will copy it exactly, yet the most accurate delineations will bear a greater resemblance to the most careless, than the careless ones will bear to one another. In the same manner, in each species of creatures, what is most beautiful bears the strongest characters of the general fabric of the species, and has the strongest resemblance to the greater part of the individuals with which it is classed. Monsters, on the contrary, or what is perfectly deformed, are always most singular and odd, and have the least resemblance to the generality of that species to which they belong. And thus the beauty of each species, though in one sense the rarest of all things, because few individuals hit this middle form exactly, yet in another, is the most common, because all the deviations from it resemble it more than they resemble one another. The most customary form, therefore, is in each species of things, according to him, the most beautiful. And hence it is that a certain practice and experience in contemplating each species of objects is requisite, before we can judge of its beauty, or know wherein the middle and most usual form consists. The nicest judgment concerning the beauty of the human species, will not help us to judge of that of flowers, or horses, or any other species of things. It is for the same reason that in different climates, and where different customs and ways of living take place, as the generality of any species receives a different conformation from those circumstances, so different ideas of its beauty prevail. The beauty of a Moorish is not exactly the same with that of

an English horse. What different ideas are formed in different nations concerning the beauty of the human shape and countenance ? A fair complexion is a shocking deformity upon the coast of Guinea. Thick lips and a flat nose are a beauty. In some nations long ears that hang down upon the shoulders are the objects of universal admiration. In China if a lady's foot is so large as to be fit to walk upon, she is regarded as a monster of ugliness. Some of the savage nations in North-America tie four boards round the heads of their children, and thus squeeze them, while the bones are tender and gristly, into a form that is almost perfectly square. Europeans are astonished at the absurd barbarity of this practice, to which some missionaries have imputed the singular stupidity of those nations among whom it prevails. But when they condemn those savages, they do not reflect that the ladies in Europe had, till within these very few years, been endeavouring, for near a century past, to squeeze the beautiful roundness of their natural shape into a square form of the same kind. And that, notwithstanding the many distortions and diseases which this practice was known to occasion, custom had rendered it agreeable among some of the most civilized nations which, perhaps, the world ever beheld.

Such is the system of this learned and ingenious Father, concerning the nature of beauty; of which the whole charm, according to him, would thus seem to arise from its falling in with the habits which custom had impressed upon the imagination, with regard to things of each particular kind. I cannot, however, be induced to believe that our sense even of external beauty is founded altogether on custom. The utility of any form, its fitness for the useful purposes for which it was intended, evidently recommends it, and renders it agreeable to us, independent of custom. Certain colours are more agreeable than others, and give more delight to the eye the first time it ever beholds them. A smooth surface is more agreeable than a rough one. Variety is more pleasing than a tedious undiversified uniformity. Connected

variety, in which each new appearance seems to be introduced by what went before it, and in which all the adjoining parts seem to have some natural relation to one another, is more agreeable than a disjointed and disorderly assemblage of unconnected objects. But though I cannot admit that custom is the sole principle of beauty, yet I can so far allow the truth of this ingenious system as to grant, that there is scarce any one external form so beautiful as to please, if quite contrary to custom and unlike whatever we have been used to in that particular species of things: or so deformed as not to be agreeable, if custom uniformly supports it, and habituates us to see it in every single individual of the kind.

Chap. II Of the Influence of Custom and Fashion upon Moral Sentiments

Since our sentiments concerning beauty of every kind, are so much influenced by custom and fashion, it cannot be expected, that those, concerning the beauty of conduct, should be entirely exempted from the dominion of those principles. Their influence here, however, seems to be much less than it is every where else. There is, perhaps, no form of external objects, how absurd and fantastical soever, to which custom will not reconcile us, or which fashion will not render even agreeable. But the characters and conduct of a Nero, or a Claudius, are what no custom will ever reconcile us to, what no fashion will ever render agreeable; but the one will always be the object of dread and hatred; the other of scorn and derision. The principles of the imagination, upon which our sense of beauty depends, are of a very nice and delicate nature, and may easily be altered by habit and education: but the sentiments of moral approbation and disapprobation, are founded on the strongest and most vigorous passions of human nature; and though they may be somewhat warped, cannot be entirely perverted.

But though the influence of custom and fashion upon moral sentiments, is not altogether so great, it is however perfectly similar to what it is every where else. When custom and fashion coincide with the natural principles of right and wrong, they heighten the delicacy of our sentiments, and increase our abhorrence for every thing which approaches to evil. Those who have been educated in what is really good company, not in what is commonly called such, who have been accustomed to see nothing in the persons whom they esteemed and lived with, but justice, modesty, humanity, and good order, are more shocked with whatever seems to be inconsistent with the rules which those virtues prescribe. Those, on the contrary, who have had the misfortune to be brought up amidst violence, licentiousness, falsehood, and injustice; lose, though not all sense of the impropriety of such conduct, yet all sense of its dreadful enormity, or of the vengeance and punishment due to it. They have been familiarized with it from their infancy, custom has rendered it habitual to them, and they are very apt to regard it as, what is called, the way of the world, something which either may, or must be practised, to hinder us from being the dupes of our own integrity.

Fashion too will sometimes give reputation to a certain degree of disorder, and, on the contrary, discountenance qualities which deserve esteem. In the reign of Charles II. a degree of licentiousness was deemed the characteristic of a liberal education. It was connected, according to the notions of those times, with generosity, sincerity, magnanimity, loyalty, and proved that the person who acted in this manner, was a gentleman, and not a puritan. Severity of manners, and regularity of conduct, on the other hand, were altogether unfashionable, and were connected, in the imagination of that age, with cant, cunning, hypocrisy, and low manners. To superficial minds, the vices of the great seem at all times agreeable. They connect them, not only with the splendour of fortune, but with many superior virtues, which they ascribe to their superiors; with the spirit of

freedom and independency, with frankness, generosity, humanity, and politeness. The virtues of the inferior ranks of people, on the contrary, their parsimonious frugality, their painful industry, and rigid adherence to rules, seem to them mean and disagreeable. They connect them, both with the meanness of the station to which those qualities commonly belong, and with many great vices, which, they suppose, usually accompany them; such as an abject, cowardly, ill-natured, lying, pilfering disposition.

The objects with which men in the different professions and states of life are conversant, being very different, and habituating them to very different passions, naturally form in them very different characters and manners. We expect in each rank and profession, a degree of those manners, which, experience has taught us, belong to it. But as in each species of things, we are particularly pleased with the middle conformation, which, in every part and feature, agrees most exactly with the general standard which nature seems to have established for things of that kind; so in each rank, or, if I may say so, in each species of men, we are particularly pleased, if they have neither too much, nor too little of the character which usually accompanies their particular condition and situation. A man, we say, should look like his trade and profession; yet the pedantry of every profession is disagreeable. The different periods of life have, for the same reason, different manners assigned to them. We expect in old age, that gravity and sedateness which its infirmities, its long experience, and its worn-out sensibility seem to render both natural and respectable; and we lay our account to find in youth that sensibility, that gaiety and sprightly vivacity which experience teaches us to expect from the lively impressions that all interesting objects are apt to make upon the tender and unpractised senses of that early period of life. Each of those two ages, however, may easily have too much of the peculiarities which belong to it. The flirting levity of youth, and the immovable insensibility of old age, are equally

disagreeable. The young, according to the common saying, are most agreeable when in their behaviour there is something of the manners of the old, and the old, when they retain something of the gaiety of the young. Either of them, however, may easily have too much of the manners of the other. The extreme coldness, and dull formality, which are pardoned in old age, make youth ridiculous. The levity, the carelessness, and the vanity, which are indulged in youth, render old age contemptible.

The peculiar character and manners which we are led by custom to appropriate to each rank and profession, have sometimes perhaps a propriety independent of custom; and are what we should approve of for their own sakes, if we took into consideration all the different circumstances which naturally affect those in each different state of life. The propriety of a person's behaviour, depends not upon its suitableness to any one circumstance of his situation, but to all the circumstances, which, when we bring his case home to ourselves, we feel, should naturally call upon his attention. If he appears to be so much occupied by any one of them, as entirely to neglect the rest, we disapprove of his conduct, as something which we cannot entirely go along with, because not properly adjusted to all the circumstances of his situation: yet, perhaps, the emotion he expresses for the object which principally interests him, does not exceed what we should entirely sympathize with, and approve of, in one whose attention was not required by any other thing. A parent in private life might, upon the loss of an only son, express without blame a degree of grief and tenderness, which would be unpardonable in a general at the head of an army, when glory, and the public safety, demanded so great a part of his attention. As different objects ought, upon common occasions, to occupy the attention of men of different professions, so different passions ought naturally to become habitual to them; and when we bring home to ourselves their situation in this particular respect, we must be sensible, that every occurrence should naturally affect them

more or less, according as the emotion which it excites, coincides or disagrees with the fixt habit and temper of their minds. We cannot expect the same sensibility to the gay pleasures and amusements of life in a clergyman, which we lay our account with in an officer. The man whose peculiar occupation it is to keep the world in mind of that awful futurity which awaits them, who is to announce what may be the fatal consequences of every deviation from the rules of duty, and who is himself to set the example of the most exact conformity, seems to be the messenger of tidings, which cannot, in propriety, be delivered either with levity or indifference. His mind is supposed to be continually occupied with what is too grand and solemn, to leave any room for the impressions of those frivolous objects, which fill up the attention of the dissipated and the gay. We readily feel therefore, that, independent of custom, there is a propriety in the manners which custom has allotted to this profession; and that nothing can be more suitable to the character of a clergyman than that grave, that austere and abstracted severity, which we are habituated to expect in his behaviour. These reflections are so very obvious, that there is scarce any man so inconsiderate, as not, at some time, to have made them, and to have accounted to himself in this manner for his approbation of the usual character of this order.

The foundation of the customary character of some other professions is not so obvious, and our approbation of it is founded entirely in habit, without being either confirmed, or enlivened by any reflections of this kind. We are led by custom, for example, to annex the character of gaiety, levity, and sprightly freedom, as well as of some degree of dissipation, to the military profession. Yet, if we were to consider what mood or tone of temper would be most suitable to this situation, we should be apt to determine, perhaps, that the most serious and thoughtful turn of mind would best become those whose lives are continually exposed to uncommon danger, and who should therefore be more constantly occupied with the thoughts of death and

its consequences than other men. It is this very circumstance, however, which is not improbably the occasion why the contrary turn of mind prevails so much among men of this profession. It requires so great an effort to conquer the fear of death, when we survey it with steadiness and attention, that those who are constantly exposed to it, find it easier to turn away their thoughts from it altogether, to wrap themselves up in careless security and indifference, and to plunge themselves, for this purpose, into every sort of amusement and dissipation. A camp is not the element of a thoughtful or a melancholy man: persons of that cast, indeed, are often abundantly determined, and are capable, by a great effort, of going on with inflexible resolution to the most unavoidable death. But to be exposed to continual, though less imminent danger, to be obliged to exert, for a long time, a degree of this effort, exhausts and depresses the mind, and renders it incapable of all happiness and enjoyment. The gay and careless, who have occasion to make no effort at all, who fairly resolve never to look before them, but to lose in continual pleasures and amusements all anxiety about their situation, more easily support such circumstances. Whenever, by any peculiar circumstances, an officer has no reason to lay his account with being exposed to any uncommon danger, he is very apt to lose the gaiety and dissipated thoughtlessness of his character. The captain of a city guard is commonly as sober, careful, and penurious an animal as the rest of his fellow-citizens. A long peace is, for the same reason, very apt to diminish the difference between the civil and the military character. The ordinary situation, however, of men of this profession, renders gaiety, and a degree of dissipation, so much their usual character; and custom has, in our imagination, so strongly connected this character with this state of life, that we are very apt to despise any man, whose peculiar humour or situation, renders him incapable of acquiring it. We laugh at the grave and careful faces of a city guard, which so little resemble those of their profession. They themselves seem often to be ashamed of the regularity of their own manners, and, not to be out of

the fashion of their trade, are fond of affecting that levity, which is by no means natural to them. Whatever is the deportment which we have been accustomed to see in a respectable order of men, it comes to be so associated in our imagination with that order, that whenever we see the one, we lay our account that we are to meet with the other, and when disappointed, miss something which we expected to find. We are embarrassed, and put to a stand, and know not how to address ourselves to a character, which plainly affects to be of a different species from those with which we should have been disposed to class it.

The different situations of different ages and countries are apt, in the same manner, to give different characters to the generality of those who live in them, and their sentiments concerning the particular degree of each quality, that is either blamable or praise-worthy, vary, according to that degree which is usual in their own country, and in their own times. That degree of politeness, which would be highly esteemed, perhaps would be thought effeminate adulation, in Russia, would be regarded as rudeness and barbarism at the court of France. That degree of order and frugality, which, in a Polish nobleman, would be considered as excessive parsimony, would be regarded as extravagance in a citizen of Amsterdam. Every age and country look upon that degree of each quality, which is commonly to be met with in those who are esteemed among themselves, as the golden mean of that particular talent or virtue. And as this varies, according as their different circumstances render different qualities more or less habitual to them, their sentiments concerning the exact propriety of character and behaviour vary accordingly.

Among civilized nations, the virtues which are founded upon humanity, are more cultivated than those which are founded upon self-denial and the command of the passions. Among rude and barbarous nations, it is quite otherwise, the virtues of self-denial are

more cultivated than those of humanity. The general security and happiness which prevail in ages of civility and politeness, afford little exercise to the contempt of danger, to patience in enduring labour, hunger, and pain. Poverty may easily be avoided, and the contempt of it therefore almost ceases to be a virtue. The abstinence from pleasure becomes less necessary, and the mind is more at liberty to unbend itself, and to indulge its natural inclinations in all those particular respects.

Among savages and barbarians it is quite otherwise. Every savage undergoes a sort of Spartan discipline, and by the necessity of his situation is inured to every sort of hardship. He is in continual danger: he is often exposed to the greatest extremities of hunger, and frequently dies of pure want. His circumstances not only habituate him to every sort of distress, but teach him to give way to none of the passions which that distress is apt to excite. He can expect from his countrymen no sympathy or indulgence for such weakness. Before we can feel much for others, we must in some measure be at ease ourselves. If our own misery pinches us very severely, we have no leisure to attend to that of our neighbour: and all savages are too much occupied with their own wants and necessities, to give much attention to those of another person. A savage, therefore, whatever be the nature of his distress, expects no sympathy from those about him, and disdains, upon that account, to expose himself, by allowing the least weakness to escape him. His passions, how furious and violent soever, are never permitted to disturb the serenity of his countenance or the composure of his conduct and behaviour. The savages in North America, we are told, assume upon all occasions the greatest indifference, and would think themselves degraded if they should ever appear in any respect to be overcome, either by love, or grief, or resentment. Their magnanimity and self-command, in this respect, are almost beyond the conception of Europeans. In a country in which all men are upon a level, with regard to rank and fortune, it might be

expected that the mutual inclinations of the two parties should be the only thing considered in marriages, and should be indulged without any sort of control. This, however, is the country in which all marriages, without exception, are made up by the parents, and in which a young man would think himself disgraced for ever, if he shewed the least preference of one woman above another, or did not express the most complete indifference, both about the time when, and the person to whom, he was to be married. The weakness of love, which is so much indulged in ages of humanity and politeness, is regarded among savages as the most unpardonable effeminacy. Even after the marriage, the two parties seem to be ashamed of a connexion which is founded upon so sordid a necessity. They do not live together. They see one another by stealth only. They both continue to dwell in the houses of their respective fathers, and the open cohabitation of the two sexes, which is permitted without blame in all other countries, is here considered as the most indecent and unmanly sensuality. Nor is it only over this agreeable passion that they exert this absolute self-command. They often bear, in the sight of all their countrymen, with injuries, reproach, and the grossest insults, with the appearance of the greatest insensibility, and without expressing the smallest resentment. When a savage is made prisoner of war, and receives, as is usual, the sentence of death from his conquerors, he hears it without expressing any emotion, and afterwards submits to the most dreadful torments, without ever bemoaning himself, or discovering any other passion but contempt of his enemies. While he is hung by the shoulders over a slow fire, he derides his tormentors, and tells them with how much more ingenuity he himself had tormented such of their countrymen as had fallen into his hands. After he has been scorched and burnt, and lacerated in all the most tender and sensible parts of his body for several hours together, he is often allowed, in order to prolong his misery, a short respite, and is taken down from the stake: he employs this interval in talking upon all indifferent subjects, inquires after the news of the country, and seems

indifferent about nothing but his own situation. The spectators express the same insensibility; the sight of so horrible an object seems to make no impression upon them; they scarce look at the prisoner, except when they lend a hand to torment him. At other times they smoke tobacco, and amuse themselves with any common object, as if no such matter was going on. Every savage is said to prepare himself from his earliest youth for this dreadful end. He composes, for this purpose, what they call the song of death, a song which he is to sing when he has fallen into the hands of his enemies, and is expiring under the tortures which they inflict upon him. It consists of insults upon his tormentors, and expresses the highest contempt of death and pain. He sings this song upon all extraordinary occasions, when he goes out to war, when he meets his enemies in the field, or whenever he has a mind to show that he has familiarised his imagination to the most dreadful misfortunes, and that no human event can daunt his resolution, or alter his purpose. The same contempt of death and torture prevails among all other savage nations. There is not a negro from the coast of Africa who does not, in this respect, possess a degree of magnanimity which the soul of his sordid master is too often scarce capable of conceiving. Fortune never exerted more cruelly her empire over mankind, than when she subjected those nations of heroes to the refuse of the jails of Europe, to wretches who possess the virtues neither of the countries which they come from, nor of those which they go to, and whose levity, brutality, and baseness, so justly expose them to the contempt of the vanquished. [6]

This heroic and unconquerable firmness, which the custom and education of his country demand of every savage, is not required of those who are brought up to live in civilized societies. If these last complain when they are in pain, if they grieve when they are in distress, if they allow themselves either to be overcome by love, or to be discomposed by anger, they are easily pardoned. Such weaknesses are not apprehended to affect the essential parts of their character. As

long as they do not allow themselves to be transported to do any thing contrary to justice or humanity, they lose but little reputation, though the serenity of their countenance, or the composure of their discourse and behaviour, should be somewhat ruffled and disturbed. A humane and polished people, who have more sensibility to the passions of others, can more readily enter into an animated and passionate behaviour, and can more easily pardon some little excess. The person principally concerned is sensible of this; and being assured of the equity of his judges, indulges himself in stronger expressions of passion, and is less afraid of exposing himself to their contempt by the violence of his emotions. We can venture to express more emotion in the presence of a friend than in that of a stranger, because we expect more indulgence from the one than from the other. And in the same manner the rules of decorum among civilized nations, admit of a more animated behaviour, than is approved of among barbarians. The first converse together with the openness of friends; the second with the reserve of strangers. The emotion and vivacity with which the French and the Italians, the two most polished nations upon the continent, express themselves on occasions that are at all interesting, surprise at first those strangers who happen to be travelling among them, and who, having been educated among a people of duller sensibility, cannot enter into this passionate behaviour, of which they have never seen any example in their own country. A young French nobleman will weep in the presence of the whole court upon being refused a regiment. An Italian, says the abbot D Bos, expresses more emotion on being condemned in a fine of twenty shillings, than an Englishman on receiving the sentence of death.^[7] Cicero, in the times of the highest Roman politeness, could, without degrading himself, weep with all the bitterness of sorrow in the sight of the whole senate and the whole people; as it is evident he must have done in the end of almost every oration. The orators of the earlier and ruder ages of Rome could not probably, consistent with the manners of the times, have expressed themselves with so much emotion. It would have been regarded, I

suppose, as a violation of nature and propriety in the Scipios, in the Leliuses, and in the elder Cato, to have exposed so much tenderness to the view of the public.^[8] Those ancient warriors could express themselves with order, gravity, and good judgment; but are said to have been strangers to that sublime and passionate eloquence which was first introduced into Rome, not many years before the birth of Cicero, by the two Gracchi, by Crassus, and by Sulpitius. This animated eloquence, which has been long practised, with or without success, both in France and Italy, is but just beginning to be introduced into England. So wide is the difference between the degrees of self-command which are required in civilized and in barbarous nations, and by such different standards do they judge of the propriety of behaviour.

This difference gives occasion to many others that are not less essential. A polished people being accustomed to give way, in some measure, to the movements of nature, become frank, open, and sincere. Barbarians, on the contrary, being obliged to smother and conceal the appearance of every passion, necessarily acquire the habits of falsehood and dissimulation. It is observed by all those who have been conversant with savage nations, whether in Asia, Africa, or America, that they are all equally impenetrable, and that, when they have a mind to conceal the truth, no examination is capable of drawing it from them. They cannot be trepanned by the most artful questions. The torture itself is incapable of making them confess any thing which they have no mind to tell. The passions of a savage too, though they never express themselves by any outward emotion, but lie concealed in the breast of the sufferer, are, notwithstanding, all mounted to the highest pitch of fury. Though he seldom shows any symptoms of anger, yet his vengeance, when he comes to give way to it, is always sanguinary and dreadful. The least affront drives him to despair. His countenance and discourse indeed are still sober and composed, and express nothing but the most perfect tranquillity of

mind: but his actions are often the most furious and violent. Among the North-Americans it is not uncommon for persons of the tenderest age and more fearful sex to drown themselves upon receiving only a slight reprimand from their mothers, and this too without expressing any passion, or saying any thing, except, you shall no longer have a daughter. In civilized nations the passions of men are not commonly so furious or so desperate. They are often clamorous and noisy, but are seldom very hurtful; and seem frequently to aim at no other satisfaction, but that of convincing the spectator, that they are in the right to be so much moved, and of procuring his sympathy and approbation.

图V—2 : Jean-Baptiste Du Bos (1670—1742)

All these effects of custom and fashion, however, upon the moral sentiments of mankind, are inconsiderable, in comparison of those which they give occasion to in some other cases; and it is not concerning the general style of character and behaviour, that those principles produce the greatest perversion of judgment, but concerning the propriety or impropriety of particular usages.

The different manners which custom teaches us to approve of in

the different professions and states of life, do not concern things of the greatest importance. We expect truth and justice from an old man as well as from a young, from a clergyman as well as from an officer; and it is in matters of small moment only that we look for the distinguishing marks of their respective characters. With regard to these too, there is often some unobserved circumstance which, if it was attended to, would show us, that, independent of custom, there was a propriety in the character which custom had taught us to allot to each profession. We cannot complain, therefore, in this case, that the perversion of natural sentiment is very great. Though the manners of different nations require different degrees of the same quality, in the character which they think worthy of esteem, yet the worst that can be said to happen even here, is that the duties of one virtue are sometimes extended so as to encroach a little upon the precincts of some other. The rustic hospitality that is in fashion among the Poles encroaches, perhaps, a little upon economy and good order; and the frugality that is esteemed in Holland, upon generosity and good-fellowship. The hardiness demanded of savages diminishes their humanity; and, perhaps, the delicate sensibility required in civilized nations sometimes destroys the masculine firmness of the character. In general, the style of manners which takes place in any nation, may commonly upon the whole be said to be that which is most suitable to its situation. Hardiness is the character most suitable to the circumstances of a savage; sensibility to those of one who lives in a very civilized society. Even here, therefore, we cannot complain that the moral sentiments of men are very grossly perverted.

It is not therefore in the general style of conduct or behaviour that custom authorises the widest departure from what is the natural propriety of action. With regard to particular usages, its influence is often much more destructive of good morals, and it is capable of establishing, as lawful and blameless, particular actions, which shock the plainest principles of right and wrong.

Can there be greater barbarity for example, than to hurt an infant? Its helplessness, its innocence, its amiableness, call forth the compassion, even of an enemy, and not to spare that tender age is regarded as the most furious effort of an enraged and cruel conqueror. What then should we imagine must be the heart of a parent who could injure that weakness which even a furious enemy is afraid to violate? Yet the exposition, that is, the murder of new-born infants, was a practice allowed of in almost all the states of Greece, even among the polite and civilized Athenians; and whenever the circumstances of the parent rendered it inconvenient to bring up the child, to abandon it to hunger, or to wild beasts, was regarded without blame or censure. This practice had probably begun in times of the most savage barbarity. The imaginations of men had been first made familiar with it in that earliest period of society, and the uniform continuance of the custom had hindered them afterwards from perceiving its enormity. We find, at this day, that this practice prevails among all savage nations; and in that rudest and lowest state of society it is undoubtedly more pardonable than in any other. The extreme indigence of a savage is often such that he himself is frequently exposed to the greatest extremity of hunger, he often dies of pure want, and it is frequently impossible for him to support both himself and his child. We cannot wonder, therefore, that in this case he should abandon it. One who, in flying from an enemy, whom it was impossible to resist, should throw down his infant, because it retarded his flight, would surely be excusable; since, by attempting to save it, he could only hope for the consolation of dying with it. That in this state of society, therefore, a parent should be allowed to judge whether he can bring up his child, ought not to surprise us so greatly. In the latter ages of Greece, however, the same thing was permitted from views of remote interest or conveniency, which could by no means excuse it. Uninterrupted custom had by this time so thoroughly authorised the practice, that not only the loose maxims of the world tolerated this barbarous prerogative, but even the doctrine of

philosophers, which ought to have been more just and accurate, was led away by the established custom, and upon this, as upon many other occasions, instead of censuring, supported the horrible abuse, by far-fetched considerations of public utility. Aristotle talks of it as of what the magistrate ought upon many occasions to encourage. The humane Plato is of the same opinion, and, with all that love of mankind which seems to animate all his writings, nowhere marks this practice with disapprobation. When custom can give sanction to so dreadful a violation of humanity, we may well imagine that there is scarce any particular practice so gross which it cannot authorise. Such a thing, we hear men every day saying, is commonly done, and they seem to think this a sufficient apology for what, in itself, is the most unjust and unreasonable conduct.

There is an obvious reason why custom should never pervert our sentiments with regard to the general style and character of conduct and behaviour, in the same degree as with regard to the propriety or unlawfulness of particular usages. There never can be any such custom. No society could subsist a moment, in which the usual strain of men's conduct and behaviour was of a piece with the horrible practice I have just now mentioned.

[1] Part VI Of the Character of Virtue

Introduction

When we consider the character of any individual, we naturally view it under two different aspects; first, as it may affect his own happiness; and secondly, as it may affect that of other people.

Section I Of the Character of the Individual, so far as it affects his own Happiness; or of Prudence

The preservation and healthful state of the body seem to be the objects which Nature first recommends to the care of every individual. The appetites of hunger and thirst, the agreeable or disagreeable sensations of pleasure and pain, of heat and cold, etc. may be considered as lessons delivered by the voice of Nature herself, directing him what he ought to chuse, and what he ought to avoid, for this purpose. The first lessons which he is taught by those to whom his childhood is entrusted, tend, the greater part of them, to the same purpose. Their principal object is to teach him how to keep out of harm's way.

As he grows up, he soon learns that some care and foresight are necessary for providing the means of gratifying those natural appetites, of procuring pleasure and avoiding pain, of procuring the agreeable and avoiding the disagreeable temperature of heat and cold. In the proper direction of this care and foresight consists the art of preserving and increasing what is called his external fortune.

Though it is in order to supply the necessities and conveniencies of the body, that the advantages of external fortune are originally recommended to us, yet we cannot live long in the world without perceiving that the respect of our equals, our credit and rank in the society we live in, depend very much upon the degree in which we possess, or are supposed to possess, those advantages. The desire of becoming the proper objects of this respect, of deserving and obtaining this credit and rank among our equals, is, perhaps, the strongest of all our desires, and our anxiety to obtain the advantages of fortune is accordingly much more excited and irritated by this

desire, than by that of supplying all the necessities and conveniencies of the body, which are always very easily supplied.

Our rank and credit among our equals, too, depend very much upon, what, perhaps, a virtuous man would wish them to depend entirely, our character and conduct, or upon the confidence, esteem, and good-will, which these naturally excite in the people we live with.

The care of the health, of the fortune, of the rank and reputation of the individual, the objects upon which his comfort and happiness in this life are supposed principally to depend, is considered as the proper business of that virtue which is commonly called Prudence.

We suffer more, it has already been observed,^[2] when we fall from a better to a worse situation, than we ever enjoy when we rise from a worse to a better. Security, therefore, is the first and the principal object of prudence. It is averse to expose our health, our fortune, our rank, or reputation, to any sort of hazard. It is rather cautious than enterprising, and more anxious to preserve the advantages which we already possess, than forward to prompt us to the acquisition of still greater advantages. The methods of improving our fortune, which it principally recommends to us, are those which expose to no loss or hazard; real knowledge and skill in our trade or profession, assiduity and industry in the exercise of it, frugality, and even some degree of parsimony, in all our expences.

The prudent man always studies seriously and earnestly to understand whatever he professes to understand, and not merely to persuade other people that he understands it; and though his talents may not always be very brilliant, they are always perfectly genuine. He neither endeavours to impose upon you by the cunning devices of an artful impostor, nor by the arrogant airs of an assuming pedant, nor by the confident assertions of a superficial and imprudent pretender. He is not ostentatious even of the abilities which he really

possesses. His conversation is simple and modest, and he is averse to all the quackish arts by which other people so frequently thrust themselves into public notice and reputation. For reputation in his profession he is naturally disposed to rely a good deal upon the solidity of his knowledge and abilities; and he does not always think of cultivating the favour of those little clubs and cabals, who, in the superior arts and sciences, so often erect themselves into the supreme judges of merit; and who make it their business to celebrate the talents and virtues of one another, and to decry whatever can come into competition with them. If he ever connects himself with any society of this kind, it is merely in self-defence, not with a view to impose upon the public, but to hinder the public from being imposed upon, to his disadvantage, by the clamours, the whispers, or the intrigues, either of that particular society, or of some other of the same kind.

The prudent man is always sincere, and feels horror at the very thought of exposing himself to the disgrace which attends upon the detection of falsehood. But though always sincere, he is not always frank and open; and though he never tells any thing but the truth, he does not always think himself bound, when not properly called upon, to tell the whole truth. As he is cautious in his actions, so he is reserved in his speech; and never rashly or unnecessarily obtrudes his opinion concerning either things or persons.

The prudent man, though not always distinguished by the most exquisite sensibility, is always very capable of friendship. But his friendship is not that ardent and passionate, but too often transitory affection, which appears so delicious to the generosity of youth and inexperience. It is a sedate, but steady and faithful attachment to a few well-tried and well-chosen companions; in the choice of whom he is not guided by the giddy admiration of shining accomplishments, but by the sober esteem of modesty, discretion, and good conduct. But

though capable of friendship, he is not always much disposed to general sociality. He rarely frequents, and more rarely figures in those convivial societies which are distinguished for the jollity and gaiety of their conversation. Their way of life might too often interfere with the regularity of his temperance, might interrupt the steadiness of his industry, or break in upon the strictness of his frugality.

But though his conversation may not always be very sprightly or diverting, it is always perfectly inoffensive. He hates the thought of being guilty of any petulance or rudeness. He never assumes impertinently over any body, and, upon all common occasions, is willing to place himself rather below than above his equals. Both in his conduct and conversation, he is an exact observer of decency, and respects with an almost religious scrupulosity, all the established decorums and ceremonials of society. And, in this respect, he sets a much better example than has frequently been done by men of much more splendid talents and virtues; who, in all ages, from that of Socrates and Aristippus,^[3] down to that of Dr Swift and Voltaire, and from that of Philip and Alexander the Great, down to that of the great Czar Peter of Moscovy, have too often distinguished themselves by the most improper and even insolent contempt of all the ordinary decorums of life and conversation, and who have thereby set the most pernicious example to those who wish to resemble them, and who too often content themselves with imitating their follies, without even attempting to attain their perfections.

In the steadiness of his industry and frugality, in his steadily sacrificing the ease and enjoyment of the present moment for the probable expectation of the still greater ease and enjoyment of a more distant but more lasting period of time, the prudent man is always both supported and rewarded by the entire approbation of the impartial spectator, and of the representative of the impartial spectator, the man within the breast. The impartial spectator does not

feel himself worn out by the present labour of those whose conduct he surveys; nor does he feel himself solicited by the importunate calls of their present appetites. To him their present, and what is likely to be their future situation, are very nearly the same: he sees them nearly at the same distance, and is affected by them very nearly in the same manner. He knows, however, that to the persons principally concerned, they are very far from being the same, and that they naturally affect them in a very different manner. He cannot therefore but approve, and even applaud, that proper exertion of self-command, which enables them to act as if their present and their future situation affected them nearly in the same manner in which they affect him.

The man who lives within his income, is naturally contented with his situation, which, by continual, though small accumulations, is growing better and better every day. He is enabled gradually to relax, both in the rigour of his parsimony and in the severity of his application; and he feels with double satisfaction this gradual increase of ease and enjoyment, from having felt before the hardship which attended the want of them. He has no anxiety to change so comfortable a situation, and does not go in quest of new enterprises and adventures, which might endanger, but could not well increase, the secure tranquillity which he actually enjoys. If he enters into any new projects or enterprises, they are likely to be well concerted and well prepared. He can never be hurried or drove into them by any necessity, but has always time and leisure to deliberate soberly and coolly concerning what are likely to be their consequences.

The prudent man is not willing to subject himself to any responsibility which his duty does not impose upon him. He is not a bustler in business where he has no concern; is not a meddler in other people's affairs; is not a professed counsellor or adviser, who obtrudes his advice where nobody is asking it. He confines himself, as much as his duty will permit, to his own affairs, and has no taste for that

foolish importance which many people wish to derive from appearing to have some influence in the management of those of other people. He is averse to enter into any party disputes, hates faction, and is not always very forward to listen to the voice even of noble and great ambition. When distinctly called upon, he will not decline the service of his country, but he will not cabal in order to force himself into it; and would be much better pleased that the public business were well managed by some other person, than that he himself should have the trouble, and incur the responsibility, of managing it. In the bottom of his heart he would prefer the undisturbed enjoyment of secure tranquillity, not only to all the vain splendour of successful ambition, but to the real and solid glory of performing the greatest and most magnanimous actions.

Prudence, in short, when directed merely to the care of the health, of the fortune, and of the rank and reputation of the individual, though it is regarded as a most respectable and even, in some degree, as an amiable and agreeable quality, yet it never is considered as one, either of the most endearing, or of the most ennobling of the virtues. It commands a certain cold esteem, but seems not entitled to any very ardent love or admiration.

Wise and judicious conduct, when directed to greater and nobler purposes than the care of the health, the fortune, the rank and reputation of the individual, is frequently and very properly called prudence. We talk of the prudence of the great general, of the great statesman, of the great legislator. Prudence is, in all these cases, combined with many greater and more splendid virtues, with valour, with extensive and strong benevolence, with a sacred regard to the rules of justice, and all these supported by a proper degree of self-command. This superior prudence, when carried to the highest degree of perfection, necessarily supposes the art, the talent, and the habit or disposition of acting with the most perfect propriety in every possible

circumstance and situation. It necessarily supposes the utmost perfection of all the intellectual and of all the moral virtues. It is the best head joined to the best heart. It is the most perfect wisdom combined with the most perfect virtue. It constitutes very nearly the character of the Academical or Peripatetic^[4] sage, as the inferior prudence does that of the Epicurean.

Mere imprudence, or the mere want of the capacity to take care of one's-self, is, with the generous and humane, the object of compassion; with those of less delicate sentiments, of neglect, or, at worst, of contempt, but never of hatred or indignation. When combined with other vices, however, it aggravates in the highest degree the infamy and disgrace which would otherwise attend them. The artful knave, whose dexterity and address exempt him, though not from strong suspicions, yet from punishment or distinct detection, is too often received in the world with an indulgence which he by no means deserves. The awkward and foolish one, who, for want of this dexterity and address, is convicted and brought to punishment, is the object of universal hatred, contempt, and derision. In countries where great crimes frequently pass unpunished, the most atrocious actions become almost familiar, and cease to impress the people with that horror which is universally felt in countries where an exact administration of justice takes place. The injustice is the same in both countries; but the imprudence is often very different. In the latter, great crimes are evidently great follies. In the former, they are not always considered as such. In Italy, during the greater part of the sixteenth century, assassinations, murders, and even murders under trust, seem to have been almost familiar among the superior ranks of people. Caesar Borgia invited four of the little princes in his neighbourhood, who all possessed little sovereignties, and commanded little armies of their own, to a friendly conference at Senigaglia, where, as soon as they arrived, he put them all to death.^[5] This infamous action, though certainly not approved of even in that

age of crimes, seems to have contributed very little to the discredit, and not in the least to the ruin of the perpetrator. That ruin happened a few years after from causes altogether disconnected with this crime. Machiavel, not indeed a man of the nicest morality even for his own times, was resident, as minister from the republic of Florence, at the court of Caesar Borgia when this crime was committed. He gives a very particular account of it,^[6] and in that pure, elegant, and simple language which distinguishes all his writings. He talks of it very coolly; is pleased with the address with which Caesar Borgia conducted it; has much contempt for the dupery and weakness of the sufferers; but no compassion for their miserable and untimely death, and no sort of indignation at the cruelty and falsehood of their murderer. The violence and injustice of great conquerors are often regarded with foolish wonder and admiration; those of petty thieves, robbers, and murderers, with contempt, hatred, and even horror upon all occasions. The former, though they are a hundred times more mischievous and destructive, yet when successful, they often pass for deeds of the most heroic magnanimity. The latter are always viewed with hatred and aversion, as the follies, as well as the crimes, of the lowest and most worthless of mankind. The injustice of the former is certainly, at least, as great as that of the latter; but the folly and imprudence are not near so great. A wicked and worthless man of parts often goes through the world with much more credit than he deserves. A wicked and worthless fool appears always, of all mortals, the most hateful, as well as the most contemptible. As prudence combined with other virtues, constitutes the noblest; so imprudence combined with other vices, constitutes the vilest of all characters.

Section II Of the Character of the Individual, so far as it can affect the Happiness of other People

The character of every individual, so far as it can affect the happiness of other people, must do so by its disposition either to hurt or to benefit them.

Proper resentment for injustice attempted, or actually committed, is the only motive which, in the eyes of the impartial spectator, can justify our hurting or disturbing in any respect the happiness of our neighbour. To do so from any other motive is itself a violation of the laws of justice, which force ought to be employed either to restrain or to punish. The wisdom of every state or commonwealth endeavours, as well as it can, to employ the force of the society to restrain those who are subject to its authority, from hurting or disturbing the happiness of one another. The rules which it establishes for this purpose, constitute the civil and criminal law of each particular state or country. The principles upon which those rules either are, or ought to be founded, are the subject of a particular science, of all sciences by far the most important, but hitherto, perhaps, the least cultivated, that of natural jurisprudence, concerning which it belongs not to our present subject to enter into any detail. A sacred and religious regard not to hurt or disturb in any respect the happiness of our neighbour, even in those cases where no law can properly protect him, constitutes the character of the perfectly innocent and just man; a character which, when carried to a certain delicacy of attention, is always highly respectable and even venerable for its own sake, and can scarce ever fail to be accompanied with many other virtues, with great feeling for other people, with great humanity and great benevolence. It is a character sufficiently understood, and requires no further explanation. In the present section I shall only endeavour to explain

the foundation of that order which nature seems to have traced out for the distribution of our good offices, or for the direction and employment of our very limited powers of beneficence: first, towards individuals; and secondly, towards societies.

The same unerring wisdom, it will be found, which regulates every other part of her conduct, directs, in this respect too, the order of her recommendations; which are always stronger or weaker in proportion as our beneficence is more or less necessary, or can be more or less useful.

Chap. I Of the Order in which Individuals are recommended by Nature to our care and attention

Every man, as the Stoics used to say, is first and principally recommended to his own care; and every man is certainly, in every respect, fitter and abler to take care of himself than of any other person. Every man feels his own pleasures and his own pains more sensibly than those of other people. The former are the original sensations; the latter the reflected or sympathetic images of those sensations. The former may be said to be the substance; the latter the shadow.

After himself, the members of his own family, those who usually live in the same house with him, his parents, his children, his brothers and sisters, are naturally the objects of his warmest affections. They are naturally and usually the persons upon whose happiness or misery his conduct must have the greatest influence. He is more habituated to sympathize with them. He knows better how every thing is likely to affect them, and his sympathy with them is more precise and determinate, than it can be with the greater part of other people. It approaches nearer, in short, to what he feels for himself.

This sympathy too, and the affections which are founded on it,

are by nature more strongly directed towards his children than towards his parents, and his tenderness for the former seems generally a more active principle, than his reverence and gratitude towards the latter. In the natural state of things, it has already been observed, the existence of the child, for some time after it comes into the world, depends altogether upon the care of the parent; that of the parent does not naturally depend upon the care of the child. In the eye of nature, it would seem, a child is a more important object than an old man; and excites a much more lively, as well as a much more universal sympathy. It ought to do so. Every thing may be expected, or at least hoped, from the child. In ordinary cases, very little can be either expected or hoped from the old man. The weakness of childhood interests the affections of the most brutal and hard-hearted. It is only to the virtuous and humane, that the infirmities of old age are not the objects of contempt and aversion. In ordinary cases, an old man dies without being much regretted by any body. Scarce a child can die without rending asunder the heart of somebody.

The earliest friendships, the friendships which are naturally contracted when the heart is most susceptible of that feeling, are those among brothers and sisters. Their good agreement, while they remain in the same family, is necessary for its tranquillity and happiness. They are capable of giving more pleasure or pain to one another than to the greater part of other people. Their situation renders their mutual sympathy of the utmost importance to their common happiness; and, by the wisdom of nature, the same situation, by obliging them to accommodate to one another, renders that sympathy more habitual, and thereby more lively, more distinct, and more determinate.

The children of brothers and sisters are naturally connected by the friendship which, after separating into different families, continues to take place between their parents. Their good agreement improves

the enjoyment of that friendship; their discord would disturb it. As they seldom live in the same family, however, though of more importance to one another, than to the greater part of other people, they are of much less than brothers and sisters. As their mutual sympathy is less necessary, so it is less habitual, and therefore proportionably weaker.

The children of cousins, being still less connected, are of still less importance to one another; and the affection gradually diminishes as the relation grows more and more remote.

What is called affection, is in reality nothing but habitual sympathy. Our concern in the happiness or misery of those who are the objects of what we call our affections; our desire to promote the one, and to prevent the other; are either the actual feeling of that habitual sympathy, or the necessary consequences of that feeling. Relations being usually placed in situations which naturally create this habitual sympathy, it is expected that a suitable degree of affection should take place among them. We generally find that it actually does take place; we therefore naturally expect that it should; and we are, upon that account, more shocked when, upon any occasion, we find that it does not. The general rule is established, that persons related to one another in a certain degree, ought always to be affected towards one another in a certain manner, and that there is always the highest impropriety, and sometimes even a sort of impiety, in their being affected in a different manner. A parent without parental tenderness, a child devoid of all filial reverence, appear monsters, the objects, not of hatred only, but of horror.

Though in a particular instance, the circumstances which usually produce those natural affections, as they are called, may, by some accident, not have taken place, yet respect for the general rule will frequently, in some measure, supply their place, and produce something which, though not altogether the same, may bear, however,

a very considerable resemblance to those affections.^[7] A father is apt to be less attached to a child, who, by some accident, has been separated from him in its infancy, and who does not return to him till it is grown up to manhood. The father is apt to feel less paternal tenderness for the child; the child, less filial reverence for the father. Brothers and sisters, when they have been educated in distant countries, are apt to feel a similar diminution of affection. With the dutiful and the virtuous, however, respect for the general rule will frequently produce something which, though by no means the same, yet may very much resemble those natural affections. Even during the separation, the father and the child, the brothers or the sisters, are by no means indifferent to one another. They all consider one another as persons to and from whom certain affections are due, and they live in the hopes of being some time or another in a situation to enjoy that friendship which ought naturally to have taken place among persons so nearly connected. Till they meet, the absent son, the absent brother, are frequently the favourite son, the favourite brother. They have never offended, or, if they have, it is so long ago, that the offence is forgotten, as some childish trick not worth the remembering. Every account they have heard of one another, if conveyed by people of any tolerable good nature, has been, in the highest degree, flattering and favourable. The absent son, the absent brother, is not like other ordinary sons and brothers; but an all-perfect son, an all-perfect brother; and the most romantic hopes are entertained of the happiness to be enjoyed in the friendship and conversation of such persons. When they meet, it is often with so strong a disposition to conceive that habitual sympathy which constitutes the family affection, that they are very apt to fancy they have actually conceived it, and to behave to one another as if they had. Time and experience, however, I am afraid, too frequently undeceive them. Upon a more familiar acquaintance, they frequently discover in one another habits, humours, and inclinations, different from what they expected, to which, from want of habitual sympathy, from want of the real

principle and foundation of what is properly called family-affection, they cannot now easily accommodate themselves. They have never lived in the situation which almost necessarily forces that easy accommodation, and though they may now be sincerely desirous to assume it, they have really become incapable of doing so. Their familiar conversation and intercourse soon become less pleasing to them, and, upon that account, less frequent. They may continue to live with one another in the mutual exchange of all essential good offices, and with every other external appearance of decent regard. But that cordial satisfaction, that delicious sympathy, that confidential openness and ease, which naturally take place in the conversation of those who have lived long and familiarly with one another, it seldom happens that they can completely enjoy.

It is only, however, with the dutiful and the virtuous, that the general rule has even this slender authority. With the dissipated, the profligate, and the vain, it is entirely disregarded. They are so far from respecting it, that they seldom talk of it but with the most indecent derision. and an early and long separation of this kind never fails to estrange them most completely from one another. With such persons, respect for the general rule can at best produce only a cold and affected civility (a very slender semblance of real regard) ; and even this, the slightest offence, the smallest opposition of interest, commonly puts an end to altogether.

The education of boys at distant great schools, of young men at distant colleges, of young ladies in distant nunneries and boarding-schools, seems, in the higher ranks of life, to have hurt most essentially the domestic morals, and consequently the domestic happiness, both of France and England.^[8] Do you wish to educate your children to be dutiful to their parents, to be kind and affectionate to their brothers and sisters? put them under the necessity of being dutiful children, of being kind and affectionate brothers and sisters:

educate them in your own house. From their parent's house they may, with propriety and advantage, go out every day to attend public schools: but let their dwelling be always at home. Respect for you must always impose a very useful restraint upon their conduct; and respect for them may frequently impose no useless restraint upon your own. Surely no acquirement, which can possibly be derived from what is called a public education, can make any sort of compensation for what is almost certainly and necessarily lost by it. Domestic education is the institution of nature; public education, the contrivance of man. It is surely unnecessary to say, which is likely to be the wisest.

In some tragedies and romances, we meet with many beautiful and interesting scenes, founded upon, what is called, the force of blood, or upon the wonderful affection which near relations are supposed to conceive for one another, even before they know that they have any such connection. This force of blood, however, I am afraid, exists no-where but in tragedies and romances. Even in tragedies and romances, it is never supposed to take place between any relations, but those who are naturally bred up in the same house; between parents and children, between brothers and sisters. To imagine any such mysterious affection between cousins, or even between aunts or uncles, and nephews or nieces, would be too ridiculous.

In pastoral countries, and in all countries where the authority of law is not alone sufficient to give perfect security to every member of the state, all the different branches of the same family commonly chuse to live in the neighbourhood of one another.^[9] Their association is frequently necessary for their common defence. They are all, from the highest to the lowest, of more or less importance to one another. Their concord strengthens their necessary association; their discord always weakens, and might destroy it. They have more intercourse with one another, than with the members of any other tribe. The

remotest members of the same tribe claim some connection with one another; and, where all other circumstances are equal, expect to be treated with more distinguished attention than is due to those who have no such pretensions. It is not many years ago that, in the Highlands of Scotland, the Chieftain used to consider the poorest man of his clan, as his cousin and relation. The same extensive regard to kindred is said to take place among the Tartars, the Arabs, the Turkomans, and, I believe, among all other nations who are nearly in the same state of society in which the Scots Highlanders were about the beginning of the present century.

In commercial countries, where the authority of law is always perfectly sufficient to protect the meanest man in the state, the descendants of the same family, having no such motive for keeping together, naturally separate and disperse, as interest or inclination may direct. They soon cease to be of importance to one another; and, in a few generations, not only lose all care about one another, but all remembrance of their common origin, and of the connection which took place among their ancestors. Regard for remote relations becomes, in every country, less and less, according as this state of civilization has been longer and more completely established. It has been longer and more completely established in England than in Scotland; and remote relations are, accordingly, more considered in the latter country than in the former, though, in this respect, the difference between the two countries is growing less and less every day. Great lords, indeed, are, in every country, proud of remembering and acknowledging their connection with one another, however remote. The remembrance of such illustrious relations flatters not a little the family pride of them all; and it is neither from affection, nor from any thing which resembles affection, but from the most frivolous and childish of all vanities, that this remembrance is so carefully kept up. Should some more humble, though, perhaps, much nearer kinsman, presume to put such great men in mind of his relation to

their family, they seldom fail to tell him that they are bad genealogists, and miserably ill-informed concerning their own family history. It is not in that order, I am afraid, that we are to expect any extraordinary extension of, what is called, natural affection.

I consider what is called natural affection as more the effect of the moral than of the supposed physical connection between the parent and the child. A jealous husband, indeed, notwithstanding the moral connection, notwithstanding the child's having been educated in his own house, often regards, with hatred and aversion, that unhappy child which he supposes to be the offspring of his wife's infidelity. It is the lasting monument of a most disagreeable adventure; of his own dishonour, and of the disgrace of his family.

Among well-disposed people, the necessity or conveniency of mutual accommodation, very frequently produces a friendship not unlike that which takes place among those who are born to live in the same family. Colleagues in office, partners in trade, call one another brothers; and frequently feel towards one another as if they really were so. Their good agreement is an advantage to all; and, if they are tolerably reasonable people, they are naturally disposed to agree. We expect that they should do so; and their disagreement is a sort of a small scandal. The Romans expressed this sort of attachment by the word *necessitudo*^[10], which, from the etymology, seems to denote that it was imposed by the necessity of the situation.

Even the trifling circumstance of living in the same neighbourhood, has some effect of the same kind. We respect the face of a man whom we see every day, provided he has never offended us. Neighbours can be very convenient, and they can be very troublesome, to one another. If they are good sort of people, they are naturally disposed to agree. We expect their good agreement; and to be a bad neighbour is a very bad character. There are certain small good offices, accordingly, which are universally allowed to be due to a

neighbour in preference to any other person who has no such connection.

This natural disposition to accommodate and to assimilate, as much as we can, our own sentiments, principles, and feelings, to those which we see fixed and rooted in the persons whom we are obliged to live and converse a great deal with, is the cause of the contagious effects of both good and bad company. The man who associates chiefly with the wise and the virtuous, though he may not himself become either wise or virtuous, cannot help conceiving a certain respect at least for wisdom and virtue; and the man who associates chiefly with the profligate and the dissolute, though he may not himself become profligate and dissolute, must soon lose, at least, all his original abhorrence of profligacy and dissolution of manners. The similarity of family characters, which we so frequently see transmitted through several successive generations, may, perhaps, be partly owing to this disposition, to assimilate ourselves to those whom we are obliged to live and converse a great deal with. The family character, however, like the family countenance, seems to be owing, not altogether to the moral, but partly too to the physical connection. The family countenance is certainly altogether owing to the latter.

But of all attachments to an individual, that which is founded altogether upon the esteem and approbation of his good conduct and behaviour, confirmed by much experience and long acquaintance, is, by far, the most respectable. Such friendships, arising not from a constrained sympathy, not from a sympathy which has been assumed and rendered habitual for the sake of conveniency and accommodation; but from a natural sympathy, from an involuntary feeling that the persons to whom we attach ourselves are the natural and proper objects of esteem and approbation; can exist only among men of virtue. Men of virtue only can feel that entire confidence in the conduct and behaviour of one another, which can, at all times, assure

them that they can never either offend or be offended by one another. Vice is always capricious: virtue only is regular and orderly. The attachment which is founded upon the love of virtue, as it is certainly, of all attachments, the most virtuous; so it is likewise the happiest, as well as the most permanent and secure. Such friendships need not be confined to a single person, but may safely embrace all the wise and virtuous, with whom we have been long and intimately acquainted, and upon whose wisdom and virtue we can, upon that account, entirely depend. They who would confine friendship to two persons, seem to confound the wise security of friendship with the jealousy and folly of love. The hasty, fond, and foolish intimacies of young people, founded, commonly, upon some slight similarity of character, altogether unconnected with good conduct, upon a taste, perhaps, for the same studies, the same amusements, the same diversions, or upon their agreement in some singular principle or opinion, not commonly adopted; those intimacies which a freak begins, and which a freak puts an end to, how agreeable soever they may appear while they last, can by no means deserve the sacred and venerable name of friendship.

Of all the persons, however, whom nature points out for our peculiar beneficence, there are none to whom it seems more properly directed than to those whose beneficence we have ourselves already experienced. Nature, which formed men for that mutual kindness, so necessary for their happiness, renders every man the peculiar object of kindness, to the persons to whom he himself has been kind. Though their gratitude should not always correspond to his beneficence, yet the sense of his merit, the sympathetic gratitude of the impartial spectator, will always correspond to it. The general indignation of other people, against the baseness of their ingratitude, will even, sometimes, increase the general sense of his merit. No benevolent man ever lost altogether the fruits of his benevolence. If he does not always gather them from the persons from whom he ought to have gathered them, he seldom fails to gather them, and with a tenfold increase,

from other people. Kindness is the parent of kindness; and if to be beloved by our brethren be the great object of our ambition, the surest way of obtaining it is, by our conduct to show that we really love them.

After the persons who are recommended to our beneficence, either by their connection with ourselves, by their personal qualities, or by their past services, come those who are pointed out, not indeed to, what is called, our friendship, but to our benevolent attention and good offices; those who are distinguished by their extraordinary situation; the greatly fortunate and the greatly unfortunate, the rich and the powerful, the poor and the wretched. The distinction of ranks, the peace and order of society, are, in a great measure, founded upon the respect which we naturally conceive for the former. The relief and consolation of human misery depend altogether upon our compassion for the latter. The peace and order of society, is of more importance than even the relief of the miserable. Our respect for the great, accordingly, is most apt to offend by its excess; our fellow-feeling for the miserable, by its defect. Moralists exhort us to charity and compassion. They warn us against the fascination of greatness. This fascination, indeed, is so powerful, that the rich and the great are too often preferred to the wise and the virtuous. Nature has wisely judged that the distinction of ranks, the peace and order of society, would rest more securely upon the plain and palpable difference of birth and fortune, than upon the invisible and often uncertain difference of wisdom and virtue. The undistinguishing eyes of the great mob of mankind can well enough perceive the former: it is with difficulty that the nice discernment of the wise and the virtuous can sometimes distinguish the latter. In the order of all those recommendations, the benevolent wisdom of nature is equally evident.

It may, perhaps, be unnecessary to observe, that the combination of two, or more, of those exciting causes of kindness, increases the

kindness. The favour and partiality which, when there is no envy in the case, we naturally bear to greatness, are much increased when it is joined with wisdom and virtue. If, notwithstanding that wisdom and virtue, the great man should fall into those misfortunes, those dangers and distresses, to which the most exalted stations are often the most exposed, we are much more deeply interested in his fortune than we should be in that of a person equally virtuous, but in a more humble situation. The most interesting subjects of tragedies and romances are the misfortunes of virtuous and magnanimous kings and princes. If, by the wisdom and manhood of their exertions, they should extricate themselves from those misfortunes, and recover completely their former superiority and security, we cannot help viewing them with the most enthusiastic and even extravagant admiration. The grief which we felt for their distress, the joy which we feel for their prosperity, seem to combine together in enhancing that partial admiration which we naturally conceive both for the station and the character.

When those different beneficent affections happen to draw different ways, to determine by any precise rules in what cases we ought to comply with the one, and in what with the other, is, perhaps, altogether impossible. In what cases friendship ought to yield to gratitude, or gratitude to friendship; in what cases the strongest of all natural affections ought to yield to a regard for the safety of those superiors upon whose safety often depends that of the whole society; and in what cases natural affection may, without impropriety, prevail over that regard; must be left altogether to the decision of the man within the breast, the supposed impartial spectator, the great judge and arbiter of our conduct. If we place ourselves completely in his situation, if we really view ourselves with his eyes, and as he views us, and listen with diligent and reverential attention to what he suggests to us, his voice will never deceive us. We shall stand in need of no casuistic rules to direct our conduct. These it is often impossible to

accommodate to all the different shades and gradations of circumstance, character, and situation, to differences and distinctions which, though not imperceptible, are, by their nicety and delicacy, often altogether undefinable. In that beautiful tragedy of Voltaire, the Orphan of China,^[11] while we admire the magnanimity of Zamti, who is willing to sacrifice the life of his own child, in order to preserve that of the only feeble remnant of his ancient sovereigns and masters; we not only pardon, but love the maternal tenderness of Idame, who, at the risque of discovering the important secret of her husband, reclaims her infant from the cruel hands of the Tartars, into which it had been delivered.

Chap. II Of the order in which Societies are by nature recommended to our Beneficence

The same principles that direct the order in which individuals are recommended to our beneficence, direct that likewise in which societies are recommended to it. Those to which it is, or may be of most importance, are first and principally recommended to it.

The state or sovereignty in which we have been born and educated, and under the protection of which we continue to live, is, in ordinary cases, the greatest society upon whose happiness or misery, our good or bad conduct can have much influence. It is accordingly, by nature, most strongly recommended to us. Not only we ourselves, but all the objects of our kindest affections, our children, our parents, our relations, our friends, our benefactors, all those whom we naturally love and revere the most, are commonly comprehended within it; and their prosperity and safety depend in some measure upon its prosperity and safety. It is by nature, therefore, endeared to us, not only by all our selfish, but by all our private benevolent affections. Upon account of our own connexion with it, its prosperity and glory seem to reflect some sort of honour upon ourselves. When

we compare it with other societies of the same kind, we are proud of its superiority, and mortified in some degree, if it appears in any respect below them. All the illustrious characters which it has produced in former times (for against those of our own times envy may sometimes prejudice us a little) , its warriors, its statesmen, its poets, its philosophers, and men of letters of all kinds; we are disposed to view with the most partial admiration, and to rank them (sometimes most unjustly) above those of all other nations. The patriot who lays down his life for the safety, or even for the vain-glory of this society, appears to act with the most exact propriety. He appears to view himself in the light in which the impartial spectator naturally and necessarily views him, as but one of the multitude, in the eye of that equitable judge, of no more consequence than any other in it, but bound at all times to sacrifice and devote himself to the safety, to the service, and even to the glory of the greater number. But though this sacrifice appears to be perfectly just and proper, we know how difficult it is to make it, and how few people are capable of making it. His conduct, therefore, excites not only our entire approbation, but our highest wonder and admiration, and seems to merit all the applause which can be due to the most heroic virtue. The traitor, on the contrary, who, in some peculiar situation, fancies he can promote his own little interest by betraying to the public enemy that of his native country; who, regardless of the judgment of the man within the breast, prefers himself, in this respect so shamefully and so basely, to all those with whom he has any connexion; appears to be of all villains the most detestable.

图VI—1：《赵氏孤儿》剧照

The love of our own nation often disposes us to view, with the most malignant jealousy and envy, the prosperity and aggrandisement of any other neighbouring nation. Independent and neighbouring nations, having no common superior to decide their disputes, all live in continual dread and suspicion of one another. Each sovereign, expecting little justice from his neighbours, is disposed to treat them with as little as he expects from them. The regard for the laws of nations, or for those rules which independent states profess or pretend to think themselves bound to observe in their dealings with one another, is often very little more than mere pretence and profession. From the smallest interest, upon the slightest provocation, we see those rules every day, either evaded or directly violated without shame or remorse. Each nation foresees, or imagines it foresees, its own subjugation in the increasing power and aggrandisement of any of its neighbours; and the mean principle of national prejudice is often founded upon the noble one of the love of our own country. The sentence with which the elder Cato is said to have concluded every speech which he made in the senate, whatever might be the subject, 'It is my opinion likewise that Carthage ought to be destroyed,' was the natural expression of the savage patriotism of a strong but coarse mind, enraged almost to madness against a foreign nation from which

his own had suffered so much. The more humane sentence with which Scipio Nasica is said to have concluded all his speeches, 'It is my opinion likewise that Carthage ought not to be destroyed,' was the liberal expression of a more enlarged and enlightened mind, who felt no aversion to the prosperity even of an old enemy, when reduced to a state which could no longer be formidable to Rome.^[12] France and England may each of them have some reason to dread the increase of the naval and military power of the other; but for either of them to envy the internal happiness and prosperity of the other, the cultivation of its lands, the advancement of its manufactures, the increase of its commerce, the security and number of its ports and harbours, its proficiency in all the liberal arts and sciences, is surely beneath the dignity of two such great nations. These are all real improvements of the world we live in. Mankind are benefited, human nature is ennobled by them. In such improvements each nation ought, not only to endeavour itself to excel, but from the love of mankind, to promote, instead of obstructing the excellence of its neighbours. These are all proper objects of national emulation, not of national prejudice or envy.

^[13]The love of our own country seems not to be derived from the love of mankind. The former sentiment is altogether independent of the latter, and seems sometimes even to dispose us to act inconsistently with it. France may contain, perhaps, near three times the number of inhabitants which Great Britain contains. In the great society of mankind, therefore, the prosperity of France should appear to be an object of much greater importance than that of Great Britain. The British subject, however, who, upon that account, should prefer upon all occasions the prosperity of the former to that of the latter country, would not be thought a good citizen of Great Britain. We do not love our country merely as a part of the great society of mankind: we love it for its own sake, and independently of any such consideration. That wisdom which contrived the system of human

affections, as well as that of every other part of nature, seems to have judged that the interest of the great society of mankind would be best promoted by directing the principal attention of each individual to that particular portion of it, which was most within the sphere both of his abilities and of his understanding.

图VI—2 : Richard Price (1723—1791)

National prejudices and hatreds seldom extend beyond neighbouring nations. We very weakly and foolishly, perhaps, call the French our natural enemies; and they perhaps, as weakly and foolishly, consider us in the same manner. Neither they nor we bear any sort of envy to the prosperity of China or Japan. It very rarely happens, however, that our good-will towards such distant countries can be exerted with much effect.

The most extensive public benevolence which can commonly be exerted with any considerable effect, is that of the statesmen, who project and form alliances among neighbouring or not very distant nations, for the preservation either of, what is called, the balance of power, or of the general peace and tranquillity of the states within the circle of their negotiations. The statesmen, however, who plan and

execute such treaties, have seldom any thing in view, but the interest of their respective countries. Sometimes, indeed, their views are more extensive. The Count d'Avaux, the plenipotentiary of France, at the treaty of Munster, would have been willing to sacrifice his life (according to the Cardinal de Retz,^[14] a man not over-credulous in the virtue of other people) in order to have restored, by that treaty, the general tranquillity of Europe. King William seems to have had a real zeal for the liberty and independency of the greater part of the sovereign states of Europe; which, perhaps, might be a good deal stimulated by his particular aversion to France, the state from which, during his time, that liberty and independency were principally in danger. Some share of the same spirit seems to have descended to the first ministry of Queen Anne.^[15]

图VI—3 : William III

Every independent state is divided into many different orders and societies, each of which has its own particular powers, privileges, and immunities. Every individual is naturally more attached to his own particular order or society, than to any other. His own interest, his own vanity the interest and vanity of many of his friends and

companions, are commonly a good deal connected with it. He is ambitious to extend its privileges and immunities. He is zealous to defend them against the encroachments of every other order or society.

Upon the manner in which any state is divided into the different orders and societies which compose it, and upon the particular distribution which has been made of their respective powers, privileges, and immunities, depends, what is called, the constitution of that particular state.

Upon the ability of each particular order or society to maintain its own powers, privileges, and immunities, against the encroachments of every other, depends the stability of that particular constitution. That particular constitution is necessarily more or less altered, whenever any of its subordinate parts is either raised above or depressed below whatever had been its former rank and condition.

All those different orders and societies are dependent upon the state to which they owe their security and protection. That they are all subordinate to that state, and established only in subserviency to its prosperity and preservation, is a truth acknowledged by the most partial member of every one of them. It may often, however, be hard to convince him that the prosperity and preservation of the state require any diminution of the powers, privileges, and immunities of his own particular order or society. This partiality, though it may sometimes be unjust, may not, upon that account, be useless. It checks the spirit of innovation. It tends to preserve whatever is the established balance among the different orders and societies into which the state is divided; and while it sometimes appears to obstruct some alterations of government which may be fashionable and popular at the time, it contributes in reality to the stability and permanency of the whole system.

The love of our country seems, in ordinary cases, to involve in it two different principles; first, a certain respect and reverence for that constitution or form of government which is actually established; and secondly, an earnest desire to render the condition of our fellow-citizens as safe, respectable, and happy as we can. He is not a citizen who is not disposed to respect the laws and to obey the civil magistrate; and he is certainly not a good citizen who does not wish to promote, by every means in his power, the welfare of the whole society of his fellow-citizens.

In peaceable and quiet times, those two principles generally coincide and lead to the same conduct. The support of the established government seems evidently the best expedient for maintaining the safe, respectable, and happy situation of our fellow-citizens; when we see that this government actually maintains them in that situation. But in times of public discontent, faction, and disorder, those two different principles may draw different ways, and even a wise man may be disposed to think some alteration necessary in that constitution or form of government, which, in its actual condition, appears plainly unable to maintain the public tranquillity. In such cases, however, it often requires, perhaps, the highest effort of political wisdom to determine when a real patriot ought to support and endeavour to re-establish the authority of the old system, and when he ought to give way to the more daring, but often dangerous spirit of innovation.

Foreign war and civil faction are the two situations which afford the most splendid opportunities for the display of public spirit. The hero who serves his country successfully in foreign war gratifies the wishes of the whole nation, and is, upon that account, the object of universal gratitude and admiration. In times of civil discord, the leaders of the contending parties, though they may be admired by one half of their fellow-citizens, are commonly execrated by the other. Their characters and the merit of their respective services appear

commonly more doubtful. The glory which is acquired by foreign war is, upon this account, almost always more pure and more splendid than that which can be acquired in civil faction.

The leader of the successful party, however, if he has authority enough to prevail upon his own friends to act with proper temper and moderation (which he frequently has not) , may sometimes render to his country a service much more essential and important than the greatest victories and the most extensive conquests. He may re-establish and improve the constitution, and from the very doubtful and ambiguous character of the leader of a party, he may assume the greatest and noblest of all characters, that of the reformer and legislator of a great state; and, by the wisdom of his institutions, secure the internal tranquillity and happiness of his fellow-citizens for many succeeding generations.

Amidst the turbulence and disorder of faction, a certain spirit of system is apt to mix itself with that public spirit which is founded upon the love of humanity, upon a real fellow-feeling with the inconveniencies and distresses to which some of our fellow-citizens may be exposed. This spirit of system commonly takes the direction of that more gentle public spirit; always animates it, and often inflames it even to the madness of fanaticism. The leaders of the discontented party seldom fail to hold out some plausible plan of reformation which, they pretend, will not only remove the inconveniencies and relieve the distresses immediately complained of, but will prevent, in all time coming, any return of the like inconveniencies and distresses. They often propose, upon this account, to new-model the constitution, and to alter, in some of its most essential parts, that system of government under which the subjects of a great empire have enjoyed, perhaps, peace, security, and even glory, during the course of several centuries together. The great body of the party are commonly intoxicated with the imaginary beauty of this ideal system, of which

they have no experience, but which has been represented to them in all the most dazzling colours in which the eloquence of their leaders could paint it. Those leaders themselves, though they originally may have meant nothing but their own aggrandisement, become many of them in time the dupes of their own sophistry, and are as eager for this great reformation as the weakest and foolishlest of their followers. Even though the leaders should have preserved their own heads, as indeed they commonly do, free from this fanaticism, yet they dare not always disappoint the expectation of their followers; but are often obliged, though contrary to their principle and their conscience, to act as if they were under the common delusion. The violence of the party, refusing all palliatives, all temperaments, all reasonable accommodations, by requiring too much frequently obtains nothing; and those inconveniencies and distresses which, with a little moderation, might in a great measure have been removed and relieved, are left altogether without the hope of a remedy.

The man whose public spirit is prompted altogether by humanity and benevolence, will respect the established powers and privileges even of individuals, and still more those of the great orders and societies, into which the state is divided. Though he should consider some of them as in some measure abusive, he will content himself with moderating, what he often cannot annihilate without great violence. When he cannot conquer the rooted prejudices of the people by reason and persuasion, he will not attempt to subdue them by force; but will religiously observe what, by Cicero, is justly called the divine maxim of Plato^[16], never to use violence to his country no more than to his parents. He will accommodate, as well as he can, his public arrangements to the confirmed habits and prejudices of the people; and will remedy as well as he can, the inconveniencies which may flow from the want of those regulations which the people are averse to submit to. When he cannot establish the right, he will not disdain to ameliorate the wrong; but like Solon, when he cannot

establish the best system of laws, he will endeavour to establish the best that the people can bear.^[17]

The man of system, on the contrary, is apt to be very wise in his own conceit; and is often so enamoured with the supposed beauty of his own ideal plan of government, that he cannot suffer the smallest deviation from any part of it. He goes on to establish it completely and in all its parts, without any regard either to the great interests, or to the strong prejudices which may oppose it. He seems to imagine that he can arrange the different members of a great society with as much ease as the hand arranges the different pieces upon a chess-board. He does not consider that the pieces upon the chess-board have no other principle of motion besides that which the hand impresses upon them; but that, in the great chess-board of human society, every single piece has a principle of motion of its own, altogether different from that which the legislature might chuse to impress upon it. If those two principles coincide and act in the same direction, the game of human society will go on easily and harmoniously, and is very likely to be happy and successful. If they are opposite or different, the game will go on miserably, and the society must be at all times in the highest degree of disorder.

Some general, and even systematical, idea of the perfection of policy and law, may no doubt be necessary for directing the views of the statesman. But to insist upon establishing, and upon establishing all at once, and in spite of all opposition, every thing which that idea may seem to require, must often be the highest degree of arrogance. It is to erect his own judgment into the supreme standard of right and wrong. It is to fancy himself the only wise and worthy man in the commonwealth, and that his fellow-citizens should accommodate themselves to him and not he to them. It is upon this account, that of all political speculators, sovereign princes are by far the most dangerous. This arrogance is perfectly familiar to them. They entertain

no doubt of the immense superiority of their own judgment. When such imperial and royal reformers, therefore, condescend to contemplate the constitution of the country which is committed to their government, they seldom see any thing so wrong in it as the obstructions which it may sometimes oppose to the execution of their own will. They hold in contempt the divine maxim of Plato, and consider the state as made for themselves, not themselves for the state. The great object of their reformation, therefore, is to remove those obstructions; to reduce the authority of the nobility; to take away the privileges of cities and provinces, and to render both the greatest individuals and the greatest orders of the state, as incapable of opposing their commands, as the weakest and most insignificant.

Chap. III Of universal Benevolence

Though our effectual good offices can very seldom be extended to any wider society than that of our own country; our good-will is

circumscribed by no boundary, but may embrace the immensity of the universe. We cannot form the idea of any innocent and sensible being, whose happiness we should not desire, or to whose misery, when distinctly brought home to the imagination, we should not have some degree of aversion. The idea of a mischievous, though sensible, being, indeed, naturally provokes our hatred: but the ill-will which, in this case, we bear to it, is really the effect of our universal benevolence. It is the effect of the sympathy which we feel with the misery and resentment of those other innocent and sensible beings, whose happiness is disturbed by its malice.

This universal benevolence, how noble and generous soever, can be the source of no solid happiness to any man who is not thoroughly convinced that all the inhabitants of the universe, the meanest as well as the greatest, are under the immediate care and protection of that great, benevolent, and all-wise Being, who directs all the movements of nature; and who is determined, by his own unalterable perfections, to maintain in it, at all times, the greatest possible quantity of happiness. To this universal benevolence, on the contrary, the very suspicion of a fatherless world, must be the most melancholy of all reflections; from the thought that all the unknown regions of infinite and incomprehensible space may be filled with nothing but endless misery and wretchedness. All the splendour of the highest prosperity can never enlighten the gloom with which so dreadful an idea must necessarily over-shadow the imagination; nor, in a wise and virtuous man, can all the sorrow of the most afflicting adversity ever dry up the joy which necessarily springs from the habitual and thorough conviction of the truth of the contrary system.

The wise and virtuous man is at all times willing that his own private interest should be sacrificed to the public interest of his own particular order or society. He is at all times willing, too, that the interest of this order or society should be sacrificed to the greater

interest of the state or sovereignty, of which it is only a subordinate part. He should, therefore, be equally willing that all those inferior interests should be sacrificed to the greater interest of the universe, to the interest of that great society of all sensible and intelligent beings, of which God himself is the immediate administrator and director. If he is deeply impressed with the habitual and thorough conviction that this benevolent and all-wise Being can admit into the system of his government, no partial evil which is not necessary for the universal good, he must consider all the misfortunes which may befall himself, his friends, his society, or his country, as necessary for the prosperity of the universe, and therefore as what he ought, not only to submit to with resignation, but as what he himself, if he had known all the connexions and dependencies of things, ought sincerely and devoutly to have wished for.

Nor does this magnanimous resignation to the will of the great Director of the universe, seem in any respect beyond the reach of human nature. Good soldiers, who both love and trust their general, frequently march with more gaiety and alacrity to the forlorn station, from which they never expect to return, than they would to one where there was neither difficulty nor danger. In marching to the latter, they could feel no other sentiment than that of the dulness of ordinary duty: in marching to the former, they feel that they are making the noblest exertion which it is possible for man to make. They know that their general would not have ordered them upon this station, had it not been necessary for the safety of the army, for the success of the war. They cheerfully sacrifice their own little systems to the prosperity of a greater system. They take an affectionate leave of their comrades, to whom they wish all happiness and success; and march out, not only with submissive obedience, but often with shouts of the most joyful exultation, to that fatal, but splendid and honourable station to which they are appointed. No conductor of an army can deserve more unlimited trust, more ardent and zealous affection, than the great

Conductor of the universe. In the greatest public as well as private disasters, a wise man ought to consider that he himself, his friends and countrymen, have only been ordered upon the forlorn station of the universe; that had it not been necessary for the good of the whole, they would not have been so ordered; and that it is their duty, not only with humble resignation to submit to this allotment, but to endeavour to embrace it with alacrity and joy. A wise man should surely be capable of doing what a good soldier holds himself at all times in readiness to do.

The idea of that divine Being, whose benevolence and wisdom have, from all eternity, contrived and conducted the immense machine of the universe, so as at all times to produce the greatest possible quantity of happiness, is certainly of all the objects of human contemplation by far the most sublime. Every other thought necessarily appears mean in the comparison. The man whom we believe to be principally occupied in this sublime contemplation, seldom fails to be the object of our highest veneration; and though his life should be altogether contemplative, we often regard him with a sort of religious respect much superior to that with which we look upon the most active and useful servant of the commonwealth. The Meditations of Marcus Antoninus^[18], which turn principally upon this subject, have contributed more, perhaps, to the general admiration of his character, than all the different transactions of his just, merciful, and beneficent reign.

The administration of the great system of the universe, however, the care of the universal happiness of all rational and sensible beings, is the business of God and not of man. To man is allotted a much humbler department, but one much more suitable to the weakness of his powers, and to the narrowness of his comprehension; the care of his own happiness, of that of his family, his friends, his country: that he is occupied in contemplating the more sublime, can never be an

excuse for his neglecting the more humble department; and he must not expose himself to the charge which Avidius Cassius is said to have brought, perhaps unjustly, against Marcus Antoninus; that while he employed himself in philosophical speculations, and contemplated the prosperity of the universe, he neglected that of the Roman empire. The most sublime speculation of the contemplative philosopher can scarce compensate the neglect of the smallest active duty.

图VI—5 : Marcus Aurelius (121—180AD)

Section III Of Self-command

The man who acts according to the rules of perfect prudence, of strict justice, and of proper benevolence, may be said to be perfectly virtuous. But the most perfect knowledge of those rules will not alone enable him to act in this manner: his own passions are very apt to mislead him; sometimes to drive him and sometimes to seduce him to violate all the rules which he himself, in all his sober and cool hours, approves of. The most perfect knowledge, if it is not supported by the most perfect self-command, will not always enable him to do his duty.

Some of the best of the ancient moralists seem to have considered those passions as divided into two different classes: first, into those which it requires a considerable exertion of self-command to restrain even for a single moment; and secondly, into those which it is easy to restrain for a single moment, or even for a short period of time; but which, by their continual and almost incessant sollicitations, are, in the course of a life, very apt to mislead into great deviations.

Fear and anger, together with some other passions which are mixed or connected with them, constitute the first class. The love of ease, of pleasure, of applause, and of many other selfish gratifications, constitute the second. Extravagant fear and furious anger, it is often difficult to restrain even for a single moment. The love of ease, of pleasure, of applause, and other selfish gratifications, it is always easy to restrain for a single moment, or even for a short period of time; but, by their continual sollicitations, they often mislead us into many weaknesses which we have afterwards much reason to be ashamed of. The former set of passions may often be said to drive, the latter, to seduce us from our duty. The command of the former was, by the ancient moralists above alluded to, denominated fortitude, manhood, and strength of mind; that of the latter, temperance, decency,

modesty, and moderation.

The command of each of those two sets of passions, independent of the beauty which it derives from its utility; from its enabling us upon all occasions to act according to the dictates of prudence, of justice, and of proper benevolence; has a beauty of its own, and seems to deserve for its own sake a certain degree of esteem and admiration. In the one case, the strength and greatness of the exertion excites some degree of that esteem and admiration. In the other, the uniformity, the equality and unremitting steadiness of that exertion.

The man who, in danger, in torture, upon the approach of death, preserves his tranquillity unaltered, and suffers no word, no gesture to escape him which does not perfectly accord with the feelings of the most indifferent spectator, necessarily commands a very high degree of admiration. If he suffers in the cause of liberty and justice, for the sake of humanity and the love of his country, the most tender compassion for his sufferings, the strongest indignation against the injustice of his persecutors, the warmest sympathetic gratitude for his beneficent intentions, the highest sense of his merit, all join and mix themselves with the admiration of his magnanimity, and often inflame that sentiment into the most enthusiastic and rapturous veneration. The heroes of ancient and modern history, who are remembered with the most peculiar favour and affection, are, many of them, those who, in the cause of truth, liberty, and justice, have perished upon the scaffold, and who behaved there with that ease and dignity which became them. Had the enemies of Socrates suffered him to die quietly in his bed, the glory even of that great philosopher might possibly never have acquired that dazzling splendour in which it has been beheld in all succeeding ages. In the english history, when we look over the illustrious heads which have been engraven by Vertue and Howbraken,^[19] there is scarce any body, I imagine, who does not feel that the axe, the emblem of having been beheaded, which is engraved

under some of the most illustrious of them. under those of the Sir Thomas Mores, of the Rhaleighs, the Russels, the Sydneys, etc.^[20] sheds a real dignity and interestingness over the characters to which it is affixed, much superior to what they can derive from all the futile ornaments of heraldry, with which they are sometimes accompanied.

Nor does this magnanimity give lustre only to the characters of innocent and virtuous men. It draws some degree of favourable regard even upon those of the greatest criminals; and when a robber or highwayman is brought to the scaffold, and behaves there with decency and firmness, though we perfectly approve of his punishment, we often cannot help regretting that a man who possessed such great and noble powers should have been capable of such mean enormities.

War is the great school both for acquiring and exercising this species of magnanimity. Death, as we say, is the king of terrors; and the man who has conquered the fear of death, is not likely to lose his presence of mind at the approach of any other natural evil. In war, men become Familiar with death, and are thereby necessarily cured of that superstitious horror with which it is viewed by the weak and unexperienced. They consider it merely as the loss of life, and as no further the object of aversion than as life may happen to be that of desire. They learn from experience, too, that many seemingly great dangers are not so great as they appear; and that, with courage, activity, and presence of mind, there is often a good probability of extricating themselves with honour from situations where at first they could see no hope. The dread of death is thus greatly diminished; and the confidence or hope of escaping it, augmented. They learn to expose themselves to danger with less reluctance. They are less anxious to get out of it, and less apt to lose their presence of mind while they are in it. It is this habitual contempt of danger and death which ennobles the profession of a soldier, and bestows upon it, in the natural apprehensions of mankind, a rank and dignity superior to that

of any other profession. The skilful and successful exercise of this profession, in the service of their country, seems to have constituted the most distinguishing feature in the character of the favourite heroes of all ages.

Great warlike exploit, though undertaken contrary to every principle of justice, and carried on without any regard to humanity, sometimes interests us, and commands even some degree of a certain sort of esteem for the very worthless characters which conduct it. We are interested even in the exploits of the Buccaneers; and read with some sort of esteem and admiration, the history of the most worthless men, who, in pursuit of the most criminal purposes, endured greater hardships, surmounted greater difficulties, and encountered greater dangers, than, perhaps, any which the ordinary course of history gives an account of.

The command of anger appears upon many occasions not less generous and noble than that of fear. The proper expression of just indignation composes many of the most splendid and admired passages both of ancient and modern eloquence. The Philippics of Demosthenes^[21], the Catalinarians of Cicero, derive their whole beauty from the noble propriety with which this passion is expressed. But this just indignation is nothing but anger restrained and properly attempered to what the impartial spectator can enter into. The blustering and noisy passion which goes beyond this, is always odious and offensive, and interests us, not for the angry man, but for the man with whom he is angry. The nobleness of pardoning appears, upon many occasions, superior even to the most perfect propriety of resenting. When either proper acknowledgments have been made by the offending party; or, even without any such acknowledgments, when the public interest requires that the most mortal enemies should unite for the discharge of some important duty, the man who can cast away all animosity, and act with confidence and cordiality towards

the person who had most grievously offended him, seems justly to merit our highest admiration.

The command of anger, however, does not always appear in such splendid colours. Fear is contrary to anger, and is often the motive which restrains it; and in such cases the meanness of the motive takes away all the nobleness of the restraint. Anger prompts to attack, and the indulgence of it seems sometimes to shew a sort of courage and superiority to fear. The indulgence of anger is sometimes an object of vanity. That of fear never is. Vain and weak men, among their inferiors, or those who dare not resist them, often affect to be ostentatiously passionate, and fancy that they show, what is called, spirit in being so. A bully tells many stories of his own insolence, which are not true, and imagines that he thereby renders himself, if not more amiable and respectable, at least more formidable to his audience. Modern manners, which, by favouring the practice of duelling, may be said, in some cases, to encourage private revenge, contribute, perhaps, a good deal to render, in modern times, the restraint of anger by fear still more contemptible than it might otherwise appear to be. There is always something dignified in the command of fear, whatever may be the motive upon which it is founded. It is not so with the command of anger. Unless it is founded altogether in the sense of decency, of dignity, and propriety, it never is perfectly agreeable.

To act according to the dictates of prudence, of justice, and proper beneficence, seems to have no great merit where there is no temptation to do otherwise. But to act with cool deliberation in the midst of the greatest dangers and difficulties; to observe religiously the sacred rules of justice in spite both of the greatest interests which might tempt, and the greatest injuries which might provoke us to violate them; never to suffer the benevolence of our temper to be damped or discouraged by the malignity and ingratitude of the

individuals towards whom it may have been exercised; is the character of the most exalted wisdom and virtue. Self-command is not only itself a great virtue, but from it all the other virtues seem to derive their principal lustre.

The command of fear, the command of anger, are always great and noble powers. When they are directed by justice and benevolence, they are not only great virtues, but increase the splendour of those other virtues. They may, however, sometimes be directed by very different motives; and in this case, though still great and respectable, they may be excessively dangerous. The most intrepid valour may be employed in the cause of the greatest injustice. Amidst great provocations, apparent tranquillity and good humour may sometimes conceal the most determined and cruel resolution to revenge. The strength of mind requisite for such dissimulation, though always and necessarily contaminated by the baseness of falsehood, has, however, been often much admired by many people of no contemptible judgment. The dissimulation of Catharine of Medicis is often celebrated by the profound historian Davila; that of Lord Digby, afterwards Earl of Bristol, by the grave and conscientious Lord Clarendon; that of the first Ashley Earl of Shaftesbury, by the judicious Mr Locke.^[22] Even Cicero seems to consider this deceitful character, not indeed as of the highest dignity, but as not unsuitable to a certain flexibility of manners, which, he thinks, may, notwithstanding, be, upon the whole, both agreeable and respectable. He exemplifies it by the characters of Homer's Ulysses, of the Athenian Themistocles, of the Spartan Lysander, and of the Roman Marcus Crassus.^[23] This character of dark and deep dissimulation occurs most commonly in times of great public disorder; amidst the violence of faction and civil war. When law has become in a great measure impotent, when the most perfect innocence cannot alone insure safety, regard to self-defence obliges the greater part of men to have recourse to dexterity, to address, and to apparent accommodation to whatever happens to

be, at the moment, the prevailing party. This false character, too, is frequently accompanied with the coolest and most determined courage. The proper exercise of it supposes that courage, as death is commonly the certain consequence of detection. It may be employed indifferently, either to exasperate or to allay those furious animosities of adverse factions which impose the necessity of assuming it; and though it may sometimes be useful, it is at least equally liable to be excessively pernicious.

The command of the less violent and turbulent passions seems much less liable to be abused to any pernicious purpose. Temperance, decency, modesty, and moderation, are always amiable, and can seldom be directed to any bad end. It is from the unremitting steadiness of those gentler exertions of self-command, that the amiable virtue of chastity, that the respectable virtues of industry and frugality, derive all that sober lustre which attends them. The conduct of all those who are contented to walk in the humble paths of private and peaceable life, derives from the same principle the greater part of the beauty and grace which belong to it; a beauty and grace, which, though much less dazzling, is not always less pleasing than those which accompany the more splendid actions of the hero, the statesman, or the legislator.

After what has already been said, in several different parts of this discourse, concerning the nature of self-command, I judge it unnecessary to enter into any further detail concerning those virtues. I shall only observe at present, that the point of propriety, the degree of any passion which the impartial spectator approves of, is differently situated in different passions. In some passions the excess is less disagreeable than the defect; and in such passions the point of propriety seems to stand high, or nearer to the excess than to the defect. In other passions, the defect is less disagreeable than the excess; and in such passions the point of propriety seems to stand low,

or nearer to the defect than to the excess. The former are the passions which the spectator is most, the latter, those which he is least disposed to sympathize with. The former, too, are the passions of which the immediate feeling or sensation is agreeable to the person principally concerned; the latter, those of which it is disagreeable. It may be laid down as a general rule, that the passions which the spectator is most disposed to sympathize with, and in which, upon that account, the point of propriety may be said to stand high, are those of which the immediate feeling or sensation is more or less agreeable to the person principally concerned: and that, on the contrary, the passions which the spectator is least disposed to sympathize with, and in which, upon that account, the point of propriety may be said to stand low, are those of which the immediate feeling or sensation is more or less disagreeable, or even painful, to the person principally concerned. This general rule, so far as I have been able to observe, admits not of a single exception. A few examples will at once, both sufficiently explain it and demonstrate the truth of it.

The disposition to the affections which tend to unite men in society, to humanity, kindness, natural affection, friendship, esteem, may sometimes be excessive. Even the excess of this disposition, however, renders a man interesting to every body. Though we blame it, we still regard it with compassion, and even with kindness, and never with dislike. We are more sorry for it than angry at it. To the person himself, the indulgence even of such excessive affections is, upon many occasions, not only agreeable, but delicious. Upon some occasions, indeed, especially when directed, as is too often the case, towards unworthy objects, it exposes him to much real and heartfelt distress. Even upon such occasions, however, a well-disposed mind regards him with the most exquisite pity, and feels the highest indignation against those who affect to despise him for his weakness and imprudence. The defect of this disposition, on the contrary, what

is called hardness of heart, while it renders a man insensible to the feelings and distresses of other people, renders other people equally insensible to his; and, by excluding him from the friendship of all the world, excludes him from the best and most comfortable of all social enjoyments.

The disposition to the affections which drive men from one another, and which tend, as it were, to break the bands of human society; the disposition to anger, hatred, envy, malice, revenge; is, on the contrary, much more apt to offend by its excess than by its defect. The excess renders a man wretched and miserable in his own mind, and the object of hatred, and sometimes even of horror, to other people. The defect is very seldom complained of. It may, however, be defective. The want of proper indignation is a most essential defect in the manly character, and, upon many occasions, renders a man incapable of protecting either himself or his friends from insult and injustice. Even that principle, in the excess and improper direction of which consists the odious and detestable passion of envy, may be defective. Envy is that passion which views with malignant dislike the superiority of those who are really entitled to all the superiority they possess. The man, however, who, in matters of consequence, tamely suffers other people, who are entitled to no such superiority, to rise above him or get before him, is justly condemned as mean-spirited. This weakness is commonly founded in indolence, sometimes in good nature, in an aversion to opposition, to bustle and solicitation, and sometimes, too, in a sort of ill-judged magnanimity, which fancies that it can always continue to despise the advantage which it then despises, and, therefore, so easily gives up. Such weakness, however, is commonly followed by much regret and repentance; and what had some appearance of magnanimity in the beginning frequently gives place to a most malignant envy in the end, and to a hatred of that superiority, which those who have once attained it, may often become really entitled to, by the very circumstance of having attained it. In

order to live comfortably in the world, it is, upon all occasions, as necessary to defend our dignity and rank, as it is to defend our life or our fortune.

Our sensibility to personal danger and distress, like that to personal provocation, is much more apt to offend by its excess than by its defect. No character is more contemptible than that of a coward; no character is more admired than that of the man who faces death with intrepidity, and maintains his tranquillity and presence of mind amidst the most dreadful dangers. We esteem the man who supports pain and even torture with manhood and firmness; and we can have little regard for him who sinks under them, and abandons himself to useless outcries and womanish lamentations. A fretful temper, which feels, with too much sensibility, every little cross accident, renders a man miserable in himself and offensive to other people. A calm one, which does not allow its tranquillity to be disturbed, either by the small injuries, or by the little disasters incident to the usual course of human affairs; but which, amidst the natural and moral evils infesting the world, lays its account and is contented to suffer a little from both, is a blessing to the man himself, and gives ease and security to all his companions.

Our sensibility, however, both to our own injuries and to our own misfortunes, though generally too strong, may likewise be too weak. The man who feels little for his own misfortunes must always feel less for those of other people, and be less disposed to relieve them. The man who has little resentment for the injuries which are done to himself, must always have less for those which are done to other people, and be less disposed either to protect or to avenge them. A stupid insensibility to the events of human life necessarily extinguishes all that keen and earnest attention to the propriety of our own conduct, which constitutes the real essence of virtue. We can feel little anxiety about the propriety of our own actions, when we are

indifferent about the events which may result from them. The man who feels the full distress of the calamity which has befallen him, who feels the whole baseness of the injustice which has been done to him, but who feels still more strongly what the dignity of his own character requires; who does not abandon himself to the guidance of the undisciplined passions which his situation might naturally inspire; but who governs his whole behaviour and conduct according to those restrained and corrected emotions which the great inmate, the great demi-god within the breast prescribes and approves of; is alone the real man of virtue, the only real and proper object of love, respect, and admiration. Insensibility and that noble firmness, that exalted self-command, which is founded in the sense of dignity and propriety, are so far from being altogether the same, that in proportion as the former takes place, the merit of the latter is, in many cases, entirely taken away.

But though the total want of sensibility to personal injury, to personal danger and distress, would, in such situations, take away the whole merit of self-command, that sensibility, however, may very easily be too exquisite, and it frequently is so. When the sense of propriety, when the authority of the judge within the breast, can control this extreme sensibility, that authority must no doubt appear very noble and very great. But the exertion of it may be too fatiguing; it may have too much to do. The individual, by a great effort, may behave perfectly well. But the contest between the two principles, the warfare within the breast, may be too violent to be at all consistent with internal tranquillity and happiness. The wise man whom Nature has endowed with this too exquisite sensibility, and whose too lively feelings have not been sufficiently blunted and hardened by early education and proper exercise, will avoid, as much as duty and propriety will permit, the situations for which he is not perfectly fitted. The man whose feeble and delicate constitution renders him too sensible to pain, to hardship, and to every sort of bodily distress,

should not wantonly embrace the profession of a soldier. The man of too much sensibility to injury, should not rashly engage in the contests of faction. Though the sense of propriety should be strong enough to command all those sensibilities, the composure of the mind must always be disturbed in the struggle. In this disorder the judgment cannot always maintain its ordinary acuteness and precision; and though he may always mean to act properly, he may often act rashly and imprudently, and in a manner which he himself will, in the succeeding part of his life, be for ever ashamed of. A certain intrepidity, a certain firmness of nerves and hardiness of constitution, whether natural or acquired, are undoubtedly the best preparatives for all the great exertions of self-command.

Though war and faction are certainly the best schools for forming every man to this hardiness and firmness of temper, though they are the best remedies for curing him of the opposite weaknesses, yet, if the day of trial should happen to come before he has completely learned his lesson, before the remedy has had time to produce its proper effect, the consequences might not be agreeable.

Our sensibility to the pleasures, to the amusements and enjoyments of human life, may offend, in the same manner, either by its excess or by its defect. Of the two, however, the excess seems less disagreeable than the defect. Both to the spectator and to the person principally concerned, a strong propensity to joy is certainly more pleasing than a dull insensibility to the objects of amusement and diversion. We are charmed with the gaiety of youth, and even with the playfulness of childhood: but we soon grow weary of the flat and tasteless gravity which too frequently accompanies old age. When this propensity, indeed, is not restrained by the sense of propriety, when it is unsuitable to the time or to the place, to the age or to the situation of the person, when, to indulge it, he neglects either his interest or his duty; it is justly blamed as excessive, and as hurtful both to the

individual and to the society. In the greater part of such cases, however, what is chiefly to be found fault with is, not so much the strength of the propensity to joy, as the weakness of the sense of propriety and duty. A young man who has no relish for the diversions and amusements that are natural and suitable to his age, who talks of nothing but his book or his business, is disliked as formal and pedantic; and we give him no credit for his abstinence even from improper indulgences, to which he seems to have so little inclination.

The principle of self-estimation may be too high, and it may likewise be too low. It is so very agreeable to think highly, and so very disagreeable to think meanly of ourselves, that, to the person himself, it cannot well be doubted, but that some degree of excess must be much less disagreeable than any degree of defect. But to the impartial spectator, it may perhaps be thought, things must appear quite differently, and that to him, the defect must always be less disagreeable than the excess. And in our companions, no doubt, we much more frequently complain of the latter than of the former. When they assume upon us, or set themselves before us, their self-estimation mortifies our own. Our own pride and vanity prompt us to accuse them of pride and vanity, and we cease to be the impartial spectators of their conduct. When the same companions, however, suffer any other man to assume over them a superiority which does not belong to him, we not only blame them, but often despise them as mean-spirited. When, on the contrary, among other people, they push themselves a little more forward, and scramble to an elevation disproportioned, as we think, to their merit, though we may not perfectly approve of their conduct, we are often, upon the whole, diverted with it; and, where there is no envy in the case, we are almost always much less displeased with them, than we should have been, had they suffered themselves to sink below their proper station.

In estimating our own merit, in judging of our own character and

conduct, there are two different standards to which we naturally compare them. The one is the idea of exact propriety and perfection, so far as we are each of us capable of comprehending that idea. The other is that degree of approximation to this idea which is commonly attained in the world, and which the greater part of our friends and companions, of our rivals and competitors, may have actually arrived at. We very seldom (I am disposed to think, we never) attempt to judge of ourselves without giving more or less attention to both these different standards. But the attention of different men, and even of the same man at different times, is often very unequally divided between them; and is sometimes principally directed towards the one, and sometimes towards the other.

So far as our attention is directed towards the first standard, the wisest and best of us all, can, in his own character and conduct, see nothing but weakness and imperfection; can discover no ground for arrogance and presumption, but a great deal for humility, regret and repentance. So far as our attention is directed towards the second, we may be affected either in the one way or in the other, and feel ourselves, either really above, or really below, the standard to which we compare ourselves.

The wise and virtuous man directs his principal attention to the first standard; the idea of exact propriety and perfection. There exists in the mind of every man, an idea of this kind, gradually formed from his observations upon the character and conduct both of himself and of other people. It is the slow, gradual, and progressive work of the great demigod within the breast, the great judge and arbiter of conduct. This idea is in every man more or less accurately drawn, its colouring is more or less just, its outlines are more or less exactly designed, according to the delicacy and acuteness of that sensibility, with which those observations were made, and according to the care and attention employed in making them. In the wise and virtuous man

they have been made with the most acute and delicate sensibility, and the utmost care and attention have been employed in making them. Every day some feature is improved; every day some blemish is corrected. He has studied this idea more than other people, he comprehends it more distinctly, he has formed a much more correct image of it, and is much more deeply enamoured of its exquisite and divine beauty. He endeavours as well as he can, to assimilate his own character to this archetype of perfection. But he imitates the work of a divine artist, which can never be equalled. He feels the imperfect success of all his best endeavours, and sees, with grief and affliction, in how many different features the mortal copy falls short of the immortal original. He remembers, with concern and humiliation, how often, from want of attention, from want of judgment, from want of temper, he has, both in words and actions, both in conduct and conversation, violated the exact rules of perfect propriety; and has so far departed from that model, according to which he wished to fashion his own character and conduct. When he directs his attention towards the second standard, indeed, that degree of excellence which his friends and acquaintances have commonly arrived at, he may be sensible of his own superiority. But, as his principal attention is always directed towards the first standard, he is necessarily much more humbled by the one comparison, than he ever can be elevated by the other. He is never so elated as to look down with insolence even upon those who are really below him. He feels so well his own imperfection, he knows so well the difficulty with which he attained his own distant approximation to rectitude, that he cannot regard with contempt the still greater imperfection of other people. Far from insulting over their inferiority, he views it with the most indulgent commiseration, and, by his advice as well as example, is at all times willing to promote their further advancement. If, in any particular qualification, they happen to be superior to him (for who is so perfect as not to have many superiors in many different qualifications?) , far from envying their superiority, he, who knows how difficult it is to

excel, esteems and honours their excellence, and never fails to bestow upon it the full measure of applause which it deserves. His whole mind, in short, is deeply impressed, his whole behaviour and deportment are distinctly stamped with the character of real modesty; with that of a very moderate estimation of his own merit, and, at the same time, of a full sense of the merit of other people.

In all the liberal and ingenious arts, in painting, in poetry, in music, in eloquence, in philosophy, the great artist feels always the real imperfection of his own best works, and is more sensible than any man how much they fall short of that ideal perfection of which he has formed some conception, which he imitates as well as he can, but which he despairs of ever equalling. It is the inferior artist only, who is ever perfectly satisfied with his own performances. He has little conception of this ideal perfection, about which he has little employed his thoughts; and it is chiefly to the works of other artists, of, perhaps, a still lower order, that he deigns to compare his own works. Boileau, the great French poet (in some of his works, perhaps not inferior to the greatest poet of the same kind, either ancient or modern) , used to say, that no great man was ever completely satisfied with his own works. His acquaintance Santeuil (a writer of Latin verses, and who, on account of that schoolboy accomplishment, had the weakness to fancy himself a poet) , assured him, that he himself was always completely satisfied with his own. Boileau replied, with, perhaps, an arch ambiguity, that he certainly was the only great man that ever was so.^[24] Boileau, in judging of his own works, compared them with the standard of ideal perfection, which, in his own particular branch of the poetic art, he had, I presume, meditated as deeply, and conceived as distinctly, as it is possible for man to conceive it. Santeuil, in judging of his own works, compared them, I suppose, chiefly to those of the other Latin poets of his own time, to the greater part of whom he was certainly very far from being inferior. But to support and finish off, if I may say so, the conduct and conversation of

a whole life to some resemblance of this ideal perfection, is surely much more difficult than to work up to an equal resemblance any of the productions of any of the ingenious arts. The artist sits down to his work undisturbed, at leisure, in the full possession and recollection of all his skill, experience, and knowledge. The wise man must support the propriety of his own conduct in health and in sickness, in success and in disappointment, in the hour of fatigue and drowsy indolence, as well as in that of the most awakened attention. The most sudden and unexpected assaults of difficulty and distress must never surprise him. The injustice of other people must never provoke him to injustice. The violence of faction must never confound him. All the hardships and hazards of war must never either dishearten or appal him.

Of the persons who, in estimating their own merit, in judging of their own character and conduct, direct by far the greater part of their attention to the second standard, to that ordinary degree of excellence which is commonly attained by other people, there are some who really and justly feel themselves very much above it, and who, by every intelligent and impartial spectator, are acknowledged to be so. The attention of such persons, however, being always principally directed, not to the standard of ideal, but to that of ordinary perfection, they have little sense of their own weaknesses and imperfections; they have little modesty; are often assuming, arrogant, and presumptuous; great admirers of themselves, and great contemners of other people. Though their characters are in general much less correct, and their merit much inferior to that of the man of real and modest virtue; yet their excessive presumption, founded upon their own excessive self-admiration, dazzles the multitude, and often imposes even upon those who are much superior to the multitude. The frequent, and often wonderful, success of the most ignorant quacks and imposters, both civil and religious, sufficiently demonstrate how easily the multitude are imposed upon by the most extravagant and

groundless pretensions. But when those pretensions are supported by a very high degree of real and solid merit, when they are displayed with all the splendour which ostentation can bestow upon them, when they are supported by high rank and great power, when they have often been successfully exerted, and are, upon that account, attended by the loud acclamations of the multitude; even the man of sober judgment often abandons himself to the general admiration. The very noise of those foolish acclamations often contributes to confound his understanding, and while he sees those great men only at a certain distance, he is often disposed to worship them with a sincere admiration, superior even to that with which they appear to worship themselves. When there is no envy in the case, we all take pleasure in admiring, and are, upon that account, naturally disposed, in our own fancies, to render complete and perfect in every respect the characters which, in many respects, are so very worthy of admiration. The excessive self-admiration of those great men is well understood, perhaps, and even seen through, with some degree of derision, by those wise men who are much in their familiarity, and who secretly smile at those lofty pretensions, which, by people at a distance, are often regarded with reverence, and almost with adoration. Such, however, have been, in all ages, the greater part of those men who have procured to themselves the most noisy fame, the most extensive reputation; a fame and reputation, too, which have often descended to the remotest posterity.

Great success in the world, great authority over the sentiments and opinions of mankind, have very seldom been acquired without some degree of this excessive self-admiration. The most splendid characters, the men who have performed the most illustrious actions, who have brought about the greatest revolutions, both in the situations and opinions of mankind; the most successful warriors, the greatest statesmen and legislators, the eloquent founders and leaders of the most numerous and most successful sects and parties; have

many of them been, not more distinguished for their very great merit, than for a degree of presumption and self-admiration altogether disproportioned even to that very great merit. This presumption was, perhaps, necessary, not only to prompt them to undertakings which a more sober mind would never have thought of, but to command the submission and obedience of their followers to support them in such undertakings. When crowned with success, accordingly, this presumption has often betrayed them into a vanity that approached almost to insanity and folly. Alexander the Great appears, not only to have wished that other people should think him a God, but to have been at least very well disposed to fancy himself such. Upon his death-bed, the most ungodlike of all situations, he requested of his friends that, to the respectable list of Deities, into which himself had long before been inserted, his old mother Olympia might likewise have the honour of being added.^[25] Amidst the respectful admiration of his followers and disciples, amidst the universal applause of the public, after the oracle, which probably had followed the voice of that applause, had pronounced him the wisest of men^[26], the great wisdom of Socrates, though it did not suffer him to fancy himself a God, yet was not great enough to hinder him from fancying that he had secret and frequent intimations from some invisible and divine Being. The sound head of Caesar was not so perfectly sound as to hinder him from being much pleased with his divine genealogy from the goddess Venus; and, before the temple of this pretended great-grandmother, to receive, without rising from his seat, the Roman Senate, when that illustrious body came to present him with some decrees conferring upon him the most extravagant honours.^[27] This insolence, joined to some other acts of an almost childish vanity, little to be expected from an understanding at once so very acute and comprehensive, seems, by exasperating the public jealousy, to have emboldened his assassins, and to have hastened the execution of their conspiracy. The religion and manners of modern times give our great men little encouragement to fancy themselves either Gods or even

Prophets. Success, however, joined to great popular favour, has often so far turned the heads of the greatest of them, as to make them ascribe to themselves both an importance and an ability much beyond what they really possessed; and, by this presumption, to precipitate themselves into many rash and sometimes ruinous adventures. It is a characteristic almost peculiar to the great Duke of Marlborough, that ten years of such uninterrupted and such splendid success as scarce any other general could boast of, never betrayed him into a single rash action, scarce into a single rash word or expression.^[28] The same temperate coolness and self-command cannot, I think, be ascribed to any other great warrior of later times; not to Prince Eugene, not to the late King of Prussia, not to the great Prince of Conde^[29], not even to Gustavus Adolphus. Turenne seems to have approached the nearest to it; but several different transactions of his life sufficiently demonstrate that it was in him by no means so perfect as in the great Duke of Marlborough.^[30]

图VI—6：亚里士多德在教导亚历山大

In the humble project of private life, as well as in the ambitious

and proud pursuit of high stations, great abilities and successful enterprise, in the beginning, have frequently encouraged to undertakings which necessarily led to bankruptcy and ruin in the end.

The esteem and admiration which every impartial spectator conceives for the real merit of those spirited, magnanimous, and high-minded persons, as it is a just and well-founded sentiment, so it is a steady and permanent one, and altogether independent of their good or bad fortune. It is otherwise with that admiration which he is apt to conceive for their excessive self-estimation and presumption. While they are successful, indeed, he is often perfectly conquered and overborne by them. Success covers from his eyes, not only the great imprudence, but frequently the great injustice of their enterprises; and, far from blaming this defective part of their character, he often views it with the most enthusiastic admiration. When they are unfortunate, however, things change their colours and their names. What was before heroic magnanimity, resumes its proper appellation of extravagant rashness and folly; and the blackness of that avidity and injustice, which was before hid under the splendour of prosperity, comes full into view, and blots the whole lustre of their enterprise. Had Caesar, instead of gaining, lost the battle of Pharsalia^[31], his character would, at this hour, have ranked a little above that of Catiline^[32], and the weakest man would have viewed his enterprise against the laws of his country in blacker colours, than, perhaps, even Cato^[33], with all the animosity of a party-man, ever viewed it at the time. His real merit, the justness of his taste, the simplicity and elegance of his writings, the propriety of his eloquence, his skill in war, his resources in distress, his cool and sedate judgment in danger, his faithful attachment to his friends, his unexampled generosity to his enemies, would all have been acknowledged; as the real merit of Catiline, who had many great qualities, is acknowledged at this day. But the insolence and injustice of his all-grasping ambition would have darkened and extinguished the glory of all that real merit.

Fortune has in this, as well as in some other respects already mentioned, great influence over the moral sentiments of mankind, and, according as she is either favourable or adverse, can render the same character the object, either of general love and admiration, or of universal hatred and contempt. This great disorder in our moral sentiments is by no means, however, without its utility; and we may on this, as well as on many other occasions, admire the wisdom of God even in the weakness and folly of man. Our admiration of success is founded upon the same principle with our respect for wealth and greatness, and is equally necessary for establishing the distinction of ranks and the order of society. By this admiration of success we are taught to submit more easily to those superiors, whom the course of human affairs may assign to us; to regard with reverence, and sometimes even with a sort of respectful affection, that fortunate violence which we are no longer capable of resisting; not only the violence of such splendid characters as those of a Caesar or an Alexander, but often that of the most brutal and savage barbarians, of an Attila, a Gengis, or a Tamerlane.^[34] To all such mighty conquerors the great mob of mankind are naturally disposed to look up with a wondering, though, no doubt, with a very weak and foolish admiration. By this admiration, however, they are taught to acquiesce with less reluctance under that government which an irresistible force imposes upon them, and from which no reluctance could deliver them.

Though in prosperity, however, the man of excessive self-estimation may sometimes appear to have some advantage over the man of correct and modest virtue; though the applause of the multitude, and of those who see them both only at a distance, is often much louder in favour of the one than it ever is in favour of the other; yet, all things fairly computed, the real balance of advantage is, perhaps in all cases, greatly in favour of the latter and against the former. The man who neither ascribes to himself, nor wishes that other people should ascribe to him, any other merit besides that which

really belongs to him, fears no humiliation, dreads no detection; but rests contented and secure upon the genuine truth and solidity of his own character. His admirers may neither be very numerous nor very loud in their applauses; but the wisest man who sees him the nearest and who knows him the best, admires him the most. To a real wise man the judicious and well-weighed approbation of a single wise man, gives more heartfelt satisfaction than all the noisy applauses of ten thousand ignorant though enthusiastic admirers. He may say with Parmenides, who, upon reading a philosophical discourse before a public assembly at Athens, and observing, that, except Plato, the whole company had left him, continued, notwithstanding, to read on, and said that Plato alone was audience sufficient for him.^[35]

It is otherwise with the man of excessive self-estimation. The wise men who see him the nearest, admire him the least. Amidst the intoxication of prosperity, their sober and just esteem falls so far short of the extravagance of his own self-admiration, that he regards it as mere malignity and envy. He suspects his best friends. Their company becomes offensive to him. He drives them from his presence, and often rewards their services, not only with ingratitude, but with cruelty and injustice. He abandons his confidence to flatterers and traitors, who pretend to idolize his vanity and presumption; and that character which in the beginning, though in some respects defective, was, upon the whole, both amiable and respectable, becomes contemptible and odious in the end. Amidst the intoxication of prosperity, Alexander killed Clytus, for having preferred the exploits of his father Philip to his own; put Calisthenes to death in torture, for having refused to adore him in the Persian manner; and murdered the great friend of his father, the venerable Parmenio, after having, upon the most groundless suspicions, sent first to the torture and afterwards to the scaffold the only remaining son of that old man, the rest having all before died in his own service.^[36] This was that Parmenio of whom Philip used to say, that the Athenians were very fortunate who could

find ten generals every year, while he himself, in the whole course of his life, could never find one but Parmenio. It was upon the vigilance and attention of this Parmenio that he reposed at all times with confidence and security, and, in his hours of mirth and jollity, used to say, Let us drink, my friends, we may do it with safety, for Parmenio never drinks.^[37] It was this same Parmenio, with whose presence and counsel, it had been said, Alexander had gained all his victories; and without whose presence and counsel, he had never gained a single victory.^[38] The humble, admiring, and flattering friends, whom Alexander left in power and authority behind him, divided his empire among themselves, and after having thus robbed his family and kindred of their inheritance, put, one after another, every single surviving individual of them, whether male or female, to death.

We frequently, not only pardon, but thoroughly enter into and sympathize with the excessive self-estimation of those splendid characters in which we observe a great and distinguished superiority above the common level of mankind. We call them spirited, magnanimous, and high-minded; words which all involve in their meaning a considerable degree of praise and admiration. But we cannot enter into and sympathize with the excessive self-estimation of those characters in which we can discern no such distinguished superiority. We are disgusted and revolted by it; and it is with some difficulty that we can either pardon or suffer it: We call it pride or vanity; two words, of which the latter always, and the former for the most part, involve in their meaning a considerable degree of blame.

Those two vices, however, though resembling, in some respects, as being both modifications of excessive self-estimation, are yet, in many respects, very different from one another.

The proud man is sincere, and, in the bottom of his heart, is convinced of his own superiority; though it may sometimes be difficult to guess upon what that conviction is founded. He wishes you to view

him in no other light than that in which, when he places himself in your situation, he really views himself. He demands no more of you than, what he thinks, justice. If you appear not to respect him as he respects himself, he is more offended than mortified, and feels the same indignant resentment as if he had suffered a real injury. He does not even then, however, deign to explain the grounds of his own pretensions. He disdains to court your esteem. He affects even to despise it, and endeavours to maintain his assumed station, not so much by making you sensible of his superiority, as of your own meanness. He seems to wish, not so much to excite your esteem for himself as to mortify that for yourself.

The vain man is not sincere, and, in the bottom of his heart, is very seldom convinced of that superiority which he wishes you to ascribe to him. He wishes you to view him in much more splendid colours than those in which, when he places himself in your situation, and supposes you to know all that he knows, he can really view himself. When you appear to view him, therefore, in different colours, perhaps in his proper colours, he is much more mortified than offended. The grounds of his claim to that character which he wishes you to ascribe to him, he takes every opportunity of displaying, both by the most ostentatious and unnecessary exhibition of the good qualities and accomplishments which he possesses in some tolerable degree, and sometimes even by false pretensions to those which he either possesses in no degree, or in so very slender a degree that he may well enough be said to possess them in no degree. Far from despising your esteem, he courts it with the most anxious assiduity. Far from wishing to mortify your self-estimation, he is happy to cherish it, in hopes that in return you will cherish his own. He flatters in order to be flattered. He studies to please, and endeavours to bribe you into a good opinion of him by politeness and complaisance, and sometimes even by real and essential good offices, though often displayed, perhaps, with unnecessary ostentation.

The vain man sees the respect which is paid to rank and fortune, and wishes to usurp this respect, as well as that for talents and virtues. His dress, his equipage, his way of living, accordingly, all announce both a higher rank and a greater fortune than really belong to him; and in order to support this foolish imposition for a few years in the beginning of his life, he often reduces himself to poverty and distress long before the end of it. As long as he can continue his expence, however, his vanity is delighted with viewing himself, not in the light in which you would view him if you knew all that he knows; but in that in which, he imagines, he has, by his own address, induced you actually to view him. Of all the illusions of vanity this is, perhaps, the most common. Obscure strangers who visit foreign countries, or who, from a remote province, come to visit, for a short time, the capital of their own country, most frequently attempt to practise it. The folly of the attempt, though always very great and most unworthy of a man of sense, may not be altogether so great upon such as upon most other occasions. If their stay is short, they may escape any disgraceful detection; and, after indulging their vanity for a few months or a few years, they may return to their own homes, and repair, by future parsimony, the waste of their past profusion.

The proud man can very seldom be accused of this folly. His sense of his own dignity renders him careful to preserve his independency, and, when his fortune happens not to be large, though he wishes to be decent, he studies to be frugal and attentive in all his expences. The ostentatious expence of the vain man is highly offensive to him. It outshines, perhaps, his own. It provokes his indignation as an insolent assumption of a rank which is by no means due; and he never talks of it without loading it with the harshest and severest reproaches.

The proud man does not always feel himself at his ease in the company of his equals, and still less in that of his superiors. He cannot lay down his lofty pretensions, and the countenance and conversation

of such company overawe him so much that he dare not display them. He has recourse to humbler company, for which he has little respect, which he would not willingly chuse; and which is by no means agreeable to him; that of his inferiors, his flatterers, and dependants. He seldom visits his superiors, or, if he does, it is rather to show that he is entitled to live in such company, than for any real satisfaction that he enjoys in it. It is as Lord Clarendon says of the Earl of Arundel, that he sometimes went to court, because he could there only find a greater man than himself; but that he went very seldom, because he found there a greater man than himself.

It is quite otherwise with the vain man. He courts the company of his superiors as much as the proud man shuns it. Their splendour, he seems to think, reflects a splendour upon those who are much about them. He haunts the courts of kings and the levees of ministers, and gives himself the air of being a candidate for fortune and preferment, when in reality he possesses the much more precious happiness, if he knew how to enjoy it, of not being one. He is fond of being admitted to the tables of the great, and still more fond of magnifying to other people the familiarity with which he is honoured there. He associates himself, as much as he can, with fashionable people, with those who are supposed to direct the public opinion, with the witty, with the learned, with the popular; and he shuns the company of his best friends whenever the very uncertain current of public favour happens to run in any respect against them. With the people to whom he wishes to recommend himself, he is not always very delicate about the means which he employs for that purpose; unnecessary ostentation, groundless pretensions, constant assentation, frequently flattery, though for the most part a pleasant and a sprightly flattery, and very seldom the gross and fulsome flattery of a parasite. The proud man, on the contrary, never flatters, and is frequently scarce civil to any body.

Notwithstanding all its groundless pretensions, however, vanity is

almost always a sprightly and a gay, and very often a good-natured passion. Pride is always a grave, a sullen, and a severe one. Even the falsehoods of the vain man are all innocent falsehoods, meant to raise himself, not to lower other people. To do the proud man justice, he very seldom stoops to the baseness of falsehood. When he does, however, his falsehoods are by no means so innocent. They are all mischievous, and meant to lower other people. He is full of indignation at the unjust superiority, as he thinks it, which is given to them. He views them with malignity and envy, and, in talking of them, often endeavours, as much as he can, to extenuate and lessen whatever are the grounds upon which their superiority is supposed to be founded. Whatever tales are circulated to their disadvantage, though he seldom forges them himself, yet he often takes pleasure in believing them, is by no means unwilling to repeat them, and even sometimes with some degree of exaggeration. The worst falsehoods of vanity are all what we call white lies: those of pride, whenever it condescends to falsehood, are all of the opposite complexion.

Our dislike to pride and vanity generally disposes us to rank the persons whom we accuse of those vices rather below than above the common level. In this judgment, however, I think, we are most frequently in the wrong, and that both the proud and the vain man are often (perhaps for the most part) a good deal above it; though not near so much as either the one really thinks himself, or as the other wishes you to think him. If we compare them with their own pretensions, they may appear the just objects of contempt. But when we compare them with what the greater part of their rivals and competitors really are, they may appear quite otherwise, and very much above the common level. Where there is this real superiority, pride is frequently attended with many respectable virtues; with truth, with integrity, with a high sense of honour, with cordial and steady friendship, with the most inflexible firmness and resolution. Vanity, with many amiable ones; with humanity, with politeness, with a

desire to oblige in all little matters, and sometimes with a real generosity in great ones; a generosity, however, which it often wishes to display in the most splendid colours that it can. By their rivals and enemies, the French, in the last century, were accused of vanity; the Spaniards, of pride; and foreign nations were disposed to consider the one as the more amiable; the other, as the more respectable people.

The words vain and vanity are never taken in a good sense. We sometimes say of a man, when we are talking of him in good humour, that he is the better for his vanity, or that his vanity is more diverting than offensive; but we still consider it as a foible and a ridicule in his character.

The words proud and pride, on the contrary, are sometimes taken in a good sense. We frequently say of a man, that he is too proud, or that he has too much noble pride, ever to suffer himself to do a mean thing. Pride is, in this case, confounded with magnanimity. Aristotle, a Philosopher who certainly knew the world, in drawing the character of the magnanimous man, paints him with many features which, in the two last centuries, were commonly ascribed to the Spanish character: that he was deliberate in all his resolutions; slow, and even tardy, in all his actions; that his voice was grave, his speech deliberate, his step and motion slow; that he appeared indolent and even slothful, not at all disposed to bustle about little matters, but to act with the most determined and vigorous resolution upon all great and illustrious occasions; that he was not a lover of danger, or forward to expose himself to little dangers, but to great dangers; and that, when he exposed himself to danger, he was altogether regardless of his life.^[39]

The proud man is commonly too well contented with himself to think that his character requires any amendment. The man who feels himself all-perfect, naturally enough despises all further improvement. His self-sufficiency and absurd conceit of his own superiority,

commonly attend him from his youth to his most advanced age; and he dies, as Hamlet says, with all his sins upon his head, unanointed, unanealed.^[40]

It is frequently otherwise with the vain man. The desire of the esteem and admiration of other people, when for qualities and talents which are the natural and proper objects of esteem and admiration, is the real love of true glory; a passion which, if not the very best passion of human nature, is certainly one of the best. Vanity is very frequently no more than an attempt prematurely to usurp that glory before it is due. Though your son, under five-and-twenty years of age, should be but a coxcomb; do not, upon that account, despair of his becoming, before he is forty, a very wise and worthy man, and a real proficient in all those talents and virtues to which, at present, he may only be an ostentatious and empty pretender. The great secret of education is to direct vanity to proper objects. Never suffer him to value himself upon trivial accomplishments. But do not always discourage his pretensions to those that are of real importance. He would not pretend to them if he did not earnestly desire to possess them. encourage this desire; afford him every means to facilitate the acquisition; and do not take too much offence, although he should sometimes assume the air of having attained it a little before the time.

Such, I say, are the distinguishing characteristics of pride and vanity, when each of them acts according to its proper character. But the proud man is often vain; and the vain man is often proud. Nothing can be more natural than that the man, who thinks much more highly of himself than he deserves, should wish that other people should think still more highly of him: or that the man, who wishes that other people should think more highly of him than he thinks of himself, should, at the same time, think much more highly of himself than he deserves. Those two vices being frequently in the same character, the characteristics of both are necessarily confounded; and we sometimes

find the superficial and impertinent ostentation of vanity joined to the most malignant and derisive insolence of pride. We are sometimes, upon that account, at a loss how to rank a particular character, or whether to place it among the proud or among the vain.

Men of merit considerably above the common level, sometimes underrate as well as over-rate themselves. Such characters, though not very dignified, are often, in private society, far from being disagreeable. His companions all feel themselves much at their ease in the society of a man so perfectly modest and unassuming. If those companions, however, have not both more discernment and more generosity than ordinary, though they may have some kindness for him, they have seldom much respect; and the warmth of their kindness is very seldom sufficient to compensate the coldness of their respect. Men of no more than ordinary discernment never rate any person higher than he appears to rate himself. He seems doubtful himself, they say, whether he is perfectly fit for such a situation or such an office; and immediately give the preference to some impudent blockhead who entertains no doubt about his own qualifications. Though they should have discernment, yet, if they want generosity, they never fail to take advantage of his simplicity, and to assume over him an impertinent superiority which they are by no means entitled to. His good-nature may enable him to bear this for some time; but he grows weary at last, and frequently when it is too late, and when that rank, which he ought to have assumed, is lost irrecoverably, and usurped, in consequence of his own backwardness, by some of his more forward, though much less meritorious companions. A man of this character must have been very fortunate in the early choice of his companions, if, in going through the world, he meets always with fair justice, even from those whom, from his own past kindness, he might have some reason to consider as his best friends; and a youth, too unassuming and too unambitious, is frequently followed by an insignificant, complaining, and discontented old age.

Those unfortunate persons whom nature has formed a good deal below the common level, seem sometimes to rate themselves still more below it than they really are. This humility appears sometimes to sink them into idiotism. Whoever has taken the trouble to examine idiots with attention, will find that, in many of them, the faculties of the understanding are by no means weaker than in several other people, who, though acknowledged to be dull and stupid, are not, by any body, accounted idiots. Many idiots, with no more than ordinary education, have been taught to read, write, and account tolerably well. Many persons, never accounted idiots, notwithstanding the most careful education, and notwithstanding that, in their advanced age, they have had spirit enough to attempt to learn what their early education had not taught them, have never been able to acquire, in any tolerable degree, any one of those three accomplishments. By an instinct of pride, however, they set themselves upon a level with their equals in age and situation; and, with courage and firmness, maintain their proper station among their companions. By an opposite instinct, the idiot feels himself below every company into which you can introduce him. Ill-usage, to which he is extremely liable, is capable of throwing him into the most violent fits of rage and fury. But no good usage, no kindness or indulgence, can ever raise him to converse with you as your equal. If you can bring him to converse with you at all, however, you will frequently find his answers sufficiently pertinent, and even sensible. But they are always stamped with a distinct consciousness of his own great inferiority. He seems to shrink and, as it were, to retire from your look and conversation; and to feel, when he places himself in your situation, that, notwithstanding your apparent condescension, you cannot help considering him as immensely below you. Some idiots, perhaps the greater part, seem to be so, chiefly or altogether, from a certain numbness or torpidity in the faculties of the understanding. But there are others, in whom those faculties do not appear more torpid or benumbed than in many other people who are not accounted idiots. But that instinct of pride,

necessary to support them upon an equality with their brethren, seems totally wanting in the former and not in the latter.

That degree of self-estimation, therefore, which contributes most to the happiness and contentment of the person himself, seems likewise most agreeable to the impartial spectator. The man who esteems himself as he ought, and no more than he ought, seldom fails to obtain from other people all the esteem that he himself thinks due. He desires no more than is due to him, and he rests upon it with complete satisfaction.

The proud and the vain man, on the contrary, are constantly dissatisfied. The one is tormented with indignation at the unjust superiority, as he thinks it, of other people. The other is in continual dread of the shame which, he foresees, would attend upon the detection of his groundless pretensions. Even the extravagant pretensions of the man of real magnanimity, though, when supported by splendid abilities and virtues, and, above all, by good fortune, they impose upon the multitude, whose applauses he little regards, do not impose upon those wise men whose approbation he can only value, and whose esteem he is most anxious to acquire. He feels that they see through, and suspects that they despise his excessive presumption; and he often suffers the cruel misfortune of becoming, first the jealous and secret, and at last the open, furious, and vindictive enemy of those very persons, whose friendship it would have given him the greatest happiness to enjoy with unsuspecting security.

Though our dislike to the proud and the vain often disposes us to rank them rather below than above their proper station, yet, unless we are provoked by some particular and personal impertinence, we very seldom venture to use them ill. In common cases, we endeavour, for our own ease, rather to acquiesce, and, as well as we can, to accommodate ourselves to their folly. But, to the man who under-rates himself, unless we have both more discernment and more generosity

than belong to the greater part of men, we seldom fail to do, at least, all the injustice which he does to himself, and frequently a great deal more. He is not only more unhappy in his own feelings than either the proud or the vain, but he is much more liable to every sort of ill-usage from other people. In almost all cases, it is better to be a little too proud, than, in any respect, too humble; and, in the sentiment of self-estimation, some degree of excess seems, both to the person and to the impartial spectator, to be less disagreeable than any degree of defect.

In this, therefore, as well as in every other emotion, passion, and habit, the degree that is most agreeable to the impartial spectator is likewise most agreeable to the person himself; and according as either the excess or the defect is least offensive to the former, so, either the one or the other is in proportion least disagreeable to the latter.

Conclusion of the Six Part

Concern for our own happiness recommends to us the virtue of prudence: concern for that of other people, the virtues of justice and beneficence; of which, the one restrains us from hurting, the other prompts us to promote that happiness. Independent of any regard either to what are, or to what ought to be, or to what upon a certain condition would be, the sentiments of other people, the first of those three virtues is originally recommended to us by our selfish, the other two by our benevolent affections. Regard to the sentiments of other people, however, comes afterwards both to enforce and to direct the practice of all those virtues; and no man during, either the whole of his life, or that of any considerable part of it, ever trod steadily and uniformly in the paths of prudence, of justice, or of proper beneficence, whose conduct was not principally directed by a regard to the sentiments of the supposed impartial spectator, of the great inmate of the breast, the great judge and arbiter of conduct. If in the course of the day we have swerved in any respect from the rules which he prescribes to us; if we have either exceeded or relaxed in our frugality; if we have either exceeded or relaxed in our industry; if, through passion or inadvertency, we have hurt in any respect the interest or happiness of our neighbour; if we have neglected a plain and proper opportunity of promoting that interest and happiness; it is this inmate who, in the evening, calls us to an account for all those omissions and violations, and his reproaches often make us blush inwardly both for our folly and inattention to our own happiness, and for our still greater indifference and inattention, perhaps, to that of other people.

But though the virtues of prudence, justice, and beneficence, may, upon different occasions, be recommended to us almost equally by two different principles; those of self-command are, upon most

occasions, principally and almost entirely recommended to us by one; by the sense of propriety, by regard to the sentiments of the supposed impartial spectator. Without the restraint which this principle imposes, every passion would, upon most occasions, rush headlong, if I may say so, to its own gratification. Anger would follow the suggestions of its own fury; fear those of its own violent agitations. Regard to no time or place would induce vanity to refrain from the loudest and most impertinent ostentation; or voluptuousness from the most open, indecent, and scandalous indulgence. Respect for what are, or for what ought to be, or for what upon a certain condition would be, the sentiments of other people, is the sole principle which, upon most occasions, overawes all those mutinous and turbulent passions into that tone and temper which the impartial spectator can enter into and sympathize with.

Upon some occasions, indeed, those passions are restrained, not so much by a sense of their impropriety, as by prudential considerations of the bad consequences which might follow from their indulgence. In such cases, the passions, though restrained, are not always subdued, but often remain lurking in the breast with all their original fury. The man whose anger is restrained by fear, does not always lay aside his anger, but only reserves its gratification for a more safe opportunity. But the man who, in relating to some other person the injury which has been done to him, feels at once the fury of his passion cooled and becalmed by sympathy with the more moderate sentiments of his companion, who at once adopts those more moderate sentiments, and comes to view that injury, not in the black and atrocious colours in which he had originally beheld it, but in the much milder and fairer light in which his companion naturally views it; not only restrains, but in some measure subdues, his anger. The passion becomes really less than it was before, and less capable of exciting him to the violent and bloody revenge which at first, perhaps, he might have thought of inflicting.

Those passions which are restrained by the sense of propriety, are all in some degree moderated and subdued by it. But those which are restrained only by prudential considerations of any kind, are, on the contrary, frequently inflamed by the restraint, and sometimes (long after the provocation given, and when nobody is thinking about it) burst out absurdly and unexpectedly, and with tenfold fury and violence.

Anger, however, as well as every other passion, may, upon many occasions, be very properly restrained by prudential considerations. Some exertion of manhood and self-command is even necessary for this sort of restraint; and the impartial spectator may sometimes view it with that sort of cold esteem due to that species of conduct which he considers as a mere matter of vulgar prudence; but never with that affectionate admiration with which he surveys the same passions, when, by the sense of propriety, they are moderated and subdued to what he himself can readily enter into. In the former species of restraint, he may frequently discern some degree of propriety, and, if you will, even of virtue; but it is a propriety and virtue of a much inferior order to those which he always feels with transport and admiration in the latter.

The virtues of prudence, justice, and beneficence, have no tendency to produce any but the most agreeable effects. Regard to those effects, as it originally recommends them to the actor, so does it afterwards to the impartial spectator. In our approbation of the character of the prudent man, we feel, with peculiar complacency, the security which he must enjoy while he walks under the safeguard of that sedate and deliberate virtue. In our approbation of the character of the just man, we feel, with equal complacency, the security which all those connected with him, whether in neighbourhood, society, or business, must derive from his scrupulous anxiety never either to hurt or offend. In our approbation of the character of the beneficent man,

we enter into the gratitude of all those who are within the sphere of his good offices, and conceive with them the highest sense of his merit. In our approbation of all those virtues, our sense of their agreeable effects, of their utility, either to the person who exercises them, or to some other persons, joins with our sense of their propriety, and constitutes always a considerable, frequently the greater part of that approbation.

But in our approbation of the virtues of self-command, complacency with their effects sometimes constitutes no part, and frequently but a small part, of that approbation. Those effects may sometimes be agreeable, and sometimes disagreeable; and though our approbation is no doubt stronger in the former case, it is by no means altogether destroyed in the latter. The most heroic valour may be employed indifferently in the cause either of justice or of injustice; and though it is no doubt much more loved and admired in the former case, it still appears a great and respectable quality even in the latter. In that, and in all the other virtues of self-command, the splendid and dazzling quality seems always to be the greatness and steadiness of the exertion, and the strong sense of propriety which is necessary in order to make and to maintain that exertion. The effects are too often but too little regarded.

[40] 这里斯密也出现了引用错误，是灵魂（哈姆雷特的父亲）而不是哈姆雷特谈及自己的死亡。（莎士比亚，《哈姆雷特》，I.v.76~79）

Part VII Of Systems of Moral Philosophy

Section I Of the Questions which ought to be examined in a Theory of Moral Sentiments

If we examine the most celebrated and remarkable of the different theories which have been given concerning the nature and origin of our moral sentiments, we shall find that almost all of them coincide with some part or other of that which I have been endeavouring to give an account of; and that if every thing which has already been said be fully considered, we shall be at no loss to explain what was the view or aspect of nature which led each particular author to form his particular system. From some one or other of those principles which I have been endeavouring to unfold, every system of morality that ever had any reputation in the world has, perhaps, ultimately been derived. As they are all of them, in this respect, founded upon natural principles, they are all of them in some measure in the right. But as many of them are derived from a partial and imperfect view of nature, there are many of them too in some respects in the wrong.

[1]In treating of the principles of morals there are two questions to be considered. First, wherein does virtue consist? Or what is the tone of temper, and tenour of conduct, which constitutes the excellent and praise-worthy character, the character which is the natural object of esteem, honour, and approbation? And, secondly, by what power or faculty in the mind is it, that this character, whatever it be, is recommended. to us? Or in other words, how and by what means does it come to pass, that the mind prefers one tenour of conduct to another, denominates the one right and the other wrong; considers the one as the object of approbation, honour, and reward, and the other of blame, censure, and punishment?

We examine the first question when we consider whether virtue

consists in benevolence, as Dr Hutcheson imagines;^[2] or in acting suitably to the different relations we stand in, as Dr Clarke^[3] supposes; or in the wise and prudent pursuit of our own real and solid happiness, as has been the opinion of others.

We examine the second question, when we consider, whether the virtuous character, whatever it consists in, be recommended to us by self-love, which makes us perceive that this character, both in ourselves and others, tends most to promote our own private interest; or by reason, which points out to us the difference between one character and another, in the same manner as it does that between truth and falsehood; or by a peculiar power of perception, called a moral sense, which this virtuous character gratifies and pleases, as the contrary disgusts and displeases it; or last of all, by some other principle in human nature, such as a modification of sympathy, or the like.

I shall begin with considering the systems which have been formed concerning the first of these questions, and shall proceed afterwards to examine those concerning the second.

图VII—1：哈奇森（1694—1746）

Section II Of the different Accounts which have been given of the Nature of Virtue

The different accounts which have been given of the nature of virtue, or of the temper of mind which constitutes the excellent and praise-worthy character, may be reduced to three different classes. According to some, the virtuous temper of mind does not consist in any one species of affections, but in the proper government and direction of all our affections, which may be either virtuous or vicious according to the objects which they pursue, and the degree of vehemence with which they pursue them. According to these authors, therefore, virtue consists in propriety.

According to others, virtue consists in the judicious pursuit of our own private interest and happiness, or in the proper government and direction of those selfish affections which aim solely at this end. In the opinion of these authors, therefore, virtue consists in prudence.

Another set of authors make virtue consist in those affections only which aim at the happiness of others, not in those which aim at our own. According to them, therefore, disinterested benevolence is the only motive which can stamp upon any action the character of virtue.

The character of virtue, it is evident, must either be ascribed indifferently to all our affections, when under proper government and direction; or it must be confined to some one class or division of them. The great division of our affections is into the selfish and the benevolent. If the character of virtue, therefore, cannot be ascribed indifferently to all our affections, when under proper government and direction, it must be confined either to those which aim directly at our own private happiness, or to those which aim directly at that of

others. If virtue, therefore, does not consist in propriety, it must consist either in prudence or in benevolence. Besides these three, it is scarce possible to imagine that any other account can be given of the nature of virtue. I shall endeavour to show hereafter how all the other accounts, which are seemingly different from any of these, coincide at bottom with some one or other of them.

Chap. I Of those Systems which make Virtue consist in Propriety

According to Plato, to Aristotle, and to Zeno, virtue consists in the propriety of conduct, or in the suitableness of the affection from which we act to the object which excites it.

I. In the system of Plato¹[\[4\]](#) the soul is considered as something like a little state or republic, composed of three different faculties or orders.

The first is the judging faculty, the faculty which determines not only what are the proper means for attaining any end, but also what ends are fit to be pursued, and what degree of relative value we ought to put upon each. This faculty Plato called, as it is very properly called, reason, and considered it as what had a right to be the governing principle of the whole. Under this appellation, it is evident, he comprehended not only that faculty by which we judge of truth and falsehood, but that by which we judge of the propriety or impropriety of desires and affections.

The different passions and appetites, the natural subjects of this ruling principle, but which are so apt to rebel against their master, he reduced to two different classes or orders. The first consisted of those passions, which are founded in pride and resentment, or in what the schoolmen called the irascible part of the soul; ambition, animosity, the love of honour, and the dread of shame, the desire of victory,

superiority, and revenge; all those passions, in short, which are supposed either to rise from, or to denote what, by a metaphor in our language, we commonly call spirit or natural fire. The second consisted of those passions which are founded in the love of pleasure, or in what the schoolmen called the concupiscible part of the soul. It comprehended all the appetites of the body, the love of ease and security, and of all sensual gratifications.

It rarely happens that we break in upon that plan of conduct, which the governing principle prescribes, and which in all our cool hours we had laid down to ourselves as what was most proper for us to pursue, but when prompted by one or other of those two different sets of passions; either by ungovernable ambition and resentment, or by the importunate solicitations of present ease and pleasure. But though these two orders of passions are so apt to mislead us, they are still considered as necessary parts of human nature: the first having been given to defend us against injuries, to assert our rank and dignity in the world, to make us aim at what is noble and honourable, and to make us distinguish those who act in the same manner; the second, to provide for the support and necessities of the body.

In the strength, acuteness, and perfection of the governing principle was placed the essential virtue of prudence, which, according to Plato, consisted in a just and clear discernment, founded upon general and scientific ideas, of the ends which were proper to be pursued, and of the means which were proper for attaining them.^[5]

When the first set of passions, those of the irascible part of the soul, had that degree of strength and firmness, which enabled them, under the direction of reason, to despise all dangers in the pursuit of what was honourable and noble; it constituted the virtue of fortitude and magnanimity. This order of passions, according to this system, was of a more generous and noble nature than the other. They were considered upon many occasions as the auxiliaries of reason, to check

and restrain the inferior and brutal appetites. We are often angry at ourselves, it was observed, we often become the objects of our own resentment and indignation, when the love of pleasure prompts to do what we disapprove of; and the irascible part of our nature is in this manner called in to assist the rational against the concupiscible.

When all those three different parts of our nature were in perfect concord with one another, when neither the irascible nor concupiscible passions ever aimed at any gratification which reason did not approve of, and when reason never commanded any thing, but what these of their own accord were willing to perform: this happy composure, this perfect and complete harmony of soul, constituted that virtue which in their language is expressed by a word which we commonly translate temperance, but which might more properly be translated good temper, or sobriety and moderation of mind.

Justice, the last and greatest of the four cardinal virtues, took place, according to this system, when each of those three faculties of the mind confined itself to its proper office, without attempting to encroach upon that of any other; when reason directed and passion obeyed, and when each passion performed its proper duty, and exerted itself towards its proper object easily and without reluctance, and with that degree of force and energy, which was suitable to the value of what it pursued. In this consisted that complete virtue, that perfect propriety of conduct, which Plato, after some of the ancient Pythagoreans, denominated Justice.

The word, it is to be observed, which expresses justice in the Greek language^[6], has several different meanings; and as the correspondent word in all other languages, so far as I know, has the same, there must be some natural affinity among those various significations. In one sense we are said to do justice to our neighbour when we abstain from doing him any positive harm, and do not directly hurt him, either in his person, or in his estate, or in his

reputation. This is that justice which I have treated of above, the observance of which may be extorted by force, and the violation of which exposes to punishment.^[7] In another sense we are said not to do justice to our neighbour unless we conceive for him all that love, respect, and esteem, which his character, his situation, and his connexion with ourselves, render suitable and proper for us to feel, and unless we act accordingly. It is in this sense that we are said to do injustice to a man of merit who is connected with us, though we abstain from hurting him in every respect, if we do not exert ourselves to serve him and to place him in that situation in which the impartial spectator would be pleased to see him. The first sense of the word coincides with what Aristotle and the Schoolmen call commutative justice, and with what Grotius^[8] calls the *justitia expletrix*, which consists in abstaining from what is another's, and in doing voluntarily whatever we can with propriety be forced to do. The second sense of the word coincides with what some have called distributive justice,^{2[9]} and with the *justitia attributrix* of Grotius, which consists in proper beneficence, in the becoming use of what is our own, and in the applying it to those purposes either of charity or generosity, to which it is most suitable, in our situation, that it should be applied. In this sense justice comprehends all the social virtues: There is yet another sense in which the word justice is sometimes taken, still more extensive than either of the former, though very much a-kin to the last; and which runs too, so far as I know, through all languages. It is in this last sense that we are said to be unjust, when we do not seem to value any particular object with that degree of esteem, or to pursue it with that degree of ardour which to the impartial spectator it may appear to deserve or to be naturally fitted for exciting. Thus we are said to do injustice to a poem or a picture, when we do not admire them enough, and we are said to do them more than justice when we admire them too much. In the same manner we are said to do injustice to ourselves when we appear not to give sufficient attention to any particular object of self-interest. In this last sense, what is called

justice means the same thing with exact and perfect propriety of conduct and behaviour, and comprehends in it, not only the offices of both commutative and distributive justice, but of every other virtue, of prudence, of fortitude, of temperance. It is in this last sense that Plato evidently understands what he calls justice, and which, therefore, according to him, comprehends in it the perfection of every sort of virtue.

Such is the account given by Plato of the nature of virtue, or of that temper of mind which is the proper object of praise and approbation. It consists, according to him, in that state of mind in which every faculty confines itself within its proper sphere without encroaching upon that of any other, and performs its proper office with that precise degree of strength and vigour which belongs to it. His account, it is evident, coincides in every respect with what we have said above concerning the propriety of conduct.

II. Virtue, according to Aristotle,³[\[10\]](#) consists in the habit of mediocrity according to right reason. Every particular virtue, according to him, lies in a kind of middle between two opposite vices, of which the one offends from being too much, the other from being too little affected by a particular species of objects. Thus the virtue of fortitude or courage lies in the middle between the opposite vices of cowardice and of presumptuous rashness, of which the one offends from being too much, and the other from being too little affected by the objects of fear. Thus too the virtue of frugality lies in a middle between avarice and profusion, of which the one consists in an excess, the other in a defect of the proper attention to the objects of self-interest. Magnanimity, in the same manner, lies in a middle between the excess of arrogance and the defect of pusillanimity, of which the one consists in too extravagant, the other in too weak a sentiment of our own worth and dignity. It is unnecessary to observe that this account of virtue corresponds too pretty exactly with what has been

said above concerning the propriety and impropriety of conduct.

According to Aristotle,^{4[11]} indeed, virtue did not so much consist in those moderate and right affections, as in the habit of this moderation. In order to understand this, it is to be observed, that virtue may be considered either as the quality of an action, or as the quality of a person. Considered as the quality of an action, it consists, even according to Aristotle, in the reasonable moderation of the affection from which the action proceeds, whether this disposition be habitual to the person or not. Considered as the quality of a person, it consists in the habit of this reasonable moderation, in its having become the customary and usual disposition of the mind. Thus the action which proceeds from an occasional fit of generosity is undoubtedly a generous action, but the man who performs it, is not necessarily a generous person, because it may be the single action of the kind which he ever performed. The motive and disposition of heart, from which this action was performed, may have been quite just and proper: but as this happy mood seems to have been the effect rather of accidental humour than of any thing steady or permanent in the character, it can reflect no great honour on the performer. When we denominate a character generous or charitable, or virtuous in any respect, we mean to signify that the disposition expressed by each of those appellations is the usual and customary disposition of the person. But single actions of any kind, how proper and suitable soever, are of little consequence to show that this is the case. If a single action was sufficient to stamp the character of any virtue upon the person who performed it, the most worthless of mankind might lay claim to all the virtues; since there is no man who has not, upon some occasions, acted with prudence, justice, temperance, and fortitude. But though single actions, how laudable soever, reflect very little praise upon the person who performs them, a single vicious action performed by one whose conduct is usually very regular, greatly diminishes and sometimes destroys altogether our opinion of his virtue. A single

action of this kind sufficiently shows that his habits are not perfect, and that he is less to be depended upon, than, from the usual train of his behaviour, we might have been apt to imagine.

Aristotle too,^{5[12]} when he made virtue to consist in practical habits, had it probably in his view to oppose the doctrine of Plato, who seems to have been of opinion that just sentiments and reasonable judgments concerning what was fit to be done or to be avoided, were alone sufficient to constitute the most perfect virtue. Virtue, according to Plato, might be considered as a species of science, and no man, he thought, could see clearly and demonstratively what was right and what was wrong, and not act accordingly. Passion might make us act contrary to doubtful and uncertain opinions, not to plain and evident judgments. Aristotle, on the contrary, was of opinion, that no conviction of the understanding was capable of getting the better of inveterate habits, and that good morals arose not from knowledge but from action.

III. According to Zeno,^{6[13]} the founder of the Stoical doctrine, every animal was by nature recommended to its own care, and was endowed with the principle of self-love, that it might endeavour to preserve, not only its existence, but all the different parts of its nature, in the best and most perfect state of which they were capable.

The self-love of man embraced, if I may say so, his body and all its different members, his mind and all its different faculties and powers, and desired the preservation and maintenance of them all in their best and most perfect condition. Whatever tended to support this state of existence was, therefore, by nature pointed out to him as fit to be chosen; and whatever tended to destroy it, as fit to be rejected. Thus health, strength, agility and ease of body as well as the eternal conveniencies which could promote these; wealth, power, honours, the respect and esteem of those we live with; were naturally pointed out to us as things eligible, and of which the possession was preferable

to the want. On the other hand, sickness, infirmity, unwieldiness, pain of body, as well as all the eternal inconveniencies which tend to occasion or bring on any of them; poverty, the want of authority, the contempt or hatred of those we live with; were, in the same manner, pointed out to us as things to be shunned and avoided. In each of those two opposite classes of objects, there were some which appeared to be more the objects either of choice or rejection, than others in the same class. Thus, in the first class, health appeared evidently preferable to strength, and strength to agility; reputation to power, and power to riches. And thus too, in the second class, sickness was more to be avoided than unwieldiness of body, ignominy than poverty, and poverty than the loss of power. Virtue and the propriety of conduct consisted in choosing and rejecting all different objects and circumstances according as they were by nature rendered more or less the objects of choice or rejection; in selecting always from among the several objects of choice presented to us, that which was most to be chosen, when we could not obtain them all; and in selecting too, out of the several objects of rejection offered to us, that which was least to be avoided, when it was not in our power to avoid them all. By choosing and rejecting with this just and accurate discernment, by thus bestowing upon every object the precise degree of attention it deserved, according to the place which it held in this natural scale of things, we maintained, according to the Stoics, that perfect rectitude of conduct which constituted the essence of virtue. This was what they called to live consistently, to live according to nature, and to obey those laws and directions which nature, or the Author of nature, had prescribed for our conduct.

So far the Stoical idea of propriety and virtue is not very different from that of Aristotle and the ancient Peripatetics.^[14]

Among those primary objects which nature had recommended to us as eligible, was the prosperity of our family, of our relations, of our

friends, of our country, of mankind, and of the universe in general. Nature, too, had taught us, that as the prosperity of two was preferable to that of one, that of many, or of all, must be infinitely more so. That we ourselves were but one, and that consequently wherever our prosperity was inconsistent with that, either of the whole, or of any considerable part of the whole, it ought, even in our own choice, to yield to what was so vastly preferable. As all the events in this world were conducted by the providence of a wise, powerful, and good God, we might be assured that whatever happened tended to the prosperity and perfection of the whole. If we ourselves, therefore, were in poverty, in sickness, or in any other calamity, we ought, first of all, to use our utmost endeavours, so far as justice and our duty to others would allow, to rescue ourselves from this disagreeable circumstance. But if, after all we could do, we found this impossible, we ought to rest satisfied that the order and perfection of the universe required that we should in the mean time continue in this situation. And as the prosperity of the whole should, even to us, appear preferable to so insignificant a part as ourselves, our situation, whatever it was, ought from that moment to become the object of our liking, if we would maintain that complete propriety and rectitude of sentiment and conduct in which consisted the perfection of our nature. If, indeed, any opportunity of extricating ourselves should offer, it became our duty to embrace it. The order of the universe, it was evident, no longer required our continuance in this situation, and the great Director of the world plainly called upon us to leave it, by so clearly pointing out the road which we were to follow. It was the same case with the adversity of our relations, our friends, our country. If, without violating any more sacred obligation, it was in our power to prevent or put an end to their calamity, it undoubtedly was our duty to do so. The propriety of action, the rule which Jupiter had given us for the direction of our conduct, evidently required this of us. But if it was altogether out of our power to do either, we ought then to consider this event as the most fortunate which could possibly have

happened; because we might be assured that it tended most to the prosperity and order of the whole, which was what we ourselves, if we were wise and equitable, ought most of all to desire. It was our own final interest considered as a part of that whole, of which the prosperity ought to be, not only the principal, but the sole object of our desire.

‘In what sense,’ says Epictetus, ‘are some things said to be according to our nature, and others contrary to it? It is in that sense in which we consider ourselves as separated and detached from all other things. For thus it may be said to be according to the nature of the foot to be always clean. But if you consider it as a foot, and not as something detached from the rest of the body, it must behave it sometimes to trample in the dirt, and sometimes to tread upon thorns, and sometimes, too, to be cut off for the sake of the whole body; and if it refuses this, it is no longer a foot. Thus, too, ought we to conceive with regard to ourselves. What are you? A man. If you consider yourself as something separated and detached, it is agreeable to your nature to live to old age, to be rich, to be in health. But if you consider yourself as a man, and as a part of a whole, upon account of that whole, it will behave you sometimes to be in sickness, sometimes to be exposed to the inconveniency of a sea voyage, sometimes to be in want; and at last, perhaps, to die before your time. Why then do you complain? Do not you know that by doing so, as the foot ceases to be a foot, so you cease to be a man?’⁷^{[15][16]}

A wise man never complains of the destiny of Providence, nor thinks the universe in confusion when he is out of order. He does not look upon himself as a whole, separated and detached from every other part of nature, to be taken care of by itself and for itself. He regards himself in the light in which he imagines the great genius of human nature, and of the world, regards him. He enters, if I may say so, into the sentiments of that divine Being, and considers himself as

an atom, a particle, of an immense and infinite system, which must and ought to be disposed of, according to the conveniency of the whole. Assured of the wisdom which directs all the events of human life, whatever lot befalls him, he accepts it with joy, satisfied that, if he had known all the connections and dependencies of the different parts of the universe, it is the very lot which he himself would have wished for. If it is life, he is contented to live; and if it is death, as nature must have no further occasion for his presence here, he willingly goes where he is appointed. I accept, said a cynical philosopher, whose doctrines were in this respect the same as those of the Stoics^[17], I accept, with equal joy and satisfaction, whatever fortune can befall me. Riches or poverty, pleasure or pain, health or sickness, all is alike: nor would I desire that the Gods should in any respect change my destination. If I was to ask of them any thing beyond what their bounty has already bestowed, it should be that they would inform me before-hand what it was their pleasure should be done with me, that I might of my own accord place myself in this situation, and demonstrate the cheerfulness with which I embraced their allotment. If I am going to sail, says Epictetus^[18], I chuse the best ship and the best pilot, and I wait for the fairest weather that my circumstances and duty will allow. Prudence and propriety, the principles which the Gods have given me for the direction of my conduct, require this of me; but they require no more: and if, notwithstanding, a storm arises, which neither the strength of the vessel nor the skill of the pilot are likely to withstand, I give myself no trouble about the consequence. All that I had to do is done already. The directors of my conduct never command me to be miserable, to be anxious, desponding, or afraid. Whether we are to be drowned, or to come to a harbour, is the business of Jupiter, not mine. I leave it entirely to his determination, nor ever break my rest with considering which way he is likely to decide it, but receive whatever comes with equal indifference and security.

From this perfect confidence in that benevolent wisdom which governs the universe, and from this entire resignation to whatever order that wisdom might think proper to establish, it necessarily followed, that, to the Stoical wise man, all the events of human life must be in a great measure indifferent. His happiness consisted altogether, first, in the contemplation of the happiness and perfection of the great system of the universe, of the good government of the great republic of Gods and men, of all rational and sensible beings; and, secondly, in discharging his duty, in acting properly in the affairs of this great republic whatever little part that wisdom had assigned to him. The propriety or impropriety of his endeavours might be of great consequence to him. Their success or disappointment could be of none at all; could excite no passionate joy or sorrow, no passionate desire or aversion. If he preferred some events to others, if some situations were the objects of his choice and others of his rejection, it was not because he regarded the one as in themselves in any respect better than the other, or thought that his own happiness would be more complete in what is called the fortunate than in what is regarded as the distressful situation; but because the propriety of action, the rule which the Gods had given him for the direction of his conduct, required him to chuse and reject in this manner. All his affections were absorbed and swallowed up in two great affections; in that for the discharge of his own duty, and in that for the greatest possible happiness of all rational and sensible beings. For the gratification of this latter affection, he rested with the most perfect security upon the wisdom and power of the great Superintendant of the universe. His sole anxiety was about the gratification of the former; not about the event, but about the propriety of his own endeavours. Whatever the event might be, he trusted to a superior power and wisdom for turning it to promote that great end which he himself was most desirous of promoting.

This propriety of chusing and rejecting, though originally pointed out to us, and as it were recommended and introduced to our

acquaintance by the things, and for the sake of the things, chosen and rejected; yet when we had once become thoroughly acquainted with it, the order, the grace, the beauty which we discerned in this conduct, the happiness which we felt resulted from it, necessarily appeared to us of much greater value than the actual obtaining of all the different objects of choice, or the actual avoiding of all those of rejection. From the observation of this propriety arose the happiness and the glory; from the neglect of it, the misery and the disgrace of human nature.

But to a wise man, to one whose passions were brought under perfect subjection to the ruling principles of his nature, the exact observation of this propriety was equally easy upon all occasions. Was he in prosperity, he returned thanks to Jupiter for having joined him with circumstances which were easily mastered, and in which there was little temptation to do wrong. Was he in adversity, he equally returned thanks to the director of this spectacle of human life, for having opposed to him a vigorous athlete, over whom, though the contest was likely to be more violent, the victory was more glorious, and equally certain. Can there be any shame in that distress which is brought upon us without any fault of our own, and in which we behave with perfect propriety? There can, therefore, be no evil, but, on the contrary, the greatest good and advantage. A brave man exults in those dangers in which, from no rashness of his own, his fortune has involved him. They afford an opportunity of exercising that heroic intrepidity, whose exertion gives the exalted delight which flows from the consciousness of superior propriety and deserved admiration. One who is master of all his exercises has no aversion to measure his strength and activity with the strongest. And, in the same manner, one who is master of all his passions, does not dread any circumstance in which the Superintendant of the universe may think proper to place him. The bounty of that divine Being has provided him with virtues which render him superior to every situation. If it is pleasure, he has temperance to refrain from it; if it is pain, he has constancy to bear it;

if it is danger or death, he has magnanimity and fortitude to despise it. The events of human life can never find him unprepared, or at a loss how to maintain that propriety of sentiment and conduct which, in his own apprehension, constitutes at once his glory and his happiness.

Human life the Stoics appear to have considered as a game of great skill; in which, however, there was a mixture of chance, or of what is vulgarly understood to be chance. In such games the stake is commonly a trifle, and the whole pleasure of the game arises from playing well, from playing fairly, and playing skilfully. If notwithstanding all his skill, however, the good player should, by the influence of chance, happen to lose, the loss ought to be a matter, rather of merriment, than of serious sorrow. He has made no false stroke; he has done nothing which he ought to be ashamed of; he has enjoyed completely the whole pleasure of the game. If, on the contrary, the bad player, notwithstanding all his blunders, should, in the same manner, happen to win, his success can give him but little satisfaction. He is mortified by the remembrance of all the faults which he committed. Even during the play he can enjoy no part of the pleasure which it is capable of affording. From ignorance of the rules of the game, fear and doubt and hesitation are the disagreeable sentiments that precede almost every stroke which he plays; and when he has played it, the mortification of finding it a gross blunder, commonly completes the unpleasing circle of his sensations. Human life, with all the advantages which can possibly attend it, ought, according to the Stoics, to be regarded but as a mere two-penny stake; a matter by far too insignificant to merit any anxious concern. Our only anxious concern ought to be, not about the stake, but about the proper method of playing. If we placed our happiness in winning the stake, we placed it in what depended upon causes beyond our power, and out of our direction. We necessarily exposed ourselves to perpetual fear and uneasiness, and frequently to grievous and mortifying disappointments. If we placed it in playing well, in playing

fairly, in playing wisely and skilfully; in the propriety of our own conduct in short; we placed it in what, by proper discipline, education, and attention, might be altogether in our own power, and under our own direction. Our happiness was perfectly secure, and beyond the reach of fortune. The event of our actions, if it was out of our power, was equally out of our concern, and we could never feel either fear or anxiety about it; nor ever suffer any grievous, or even any serious disappointment.

Human life itself, as well as every different advantage or disadvantage which can attend it, might, they said, according to Different circumstances, be the proper object either of our choice or of our rejection. If, in our actual situation, there were more circumstances agreeable to nature than contrary to it; more circumstances which were the objects of choice than of rejection; life, in this case, was, upon the whole, the proper object of choice, and the propriety of conduct required that we should remain in it. If, on the other hand, there were, in our actual situation, without any probable hope of amendment, more circumstances contrary to nature than agreeable to it; more circumstances which were the objects of rejection than of choice; life itself, in this case, became, to a wise man, the object of rejection, and he was not only at liberty to remove out of it, but the propriety of conduct, the rule which the Gods had given him for the direction of his conduct, required him to do so. I am ordered, says Epictetus^[19], not to dwell at Nicopolis. I do not dwell there. I am ordered not to dwell at Athens. I do not dwell at Athens. I am ordered not to dwell in Rome. I do not dwell in Rome. I am ordered to dwell in the little and rocky island of Gyarae. I go and dwell there. But the house smokes in Gyarae. If the smoke is moderate, I will bear it, and stay there. If it is excessive, I will go to a house from whence no tyrant can remove me. I keep in mind always that the door is open, that I can walk out when I please, and retire to that hospitable house which is at all times open to all the world; for

beyond my undermost garment, beyond my body, no man living has any power over me. If your situation is upon the whole disagreeable; if your house smokes too much for you, said the Stoics, walk forth by all means. But walk forth without, repining, without murmuring or complaining. Walk forth calm, contented, rejoicing, returning thanks to the Gods, who, from their infinite bounty, have opened the safe and quiet harbour of death, at all times ready to receive us from the stormy ocean of human life; who have prepared this sacred, this inviolable, this great asylum, always open, always accessible; altogether beyond the reach of human rage and injustice; and large enough to contain both all those who wish, and all those who do not wish to retire to it: an asylum which takes away from every man every pretence of complaining, or even of fancying that there can be any evil in human life, except such as he may suffer from his own folly and weakness.

The Stoics, in the few fragments of their philosophy which have come down to us, sometimes talk of leaving life with a gaiety, and even with a levity, which, were we to consider those passages by themselves, might induce us to believe that they imagined we could with propriety leave it whenever we had a mind, wantonly and capriciously, upon the slightest disgust or uneasiness. ‘When you sup with such a person,’ says Epictetus^[20], ‘you complain of the long stories which he tells you about his Mysian wars. “Now my friend, says he, having told you how I took possession of an eminence at such a place, I will tell you how I was besieged in such another place.” But if you have a mind not to be troubled with his long stories, do not accept of his supper. If you accept of his supper, you have not the least pretence to complain of his long stories. It is the same case with what you call the evils of human life. Never complain of that of which it is at all times in your power to rid yourself.’ Notwithstanding this gaiety and even levity of expression, however, the alternative of leaving life, or of remaining in it, was, according to the Stoics, a

matter of the most serious and important deliberation. We ought never to leave it till we were distinctly called upon to do so by that superintending power which had originally placed us in it. But we were to consider ourselves as called upon to do so, not merely at the appointed and unavoidable term of human life. Whenever the providence of that superintending Power had rendered our condition in life upon the whole the proper object rather of rejection than of choice; the great rule which he had given us for the direction of our conduct, then required us to leave it. We might then be said to hear the awful and benevolent voice of that divine Being distinctly calling upon us to do so.

It was upon this account that, according to the Stoics, it might be the duty of a wise man to remove out of life though he was perfectly happy; while, on the contrary, it might be the duty of a weak man to remain in it, though he was necessarily miserable. If, in the situation of the wise man, there were more circumstances which were the natural objects of rejection than of choice, the whole situation became the object of rejection, and the rule which the Gods had given him for the direction of his conduct, required that he should remove out of it as speedily as particular circumstances might render convenient. He was, however, perfectly happy even during the time that he might think proper to remain in it. He had placed his happiness, not in obtaining the objects of his choice, or in avoiding those of his rejection; but in always choosing and rejecting with exact propriety; not in the success, but in the fitness of his endeavours and exertions. If, in the situation of the weak man, on the contrary, there were more circumstances which were the natural objects of choice than of rejection; his whole situation became the proper object of choice, and it was his duty to remain in it. He was unhappy, however, from not knowing how to use those circumstances. Let his cards be ever so good, he did not know how to play them, and could enjoy no sort of real satisfaction, either in the progress, or in the event of the game, in

whatever manner it might happen to turn out.^{8[21]}

The propriety, upon some occasions, of voluntary death, though it was, perhaps, more insisted upon by the Stoics, than by any other sect of ancient philosophers, was, however, a doctrine common to them all, even to the peaceable and indolent Epicureans. During the age in which flourished the founders of all the principal sects of ancient philosophy; during the Peloponnesian war and for many years after its conclusion, all the different republics of Greece were, at home, almost always distracted by the most furious factions; and abroad, involved in the most sanguinary wars, in which each sought, not merely superiority or dominion, but either completely to extirpate all its enemies, or, what was not less cruel, to reduce them into the vilest of all states, that of domestic slavery, and to sell them, man, woman, and child, like so many herds of cattle, to the highest bidder in the market. The smallness of the greater part of those states, too, rendered it, to each of them, no very improbable event, that it might itself fall into that very calamity which it had so frequently, either, perhaps, actually inflicted, or at least attempted to inflict upon some of its neighbours. In this disorderly state of things, the most perfect innocence, joined to both the highest rank and the greatest public services, could give no security to any man that, even at home and among his own relations and fellow-citizens, he was not, at some time or another, from the prevalence of some hostile and furious faction, to be condemned to the most cruel and ignominious punishment. If he was taken prisoner in war, or if the city of which he was a member was conquered, he was exposed, if possible, to still greater injuries and insults. But every man naturally, or rather necessarily, familiarizes his imagination with the distresses to which he foresees that his situation may frequently expose him. It is impossible that a sailor should not frequently think of storms and shipwrecks, and foundering at sea, and of how he himself is likely both to feel and to act upon such occasions. It was impossible, in the same manner, that a Grecian patriot or hero should not

familiarize his imagination with all the different calamities to which he was sensible his situation must frequently, or rather constantly expose him. As an American savage prepares his death-song, and considers how he should act when he has fallen into the hands of his enemies, and is by them put to death in the most lingering tortures, and amidst the insults and derision of all the spectators; so a Grecian patriot or hero could not avoid frequently employing his thoughts in considering what he ought both to suffer and to do in banishment, in captivity, when reduced to slavery, when put to the torture, when brought to the scaffold. But the philosophers of all the different sects very justly represented virtue; that is, wise, just, firm, and temperate conduct; not only as the most probable, but as the certain and infallible road to happiness even in this life. This conduct, however, could not always exempt, and might even sometimes expose the person who followed it to all the calamities which were incident to that unsettled situation of public affairs. They endeavoured, therefore, to show that happiness was either altogether, or at least in a great measure, independent of fortune; the Stoics, that it was so altogether; the Academic and Peripatetic philosophers^[22], that it was so in a great measure. Wise, prudent, and good conduct was, in the first place, the conduct most likely to ensure success in every species of undertaking; and secondly, though it should fail of success, yet the mind was not left without consolation. The virtuous man might still enjoy the complete approbation of his own breast; and might still feel that, how untoward soever things might be without, all was calm and peace and concord within. He might generally comfort himself, too, with the assurance that he possessed the love and esteem of every intelligent and impartial spectator, who could not fail both to admire his conduct, and to regret his misfortune.

Those philosophers endeavoured, at the same time, to show, that the greatest misfortunes to which human life was liable, might be supported more easily than was commonly imagined. They

endeavoured to point out the comforts which a man might still enjoy when reduced to poverty, when driven into banishment, when exposed to the injustice of popular clamour, when labouring under blindness, under deafness, in the extremity of old age, upon the approach of death. They pointed out, too, the considerations which might contribute to support his constancy under the agonies of pain and even of torture, in sickness, in sorrow for the loss of children, for the death of friends and relations, etc. The few fragments which have come down to us of what the ancient philosophers had written upon these subjects, form, perhaps, one of the most instructive, as well as one of the most interesting remains of antiquity. The spirit and manhood of their doctrines make a wonderful contrast with the desponding, plaintive, and whining tone of some modern systems.

But while those ancient philosophers endeavoured in this manner to suggest every consideration which could, as Milton says^[23], arm the obdured breast with stubborn patience, as with triple steel; they, at the same time, laboured above all to convince their followers that there neither was nor could be any evil in death; and that, if their situation became at any time too hard for their constancy to support, the remedy was at hand, the door was open, and they might, without fear, walk out when they pleased. If there was no world beyond the present, death, they said, could be no evil; and if there was another world, the Gods must likewise be in that other, and a just man could fear no evil while under their protection. Those philosophers, in short, prepared a death-song, if I may say so, which the Grecian patriots and heroes might make use of upon the proper occasions; and, of all the different sects, the Stoics, I think it must be acknowledged, had prepared by far the most animated and spirited song.

Suicide, however, never seems to have been very common among the Greeks. Excepting Cleomenes^[24], I cannot at present recollect any very illustrious either patriot or hero of Greece, who died by his own

hand. The death of Aristomenes^[25] is as much beyond the period of true history as that of Ajax^[26]. The common story of the death of Themistocles^[27], though within that period, bears upon its face all the marks of a most romantic fable. Of all the Greek heroes whose lives have been written by Plutarch, Cleomenes appears to have been the only one who perished in this manner. Theramenes, Socrates, and Phocion^[28], who certainly did not want courage, suffered themselves to be sent to prison, and submitted patiently to that death to which the injustice of their fellow-citizens had condemned them. The brave Eumenes allowed himself to be delivered up, by his own mutinous soldiers, to his enemy Antigonus, and was starved to death, without attempting any violence.^[29] The gallant Philopoemen suffered himself to be taken prisoner by the Messenians, was thrown into a dungeon, and was supposed to have been privately poisoned. Several of the philosophers, indeed, are said to have died in this manner; but their lives have been so very foolishly written, that very little credit is due to the greater part of the tales which are told of them. Three different accounts have been given of the death of Zeno the Stoic. One is, that after enjoying, for ninety-eight years, the most perfect state of health, he happened, in going out of his school, to fall; and though he suffered no other damage than that of breaking or dislocating one of his fingers, he struck the ground with his hand, and, in the words of the Niobe of Euripides, said, I come, why doest thou call me? and immediately went home and hanged himself. At that great age, one should think, he might have had a little more patience. Another account is, that, at the same age, and in consequence of a like accident, he starved himself to death. The third account is, that, at seventy-two years of age, he died in the natural way; by far the most probable account of the three, and supported too by the authority of a co-temporary, who must have had every opportunity of being well informed; of Persaeus, originally the slave, and afterwards the friend and disciple of Zeno. The first account is given by Apollonius of Tyre, who flourished about the time of Augustus Caesar, between two and

three hundred years after the death of Zeno. I know not who is the author of the second account. Apollonius, who was himself a Stoic, had probably thought it would do honour to the founder of a sect which talked so much about voluntary death, to die in this manner by his own hand. Men of letters, though, after their death, they are frequently more talked of than the greatest princes or statesmen of their times, are generally, during their life, so obscure and insignificant that their adventures are seldom recorded by contemporary historians. Those of after-ages, in order to satisfy the public curiosity, and having no authentic documents either to support or to contradict their narratives, seem frequently to have fashioned them according to their own fancy; and almost always with a great mixture of the marvellous. In this particular case the marvellous, though supported by no authority, seems to have prevailed over the probable, though supported by the best. Diogenes Laertius plainly gives the preference to the story of Apollonius. Lucian and Lactantius appear both to have given credit to that of the great age and of the violent death.

This fashion of voluntary death appears to have been much more prevalent among the proud Romans, than it ever was among the lively, ingenious, and accommodating Greeks. Even among the Romans, the fashion seems not to have been established in the early and, what are called, the virtuous ages of the republic. The common story of the death of Regulus^[30], though probably a fable, could never have been invented, had it been supposed that any dishonour could fall upon that hero, from patiently submitting to the tortures which the Carthaginians are said to have inflicted upon him. In the later ages of the republic some dishonour I apprehend, would have attended this submission. In the different civil wars which preceded the fall of the commonwealth, many of the eminent men of all the contending parties chose rather to perish by their own hands, than to fall into those of their enemies. The death of Cato, celebrated by Cicero, and

censured by Caesar, and become the subject of a very serious controversy between, perhaps, the two most illustrious advocates that the world had ever beheld, stamped a character of splendour upon this method of dying which it seems to have retained for several ages after. The eloquence of Cicero was superior to that of Caesar. The admiring prevailed greatly over the censoring party, and the lovers of liberty, for many ages afterwards, looked up to Cato as to the most venerable martyr of the republican party. The head of a party, the Cardinal de Retz observes, may do what he pleases; as long as he retains the confidence of his own friends, he can never do wrong; a maxim of which his Eminence had himself, upon several occasions, an opportunity of experiencing the truth. Cato, it seems, joined to his other virtues that of an excellent bottle companion. His enemies accused him of drunkenness, but, says Seneca, whoever objected this vice to Cato, will find it much easier to prove that drunkenness is a virtue, than that Cato could be addicted to any vice. ^[31]

图VII—2：Regulus返回迦太基

Under the Emperors this method of dying seems to have been, for a long time, perfectly fashionable. In the epistles of Pliny ^[32] we find

an account of several persons who chose to die in this manner, rather from vanity and ostentation, it would seem, than from what would appear, even to a sober and judicious Stoic, any proper or necessary reason. Even the ladies, who are seldom behind in following the fashion, seem frequently to have chosen, most unnecessarily, to die in this manner; and, like the ladies in Bengal, to accompany, upon some occasions, their husbands to the tomb. The prevalence of this fashion certainly occasioned many deaths which would not otherwise have happened. All the havock, however, which this, perhaps the highest exertion of human vanity and impertinence, could occasion, would, probably, at no time, be very great.

The principle of suicide, the principle which would teach us, upon some occasions, to consider that violent action as an object of applause and approbation, seems to be altogether a refinement of philosophy.^[33] Nature, in her sound and healthful state, seems never to prompt us to suicide. There is, indeed, a species of melancholy (a disease to which human nature, among its other calamities, is unhappily subject) which seems to be accompanied with, what one may call, an irresistible appetite for self-destruction. In circumstances often of the highest external prosperity, and sometimes too, in spite even of the most serious and deeply impressed sentiments of religion, this disease has frequently been known to drive its wretched victims to this fatal extremity. The unfortunate persons who perish in this miserable manner, are the proper objects, not of censure, but of commiseration. To attempt to punish them, when they are beyond the reach of all human punishment, is not more absurd than it is unjust. That punishment can fall only on their surviving friends and relations, who are always perfectly innocent, and to whom the loss of their friend, in this disgraceful manner, must always be alone a very heavy calamity. Nature, in her sound and healthful state, prompts us to avoid distress upon all occasions; upon many occasions to defend ourselves against it, though at the hazard, or even with the certainty

of perishing in that defence. But, when we have neither been able to defend ourselves from it, nor have perished in that defence, no natural principle, no regard to the approbation of the supposed impartial spectator, to the judgment of the man within the breast, seems to call upon us to escape from it by destroying ourselves. It is only the consciousness of our own weakness, of our own incapacity to support the calamity with proper manhood and firmness, which can drive us to this resolution. I do not remember to have either read or heard of any American savage, who, upon being taken prisoner by some hostile tribe, put himself to death, in order to avoid being afterwards put to death in torture, and amidst the insults and mockery of his enemies. He places his glory in supporting those torments with manhood, and in retorting those insults with tenfold contempt and derision.

This contempt of life and death, however, and, at the same time, the most entire submission to the order of Providence; the most complete contentment with every event which the current of human affairs could possibly cast up, may be considered as the two fundamental doctrines upon which rested the whole fabric of Stoical morality. The independent and spirited, but often harsh Epictetus, may be considered as the great apostle of the first of those doctrines: the mild, the humane, the benevolent Antoninus, of the second.

The emancipated slave of Epaphrimitus, who, in his youth, had been subjected to the insolence of a brutal master, who, in his riper years, was, by the jealousy and caprice of Domitian, banished from Rome and Athens, and obliged to dwell at Nicopolis, and who, by the same tyrant, might expect every moment to be sent to Gyarae, or, perhaps, to be put to death;^[34] could preserve his tranquillity only by fostering in his mind the most sovereign contempt of human life. He never exults so much, accordingly his eloquence is never so animated as when he represents the futility and nothingness of all its pleasures and all its pains.

The good-natured Emperor, the absolute sovereign of the whole civilized part of the world, who certainly had no peculiar reason to complain of his own allotment, delights in expressing his contentment with the ordinary course of things, and in pointing out beauties even in those parts of it where vulgar observers are not apt to see any. There is a propriety and even an engaging grace, he observes,^[35] in old age as well as in youth; and the weakness and decrepitude of the one state are as suitable to nature as the bloom and vigour of the other.^[36] Death, too, is just as proper a termination of old age, as youth is of childhood, or manhood of youth. As we frequently say, he remarks upon another occasion,^[37] that the physician has ordered to such a man to ride on horseback, or to use the cold bath, or to walk barefooted; so ought we to say, that Nature, the great conductor and physician of the universe, has ordered to such a man a disease, or the amputation of a limb, or the loss of a child. By the prescriptions of ordinary physicians the patient swallows many a bitter potion; undergoes many a painful operation. From the very uncertain hope, however, that health may be the consequence, he gladly submits to all. The harshest prescriptions of the great Physician of nature, the patient may, in the same manner, hope will contribute to his own health, to his own final prosperity and happiness: and he may be perfectly assured that they not only contribute, but are indispensably necessary to the health, to the prosperity and happiness of the universe, to the furtherance and advancement of the great plan of Jupiter. Had they not been so, the universe would never have produced them; its all-wise Architect and Conductor would never have suffered them to happen. As all, even the smallest of the co-existent parts of the universe, are exactly fitted to one another, and all contribute to compose one immense and connected system; so all, even apparently the most insignificant of the successive events which follow one another, make parts, and necessary parts, of that great chain of causes and effects which had no beginning, and which will have no end; and which, as they all necessarily result from the

original arrangement and contrivance of the whole; so they are all essentially necessary, not only to its prosperity, but to its continuance and preservation. Whoever does not cordially embrace whatever befalls him, whoever is sorry that it has befallen him, whoever wishes that it had not befallen him, wishes, so far as in him lies, to stop the motion of the universe, to break that great chain of succession, by the progress of which that system can alone be continued and preserved, and, for some little conveniency of his own, to disorder and discompose the whole machine of the world. ‘O world,’ says he, in another place, ‘^[38]all things are suitable to me which are suitable to thee. Nothing is too early or too late to me which is seasonable for thee. All is fruit to me which thy seasons bring forth. From thee are all things; in thee are all things; for thee are all things. One man says, O beloved city of Cecrops.^[39] Wilt not thou say, O beloved city of God?’

From these very sublime doctrines the Stoics, or at least some of the Stoics, attempted to deduce all their paradoxes.

The Stoical wise man endeavoured to enter into the views of the great Superintendant of the universe, and to see things in the same light in which that divine Being beheld them. But, to the great Superintendant of the universe, all the different events which the course of his providence may bring forth, what to us appear the smallest and the greatest, the bursting of a bubble, as Mr Pope says^[40], and that of a world, for example, were perfectly equal, were equally parts of that great chain which he had predestined from all eternity, were equally the effects of the same unerring wisdom, of the same universal and boundless benevolence. To the Stoical wise man, in the same manner, all those different events were perfectly equal. In the course of those events, indeed, a little department, in which he had himself some little management and direction, had been assigned to him. In this department he endeavoured to act as properly as he could, and to conduct himself according to those orders which, he

understood, had been prescribed to him. But he took no anxious or passionate concern either in the success, or in the disappointment of his own most faithful endeavours. The highest prosperity and the total destruction of that little department, of that little system which had been in some measure committed to his charge, were perfectly indifferent to him. If those events had depended upon him, he would have chosen the one, and he would have rejected the other. But as they did not depend upon him, he trusted to a superior wisdom, and was perfectly satisfied that the event which happened, whatever it might be, was the very event which he himself, had he known all the connections and dependencies of things, would most earnestly and devoutly have wished for. Whatever he did under the influence and direction of those principles was equally perfect; and when he stretched out his finger, to give the example which they commonly made use of, he performed an action in every respect as meritorious, as worthy of praise and admiration, as when he laid down his life for the service of his country. As, to the great Superintendant of the universe, the greatest and the smallest exertions of his power, the formation and dissolution of a world, the formation and dissolution of a bubble, were equally easy, were equally admirable, and equally the effects of the same divine wisdom and benevolence; so, to the Stoical wise man, what we would call the great action required no more exertion than the little one, was equally easy, proceeded from exactly the same principles, was in no respect more meritorious, nor worthy of any higher degree of praise and admiration.

As all those who had arrived at this state of perfection, were equally happy; so all those who fell in the smallest degree short of it, how nearly soever they might approach to it, were equally miserable. As the man, they said, who was but an inch below the surface of the water, could no more breathe than he who was an hundred yards below it; so the man who had not completely subdued all his private, partial, and selfish passions, who had any other earnest desire but that

for the universal happiness, who had not completely emerged from that abyss of misery and disorder into which his anxiety for the gratification of those private, partial, and selfish passions had involved him, could no more breathe the free air of liberty and independency, could no more enjoy the security and happiness of the wise man, than he who was most remote from that situation. As all the actions of the wise man were perfect, and equally perfect; so all those of the man who had not arrived at this supreme wisdom were faulty, and, as some Stoics pretended, equally faulty. As one truth, they said, could not be more true, nor one falsehood more false than another; so an honourable action could not be more honourable, nor a shameful one more shameful than another. As in shooting at a mark, the man who missed it by an inch had equally missed it with him who had done so by a hundred yards; so the man who, in what to us appears the most insignificant action, had acted improperly and without a sufficient reason, was equally faulty with him who had done so in, what to us appears, the most important; the man who has killed a cock, for example, improperly and without a sufficient reason, with him who had murdered his father.

If the first of those two paradoxes should appear sufficiently violent, the second is evidently too absurd to deserve any serious consideration. It is, indeed, so very absurd that one can scarce help suspecting that it must have been in some measure misunderstood or misrepresented. At any rate, I cannot allow myself to believe that such men as Zeno or Cleanthes, men, it is said, of the most simple as well as of the most sublime eloquence, could be the authors, either of these, or of the greater part of the other Stoical paradoxes, which are in general mere impertinent quibbles, and do so little honour to their system that I shall give no further account of them. I am disposed to impute them rather to Chrysippus, the disciple and follower, indeed, of Zeno and Cleanthes,^[41] but who, from all that has been delivered down to us concerning him, seems to have been a mere dialectical

pedant, without taste or elegance of any kind. He may have been the first who reduced their doctrines into a scholastic or technical system of artificial definitions, divisions, and subdivisions; one of the most effectual expedients, perhaps, for extinguishing whatever degree of good sense there may be in any moral or metaphysical doctrine. Such a man may very easily be supposed to have understood too literally some animated expressions of his masters in describing the happiness of the man of perfect virtue, and the unhappiness of whoever fell short of that character.

The Stoics in general seem to have admitted that there might be a degree of proficiency in those who had not advanced to perfect virtue and happiness. They distributed those proficient into different classes, according to the degree of their advancement; and they called the imperfect virtues which they supposed them capable of exercising, not rectitudes, but proprieties, fitnesses, decent and becoming actions, for which a plausible or probable reason could be assigned, what Cicero expresses by the Latin word *officia*, and Seneca, I think more exactly, by that of *convenientia*. The doctrine of those imperfect, but attainable virtues, seems to have constituted what we may call the practical morality of the Stoics. It is the subject of Cicero's *Offices*; and is said to have been that of another book written by Marcus Brutus, but which is now lost. ^[42]

The plan and system which Nature has sketched out for our conduct, seems to be altogether different from that of the Stoical philosophy.

By Nature the events which immediately affect that little department in which we ourselves have some little management and direction, which immediately affect ourselves, our friends, our country, are the events which interest us the most, and which chiefly excite our desires and aversions, our hopes and fears, our joys and sorrows. Should those passions be, what they are very apt to be, too

vehement, Nature has provided a proper remedy and correction. The real or even the imaginary presence of the impartial spectator, the authority of the man within the breast, is always at hand to overawe them into the proper tone and temper of moderation.

If, notwithstanding our most faithful exertions, all the events which can affect this little department, should turn out the most unfortunate and disastrous, Nature has by no means left us without consolation. That consolation may be drawn, not only from the complete approbation of the man within the breast, but, if possible, from a still nobler and more generous principle, from a firm reliance upon, and a reverential submission to, that benevolent wisdom which directs all the events of human life, and which, we may be assured, would never have suffered those misfortunes to happen, had they not been indispensably necessary for the good of the whole.

Nature has not prescribed to us this sublime contemplation as the great business and occupation of our lives. She only points it out to us as the consolation of our misfortunes. The Stoical philosophy prescribes it as the great business and occupation of our lives. That philosophy teaches us to interest ourselves earnestly and anxiously in no events, external to the good order of our own minds, to the propriety of our own choosing and rejecting, except in those which concern a department where we neither have nor ought to have any sort of management or direction, the department of the great Superintendant of the universe. By the perfect apathy which it prescribes to us, by endeavouring, not merely to moderate, but to eradicate all our private, partial, and selfish affections, by suffering us to feel for whatever can befall ourselves, our friends, our country, not even the sympathetic and reduced passions of the impartial spectator, it endeavours to render us altogether indifferent and unconcerned in the success or miscarriage of every thing which Nature has prescribed to us as the proper business and occupation of our lives.

The reasonings of philosophy, it may be said, though they may confound and perplex the understanding, can never break down the necessary connection which Nature has established between causes and their effects. The causes which naturally excite our desires and aversions, our hopes and fears, our joys and sorrows, would no doubt, notwithstanding all the reasonings of Stoicism, produce upon each individual, according to the degree of his actual sensibility, their proper and necessary effects. The judgments of the man within the breast, however, might be a good deal affected by those reasonings, and that great inmate might be taught by them to attempt to overawe all our private, partial, and selfish affections into a more or less perfect tranquillity. To direct the judgments of this inmate is the great purpose of all systems of morality. That the Stoical philosophy had very great influence upon the character and conduct of its followers, cannot be doubted; and that though it might sometimes incite them to unnecessary violence, its general tendency was to animate them to actions of the most heroic magnanimity and most extensive benevolence.

IV. Besides these ancient, there are some modern systems, according to which virtue consists in propriety; or in the suitableness of the affection from which we act, to the cause or object which excites it. The system of Dr Clark, which places virtue in acting according to the relations of things, in regulating our conduct according to the fitness or incongruity which there may be in the application of certain actions to certain things, or to certain relations: that of Mr Woollaston^[43], which places it in acting according to the truth of things, according to their proper nature and essence, or in treating them as what they really are, and not as what they are not: that of my Lord Shaftesbury^[44], which places it in maintaining a proper balance of the affections, and in allowing no passion to go beyond its proper sphere; are all of them more or less inaccurate descriptions of the same fundamental idea.

None of those systems either give, or even pretend to give, any precise or distinct measure by which this fitness or propriety of affection can be ascertained or judged of. That precise and distinct measure can be found nowhere but in the sympathetic feelings of the impartial and well-informed spectator.

The description of virtue, besides, which is either given, or at least meant and intended to be given in each of those systems, for some of the modern authors are not very fortunate in their manner of expressing themselves, is no doubt quite just, so far as it goes. There is no virtue without propriety, and wherever there is propriety some degree of approbation is due. But still this description is imperfect. For though propriety is an essential ingredient in every virtuous action, it is not always the sole ingredient. Beneficent actions have in them another quality by which they appear not only to deserve approbation but recompense. None of those systems account either easily or sufficiently for that superior degree of esteem which seems due to such actions, or for that diversity of sentiment which they naturally excite. Neither is the description of vice more complete. For, in the same manner, though impropriety is a necessary ingredient in every vicious action, it is not always the sole ingredient; and there is often the highest degree of absurdity and impropriety in very harmless and insignificant actions. Deliberate actions, of a pernicious tendency to those we live with, have, besides their impropriety, a peculiar quality of their own by which they appear to deserve, not only disapprobation, but punishment; and to be the objects, not of dislike merely, but of resentment and revenge: and none of those systems easily and sufficiently account for that superior degree of detestation which we feel for such actions.

Chap. II Of those Systems which make Virtue consist in Prudence

The most ancient of those systems which make virtue consist in prudence, and of which any considerable remains have come down to us, is that of Epicurus, who is said, however, to have borrowed all the leading principles of his philosophy from some of those who had gone before him, particularly from Aristippus^[45]; though it is very probable, notwithstanding this allegation of his enemies, that at least his manner of applying those principles was altogether his own.

According to Epicurus⁹,^[46] bodily pleasure and pain were the sole ultimate objects of natural desire and aversion. That they were always the natural objects of those passions, he thought required no proof. Pleasure might, indeed, appear sometimes to be avoided; not, however, because it was pleasure, but because, by the enjoyment of it, we should either forfeit some greater pleasure, or expose ourselves to some pain that was more to be avoided than this pleasure was to be desired. Pain, in the same manner, might appear sometimes to be eligible; not, however, because it was pain, but because by enduring it we might either avoid a still greater pain, or acquire some pleasure of much more importance. That bodily pain and pleasure, therefore, were always the natural objects of desire and aversion, was, he thought, abundantly evident. Nor was it less so, he imagined, that they were the sole ultimate objects of those passions. Whatever else was either desired or avoided, was so, according to him, upon account of its tendency to produce one or other of those sensations. The tendency to procure pleasure rendered power and riches desirable, as the contrary tendency to produce pain made poverty and insignificance the objects of aversion. Honour and reputation were valued, because the esteem and love of those we live with were of the greatest consequence both to procure pleasure and to defend us from pain. Ignominy and bad fame, on the contrary, were to be avoided, because the hatred, contempt and resentment of those we lived with, destroyed all security, and necessarily exposed us to the greatest bodily evils.

图VII—3 : Aristippus

All the pleasures and pains of the mind were, according to Epicurus, ultimately derived from those of the body. The mind was happy when it thought of the past pleasures of the body, and hoped for others to come: and it was miserable when it thought of the pains which the body had formerly endured, and dreaded the same or greater thereafter.

But the pleasures and pains of the mind, though ultimately derived from those of the body, were vastly greater than their originals. The body felt only the sensation of the present instant, whereas the mind felt also the past and the future, the one by remembrance, the other by anticipation, and consequently both suffered and enjoyed much more. When we are under the greatest bodily pain, he observed, we shall always find, if we attend to it, that it is not the suffering of the present instant which chiefly torments us, but either the agonizing remembrance of the past, or the yet more horrible dread of the future. The pain of each instant, considered by itself, and cut off from all that goes before and all that comes after it,

is a trifle, not worth the regarding. Yet this is all which the body can ever be said to suffer. In the same manner, when we enjoy the greatest pleasure, we shall always find that the bodily sensation, the sensation of the present instant, makes but a small part of our happiness, that our enjoyment chiefly arises either from the cheerful recollection of the past, or the still more joyous anticipation of the future, and that the mind always contributes by much the largest share of the entertainment.

Since our happiness and misery, therefore, depended chiefly on the mind, if this part of our nature was well disposed, if our thoughts and opinions were as they should be, it was of little importance in what manner our body was affected. Though under great bodily pain, we might still enjoy a considerable share of happiness, if our reason and judgment maintained their superiority. We might entertain ourselves with the remembrance of past, and with the hopes of future pleasure; we might soften the rigour of our pains, by recollecting what it was which, even in this situation, we were under any necessity of suffering. That this was merely the bodily sensation, the pain of the present instant, which by itself could never be very great. That whatever agony we suffered from the dread of its continuance, was the effect of an opinion of the mind, which might be corrected by juster sentiments; by considering that, if our pains were violent, they would probably be of short duration; and that if they were of long continuance, they would probably be moderate, and admit of many intervals of ease; and that, at any rate, death was always at hand and within call to deliver us, which as, according to him, it put an end to all sensation, either of pain or pleasure, could not be regarded as an evil. When we are, said he, death is not; and when death is, we are not; death therefore can be nothing to us.

If the actual sensation of positive pain was in itself so little to be feared, that of pleasure was still less to be desired. Naturally the

sensation of pleasure was much less pungent than that of pain. If, therefore, this last could take so very little from the happiness of a well-disposed mind, the other could add scarce any thing to it. When the body was free from pain and the mind from fear and anxiety, the superadded sensation of bodily pleasure could be of very little importance; and though it might diversify could not properly be said to increase the happiness of the situation.

In ease of body, therefore, and in security or tranquillity of mind, consisted, according to Epicurus, the most perfect state of human nature, the most complete happiness which man was capable of enjoying. To obtain this great end of natural desire was the sole object of all the virtues, which, according to him, were not desirable upon their own account, but upon account of their tendency to bring about this situation.

Prudence, for example, though, according to this philosophy, the source and principle of all the virtues, was not desirable upon its own account. That careful and laborious and circumspect state of mind, ever watchful and ever attentive to the most distant consequences of every action. could not be a thing pleasant or agreeable for its own sake, but upon account of its tendency to procure the greatest goods and to keep off the greatest evils.

To abstain from pleasure too, to curb and restrain our natural passions for enjoyment, which was the office of temperance, could never be desirable for its own sake. The whole value of this virtue arose from its utility, from its enabling us to postpone the present enjoyment for the sake of a greater to come, or to avoid a greater pain that might ensue from it. Temperance, in short, was nothing but prudence with regard to pleasure.

To support labour, to endure pain, to be exposed to danger or to death, the situations which fortitude would often lead us into, were

surely still less the objects of natural desire. They were chosen only to avoid greater evils. We submitted to labour, in order to avoid the greater shame and pain of poverty, and we exposed ourselves to danger and to death in defence of our liberty and property, the means and instruments of pleasure and happiness; or in defence of our country, in the safety of which our own was necessarily comprehended. Fortitude enabled us to do all this cheerfully, as the best which, in our present situation, could possibly be done, and was in reality no more than prudence, good judgment, and presence of mind in properly appreciating pain, labour, and danger, always choosing the less in order to avoid the greater.

It is the same case with justice. To abstain from what is another's was not desirable on its own account, and it could not surely be better for you, that I should possess what is my own, than that you should possess it. You ought, however, to abstain from whatever belongs to me, because by doing otherwise you will provoke the resentment and indignation of mankind. The security and tranquillity of your mind will be entirely destroyed. You will be filled with fear and consternation at the thought of that punishment which you will imagine that men are at all times ready to inflict upon you, and from which no power, no art, no concealment, will ever, in your own fancy, be sufficient to protect you. That other species of justice which consists in doing proper good offices to different persons, according to the various relations of neighbours, kinsmen, friends, benefactors, superiors, or equals, which they may stand in to us, is recommended by the same reasons. To act properly in all these different relations procures us the esteem and love of those we live with; as to do otherwise excites their contempt and hatred. By the one we naturally secure, by the other we necessarily endanger our own ease and tranquillity, the great and ultimate objects of all our desires. The whole virtue of justice, therefore, the most important of all the virtues, is no more than discreet and prudent conduct with regard to

our neighbours.

Such is the doctrine of Epicurus concerning the nature of virtue. It may seem extraordinary that this philosopher, who is described as a person of the most amiable manners, should never have observed, that, whatever may be the tendency of those virtues, or of the contrary vices, with regard to our bodily ease and security, the sentiments which they naturally excite in others are the objects of a much more passionate desire or aversion than all their other consequences; that to be amiable, to be respectable, to be the proper object of esteem, is by every well-disposed mind more valued than all the ease and security which love, respect, and esteem can procure us; that, on the contrary, to be odious, to be contemptible, to be the proper object of indignation, is more dreadful than all that we can suffer in our body from hatred, contempt, or indignation; and that consequently our desire of the one character, and our aversion to the other, cannot arise from any regard to the effects which either of them is likely to produce upon the body.

This system is, no doubt, altogether inconsistent with that which I have been endeavouring to establish. It is not difficult, however, to discover from what phasis, if I may say so, from what particular view or aspect of nature, this account of things derives its probability. By the wise contrivance of the Author of nature, virtue is upon all ordinary occasions, even with regard to this life, real wisdom, and the surest and readiest means of obtaining both safety and advantage. Our success or disappointment in our undertakings must very much depend upon the good or bad opinion which is commonly entertained of us, and upon the general disposition of those we live with, either to assist or to oppose us. But the best, the surest, the easiest, and the readiest way of obtaining the advantageous and of avoiding the unfavourable judgments of others, is undoubtedly to render ourselves the proper objects of the former and not of the latter. 'Do you desire,'

said Socrates,^[47] ‘the reputation of a good musician? The only sure way of obtaining it, is to become a good musician. Would you desire in the same manner to be thought capable of serving your country either as a general or as a statesman? The best way in this case too is really to acquire the art and experience of war and government, and to become really fit to be a general or a statesman. And in the same manner if you would be reckoned sober, temperate, just, and equitable, the best way of acquiring this reputation is to become sober, temperate, just, and equitable. If you can really render yourself amiable, respectable, and the proper object of esteem, there is no fear of your not soon acquiring the love, the respect, and esteem of those you live with.’ Since the practice of virtue, therefore, is in general so advantageous, and that of vice so contrary to our interest, the consideration of those opposite tendencies undoubtedly stamps an additional beauty and propriety upon the one, and a new deformity and impropriety upon the other. Temperance, magnanimity, justice, and beneficence, come thus to be approved of, not only under their proper characters, but under the additional character of the highest wisdom and most real prudence. And in the same manner, the contrary vices of intemperance, pusillanimity, injustice, and either malevolence or sordid selfishness, come to be disapproved of, not only under their proper characters, but under the additional character of the most short-sighted folly and weakness. Epicurus appears in every virtue to have attended to this species of propriety only. It is that which is most apt to occur to those who are endeavouring to persuade others to regularity of conduct. When men by their practice, and perhaps too by their maxims, manifestly show that the natural beauty of virtue is not like to have much effect upon them, how is it possible to move them but by representing the folly of their conduct, and how much they themselves are in the end likely to suffer by it?

By running up all the different virtues too to this one species of propriety, Epicurus indulged a propensity, which is natural to all men,

but which philosophers in particular are apt to cultivate with a peculiar fondness, as the great means of displaying their ingenuity, the propensity to account for all appearances from as few principles as possible. And he, no doubt, indulged this propensity still further, when he referred all the primary objects of natural desire and aversion to the pleasures and pains of the body. The great patron of the atomical philosophy, who took so much pleasure in deducing all the powers and qualities of bodies from the most obvious and familiar, the figure, motion, and arrangement of the small parts of matter, felt no doubt a similar satisfaction, when he accounted, in the same manner, for all the sentiments and passions of the mind from those which are most obvious and familiar.

The system of Epicurus agreed with those of Plato, Aristotle, and Zeno, in making virtue consist in acting in the most suitable manner to obtain the¹⁰[\[48\]](#) primary objects of natural desire. It differed from all of them in two other respects; first, in the account which it gave of those primary objects of natural desire; and secondly, in the account which it gave of the excellence of virtue, or of the reason why that quality ought to be esteemed.

The primary objects of natural desire consisted, according to Epicurus, in bodily pleasure and pain, and in nothing else: whereas, according to the other three philosophers, there were many other objects, such as knowledge, such as the happiness of our relations, of our friends, of our country, which were ultimately desirable for their own sakes.

Virtue too, according to Epicurus, did not deserve to be pursued for its own sake, nor was itself one of the ultimate objects of natural appetite, but was eligible only upon account of its tendency to prevent pain and to procure ease and pleasure. In the opinion of the other three, on the contrary, it was desirable, not merely as the means of procuring the other primary objects of natural desire, but as

something which was in itself more valuable than them all. Man, they thought, being born for action, his happiness must consist, not merely in the agreeableness of his passive sensations, but also in the propriety of his active exertions.

Chap. III Of those Systems which make Virtue consist in Benevolence

The system which makes virtue consist in benevolence, though I think not so ancient as all of those which I have already given an account of, is, however, of very great antiquity. It seems to have been the doctrine of the greater part of those philosophers who, about and after the age of Augustus, called themselves Eclectics, who pretended to follow chiefly the opinions of Plato and Pythagoras, and who upon that account are commonly known by the name of the later Platonists.

[49]In the divine nature, according to these authors, benevolence or love was the sole principle of action, and directed the exertion of all the other attributes. The wisdom of the Deity was employed in finding out the means for bringing about those ends which his goodness suggested, as his infinite power was exerted to execute them. Benevolence, however, was still the supreme and governing attribute, to which the others were subservient, and from which the whole excellency, or the whole morality, if I may be allowed such an expression, of the divine operations, was ultimately derived. The whole perfection and virtue of the human mind consisted in some resemblance or participation of the divine perfections, and, consequently, in being filled with the same principle of benevolence and love which influenced all the actions of the Deity. The actions of men which flowed from this motive were alone truly praise-worthy, or could claim any merit in the sight of the Deity. It was by actions of charity and love only that we could imitate, as became us, the conduct of God, that we could express our humble and devout admiration of

his infinite perfections, that by fostering in our own minds the same divine principle, we could bring our own affections to a greater resemblance with his holy attributes, and thereby become more proper objects of his love and esteem; till at last we arrived at that immediate converse and communication with the Deity to which it was the great object of this philosophy to raise us.

This system, as it was much esteemed by many ancient fathers of the Christian church, so after the Reformation it was adopted by several divines of the most eminent piety and learning and of the most amiable manners; particularly, by Dr Ralph Cudworth, by Dr Henry More, and by Mr John Smith of Cambridge.^[50] But of all the patrons of this system, ancient or modern, the late Dr Hutcheson was undoubtedly, beyond all comparison, the most acute, the most distinct, the most philosophical, and what is of the greatest consequence of all, the soberest and most judicious.

That virtue consists in benevolence is a notion supported by many appearances in human nature. It has been observed already, that proper benevolence is the most graceful and agreeable of all the affections, that it is recommended to us by a double sympathy, that as its tendency is necessarily beneficent, it is the proper object of gratitude and reward, and that upon all these accounts it appears to our natural sentiments to possess a merit superior to any other. It has been observed too, that even the weaknesses of benevolence are not very disagreeable to us, whereas those of every other passion are always extremely disgusting. Who does not abhor excessive malice, excessive selfishness, or excessive resentment? But the most excessive indulgence even of partial friendship is not so offensive. It is the benevolent passions only which can exert themselves without any regard or attention to propriety, and yet retain something about them which is engaging. There is something pleasing even in mere instinctive good-will which goes on to do good offices without once

reflecting whether by this conduct it is the proper object either of blame or approbation. It is not so with the other passions. The moment they are deserted, the moment they are unaccompanied by the sense of propriety, they cease to be agreeable.

As benevolence bestows upon those actions which proceed from it, a beauty superior to all others, so the want of it, and much more the contrary inclination, communicates a peculiar deformity to whatever evidences such a disposition. Pernicious actions are often punishable for no other reason than because they shew a want of sufficient attention to the happiness of our neighbour.

Besides all this, Dr Hutcheson¹¹[\[51\]](#) observed that whenever in any action, supposed to proceed from benevolent affections, some other motive had been discovered, our sense of the merit of this action was just so far diminished as this motive was believed to have influenced it. If an action, supposed to proceed from gratitude, should be discovered to have arisen from an expectation of some new favour, or if what was apprehended to proceed from public spirit, should be found out to have taken its origin from the hope of a pecuniary reward, such a discovery would entirely destroy all notion of merit or praise-worthiness in either of these actions. Since, therefore, the mixture of any selfish motive, like that of a baser alloy, diminished or took away altogether the merit which would otherwise have belonged to any action, it was evident, he imagined, that virtue must consist in pure and disinterested benevolence alone.

When those actions, on the contrary, which are commonly supposed to proceed from a selfish motive, are discovered to have arisen from a benevolent one, it greatly enhances our sense of their merit. If we believed of any person that he endeavoured to advance his fortune from no other view but that of doing friendly offices, and of making proper returns to his benefactors, we should only love and esteem him the more. And this observation seemed still more to

confirm the conclusion, that it was benevolence only which could stamp upon any action the character of virtue.

Last of all, what, he imagined, was an evident proof of the justness of this account of virtue, in all the disputes of casuists concerning the rectitude of conduct, the public good, he observed, was the standard to which they constantly referred; thereby universally acknowledging that whatever tended to promote the happiness of mankind was right and laudable and virtuous, and the contrary, wrong, blamable, and vicious. In the late debates about passive obedience and the right of resistance, the sole point in controversy among men of sense was, whether universal submission would probably be attended with greater evils than temporary insurrections when privileges were invaded. Whether what, upon the whole, tended most to the happiness of mankind, was not also morally good, was never once, he said, made a question.

Since benevolence, therefore, was the only motive which could bestow upon any action the character of virtue, the greater the benevolence which was evidenced by any action, the greater the praise which must belong to it.

Those actions which aimed at the happiness of a great community, as they demonstrated a more enlarged benevolence than those which aimed only at that of a smaller system, so were they, likewise, proportionally the more virtuous. The most virtuous of all affections, therefore, was that which embraced as its object the happiness of all intelligent beings. The least virtuous, on the contrary, of those to which the character of virtue could in any respect belong, was that which aimed no further than at the happiness of an individual, such as a son, a brother, a friend.

In directing all our actions to promote the greatest possible good, in submitting all inferior affections to the desire of the general

happiness of mankind, in regarding one's self but as one of the many, whose prosperity was to be pursued no further than it was consistent with, or conducive to that of the whole, consisted the perfection of virtue.

Self-love was a principle which could never be virtuous in any degree or in any direction. It was vicious whenever it obstructed the general good. When it had no other effect than to make the individual take care of his own happiness, it was merely innocent, and though it deserved no praise, neither ought it to incur any blame. Those benevolent actions which were performed, notwithstanding some strong motive from self-interest, were the more virtuous upon that account. They demonstrated the strength and vigour of the benevolent principle.

Dr Hutcheson¹²[\[52\]](#) was so far from allowing self-love to be in any case a motive of virtuous actions, that even a regard to the pleasure of self-approbation, to the comfortable applause of our own consciences, according to him, diminished the merit of a benevolent action. This was a selfish motive, he thought, which, so far as it contributed to any action, demonstrated the weakness of that pure and disinterested benevolence which could alone stamp upon the conduct of man the character of virtue. In the common judgments of mankind, however, this regard to the approbation of our own minds is so far from being considered as what can in any respect diminish the virtue of any action, that it is rather looked upon as the sole motive which deserves the appellation of virtuous.

Such is the account given of the nature of virtue in this amiable system, a system which has a peculiar tendency to nourish and support in the human heart the noblest and the most agreeable of all affections, and not only to check the injustice of self-love, but in some measure to discourage that principle altogether, by representing it as what could never reflect any honour upon those who were influenced

by it.

As some of the other systems which I have already given an account of, do not sufficiently explain from whence arises the peculiar excellency of the supreme virtue of beneficence, so this system seems to have the contrary defect, of not sufficiently explaining from whence arises our approbation of the inferior virtues of prudence, vigilance, circumspection, temperance, constancy, firmness. The view and aim of our affections, the beneficent and hurtful effects which they tend to produce, are the only qualities at all attended to in this system. Their propriety and impropriety, their suitableness and unsuitableness, to the cause which excites them, are disregarded altogether.

Regard to our own private happiness and interest, too, appear upon many occasions very laudable principles of action. The habits of economy, industry, discretion, attention, and application of thought, are generally supposed to be cultivated from self-interested motives, and at the same time are apprehended to be very praise-worthy qualities, which deserve the esteem and approbation of every body. The mixture of a selfish motive, it is true, seems often to sully the beauty of those actions which ought to arise from a benevolent affection. The cause of this, however, is not that self-love can never be the motive of a virtuous action, but that the benevolent principle appears in this particular case to want its due degree of strength, and to be altogether unsuitable to its object. The character, therefore, seems evidently imperfect, and upon the whole to deserve blame rather than praise. The mixture of a benevolent motive in an action to which self-love alone ought to be sufficient to prompt us, is not so apt indeed to diminish our sense of its propriety, or of the virtue of the person who performs it. We are not ready to suspect any person of being defective in selfishness. This is by no means the weak side of human nature, or the failing of which we are apt to be suspicious. If we could really believe, however, of any man, that, was it not from a

regard to his family and friends, he would not take that proper care of his health, his life, or his fortune, to which self-preservation alone ought to be sufficient to prompt him, it would undoubtedly be a failing, though one of those amiable failings, which render a person rather the object of pity than of contempt or hatred. It would still, however, somewhat diminish the dignity and respectableness of his character. Carelessness and want of economy are universally disapproved of, not, however, as proceeding from a want of benevolence, but from a want of the proper attention to the objects of self-interest.

Though the standard by which casuists frequently determine what is right or wrong in human conduct, be its tendency to the welfare or disorder of society, it does not follow that a regard to the welfare of society should be the sole virtuous motive of action, but only that, in any competition, it ought to cast the balance against all other motives.

Benevolence may, perhaps, be the sole principle of action in the Deity, and there are several, not improbable, arguments which tend to persuade us that it is so. It is not easy to conceive what other motive an independent and all-perfect Being, who stands in need of nothing external, and whose happiness is complete in himself, can act from. But whatever may be the case with the Deity, so imperfect a creature as man, the support of whose existence requires so many things external to him, must often act from many other motives. The condition of human nature were peculiarly hard, if those affections, which, by the very nature of our being, ought frequently to influence our conduct, could upon no occasion appear virtuous, or deserve esteem and commendation from any body.

Those three systems, that which places virtue in propriety, that which places it in prudence, and that which makes it consist in benevolence, are the principal accounts which have been given of the nature of virtue. To one or other of them, all the other descriptions of

virtue, how different soever they may appear, are easily reducible.

That system which places virtue in obedience to the will of the Deity, may be counted either among those which make it consist in prudence, or among those which make it consist in propriety. When it is asked, why we ought to obey the will of the Deity, this question, which would be impious and absurd in the highest degree, if asked from any doubt that we ought to obey him, can admit but of two different answers. It must either be said that we ought to obey the will of the Deity because he is a Being of infinite power, who will reward us eternally if we do so, and punish us eternally if we do otherwise: or it must be said, that independent of any regard to our own happiness, or to rewards and punishments of any kind, there is a congruity and fitness that a creature should obey its creator, that a limited and imperfect being should submit to one of infinite and incomprehensible perfections. Besides one or other of these two, it is impossible to conceive that any other answer can be given to this question. If the first answer be the proper one, virtue consists in prudence, or in the proper pursuit of our own final interest and happiness; since it is upon this account that we are obliged to obey the will of the Deity. If the second answer be the proper one, virtue must consist in propriety, since the ground of our obligation to obedience is the suitableness or congruity of the sentiments of humility and submission to the superiority of the object which excites them.

That system which places virtue in utility, coincides too with that which makes it consist in propriety. According to this system, all those qualities of the mind which are agreeable or advantageous, either to the person himself or to others, are approved of as virtuous, and the contrary disapproved of as vicious. But the agreeableness or utility of any affection depends upon the degree which it is allowed to subsist in. Every affection is useful when it is confined to a certain degree of moderation; and every affection is disadvantageous when it exceeds

the proper bounds. According to this system therefore, virtue consists not in any one affection, but in the proper degree of all the affections. The only difference between it and that which I have been endeavouring to establish, is, that it makes utility, and not sympathy, or the correspondent affection of the spectator, the natural and original measure of this proper degree.

Chap. IV Of licentious Systems

All those systems, which I have hitherto given an account of, suppose that there is a real and essential distinction between vice and virtue, whatever these qualities may consist in. There is a real and essential difference between the propriety and impropriety of any affection, between benevolence and any other principle of action, between real prudence and shortsighted folly or precipitate rashness. In the main too all of them contribute to encourage the praise-worthy, and to discourage the blamable disposition.

It may be true, perhaps, of some of them, that they tend, in some measure, to break the balance of the affections, and to give the mind a particular bias to some principles of action, beyond the proportion that is due to them. The ancient systems, which place virtue in propriety, seem chiefly to recommend the great, the awful, and the respectable virtues, the virtues of self-government and self-command; fortitude, magnanimity, independency upon fortune, the contempt of all outward accidents, of pain, poverty, exile, and death. It is in these great exertions that the noblest propriety of conduct is displayed. The soft, the amiable, the gentle virtues, all the virtues of indulgent humanity are, in comparison, but little insisted upon, and seem, on the contrary, by the Stoics in particular, to have been often regarded as mere weaknesses which it behoved a wise man not to harbour in his breast.

The benevolent system, on the other hand, while it fosters and

encourages all those milder virtues in the highest degree, seems entirely to neglect the more awful and respectable qualities of the mind. It even denies them the appellation of virtues. It calls them moral abilities, and treats them as qualities which do not deserve the same sort of esteem and approbation, that is due to what is properly denominated virtue. All those principles of action which aim only at our own interest, it treats, if that be possible, still worse. So far from having any merit of their own, they diminish, it pretends, the merit of benevolence, when they co-operate with it: and prudence, it is asserted, when employed only in promoting private interest, can never even be imagined a virtue.

That system, again, which makes virtue consist in prudence only, while it gives the highest encouragement to the habits of caution, vigilance, sobriety, and judicious moderation, seems to degrade equally both the amiable and respectable virtues, and to strip the former of all their beauty, and the latter of all their grandeur.

But notwithstanding these defects, the general tendency of each of those three systems is to encourage the best and most laudable habits of the human mind: and it were well for society, if, either mankind in general, or even those few who pretend to live according to any philosophical rule, were to regulate their conduct by the precepts of any one of them. We may learn from each of them something that is both valuable and peculiar. If it was possible, by precept and exhortation, to inspire the mind with fortitude and magnanimity, the ancient systems of propriety would seem sufficient to do this. Or if it was possible, by the same means, to soften it into humanity, and to awaken the affections of kindness and general love towards those we live with, some of the pictures with which the benevolent system presents us, might seem capable of producing this effect. We may learn from the system of Epicurus, though undoubtedly the most imperfect of all the three, how much the practice of both the

amiable and respectable virtues is conducive to our own interest, to our own ease and safety and quiet even in this life. As Epicurus placed happiness in the attainment of ease and security, he exerted himself in a particular manner to show that virtue was, not merely the best and the surest, but the only means of acquiring those invaluable possessions. The good effects of virtue, upon our inward tranquillity and peace of mind, are what other philosophers have chiefly celebrated. Epicurus, without neglecting this topic, has chiefly insisted upon the influence of that amiable quality on our outward prosperity and safety. It was upon this account that his writings were so much studied in the ancient world by men of all different philosophical parties. It is from him that Cicero, the great enemy of the Epicurean system, borrows his most agreeable proofs that virtue alone is sufficient to secure happiness. Seneca, though a Stoic, the sect most opposite to that of Epicurus, yet quotes this philosopher more frequently than any other.

There is, however, another system which seems to take away altogether the distinction between vice and virtue, and of which the tendency is, upon that account, wholly pernicious: I mean the system of Dr Mandeville. Though the notions of this author are in almost every respect erroneous, there are, however, some appearances in human nature, which, when viewed in a certain manner, seem at first sight to favour them. These, described and exaggerated by the lively and humorous, though coarse and rustic eloquence of Dr Mandeville, have thrown upon his doctrines an air of truth and probability which is very apt to impose upon the unskilful.

Dr Mandeville^[53] considers whatever is done from a sense of propriety, from a regard to what is commendable and praise-worthy, as being done from a love of praise and commendation, or as he calls it from vanity. Man, he observes, is naturally much more interested in his own happiness than in that of others, and it is impossible that in

his heart he can ever really prefer their prosperity to his own. Whenever he appears to do so, we may be assured that he imposes upon us, and that he is then acting from the same selfish motives as at all other times. Among his other selfish passions, vanity is one of the strongest, and he is always easily flattered and greatly delighted with the applauses of those about him. When he appears to sacrifice his own interest to that of his companions, he knows that his conduct will be highly agreeable to their self-love, and that they will not fail to express their satisfaction by bestowing upon him the most extravagant praises. The pleasure which he expects from this, over-balances, in his opinion, the interest which he abandons in order to procure it. His conduct, therefore, upon this occasion, is in reality just as selfish, and arises from just as mean a motive, as upon any other. He is flattered, however, and he flatters himself, with the belief that it is entirely disinterested; since, unless this was supposed, it would not seem to merit any commendation either in his own eyes or in those of others. All public spirit, therefore, all preference of public to private interest, is, according to him, a mere cheat and imposition upon mankind; and that human virtue which is so much boasted of, and which is the occasion of so much emulation among men, is the mere offspring of flattery begot upon pride.

Whether the most generous and public-spirited actions may not, in some sense, be regarded as proceeding from self-love, I shall not at present examine. The decision of this question is not, I apprehend, of any importance towards establishing the reality of virtue, since self-love may frequently be a virtuous motive of action. I shall only endeavour to show that the desire of doing what is honourable and noble, of rendering ourselves the proper objects of esteem and approbation, cannot with any propriety be called vanity. Even the love of well-grounded fame and reputation, the desire of acquiring esteem by what is really estimable, does not deserve that name. The first is the love of virtue, the noblest and the best passion in human nature.

The second is the love of true glory, a passion inferior no doubt to the former, but which in dignity appears to come immediately after it. He is guilty of vanity who desires praise for qualities which are either not praise-worthy in any degree, or not in that degree in which he expects to be praised for them who sets his character upon the frivolous ornaments of dress and equipage, or upon the equally frivolous accomplishments of ordinary behaviour. He is guilty of vanity who desires praise for what indeed very well deserves it, but what he perfectly knows does not belong to him. The empty coxcomb who gives himself airs of importance which he has no title to, the silly liar who assumes the merit of adventures which never happened, the foolish plagiarist who gives himself out for the author of what he has no pretensions to, are properly accused of this passion. He too is said to be guilty of vanity who is not contented with the silent sentiments of esteem and approbation, who seems to be fonder of their noisy expressions and acclamations than of the sentiments themselves, who is never satisfied but when his own praises are ringing in his ears, and who solicits with the most anxious importunity all external marks of respect, is fond of titles, of compliments, of being visited, of being attended, of being taken notice of in public places with the appearance of deference and attention. This frivolous passion is altogether different from either of the two former, and is the passion of the lowest and the least of mankind, as they are of the noblest and the greatest.

But though these three passions, the desire of rendering ourselves the proper objects of honour and esteem; or of becoming what is honourable and estimable; the desire of acquiring honour and esteem by really deserving those sentiments; and the frivolous desire of praise at any rate, are widely different; though the two former are always approved of, while the latter never fails to be despised; there is, however, a certain remote affinity among them, which, exaggerated by the humorous and diverting eloquence of this lively author, has

enabled him to impose upon his readers. There is an affinity between vanity and the love of true glory, as both these passions aim at acquiring esteem and approbation. But they are different in this, that the one is a just, reasonable, and equitable passion, while the other is unjust, absurd, and ridiculous. The man who desires esteem for what is really estimable, desires nothing but what he is justly entitled to, and what cannot be refused him without some sort of injury. He, on the contrary, who desires it upon any other terms, demands what he has no just claim to. The first is easily satisfied, is not apt to be jealous or suspicious that we do not esteem him enough, and is seldom solicitous about receiving many external marks of our regard. The other, on the contrary, is never to be satisfied, is full of jealousy and suspicion that we do not esteem him so much as he desires, because he has some secret consciousness that he desires more than he deserves. The least neglect of ceremony, he considers as a mortal affront, and as an expression of the most determined contempt. He is restless and impatient, and perpetually afraid that we have lost all respect for him, and is upon this account always anxious to obtain new expressions of esteem, and cannot be kept in temper but by continual attention and adulation.

There is an affinity too between the desire of becoming what is honourable and estimable, and the desire of honour and esteem, between the love of virtue and the love of true glory. They resemble one another not only in this respect, that both aim at really being what is honourable and noble, but even in that respect in which the love of true glory resembles what is properly called vanity, some reference to the sentiments of others. The man of the greatest magnanimity, who desires virtue for its own sake, and is most indifferent about what actually are the opinions of mankind with regard to him, is still, however, delighted with the thoughts of what they should be, with the consciousness that though he may neither be honoured nor applauded, he is still the proper object of honour and

applause, and that if mankind were cool and candid and consistent with themselves, and properly informed of the motives and circumstances of his conduct, they would not fail to honour and applaud him. Though he despises the opinions which are actually entertained of him, he has the highest value for those which ought to be entertained of him. That he might think himself worthy of those honourable sentiments, and, whatever was the idea which other men might conceive of his character, that when he should put himself in their situation, and consider, not what was, but what ought to be their opinion, he should always have the highest idea of it himself, was the great and exalted motive of his conduct. As even in the love of virtue, therefore, there is still some reference, though not to what is, yet to what in reason and propriety ought to be, the opinion of others, there is even in this respect some affinity between it, and the love of true glory. There is, however, at the same time, a very great difference between them. The man who acts solely from a regard to what is right and fit to be done, from a regard to what is the proper object of esteem and approbation, though these sentiments should never be bestowed upon him, acts from the most sublime and godlike motive which human nature is even capable of conceiving. The man, on the other hand, who while he desires to merit approbation is at the same time anxious to obtain it, though he too is laudable in the main, yet his motives have a greater mixture of human infirmity. He is in danger of being mortified by the ignorance and injustice of mankind, and his happiness is exposed to the envy of his rivals and the folly of the public. The happiness of the other, on the contrary, is altogether secure and independent of fortune, and of the caprice of those he lives with. The contempt and hatred which may be thrown upon him by the ignorance of mankind, he considers as not belonging to him, and is not at all mortified by it. Mankind despise and hate him from a false notion of his character and conduct. If they knew him better, they would esteem and love him. It is not him whom, properly speaking, they hate and despise, but another person whom they mistake him to

be. Our friend, whom we should meet at a masquerade in the garb of our enemy, would be more diverted than mortified, if under that disguise we should vent our indignation against him. Such are the sentiments of a man of real magnanimity, when exposed to unjust censure. It seldom happens, however, that human nature arrives at this degree of firmness. Though none but the weakest and most worthless of mankind are much delighted with false glory, yet, by a strange inconsistency, false ignominy is often capable of mortifying those who appear the most resolute and determined.

Dr Mandeville is not satisfied with representing the frivolous motive of vanity, as the source of all those actions which are commonly accounted virtuous. He endeavours to point out the imperfection of human virtue in many other respects. In every case, he pretends, it falls short of that complete self-denial which it pretends to, and, instead of a conquest, is commonly no more than a concealed indulgence of our passions. Wherever our reserve with regard to pleasure falls short of the most ascetic abstinence, he treats it as gross luxury and sensuality. Every thing, according to him, is luxury which exceeds what is absolutely necessary for the support of human nature, so that there is vice even in the use of a clean shirt, or of a convenient habitation. The indulgence of the inclination to sex, in the most lawful union, he considers as the same sensuality with the most hurtful gratification of that passion, and derides that temperance and that chastity which can be practised at so cheap a rate. The ingenious sophistry of his reasoning, is here, as upon many other occasions, covered by the ambiguity of language. There are some of our passions which have no other names except those which mark the disagreeable and offensive degree. The spectator is more apt to take notice of them in this degree than in any other. When they shock his own sentiments, when they give him some sort of antipathy and uneasiness, he is necessarily obliged to attend to them, and is from thence naturally led to give them a name. When they fall in with the natural state of his

own mind, he is very apt to overlook them altogether, and either gives them no name at all, or, if he give them any, it is one which marks rather the subjection and restraint of the passion, than the degree which it still is allowed to subsist in, after it is so subjected and restrained. Thus the common names¹³[\[54\]](#) of the love of pleasure, and of the love of sex, denote a vicious and offensive degree of those passions. The words temperance and chastity, on the other hand, seem to mark rather the restraint and subjection which they are kept under, than the degree which they are still allowed to subsist in. When he can show, therefore, that they still subsist in some degree, he imagines, he has entirely demolished the reality of the virtues of temperance and chastity, and shown them to be mere impositions upon the inattention and simplicity of mankind. Those virtues, however, do not require an entire insensibility to the objects of the passions which they mean to govern. They only aim at restraining the violence of those passions so far as not to hurt the individual, and neither disturb nor offend the society.

It is the great fallacy of Dr. Mandeville's book¹⁴[\[55\]](#) to represent every passion as wholly vicious, which is so in any degree and in any direction. It is thus that he treats every thing as vanity which has any reference, either to what are, or to what ought to be the sentiments of others: and it is by means of this sophistry, that he establishes his favourite conclusion, that private vices are public benefits. If the love of magnificence, a taste for the elegant arts and improvements of human life, for whatever is agreeable in dress, furniture, or equipage, for architecture, statuary, painting, and music, is to be regarded as luxury, sensuality, and ostentation, even in those whose situation allows, without any inconveniency, the indulgence of those passions, it is certain that luxury, sensuality, and ostentation are public benefits: since without the qualities upon which he thinks proper to bestow such opprobrious names, the arts of refinement could never find encouragement, and must languish for want of employment. Some

popular ascetic doctrines which had been current before his time, and which placed virtue in the entire extirpation and annihilation of all our passions, were the real foundation of this licentious system. It was easy for Dr Mandeville to prove, first, that this entire conquest never actually took place among men; and secondly, that, if it was to take place universally, it would be pernicious to society, by putting an end to all industry and commerce, and in a manner to the whole business of human life. By the first of these propositions he seemed to prove that there was no real virtue, and that what pretended to be such, was a mere cheat and imposition upon mankind; and by the second, that private vices were public benefits, since without them no society could prosper or flourish.

Such is the system of Dr Mandeville, which once made so much noise in the world, and which, though, perhaps, it never gave occasion to more vice than what would have been without it, at least taught that vice, which arose from other causes, to appear with more effrontery, and to avow the corruption of its motives with a profligate audaciousness which had never been heard of before.

But how destructive soever this system may appear, it could never have imposed upon so great a number of persons, nor have occasioned so general an alarm among those who are the friends of better principles, had it not in some respects bordered upon the truth. A system of natural philosophy may appear very plausible, and be for a long time very generally received in the world, and yet have no foundation in nature, nor any sort of resemblance to the truth. The vortices of Des Cartes were regarded by a very ingenious nation, for near a century together, as a most satisfactory account of the revolutions of the heavenly bodies. Yet it has been demonstrated, to the conviction of all mankind, that these pretended causes of those wonderful effects, not only do not actually exist, but are utterly impossible, and if they did exist, could produce no such effects as are

ascribed to them.^[56] But it is otherwise with systems of moral philosophy, and an author who pretends to account for the origin of our moral sentiments, cannot deceive us so grossly, nor depart so very far from all resemblance to the truth. When a traveller gives an account of some distant country, he may impose upon our credulity the most groundless and absurd fictions as the most certain matters of fact. But when a person pretends to inform us of what passes in our neighbourhood, and of the affairs of the very parish which we live in, though here too, if we are so careless as not to examine things with our own eyes, he may deceive us in many respects, yet the greatest falsehoods which he imposes upon us must bear some resemblance to the truth, and must even have a considerable mixture of truth in them. An author who treats of natural philosophy, and pretends to assign the causes of the great phaenomena of the universe, pretends to give an account of the affairs of a very distant country, concerning which he may tell us what he pleases, and as long as his narration keeps within the bounds of seeming possibility, he need not despair of gaining our belief. But when he proposes to explain the origin of our desires and affections, of our sentiments of approbation and disapprobation, he pretends to give an account, not only of the affairs of the very parish that we live in, but of our own domestic concerns. Though here too, like indolent masters who put their trust in a steward who deceives them, we are very liable to be imposed upon, yet we are incapable of passing any account which does not preserve some little regard to the truth. Some of the articles, at least, must be just, and even those which are most overcharged must have had some foundation, otherwise the fraud would be detected even by that careless inspection which we are disposed to give. The author who should assign, as the cause of any natural sentiment, some principle which neither had any connexion with it, nor resembled any other principle which had some such connexion, would appear absurd and ridiculous to the most injudicious and unexperienced reader.

Section III Of the different Systems which have been formed concerning the Principle of Approbation

Introduction

After the inquiry concerning the nature of virtue, the next question of importance in Moral Philosophy, is concerning the principle of approbation, concerning the power or faculty of the mind which renders certain characters agreeable or disagreeable to us, makes us prefer one tenour of conduct to another, denominate the one right and the other wrong, and consider the one as the object of approbation, honour, and reward; the other as that of blame, censure, and punishment.

Three different accounts have been given of this principle of approbation. According to some, we approve and disapprove both of our own actions and of those of others, from self-love only, or from some view of their tendency to our own happiness or disadvantage: according to others, reason, the same faculty by which we distinguish between truth and falsehood, enables us to distinguish between what is fit and unfit both in actions and affections: according to others this distinction is altogether the effect of immediate sentiment and feeling, and arises from the satisfaction or disgust with which the view of certain actions or affections inspires us. Self-love, reason, and sentiment, therefore, are the three different sources which have been assigned for the principle of approbation.

Before I proceed to give an account of those different systems, I must observe, that the determination of this second question, though of the greatest importance in speculation, is of none in practice. The question concerning the nature of virtue necessarily has some

influence upon our notions of right and wrong in many particular cases. That concerning the principle of approbation can possibly have no such effect. To examine from what contrivance or mechanism within, those different notions or sentiments arise, is a mere matter of philosophical curiosity.

Chap. I Of those Systems which deduce the Principle of Approbation from Self-love

Those who account for the principle of approbation from self-love, do not all account for it in the same manner, and there is a good deal of confusion and inaccuracy in all their different systems. According to Mr Hobbes, and many of his followers,^{15[57]} man is driven to take refuge in society, not by any natural love which he bears to his own kind, but because without the assistance of others he is incapable of subsisting with ease or safety. Society, upon this account, becomes necessary to him, and whatever tends to its support and welfare, he considers as having a remote tendency to his own interest; and, on the contrary, whatever is likely to disturb or destroy it, he regards as in some measure hurtful or pernicious to himself. Virtue is the great support, and vice the great disturber of human society. The former, therefore, is agreeable, and the latter offensive to every man; as from the one he foresees the prosperity, and from the other the ruin and disorder of what is so necessary for the comfort and security of his existence.

That the tendency of virtue to promote, and of vice to disturb the order of society, when we consider it coolly and philosophically, reflects a very great beauty upon the one, and a very great deformity upon the other, cannot, as I have observed upon a former occasion, be called in question. Human society, when we contemplate it in a certain abstract and philosophical light, appears like a great, an immense machine, whose regular and harmonious movements

produce a thousand agreeable effects. As in any other beautiful and noble machine that was the production of human art, whatever tended to render its movements more smooth and easy, would derive a beauty from this effect, and, on the contrary, whatever tended to obstruct them would displease upon that account: so virtue, which is, as it were, the fine polish to the wheels of society, necessarily pleases; while vice, like the vile rust, which makes them jar and grate upon one another, is as necessarily offensive. This account, therefore, of the origin of approbation and disapprobation, so far as it derives them from a regard to the order of society, runs into that principle which gives beauty to utility, and which I have explained upon a former occasion; and it is from thence that this system derives all that appearance of probability which it possesses. When those authors describe the innumerable advantages of a cultivated and social, above a savage and solitary life; when they expatiate upon the necessity of virtue and good order for the maintenance of the one, and demonstrate how infallibly the prevalence of vice and disobedience to the laws tend to bring back the other, the reader is charmed with the novelty and grandeur of those views which they open to him: he sees plainly a new beauty in virtue, and a new deformity in vice, which he had never taken notice of before, and is commonly so delighted with the discovery, that he seldom takes time to reflect, that this political view, having never occurred to him in his life before, cannot possibly be the ground of that approbation and disapprobation with which he has always been accustomed to consider those different qualities.

When those authors, on the other hand, deduce from self-love the interest which we take in the welfare of society, and the esteem which upon that account we bestow upon virtue, they do not mean, that when we in this age applaud the virtue of Cato, and detest the villany of Catiline, our sentiments are influenced by the notion of any benefit we receive from the one, or of any detriment we suffer from the other. It was not because the prosperity or subversion of society, in those

remote ages and nations, was apprehended to have any influence upon our happiness or misery in the present times; that according to those philosophers, we esteemed the virtuous, and blamed the disorderly characters. They never imagined that our sentiments were influenced by any benefit or damage which we supposed actually to redound to us, from either; but by that which might have redounded to us, had we lived in those distant ages and countries; or by that which might still redound to us, if in our own times we should meet with characters of the same kind. The idea, in short, which those authors were groping about, but which they were never able to unfold distinctly, was that indirect sympathy which we feel with the gratitude or resentment of those who received the benefit or suffered the damage resulting from such opposite characters: and it was this which they were indistinctly pointing at, when they said, that it was not the thought of what we had gained or suffered which prompted our applause or indignation, but the conception or imagination of what we might gain or suffer if we were to act in society with such associates.

Sympathy, however, cannot, in any sense, be regarded as a selfish principle. When I sympathize with your sorrow or your indignation, it may be pretended, indeed, that my emotion is founded in self-love, because it arises from bringing your case home to myself, from putting myself in your situation, and thence conceiving what I should feel in the like circumstances. But though sympathy is very properly said to arise from an imaginary change of situations with the person principally concerned, yet this imaginary change is not supposed to happen to me in my own person and character, but in that of the person with whom I sympathize. When I condole with you for the loss of your only son, in order to enter into your grief I do not consider what I, a person of such a character and profession, should suffer, if I had a son, and if that son was unfortunately to die: but I consider what I should suffer if I was really you, and I not only change

circumstances with you, but I change persons and characters. My grief, therefore, is entirely upon your account, and not in the least upon my own. It is not, therefore, in the least selfish. How can that be regarded as a selfish passion, which does not arise even from the imagination of any thing that has befallen, or that relates to myself, in my own proper person and character, but which is entirely occupied about what relates to you? A man may sympathize with a woman in child-bed; though it is impossible that he should conceive himself as suffering her pains in his own proper person and character. That whole account of human nature, however, which deduces all sentiments and affections from self-love, which has made so much noise in the world, but which, so far as I know, has never yet been fully and distinctly explained, seems to me to have arisen from some confused misapprehension of the system of sympathy.

Chap. II Of those Systems which make Reason the Principle of Approbation

It is well known to have been the doctrine of Mr Hobbes, that a state of nature is a state of war; and that antecedent to the institution of civil government there could be no safe or peaceable society among men.^[58] To preserve society, therefore, according to him, was to support civil government, and to destroy civil government was the same thing as to put an end to society. But the existence of civil government depends upon the obedience that is paid to the supreme magistrate. The moment he loses his authority, all government is at an end. As self-preservation, therefore, teaches men to applaud whatever tends to promote the welfare of society, and to blame whatever is likely to hurt it; so the same principle, if they would think and speak consistently, ought to teach them to applaud upon all occasions obedience to the civil magistrate, and to blame all disobedience and rebellion. The very ideas of laudable and blamable, ought to be the

same with those of obedience and disobedience. The laws of the civil magistrate, therefore, ought to be regarded as the sole ultimate standards of what was just and unjust, of what was right and wrong.

It was the avowed intention of Mr Hobbes, by propagating these notions, to subject the consciences of men immediately to the civil, and not to the ecclesiastical powers, whose turbulence and ambition, he had been taught, by the example of his own times, to regard as the principal source of the disorders of society. His doctrine, upon this account, was peculiarly offensive to theologians, who accordingly did not fail to vent their indignation against him with great asperity and bitterness. It was likewise offensive to all sound moralists, as it supposed that there was no natural distinction between right and wrong, that these were mutable and changeable, and depended upon the mere arbitrary will of the civil magistrate. This account of things, therefore, was attacked from all quarters, and by all sorts of weapons, by sober reason as well as by furious declamation.

In order to confute so odious a doctrine, it was necessary to prove, that antecedent to all law or positive institution, the mind was naturally endowed with a faculty, by which it distinguished in certain actions and affections, the qualities of right, laudable, and virtuous, and in others those of wrong, blamable, and vicious.

Law, it was justly observed by Dr Cudworth,¹⁶^[59] could not be the original source of those distinctions; since upon the supposition of such a law, it must either be right to obey it, and wrong to disobey it, or indifferent whether we obeyed it, or disobeyed it. That law which it was indifferent whether we obeyed or disobeyed, could not, it was evident, be the source of those distinctions; neither could that which it was right to obey and wrong to disobey, since even this still supposed the antecedent notions or ideas of right and wrong, and that obedience to the law was conformable to the idea of right, and disobedience to that of wrong.^[60]

图VII—5：《利维坦》的扉页

Since the mind, therefore, had a notion of those distinctions antecedent to all law, it seemed necessarily to follow, that it derived this notion from reason, which pointed out the difference between right and wrong, in the same manner in which it did that between truth and falsehood: and this conclusion, which, though true in some respects, is rather hasty in others, was more easily received at a time when the abstract science of human nature was but in its infancy, and before the distinct offices and powers of the different faculties of the human mind had been carefully examined and distinguished from one another. When this controversy with Mr Hobbes was carried on with the greatest warmth and keenness, no other faculty had been thought of from which any such ideas could possibly be supposed to arise. It became at this time, therefore, the popular doctrine, that the essence of virtue and vice did not consist in the conformity or disagreement of human actions with the law of a superior, but in their conformity or disagreement with reason, which was thus considered as the original

source and principle of approbation and disapprobation.

That virtue consists in conformity to reason, is true in some respects, and this faculty may very justly be considered as, in some sense, the source and principle of approbation and disapprobation, and of all solid judgments concerning right and wrong. It is by reason that we discover those general rules of justice by which we ought to regulate our actions: and it is by the same faculty that we form those more vague and indeterminate ideas of what is prudent, of what is decent, of what is generous or noble, which we carry constantly about with us, and according to which we endeavour, as well as we can, to model the tenor of our conduct. The general maxims of morality are formed, like all other general maxims, from experience and induction. We observe in a great variety of particular cases what pleases or displeases our moral faculties, what these approve or disapprove of, and, by induction from this experience, we establish those general rules. But induction is always regarded as one of the operations of reason. From reason, therefore, we are very properly said to derive all those general maxims and ideas. It is by these, however, that we regulate the greater part of our moral judgments, which would be extremely uncertain and precarious if they depended altogether upon what is liable to so many variations as immediate sentiment and feeling, which the different states of health and humour are capable of altering so essentially. As our most solid judgments, therefore, with regard to right and wrong, are regulated by maxims and ideas derived from an induction of reason, virtue may very properly be said to consist in a conformity to reason, and so far this faculty may be considered as the source and principle of approbation and disapprobation.

But though reason is undoubtedly the source of the general rules of morality, and of all the moral judgments which we form by means of them; it is altogether absurd and unintelligible to suppose that the

first perceptions of right and wrong can be derived from reason, even in those particular cases upon the experience of which the general rules are formed. These first perceptions, as well as all other experiments upon which any general rules are founded, cannot be the object of reason, but of immediate sense and feeling. It is by finding in a vast variety of instances that one tenor of conduct constantly pleases in a certain manner, and that another as constantly displeases the mind, that we form the general rules of morality. But reason cannot render any particular object either agreeable or disagreeable to the mind for its own sake. Reason may show that this object is the means of obtaining some other which is naturally either pleasing or displeasing, and in this manner may render it either agreeable or disagreeable for the sake of something else. But nothing can be agreeable or disagreeable for its own sake, which is not rendered such by immediate sense and feeling. If virtue, therefore, in every particular instance, necessarily pleases for its own sake, and if vice as certainly displeases the mind, it cannot be reason, but immediate sense and feeling, which, in this manner, reconciles us to the one, and alienates us from the other.

Pleasure and pain are the great objects of desire and aversion: but these are distinguished not by reason, but by immediate sense and feeling. If virtue, therefore, be desirable for its own sake, and if vice be, in the same manner, the object of aversion, it cannot be reason which originally distinguishes those different qualities, but immediate sense and feeling.

As reason, however, in a certain sense, may justly be considered as the principle of approbation and disapprobation, these sentiments were, through inattention, long regarded as originally flowing from the operations of this faculty. Dr Hutcheson had the merit of being the first who distinguished with any degree of precision in what respect all moral distinctions may be said to arise from reason, and in what

respect they are founded upon immediate sense and feeling. In his illustrations upon the moral sense^[61] he has explained this so fully, and, in my opinion, so unanswerably, that, if any controversy is still kept up about this subject, I can impute it to nothing, but either to inattention to what that gentleman has written, or to a superstitious attachment to certain forms of expression, a weakness not very uncommon among the learned, especially in subjects so deeply interesting as the present, in which a man of virtue is often loath to abandon, even the propriety of a single phrase which he has been accustomed to.

Chap. III Of those Systems which make Sentiment the Principle of Approbation

Those systems which make sentiment the principle of approbation may be divided into two different classes.

I. According to some the principle of approbation is founded upon a sentiment of a peculiar nature, upon a particular power of perception exerted by the mind at the view of certain actions or affections; some of which affecting this faculty in an agreeable and others in a disagreeable manner, the former are stamped with the characters of right, laudable, and virtuous; the latter with those of wrong, blamable, and vicious. This sentiment being of a peculiar nature distinct from every other, and the effect of a particular power of perception, they give it a particular name, and call it a moral sense.

II. According to others, in order to account for the principle of approbation, there is no occasion for supposing any new power of perception which had never been heard of before: Nature, they imagine, acts here, as in all other cases, with the strictest economy, and produces a multitude of effects from one and the same cause; and sympathy, a power which has always been taken notice of, and with

which the mind is manifestly endowed, is, they think, sufficient to account for all the effects ascribed to this peculiar faculty.

I. Dr Hutcheson¹⁷[\[62\]](#) had been at great pains to prove that the principle of approbation was not founded on self-love. He had demonstrated too that it could not arise from any operation of reason. Nothing remained, he thought, but to suppose it a faculty of a peculiar kind, with which Nature had endowed the human mind, in order to produce this one particular and important effect. When self-love and reason were both excluded, it did not occur to him that there was any other known faculty of the mind which could in any respect answer this purpose.

This new power of perception he called a moral sense, and supposed it to be somewhat analogous to the external senses. As the bodies around us, by affecting these in a certain manner, appear to possess the different qualities of sound, taste, odour, colour; so the various affections of the human mind, by touching this particular faculty in a certain manner, appear to possess the different qualities of amiable and odious, of virtuous and vicious, of right and wrong.

The various senses or powers of perception,¹⁸[\[63\]](#) from which the human mind derives all its simple ideas, were, according to this system, of two different kinds, of which the one were called the direct or antecedent, the other, the reflex or consequent senses. The direct senses were those faculties from which the mind derived the perception of such species of things as did not presuppose the antecedent perception of any other. Thus sounds and colours were objects of the direct senses. To hear a sound or to see a colour does not presuppose the antecedent perception of any other quality or object. The reflex or consequent senses, on the other hand, were those faculties from which the mind derived the perception of such species of things as presupposed the antecedent perception of some other. Thus harmony and beauty were objects of the reflex senses. In order to

perceive the harmony of a sound, or the beauty of a colour, we must first perceive the sound or the colour. The moral sense was considered as a faculty of this kind. That faculty, which Mr Locke calls reflection, and from which he derived the simple ideas of the different passions and emotions of the human mind, was, according to Dr Hutcheson, a direct internal sense. That faculty again by which we perceived the beauty or deformity, the virtue or vice of those different passions and emotions, was a reflex, internal sense.

Dr Hutcheson endeavoured still further to support this doctrine, by shewing that it was agreeable to the analogy of nature, and that the mind was endowed with a variety of other reflex senses exactly similar to the moral sense; such as a sense of beauty and deformity in external objects; a public sense, by which we sympathize with the happiness or misery of our fellow-creatures; a sense of shame and honour, and a sense of ridicule.

But notwithstanding all the pains which this ingenious philosopher has taken to prove that the principle of approbation is founded in a peculiar power of perception, somewhat analogous to the external senses, there are some consequences, which he acknowledges to follow from this doctrine, that will, perhaps, be regarded by many as a sufficient confutation of it. The qualities he allows,¹⁹[\[64\]](#) which belong to the objects of any sense, cannot, without the greatest absurdity, be ascribed to the sense itself. Who ever thought of calling the sense of seeing black or white, the sense of hearing loud or low, or the sense of tasting sweet or bitter? And, according to him, it is equally absurd to call our moral faculties virtuous or vicious, morally good or evil. These qualities belong to the objects of those faculties, not to the faculties themselves. If any man, therefore, was so absurdly constituted as to approve of cruelty and injustice as the highest virtues, and to disapprove of equity and humanity as the most pitiful vices, such a constitution of mind might indeed be regarded as

inconvenient both to the individual and to the society, and likewise as strange, surprising, and unnatural in itself; but it could not, without the greatest absurdity, be denominated vicious or morally evil.

Yet surely if we saw any man shouting with admiration and applause at a barbarous and unmerited execution, which some insolent tyrant had ordered, we should not think we were guilty of any great absurdity in denominating this behaviour vicious and morally evil in the highest degree, though it expressed nothing but depraved moral faculties, or an absurd approbation of this horrid action, as of what was noble, magnanimous, and great. Our heart, I imagine, at the sight of such a spectator, would forget for a while its sympathy with the sufferer, and feel nothing but horror and detestation, at the thought of so execrable a wretch. We should abominate him even more than the tyrant who might be goaded on by the strong passions of jealousy, fear, and resentment, and upon that account be more excusable. But the sentiments of the spectator would appear altogether without cause or motive, and therefore most perfectly and completely detestable. There is no perversion of sentiment or affection which our heart would be more averse to enter into, or which it would reject with greater hatred and indignation than one of this kind; and so far from regarding such a constitution of mind as being merely something strange or inconvenient, and not in any respect vicious or morally evil, we should rather consider it as the very last and most dreadful stage of moral depravity.

Correct moral sentiments, on the contrary, naturally appear in some degree laudable and morally good. The man, whose censure and applause are upon all occasions suited with the greatest accuracy to the value or unworthiness of the object, seems to deserve a degree even of moral approbation. We admire the delicate precision of his moral sentiments: they lead our own judgments, and, upon account of their uncommon and surprising justness, they even excite our wonder

and applause. We cannot indeed be always sure that the conduct of such a person would be in any respect correspondent to the precision and accuracy of his judgments concerning the conduct of others. Virtue requires habit and resolution of mind, as well as delicacy of sentiment; and unfortunately the former qualities are sometimes wanting, where the latter is in the greatest perfection. This disposition of mind, however, though it may sometimes be attended with imperfections, is incompatible with any thing that is grossly criminal, and is the happiest foundation upon which the superstructure of perfect virtue can be built. There are many men who mean very well, and seriously purpose to do what they think their duty, who notwithstanding are disagreeable on account of the coarseness of their moral sentiments.

It may be said, perhaps, that though the principle of approbation is not founded upon any power of perception that is in any respect analogous to the external senses, it may still be founded upon a peculiar sentiment which answers this one particular purpose and no other. Approbation and disapprobation, it may be pretended, are certain feelings or emotions which arise in the mind upon the view of different characters and actions; and as resentment might be called a sense of injuries, or gratitude a sense of benefits, so these may very properly receive the name of a sense of right and wrong, or of a moral sense.

But this account of things, though it may not be liable to the same objections with the foregoing, is exposed to others which are equally unanswerable.

First of all, whatever variations any particular emotion may undergo, it still preserves the general features which distinguish it to be an emotion of such a kind, and these general features are always more striking and remarkable than any variation which it may undergo in particular cases. Thus anger is an emotion of a particular

kind: and accordingly its general features are always more distinguishable than all the variations it undergoes in particular cases. Anger against a man is, no doubt, somewhat different from anger against a woman, and that again from anger against a child. In each of those three cases, the general passion of anger receives a different modification from the particular character of its object, as may easily be observed by the attentive. But still the general features of the passion predominate in all these cases. To distinguish these, requires no nice observation: a very delicate attention, on the contrary, is necessary to discover their variations: every body takes notice of the former; scarce any body observes the latter. If approbation and disapprobation, therefore, were, like gratitude and resentment, emotions of a particular kind, distinct from every other, we should expect that in all the variations which either of them might undergo, it would still retain the general features which mark it to be an emotion of such a particular kind, clear, plain, and easily distinguishable. But in fact it happens quite otherwise. If we attend to what we really feel when upon different occasions we either approve or disapprove, we shall find that our emotion in one case is often totally different from that in another, and that no common features can possibly be discovered between them. Thus the approbation with which we view a tender, delicate, and humane sentiment, is quite different from that with which we are struck by one that appears great, daring, and magnanimous. Our approbation of both may, upon different occasions, be perfect and entire; but we are softened by the one, and we are elevated by the other, and there is no sort of resemblance between the emotions which they excite in us. But according to that system which I have been endeavouring to establish, this must necessarily be the case. As the emotions of the person whom we approve of, are, in those two cases, quite opposite to one another, and as our approbation arises from sympathy with those opposite emotions, what we feel upon the one occasion, can have no sort of resemblance to what we feel upon the other. But this could not

happen if approbation consisted in a peculiar emotion which had nothing in common with the sentiments we approved of, but which arose at the view of those sentiments, like any other passion at the view of its proper object. The same thing holds true with regard to disapprobation. Our horror for cruelty has no sort of resemblance to our contempt for mean-spiritedness. It is quite a different species of discord which we feel at the view of those two different vices, between our own minds and those of the person whose sentiments and behaviour we consider.

Secondly, I have already observed, that not only the different passions or affections of the human mind which are approved or disapproved of, appear morally good or evil, but that proper and improper approbation appear, to our natural sentiments, to be stamped with the same characters. I would ask, therefore, how it is, that, according to this system, we approve or disapprove of proper or improper approbation? To this question there is, I imagine, but one reasonable answer, which can possibly be given. It must be said, that when the approbation with which our neighbour regards the conduct of a third person coincides with our own, we approve of his approbation, and consider it as, in some measure, morally good; and that, on the contrary, when it does not coincide with our own sentiments, we disapprove of it, and consider it as, in some measure, morally evil. It must be allowed, therefore, that, at least in this one case, the coincidence or opposition of sentiments, between the observer and the person observed, constitutes moral approbation or disapprobation. And if it does so in this one case, I would ask, why not in every other? Or to what purpose imagine a new power of perception in order to account for those sentiments?

Against every account of the principle of approbation, which makes it depend upon a peculiar sentiment, distinct from every other, I would object; that it is strange that this sentiment, which Providence

undoubtedly intended to be the governing principle of human nature, should hitherto have been so little taken notice of, as not to have got a name in any language. The word moral sense is of very late formation, and cannot yet be considered as making part of the English tongue. The word approbation has but within these few years been appropriated to denote peculiarly any thing of this kind. In propriety of language we approve of whatever is entirely to our satisfaction, of the form of a building, of the contrivance of a machine, of the flavour of a dish of meat. The word conscience does not immediately denote any moral faculty by which we approve or disapprove. Conscience supposes, indeed, the existence of some such faculty, and properly signifies our consciousness of having acted agreeably or contrary to its directions. When love, hatred, joy, sorrow, gratitude, resentment, with so many other passions which are all supposed to be the subjects of this principle, have made themselves considerable enough to get titles to know them by, is it not surprising that the sovereign of them all should hitherto have been so little heeded, that, a few philosophers excepted, nobody has yet thought it worth while to bestow a name upon it?

When we approve of any character or action, the sentiments which we feel, are, according to the foregoing system, derived from four sources, which are in some respects different from one another. First, we sympathize with the motives of the agent; secondly, we enter into the gratitude of those who receive the benefit of his actions; thirdly, we observe that his conduct has been agreeable to the general rules by which those two sympathies generally act; and, last of all, when we consider such actions as making a part of a system of behaviour which tends to promote the happiness either of the individual or of the society, they appear to derive a beauty from this utility, not unlike that which we ascribe to any well-contrived machine. After deducting, in any one particular case, all that must be acknowledged to proceed from some one or other of these four

principles, I should be glad to know what remains, and I shall freely allow this overplus to be ascribed to a moral sense, or to any other peculiar faculty, provided any body will ascertain precisely what this overplus is. It might be expected, perhaps, that if there was any such peculiar principle, such as this moral sense is supposed to be, we should feel it, in some particular cases, separated and detached from every other, as we often feel joy, sorrow, hope, and fear, pure and unmixed with any other emotion. This however, I imagine, cannot even be pretended. I have never heard any instance alleged in which this principle could be said to exert itself alone and unmixed with sympathy or antipathy, with gratitude or resentment, with the perception of the agreement or disagreement of any action to an established rule, or last of all with that general taste for beauty and order which is excited by inanimated as well as by animated objects.

II. There is another system which attempts to account for the origin of our moral sentiments from sympathy, distinct from that which I have been endeavouring to establish. It is that which places virtue in utility, and accounts for the pleasure with which the spectator surveys the utility of any quality from sympathy with the happiness of those who are affected by it. This sympathy is different both from that by which we enter into the motives of the agent, and from that by which we go along with the gratitude of the persons who are benefited by his actions. It is the same principle with that by which we approve of a well-contrived machine. But no machine can be the object of either of those two last mentioned sympathies. I have already, in the fourth part of this discourse, given some account of this system.

Section IV Of the Manner in which different Authors have treated of the practical Rules of Morality

It was observed in the third part of this discourse, that the rules of justice are the only rules of morality which are precise and accurate; that those of all the other virtues are loose, vague, and indeterminate; that the first may be compared to the rules of grammar; the others to those which critics lay down for the attainment of what is sublime and elegant in composition, and which present us rather with a general idea of the perfection we ought to aim at, than afford us any certain and infallible directions for acquiring it.

As the different rules of morality admit such different degrees of accuracy, those authors who have endeavoured to collect and digest them into systems have done it in two different manners; and one set has followed through the whole that loose method to which they were naturally directed by the consideration of one species of virtues; while another has as universally endeavoured to introduce into their precepts that sort of accuracy of which only some of them are susceptible. The first have wrote like critics, the second like grammarians.

I. The first, among whom we may count all the ancient moralists, have contented themselves with describing in a general manner the different vices and virtues, and with pointing out the deformity and misery of the one disposition as well as the propriety and happiness of the other, but have not affected to lay down many precise rules that are to hold good unexceptionably in all particular cases. They have only endeavoured to ascertain, as far as language is capable of ascertaining, first, wherein consists the sentiment of the heart, upon which each particular virtue is founded, what sort of internal feeling

or emotion it is which constitutes the essence of friendship, of humanity, of generosity, of justice, of magnanimity, and of all the other virtues, as well as of the vices which are opposed to them: and, secondly, what is the general way of acting, the ordinary tone and tenor of conduct to which each of those sentiments would direct us, or how it is that a friendly, a generous, a brave, a just, and a humane man, would, upon ordinary occasions, chuse to act.

To characterize the sentiment of the heart, upon which each particular virtue is founded, though it requires both a delicate and an accurate pencil, is a task, however, which may be executed with some degree of exactness. It is impossible, indeed, to express all the variations which each sentiment either does or ought to undergo, according to every possible variation of circumstances. They are endless, and language wants names to mark them by. The sentiment of friendship, for example, which we feel for an old man is different from that which we feel for a young: that which we entertain for an austere man different from that which we feel for one of softer and gentler manners: and that again from what we feel for one of gay vivacity and spirit. The friendship which we conceive for a man is different from that with which a woman affects us, even where there is no mixture of any grosser passion. What author could enumerate and ascertain these and all the other infinite varieties which this sentiment is capable of undergoing? But still the general sentiment of friendship and familiar attachment which is common to them all, may be ascertained with a sufficient degree of accuracy. The picture which is drawn of it, though it will always be in many respects incomplete, may, however, have such a resemblance as to make us know the original when we meet with it, and even distinguish it from other sentiments to which it has a considerable resemblance, such as good-will, respect, esteem, admiration.

To describe, in a general manner, what is the ordinary way of

acting to which each virtue would prompt us, is still more easy. It is, indeed, scarce possible to describe the internal sentiment or emotion upon which it is founded, without doing something of this kind. It is impossible by language to express, if I may say so, the invisible features of all the different modifications of passion as they show themselves within. There is no other way of marking and distinguishing them from one another, but by describing the effects which they produce without, the alterations which they occasion in the countenance, in the air and external behaviour, the resolutions they suggest, the actions they prompt to. It is thus that Cicero, in the first book of his Offices, endeavours to direct us to the practice of the four cardinal virtues, and that Aristotle in the practical parts of his Ethics, points out to us the different habits by which he would have us regulate our behaviour, such as liberality, magnificence, magnanimity, and even jocularity and good-humour, qualities which that indulgent philosopher has thought worthy of a place in the catalogue of the virtues,^[65] though the lightness of that approbation which we naturally bestow upon them, should not seem to entitle them to so venerable a name.

Such works present us with agreeable and lively pictures of manners. By the vivacity of their descriptions they inflame our natural love of virtue, and increase our abhorrence of vice: by the justness as well as delicacy of their observations they may often help both to correct and to ascertain our natural sentiments with regard to the propriety of conduct, and suggesting many nice and delicate attentions, form us to a more exact justness of behaviour, than what, without such instruction, we should have been apt to think of. In treating of the rules of morality, in this manner, consists the science which is properly called Ethics, a science which, though like criticism it does not admit of the most accurate precision, is, however, both highly useful and agreeable. It is of all others the most susceptible of the embellishments of eloquence, and by means of them of bestowing,

if that be possible, a new importance upon the smallest rules of duty. Its precepts, when thus dressed and adorned, are capable of producing upon the flexibility of youth, the noblest and most lasting impressions, and as they fall in with the natural magnanimity of that generous age, they are able to inspire, for a time at least, the most heroic resolutions, and thus tend both to establish and confirm the best and most useful habits of which the mind of man is susceptible. Whatever precept and exhortation can do to animate us to the practice of virtue, is done by this science delivered in this manner.

II. The second set of moralists, among whom we may count all the casuists of the middle and latter ages of the christian church, as well as all those who in this and in the preceding century have treated of what is called natural jurisprudence, do not content themselves with characterizing in this general manner that tenor of conduct which they would recommend to us, but endeavour to lay down exact and precise rules for the direction of every circumstance of our behaviour. As justice is the only virtue with regard to which such exact rules can properly be given; it is this virtue, that has chiefly fallen under the consideration of those two different sets of writers. They treat of it, however, in a very different manner.

Those who write upon the principles of jurisprudence, consider only what the person to whom the obligation is due, ought to think himself entitled to exact by force; what every impartial spectator would approve of him for exacting, or what a judge or arbiter, to whom he had submitted his case, and who had undertaken to do him justice, ought to oblige the other person to suffer or to perform. The casuists, on the other hand, do not so much examine what it is, that might properly be exacted by force, as what it is, that the person who owes the obligation ought to think himself bound to perform from the most sacred and scrupulous regard to the general rules of justice, and from the most conscientious dread, either of wronging his neighbour,

or of violating the integrity of his own character. It is the end of jurisprudence to prescribe rules for the decisions of judges and arbiters. It is the end of casuistry to prescribe rules for the conduct of a good man. By observing all the rules of jurisprudence, supposing them ever so perfect, we should deserve nothing but to be free from external punishment. By observing those of casuistry, supposing them such as they ought to be, we should be entitled to considerable praise by the exact and scrupulous delicacy of our behaviour.

It may frequently happen that a good man ought to think himself bound, from a sacred and conscientious regard to the general rules of justice, to perform many things which it would be the highest injustice to extort from him, or for any judge or arbiter to impose upon him by force. To give a trite example; a highwayman, by the fear of death, obliges a traveller to promise him a certain sum of money. Whether such a promise, extorted in this manner by unjust force, ought to be regarded as obligatory, is a question that has been very much debated.

If we consider it merely as a question of jurisprudence, the decision can admit of no doubt. It would be absurd to suppose that the highwayman can be entitled to use force to constrain the other to perform. To extort the promise was a crime which deserved the highest punishment, and to extort the performance would only be adding a new crime to the former. He can complain of no injury who has been only deceived by the person by whom he might justly have been killed. To suppose that a judge ought to enforce the obligation of such promises, or that the magistrate ought to allow them to sustain action at law, would be the most ridiculous of all absurdities. If we consider this question, therefore, as a question of jurisprudence, we can be at no loss about the decision.

But if we consider it as a question of casuistry, it will not be so easily determined. Whether a good man, from a conscientious regard to that most sacred rule of justice, which commands the observance of

all serious promises, would not think himself bound to perform, is at least much more doubtful. That no regard is due to the disappointment of the wretch who brings him into this situation, that no injury is done to the robber, and consequently that nothing can be extorted by force, will admit of no sort of dispute. But whether some regard is not, in this case, due to his own dignity and honour, to the inviolable sacredness of that part of his character which makes him reverence the law of truth and abhor every thing that approaches to treachery and falsehood, may, perhaps, more reasonably be made a question. The casuists accordingly are greatly divided about it. One party, with whom we may count Cicero among the ancients, among the moderns, Puffendorf, Barbeyrac his commentator, and above all the late Dr Hutcheson, one who in most cases was by no means a loose casuist, determine, without any hesitation, that no sort of regard is due to any such promise, and that to think otherwise is mere weakness and superstition. Another party, among whom we may reckon²⁰[\[66\]](#) some of the ancient fathers of the church, as well as some very eminent modern casuists, have been of another opinion, and have judged all such promises obligatory.

If we consider the matter according to the common sentiments of mankind, we shall find that some regard would be thought due even to a promise of this kind; but that it is impossible to determine how much, by any general rule that will apply to all cases without exception. The man who was quite frank and easy in making promises of this kind, and who violated them with as little ceremony, we should not chuse for our friend and companion. A gentleman who should promise a highwayman five pounds and not perform, would incur some blame. If the sum promised, however, was very great, it might be more doubtful, what was proper to be done. If it was such, for example, that the payment of it would entirely ruin the family of the promiser, if it was so great as to be sufficient for promoting the most useful purposes, it would appear in some measure criminal, at least

extremely improper, to throw it, for the sake of a punctilio, into such worthless hands. The man who should beggar himself, or who should throw away an hundred thousand pounds, though he could afford that vast sum, for the sake of observing such a parole with a thief, would appear to the common sense of mankind, absurd and extravagant in the highest degree. Such profusion would seem inconsistent with his duty, with what he owed both to himself and others, and what, therefore, regard to a promise extorted in this manner, could by no means authorise. To fix, however, by any precise rule, what degree of regard ought to be paid to it, or what might be the greatest sum which could be due from it, is evidently impossible. This would vary according to the characters of the persons, according to their circumstances, according to the solemnity of the promise, and even according to the incidents of the rencounter: and if the promiser had been treated with a great deal of that sort of gallantry, which is sometimes to be met with in persons of the most abandoned characters, more would seem due than upon other occasions. It may be said in general, that exact propriety requires the observance of all such promises, wherever it is not inconsistent with some other duties that are more sacred; such as regard to the public interest, to those whom gratitude, whom natural affection, or whom the laws of proper beneficence should prompt us to provide for. But, as was formerly taken notice of, we have no precise rules to determine what external actions are due from a regard to such motives, nor, consequently, when it is that those virtues are inconsistent with the observance of such promises.

It is to be observed, however, that whenever such promises are violated, though for the most necessary reasons, it is always with some degree of dishonour to the person who made them. After they are made, we may be convinced of the impropriety of observing them. But still there is some fault in having made them. It is at least a departure from the highest and noblest maxims of magnanimity and

honour. A brave man ought to die, rather than make a promise which he can neither keep without folly, nor violate without ignominy. For some degree of ignominy always attends a situation of this kind. Treachery and falsehood are vices so dangerous, so dreadful, and, at the same time, such as may so easily, and, upon many occasions, so safely be indulged, that we are more jealous of them than of almost any other. Our imagination therefore attaches the idea of shame to all violations of faith, in every circumstance and in every situation. They resemble, in this respect, the violations of chastity in the fair sex, a virtue of which, for the like reasons, we are excessively jealous; and our sentiments are not more delicate with regard to the one, than with regard to the other. Breach of chastity dishonours irretrievably. No circumstances, no solicitation can excuse it; no sorrow, no repentance atone for it. We are so nice in this respect that even a rape dishonours, and the innocence of the mind cannot, in our imagination, wash out the pollution of the body.

It is the same case with the violation of faith, when it has been solemnly pledged, even to the most worthless of mankind. Fidelity is so necessary a virtue, that we apprehend it in general to be due even to those to whom nothing else is due, and whom we think it lawful to kill and destroy. It is to no purpose that the person who has been guilty of the breach of it, urges that he promised in order to save his life, and that he broke his promise because it was inconsistent with some other respectable duty to keep it. These circumstances may alleviate, but cannot entirely wipe out his dishonour. He appears to have been guilty of an action with which, in the imaginations of men, some degree of shame is inseparably connected. He has broke a promise which he had solemnly averred he would maintain; and his character, if not irretrievably stained and polluted, has at least a ridicule affixed to it, which it will be very difficult entirely to efface; and no man, I imagine, who had gone through an adventure of this kind would be fond of telling the story.

This instance may serve to show wherein consists the difference between casuistry and jurisprudence, even when both of them consider the obligations of the general rules of justice.

But though this difference be real and essential, though those two sciences propose quite different ends, the sameness of the subject has made such a similarity between them, that the greater part of authors whose professed design was to treat of jurisprudence, have determined the different questions they examine, sometimes according to the principles of that science, and sometimes according to those of casuistry, without distinguishing, and, perhaps, without being themselves aware when they did the one, and when the other.

The doctrine of the casuists, however, is by no means confined to the consideration of what a conscientious regard to the general rules of justice would demand of us. It embraces many other parts of Christian and moral duty. What seems principally to have given occasion to the cultivation of this species of science was the custom of auricular confession, introduced by the Roman Catholic superstition, in times of barbarism and ignorance. By that institution, the most secret actions, and even the thoughts of every person, which could be suspected of receding in the smallest degree from the rules of Christian purity, were to be revealed to the confessor. The confessor informed his penitents whether, and in what respect they had violated their duty, and what penance it behoved them to undergo, before he could absolve them in the name of the offended Deity.

The consciousness, or even the suspicion of having done wrong, is a load upon every mind, and is accompanied with anxiety and terror in all those who are not hardened by long habits of iniquity. Men, in this, as in all other distresses, are naturally eager to disburthen themselves of the oppression which they feel upon their thoughts, by unbosoming the agony of their mind to some person whose secrecy and discretion they can confide in. The shame, which they suffer from

this acknowledgment, is fully compensated by that deviation of their uneasiness which the sympathy of their confident seldom fails to occasion. It relieves them to find that they are not altogether unworthy of regard, and that however their past conduct may be censured, their present disposition is at least approved of, and is perhaps sufficient to compensate the other, at least to maintain them in some degree of esteem with their friend. A numerous and artful clergy had, in those times of superstition, insinuated themselves into the confidence of almost every private family. They possessed all the little learning which the times could afford, and their manners, though in many respects rude and disorderly, were polished and regular compared with those of the age they lived in. They were regarded, therefore, not only as the great directors of all religious, but of all moral duties. Their familiarity gave reputation to whoever was so happy as to possess it, and every mark of their disapprobation stamped the deepest ignominy upon all who had the misfortune to fall under it. Being considered as the great judges of right and wrong, they were naturally consulted about all scruples that occurred, and it was reputable for any person to have it known that he made those holy men the confidants of all such secrets, and took no important or delicate step in his conduct without their advice and approbation. It was not difficult for the clergy, therefore, to get it established as a general rule, that they should be entrusted with what it had already become fashionable to entrust them, and with what they generally would have been entrusted, though no such rule had been established. To qualify themselves for confessors became thus a necessary part of the study of churchmen and divines, and they were thence led to collect what are called cases of conscience, nice and delicate situations in which it is hard to determine whereabouts the propriety of conduct may lie. Such works, they imagined, might be of use both to the directors of consciences and to those who were to be directed; and hence the origin of books of casuistry.

The moral duties which fell under the consideration of the casuists were chiefly those which can, in some measure at least, be circumscribed within general rules, and of which the violation is naturally attended with some degree of remorse and some dread of suffering punishment. The design of that institution which gave occasion to their works, was to appease those terrors of conscience which attend upon the infringement of such duties. But it is not every virtue of which the defect is accompanied with any very severe compunctions of this kind, and no man applies to his confessor for absolution, because he did not perform the most generous, the most friendly, or the most magnanimous action which, in his circumstances, it was possible to perform. In failures of this kind, the rule that is violated is commonly not very determinate, and is generally of such a nature too, that though the observance of it might entitle to honour and reward, the violation seems to expose to no positive blame, censure, or punishment. The exercise of such virtues the casuists seem to have regarded as a sort of works of supererogation, which could not be very strictly exacted, and which it was therefore unnecessary for them to treat of.

The breaches of moral duty, therefore, which came before the tribunal of the confessor, and upon that account fell under the cognizance of the casuists, were chiefly of three different kinds.

First and principally, breaches of the rules of justice. The rules here are all express and positive, and the violation of them is naturally attended with the consciousness of deserving, and the dread of suffering punishment both from God and man.

Secondly, breaches of the rules of chastity. These in all grosser instances are real breaches of the rules of justice, and no person can be guilty of them without doing the most unpardonable injury to some other. In smaller instances, when they amount only to a violation of those exact decorums which ought to be observed in the conversation

of the two sexes, they cannot indeed justly be considered as violations of the rules of justice. They are generally, however, violations of a pretty plain rule, and, at least in one of the sexes, tend to bring ignominy upon the person who has been guilty of them, and consequently to be attended in the scrupulous with some degree of shame and contrition of mind.

Thirdly, breaches of the rules of veracity. The violation of truth, it is to be observed, is not always a breach of justice, though it is so upon many occasions, and consequently cannot always expose to any external punishment. The vice of common lying, though a most miserable meanness, may frequently do hurt to nobody, and in this case no claim of vengeance or satisfaction can be due either to the persons imposed upon, or to others. But though the violation of truth is not always a breach of justice, it is always a breach of a very plain rule, and what naturally tends to cover with shame the person who has been guilty of it.^[67]

There seems to be in young children an instinctive disposition to believe whatever they are told. Nature seems to have judged it necessary for their preservation that they should, for some time at least, put implicit confidence in those to whom the care of their childhood, and of the earliest and most necessary parts of their education, is intrusted. Their credulity, accordingly, is excessive, and it requires long and much experience of the falsehood of mankind to reduce them to a reasonable degree of diffidence and distrust. In grown-up people the degrees of credulity are, no doubt, very different. The wisest and most experienced are generally the least credulous. But the man scarce lives who is not more credulous than he ought to be, and who does not, upon many occasions, give credit to tales, which not only turn out to be perfectly false, but which a very moderate degree of reflection and attention might have taught him could not well be true. The natural disposition is always to believe. It is acquired

wisdom and experience only that teach incredulity, and they very seldom teach it enough. The wisest and most cautious of us all frequently gives credit to stories which he himself is afterwards both ashamed and astonished that he could possibly think of believing.

The man whom we believe is necessarily, in the things concerning which we believe him, our leader and director, and we look up to him with a certain degree of esteem and respect. But as from admiring other people we come to wish to be admired ourselves; so from being led and directed by other people we learn to wish to become ourselves leaders and directors. And as we cannot always be satisfied merely with being admired, unless we can at the same time persuade ourselves that we are in some degree really worthy of admiration; so we cannot always be satisfied merely with being believed, unless we are at the same time conscious that we are really worthy of belief. As the desire of praise and that of praise-worthiness, though very much a-kin, are yet distinct and separate desires; so the desire of being believed and that of being worthy of belief, though very much a-kin too, are equally distinct and separate desires.

The desire of being believed, the desire of persuading, of leading and directing other people, seems to be one of the strongest of all our natural desires. It is, perhaps, the instinct upon which is founded the faculty of speech, the characteristical faculty of human nature. No other animal possesses this faculty, and we cannot discover in any other animal any desire to lead and direct the judgment and conduct of its fellows. Great ambition, the desire of real superiority, of leading and directing, seems to be altogether peculiar to man, and speech is the great instrument of ambition, of real superiority, of leading and directing the judgments and conduct of other people.

It is always mortifying not to be believed, and it is doubly so when we suspect that it is because we are supposed to be unworthy of belief and capable of seriously and wilfully deceiving. To tell a man

that he lies, is of all affronts the most mortal. But whoever seriously and wilfully deceives is necessarily conscious to himself that he merits this affront, that he does not deserve to be believed, and that he forfeits all title to that sort of credit from which alone he can derive any sort of ease, comfort, or satisfaction in the society of his equals. The man who had the misfortune to imagine that nobody believed a single word he said, would feel himself the outcast of human society, would dread the very thought of going into it, or of presenting himself before it, and could scarce fail, I think, to die of despair. It is probable, however, that no man ever had just reason to entertain this humiliating opinion of himself. The most notorious liar, I am disposed to believe, tells the fair truth at least twenty times for once that he seriously and deliberately lies; and, as in the most cautious the disposition to believe is apt to prevail over that to doubt and distrust; so in those who are the most regardless of truth, the natural disposition to tell it prevails upon most occasions over that to deceive, or in any respect to alter or disguise it.

We are mortified when we happen to deceive other people, though unintentionally, and from having been ourselves deceived. Though this involuntary falsehood may frequently be no mark of any want of veracity, of any want of the most perfect love of truth, it is always in some degree a mark of want of judgment, of want of memory, of improper credulity, of some degree of precipitancy and rashness. It always diminishes our authority to persuade, and always brings some degree of suspicion upon our fitness to lead and direct. The man who sometimes misleads from mistake, however, is widely different from him who is capable of wilfully deceiving. The former may safely be trusted upon many occasions; the latter very seldom upon any.

Frankness and openness conciliate confidence. We trust the man who seems willing to trust us. We see clearly, we think, the road by

which he means to conduct us, and we abandon ourselves with pleasure to his guidance and direction. Reserve and concealment, on the contrary, call forth diffidence. We are afraid to follow the man who is going we do not know where. The great pleasure of conversation and society, besides, arises from a certain correspondence of sentiments and opinions, from a certain harmony of minds, which like so many musical instruments coincide and keep time with one another. But this most delightful harmony cannot be obtained unless there is a free communication of sentiments and opinions. We all desire, upon this account, to feel how each other is affected, to penetrate into each other's bosoms, and to observe the sentiments and affections which really subsist there. The man who indulges us in this natural passion, who invites us into his heart, who, as it were, sets open the gates of his breast to us, seems to exercise a species of hospitality more delightful than any other. No man, who is in ordinary good temper, can fail of pleasing, if he has the courage to utter his real sentiments as he feels them, and because he feels them. It is this unreserved sincerity which renders even the prattle of a child agreeable. How weak and imperfect soever the views of the open-hearted, we take pleasure to enter into them, and endeavour, as much as we can, to bring down our own understanding to the level of their capacities, and to regard every subject in the particular light in which they appear to have considered it. This passion to discover the real sentiments of others is naturally so strong, that it often degenerates into a troublesome and impertinent curiosity to pry into those secrets of our neighbours which they have very justifiable reasons for concealing; and, upon many occasions, it requires prudence and a strong sense of propriety to govern this, as well as all the other passions of human nature, and to reduce it to that pitch which any impartial spectator can approve of. To disappoint this curiosity, however, when it is kept within proper bounds, and aims at nothing which there can be any just reason for concealing, is equally disagreeable in its turn. The man who eludes our most innocent

questions, who gives no satisfaction to our most inoffensive inquiries, who plainly wraps himself up in impenetrable obscurity, seems, as it were, to build a wall about his breast. We run forward to get within it, with all the eagerness of harmless curiosity; and feel ourselves all at once pushed back with the rudest and most offensive violence.^[68]

The man of reserve and concealment, though seldom a very amiable character, is not disrespected or despised. He seems to feel coldly towards us, and we feel as coldly towards him. He is not much praised or beloved, but he is as little hated or blamed. He very seldom, however, has occasion to repent of his caution, and is generally disposed rather to value himself upon the prudence of his reserve. Though his conduct, therefore, may have been very faulty, and sometimes even hurtful, he can very seldom be disposed to lay his case before the casuists, or to fancy that he has any occasion for their acquittal or approbation.

It is not always so with the man, who, from false information, from inadvertency, from precipitancy and rashness, has involuntarily deceived. Though it should be in a matter of little consequence, in telling a piece of common news, for example, if he is a real lover of truth, he is ashamed of his own carelessness, and never fails to embrace the first opportunity of making the fullest acknowledgments. If it is in a matter of some consequence, his contrition is still greater; and if any unlucky or fatal consequence has followed from his misinformation, he can scarce ever forgive himself. Though not guilty, he feels himself to be in the highest degree, what the ancients called, *piacular*, and is anxious and eager to make every sort of atonement in his power. Such a person might frequently be disposed to lay his case before the casuists, who have in general been very favourable to him, and though they have sometimes justly condemned him for rashness, they have universally acquitted him of the ignominy of falsehood.

But the man who had the most frequent occasion to consult them,

was the man of equivocation and mental reservation, the man who seriously and deliberately meant to deceive, but who, at the same time, wished to flatter himself that he had really told the truth. With him they have dealt variously. When they approved very much of the motives of his deceit, they have sometimes acquitted him, though, to do them justice, they have in general and much more frequently condemned him.

The chief subjects of the works of the casuists, therefore, were the conscientious regard that is due to the rules of justice; how far we ought to respect the life and property of our neighbour; the duty of restitution; the laws of chastity and modesty, and wherein consisted what, in their language, are called the sins of concupiscence; the rules of veracity, and the obligation of oaths, promises, and contracts of all kinds.

It may be said in general of the works of the casuists that they attempted, to no purpose, to direct by precise rules what it belongs to feeling and sentiment only to judge of. How is it possible to ascertain by rules the exact point at which, in every case, a delicate sense of justice begins to run into a frivolous and weak scrupulosity of conscience? When it is that secrecy and reserve begin to grow into dissimulation? How far an agreeable irony may be carried, and at what precise point it begins to degenerate into a detestable lie? What is the highest pitch of freedom and ease of behaviour which can be regarded as graceful and becoming, and when it is that it first begins to run into a negligent and thoughtless licentiousness? With regard to all such matters, what would hold good in any one case would scarce do so exactly in any other, and what constitutes the propriety and happiness of behaviour varies in every case with the smallest variety of situation. Books of casuistry, therefore, are generally as useless as they are commonly tiresome. They could be of little use to one who should consult them upon occasion, even supposing their decisions to

be just; because, notwithstanding the multitude of cases collected in them, yet upon account of the still greater variety of possible circumstances, it is a chance, if among all those cases there be found one exactly parallel to that under consideration. One, who is really anxious to do his duty, must be very weak, if he can imagine that he has much occasion for them; and with regard to one who is negligent of it, the style of those writings is not such as is likely to awaken him to more attention. None of them tend to animate us to what is generous and noble. None of them tend to soften us to what is gentle and humane. Many of them, on the contrary, tend rather to teach us to chicanery with our own consciences, and by their vain subtilties serve to authorise innumerable evasive refinements with regard to the most essential articles of our duty. That frivolous accuracy which they attempted to introduce into subjects which do not admit of it, almost necessarily betrayed them into those dangerous errors, and at the same time rendered their works dry and disagreeable, abounding in abstruse and metaphysical distinctions, but incapable of exciting in the heart any of those emotions which it is the principal use of books of morality to excite.

The two useful parts of moral philosophy, therefore, are Ethics and Jurisprudence: casuistry ought to be rejected altogether; and the ancient moralists appear to have judged much better, who, in treating of the same subjects, did not affect any such nice exactness, but contented themselves with describing, in a general manner, what is the sentiment upon which justice, modesty, and veracity are founded, and what is the ordinary way of acting to which those virtues would commonly prompt us.

Something, indeed, not unlike the doctrine of the casuists, seems to have been attempted by several philosophers. There is something of this kind in the third book of Cicero's *Offices*, where he endeavours like a casuist to give rules for our conduct in many nice cases, in

which it is difficult to determine whereabouts the point of propriety may lie. It appears too, from many passages in the same book, that several other philosophers had attempted something of the same kind before him. Neither he nor they, however, appear to have aimed at giving a complete system of this sort, but only meant to show how situations may occur, in which it is doubtful, whether the highest propriety of conduct consists in observing or in receding from what, in ordinary cases, are the rules of duty.

Every system of positive law may be regarded as a more or less imperfect attempt towards a system of natural jurisprudence, or towards an enumeration of the particular rules of justice. As the violation of justice is what men will never submit to from one another, the public magistrate is under a necessity of employing the power of the commonwealth to enforce the practice of this virtue. Without this precaution, civil society would become a scene of bloodshed and disorder, every man revenging himself at his own hand whenever he fancied he was injured. To prevent the confusion which would attend upon every man's doing justice to himself, the magistrate, in all governments that have acquired any considerable authority, undertakes to do justice to all, and promises to hear and to redress every complaint of injury. In all well-governed states too, not only judges are appointed for determining the controversies of individuals, but rules are prescribed for regulating the decisions of those judges; and these rules are, in general, intended to coincide with those of natural justice. It does not, indeed, always happen that they do so in every instance. Sometimes what is called the constitution of the state, that is, the interest of the government; sometimes the interest of particular orders of men who tyrannize the government, warp the positive laws of the country from what natural justice would prescribe. In some countries, the rudeness and barbarism of the people hinder the natural sentiments of justice from arriving at that accuracy and precision which, in more civilized nations, they naturally attain

to. Their laws are, like their manners, gross and rude and undistinguishing. In other countries the unfortunate constitution of their courts of judicature hinders any regular system of jurisprudence from ever establishing itself among them, though the improved manners of the people may be such as would admit of the most accurate. In no country do the decisions of positive law coincide exactly, in every case, with the rules which the natural sense of justice would dictate. Systems of positive law, therefore, though they deserve the greatest authority, as the records of the sentiments of mankind in different ages and nations, yet can never be regarded as accurate systems of the rules of natural justice.

It might have been expected that the reasonings of lawyers, upon the different imperfections and improvements of the laws of different countries, should have given occasion to an inquiry into what were the natural rules of justice independent of all positive institution. It might have been expected that these reasonings should have led them to aim at establishing a system of what might properly be called natural jurisprudence, or a theory of the general principles which ought to run through and be the foundation of the laws of all nations. But though the reasonings of lawyers did produce something of this kind, and though no man has treated systematically of the laws of any particular country, without intermixing in his work many observations of this sort; it was very late in the world before any such general system was thought of, or before the philosophy of law was treated of by itself, and without regard to the particular institutions of any one nation. In none of the ancient moralists, do we find any attempt towards a particular enumeration of the rules of justice. Cicero in his *Offices*, and Aristotle in his *Ethics*, treat of justice in the same general manner in which they treat of all the other virtues. In the laws of Cicero and Plato, where we might naturally have expected some attempts towards an enumeration of those rules of natural equity, which ought to be enforced by the positive laws of every country,

there is, however, nothing of this kind. Their laws are laws of police, not of justice. Grotius seems to have been the first who attempted to give the world any thing like a system of those principles which ought to ruin through, and be the foundation of the laws of all nations: and his treatise of the laws of war and peace, with all its imperfections, is perhaps at this day the most complete work that has yet been given upon this subject. I shall in another discourse endeavour to give an account of the general principles of law and government, and of the different revolutions they have undergone in the different ages and periods of society, not only in what concerns justice, but in what concerns police, revenue, and arms, and whatever else is the object of law. I shall not, therefore, at present enter into any further detail concerning the history of jurisprudence.

NOTES: 1. See Plato de Rep. lib. iv. 2. The distributive justice of Aristotle is somewhat different. It consists in the proper distribution of rewards from the public stock of a community. [13] 原注: See Cicero, *De finibus*, book III; also Diogenes Laertius in Zenone, book VIII, segment 84。

[14] 第1~5版中, 17段之后接以下段落 (经过轻微修改) :

What chiefly distinguished those two systems from one another was the different degrees of self-command which they required. The peripatetics allowed of some degree of perturbation as suitable to the weakness of human nature, and as useful to so imperfect a creature as man. If his own misfortunes excited no passionate grief, if his own injuries called forth no violent resentment, reason, or a regard to the general rules which determined what was right and fit to be done, would commonly, they thought, be too weak to prompt him to avoid the one or to beat off the other. The Stoics, on the contrary, demanded the most perfect apathy, and regarded every emotion that could in the smallest degree disturb the tranquility of the mind, as the effect of levity and folly. The peripatetics seem to have thought that no passion exceeded the bounds of propriety as long as the spectator, by the utmost effort of humanity, could sympathize with it. The stoics, on the contrary, appear to have regarded every passion as improper, which made any demand upon the sympathy of the spectator, or required him to alter in any respect the natural and ordinary state of his mind, in order to keep time with the vehemence of its emotions. A man of virtue, they seem to have thought, ought not to depend upon the generosity of those he lives with for pardon or approbation.

According to the stoics every event ought, to a wise man, to appear indifferent, and what for its own sake could be the object neither of desire, nor aversion, neither of joy, nor sorrow. If he preferred some events to others, if some situations were the objects of his choice, and others of his rejection, it was not, because he regarded the one as in themselves, in any respect better than the other, or thought that his own happiness would be more compleat in what is called the fortunate, than in what is commonly regarded as the distressful situation; but because the propriety of action, the rule which the gods had given him for the direction of his conduct, required him to choose and reject in this manner.

Smith's note: Some of these expressions sound a little awkward in the English language: they are literal translations of the technical terms of the stoics.

[15] 原注：Arrian. lib. ii.c.5. (Epictetus没有写下任何著作，而是他的学生Arrian记录下他的学说—Arrian's Discourses of Epictetus。)

[16] 在前五版中，本段之下还有另外一段：

This submission to the order of the universe, this entire indifference with regard to whatever concerns ourselves, when put into the balance with the interest of the whole, could derive its propriety, it is evident, from no other principle besides that upon which I have endeavoured to show that the propriety of justice was founded. As long as we view our own interests with our own eyes, it is scarce possible that we should willingly acquiesce in their being thus sacrificed to the interests of the whole. It is only when we view those opposite interests with the eyes of others that what concerns ourselves can appear to be so contemptible in the comparison, as to be resigned without any reluctance. To every body but the person principally concerned nothing can appear more agreeable to reason and propriety than that the part should give place to the whole. But what is agreeable to the reason of all other men, ought not to appear contrary to his. He himself therefore ought to approve of this sacrifice and acknowledge its conformity to reason. But all the affections of a wise man, according to the stoics are perfectly agreeable to reason and propriety, and of their own accord coincide with whatever these ruling principles prescribe. A wise man, therefore, could never feel any reluctance to comply with this disposition of things.

[17] 这里斯密很可能指的是Cynic Demetrius. Seneca 在书中引用其学说，参见：De Providentia (Dialogues, Book 1) , v.5 ~ 6. Demetrius 是Seneca的挚友，也是其崇拜者。斯密在前五版中认为这仅仅是Seneca的观点，在第六版中他改正过来，意识到这是Seneca引用的Demetrius的观点。

[18] 参见：Discourses. II.v.10 ~ 14。

[19] 参见：Discourses.I.xxv.18 ~ 21.

[20] 参见：Descourses, I.xxv.15-17。斯密自己的翻译。

[21] 原注：See Cicero de finibus. lib. 3. c13. Olivet's edition.

[22] 柏拉图学派。

[23] John Milton, *Paradise Lost* (1667) , II.568 ~ 9。

[24] Cleomenes III (Greek: Κλεομένης) , 公元前235—222年斯巴达国王，公元前222年在塞拉利战争中被雅典打败，逃往托勒密王朝，公元前219年由于反击失败而自杀。

[25] 斯密在这里混淆了Aristodemus 与 Aristomenes，两人均是麦西尼的城市英雄，但是应该是 Aristodemus在第一次麦西尼战争（公元前18世纪）中抵抗斯巴达，且自杀；而不是第二次战争（公元前17世纪）中的Aristomenes，后者是因病去世的。

[26] Ajax, 古希腊神话英雄，忒拉蒙和珀里玻亚的儿子，萨拉米斯国王，荷马所著史诗《伊利亚特》中的重要角色。

[27] Themistocles (c.524—c.459 BC) 雅典民主政治家，领导了萨拉米斯战役中雅典对波斯的胜利，但之后由于政治斗争被流放至小亚细亚，终自杀。

[28] 此三人都是死于雅典，且都是被命令服下毒参而死。其中苏格拉底的罪名是不敬神和蛊惑青年，其余两人均是叛国罪。

[29] Eumenes 和 Antigonus 在亚历山大死后各自控制了亚细亚的部分地区。后Antigonus打败了Eumenes，并于公元前316年处死了Eumenes。

[30] Marcus Atilius Regulus, 在公元前265到256年间任罗马执政官，在第一次布匿战争（264—241BC）中被迦太基人抓获（255BC）；后迦太基人为了求和及交换俘虏，将其送至罗马；但是他由于在罗马蓄意挑起战争，又被遣送回迦太基，最终被处死。（参见：图VII—2）

[31] Seneca, *De Tranquillitate Animi* xvii.9.

[32] Pliny the Younger (61 or 62—113 AD) *Letters*, I. 12; III.16; VI.24.

[33] 斯密的引用大概来自于休谟的论文《论自杀》。斯密同意休谟的观点，认为自杀通常都是由于忧郁，而不应该看作是一种罪恶。

[34] Epictetus曾经是Epaphroditus的奴隶，后被释放。斯密之所以说是“残酷的主人”，主要是基于一个故事说Epictetus的腿曾经被主人打断，Domitian国王在公元89年将他驱逐出罗马，随后他在伊庇鲁斯度过了余生。

[35] 这一段中斯密意译了Marcus Aurelius 的*Meditations*，这本书由他的老师Francis Hutcheson加以译注。参见：III.2。

[36] 参见上书：IX.3。

[37] 参见上书：V.8。

[38] 参见上书：IV.23。

[39] The city of Cecrops is Athens.

[40] Alexander Pope (1688—1744) , 18世纪英国诗人。选自：*Essay on Man*, I.90。

[41] 斯多葛学派的领导者顺序：Zeno; Cleanthes; Chrysippus。

[42] Marcus Junius Brutus (c. 85—42 BC), 凯撒大帝的刺杀者之一, 一本遗失的希腊文著作的作者, 这本书后用拉丁文翻译为*De officiis* (与西塞罗的著作同名)。

[43] William Wollaston (1660—1724), *Religion of Nature Delineated* (1722), I.

[44] Anthony Ashley Cooper, 沙夫兹伯里第三伯爵 (1671—1713), *Inquiry Concerning Virtue* (1699) I.ii.3.

[45] Aristippus (c. 435—c. 356 BC) : 昔兰尼学派创始人, 师从苏格拉底, 主张快乐是行动的唯一目的。(参见: 图VII—3)

[46] 原注: See Cicero de finibus, lib.i. Diogenes Laert.1.x.

[47] 文本援引自: Xenophon, *Memorabilia*, I.vii.2 ~ 5。但并不是严格的翻译, 而是斯密的意译。

[48] 原注: Prima naturae.

[49] 斯密很可能是指中期柏拉图主义, 以Antiochus of Ascalon (c.130—68BC) 为主要代表, 他们打破了学院派的怀疑主义传统。

[50] 此三人均为17世纪剑桥柏拉图主义的代表。参见: Ralph Cudworth (1617—1688), *True Intellectual System of the Universe* (1678) and *Treatise Concerning Eternal and Immutable Morality* (1731); Henry More (1614—1687), *Enchiridion Ethicum* (1667); John Smith (1618—1652), *Selected Discourses* (1660)。

[51] 原注: See *Inquiry concerning Virtue*, sect.1 and 2.

[52] 原注: *Inquiry concerning virtue*, sect. 2 art.4 ; also *Illustrations on the moral sense*, sect.5 last paragraph.

[53] Bernard de Mandeville (1670—1733), 哲学家、政治经济学家, 出生于荷兰鹿特丹, 但大部分时间都生活在英国, 因著作《蜜蜂的寓言》而得名。

[54] 原注: *Luxury and Lust* 《奢侈与色欲》。

[55] 原注: *Fable of the Bees* 《蜜蜂的寓言》。

[56] 笛卡尔 (1596—1650) 在其著作《哲学的原则》 (1644) 中发展了行星运动的漩涡理论。(参见: 图VII—4)

[57] 原注: Puffendorff, Mandeville (普芬道夫、孟德维尔)。

[58] 霍布斯《利维坦》第13 ~ 17章。(参见: 图VII—5)

[59] 原注: *Immutable Morality*, I.i. (《不变的道德》)。

[60] 参见: Cudworth, *Treatise concerning Eternal and Immutable Morality*, I.ii.3 ~ 4. Ralph Cudworth (1617—1688) 英国哲学家, 剑桥柏拉图主义学派的代表人物。

[61] 参见: Hutcheson, *An Essay on the Nature and Conduct of the Passions and Affections. With Illustrations on the Moral Sense* (1728), I—IV.

[62] 原注: *Inquiry concerning Virtue* 《美德之研究》

[63] 原注：Treatise of the Passions 《论激情》

[64] 原注：Illustrations upon the moral sense, sect. I. p.237, et seq.; third edition. 《关于道德的若干说明》

[65] 参见：西塞罗《论责任》I.v.15；亚里士多德《尼格马克伦理学》IV.1 ~ 3.5.8。

[66] 原注：St Augustine（圣·奥古斯丁），La Placette（拉普拉斯特）。

[67] 接下来的五个段落是第六版中新添的内容。

[68] 接下来的5个段落是第六版中新添加内容。

by Jury

FEDERALIST No. 84 Certain General and Miscellaneous
Objections to the Constitution Considered and Answered

FEDERALIST No. 85 Concluding Remarks

Appendixes

The Declaration of Independence

The Articles of Confederation

出版说明

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切：“如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。”今人之于古人的“以意逆志”尚且如此，又遑论国人之于西人？于是王国维先生认为“外国语中之无我国‘天’字之相当字，与我国语中之无God之相当字无以异”；经典之妙，“无论何人，不能精密译之”。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本文库编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出“世界大师原典文库（中文导读插图版）”，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，“世界大师原典文库（中文导读插图版）”会成为各界读者阅读、研究和收藏的精神大餐。

导读

强梅梅

—

1776年6月，大陆会议（Continental Congress）^[1]在费城开会期间任命了一些委员会起草《独立宣言》，并准备“这些殖民地之间可以形成的一种邦联（confederation）之形式”。^[2]委员会起草的《邦联条例》（Articles of Confederation）^[3]于1777年11月15日获得大陆会议通过，并被交给各州进行表决，但它直到最后一个州——马里兰——在1781年同意后才开始生效。《邦联条例》是北美殖民地十三个州筹建统一政府的第一个正式文件^[4]，但它所建立的政治秩序被认为是缺陷的，许多人感觉到这类缺陷反映于1783年革命战争结束后的经济混乱中。比如，国会无权调节州际或国外贸易，甚至无权对其公民征税，只能从各州那里获得“征用”（requisitioning）资金，而这实际上和请求对国库自愿捐款相差无几。再比如，国会无权制造钱币，但各州仍保留发行纸币的权力，甚至在某些州已经发展到了恣意放肆的地步。^[5].....这导致许多人都倡议修正《邦联条例》。

大陆会议召开。大陆会议是英属北美十三个殖民地以及后来美利坚合众国的立法机构，共举办了两届。

1786年9月，安纳波利斯（Annapolis）会议召开，这次会议被认为是制宪会议的准备。安纳波利斯会议的法令建议：“任命官员要考虑合众国的情况，要拟定他们认可使联邦政府的宪法足以应付联邦急务所必需的新条款，并将为此目的而拟定法令在召集的国会上向合众国提出报告，求得他们同意，然后经各州立法机关批准，能使该条款有效。”但是参加安纳波利斯会议的只有从5个州来的12名代表，因此其实际权威显然是有限的，更不用说法律授权。^[6]因此，它的报告提议召开另一个会议，以设计必要的进一步规定，应对合众国目前的危机。

1787年5月，根据美国邦联国会的邀请，在乔治·华盛顿的主持下，各州代表[7]齐聚费城举行了全国代表会议。会议的原定目的，是“为了修正《邦联条例》的唯一与明确目的，并向国会及各州议会报告其中的改动和规定，使之在获得国会同意和各州批准之后，能使联邦宪法适当解决政府危机并维持合众国”。但是，经过近三个月的秘密讨论以后[8]，会议不仅否定了《邦联条例》，而且重新制定了一部取而代之的新宪法。因此，这次会议就成了美国历史上著名的制宪会议。新宪法第7章规定：“如有九州的制宪大会批准，即足以使本宪法对各州生效。”因此，制宪会议之后，代表们回到各州，全力投入各州通过宪法的说服工作。

《联邦党人文集》的作者，依次是亚历山大·汉密尔顿、约翰·杰伊和詹姆斯·麦迪逊

在各州的批准过程中，对新宪法有两种截然相反的意见：一种拥护，一种反对。因此，就发生了美国历史上一场最激烈的论战。本书就是这次论战的产物。它是以亚历山大·汉密尔顿[9]为主，约同约翰·杰伊[10]和詹姆斯·麦迪逊[11]为争取批准新宪法而在纽约报刊上共同以“普布利乌斯”（Publius）[12]为笔名发表的一系列论文的文集，其中2/3是汉密尔顿的作品。[13]这三位作者当时自称联邦党人[14]，坚决拥护在新宪法中得到体现的、以代议制为基础的联邦共和国制度。第一篇论文即点明了这一系列论文的目的：论证联邦对政治繁荣的裨益，目前的邦联不足以维持联邦，为了进一步保证自由和财产，美国需要一个坚强有力的政府，而新宪法的目的是为了建立这样一个政府；新宪法与共和政体的原则是一致的。接下来，这些论文分析了联邦在维持国内、国际和平，商业关系，税收和经济关系方面的优越性；说明了当前邦联的种种缺点与存在的问题，强调了建立一个统一的、强有力政府的必要性和紧迫性；分析了新政府的性质，是联邦性和国家性相结合的共和政体；最

后，这些论文论证了新宪法授予政府的种种权力、联邦政府和州政府的权力划分、政府各部门之间的权力分配，并详细分析了众议院、参议院、行政部门、司法部门的产生、组成、权力及对其权力的限制。

因为是论战的产物，所以这些论文具有的一个最明显的特点就是边破边立，一方面驳斥反对派^[15]对新宪法的各种责难和抨击，一方面对新宪法和联邦政府所依据的基本原则进行分析和说明。对这些原则的论证不仅构成了本书的主要内容，而且也是其贡献所在。正如托马斯·杰斐逊所说：“对政府原则最优秀的阐述……从理论到实践，没有一本书优于《联邦党人文集》。”这些原则可以概括为四个方面：共和主义、分权原则、联邦主义和有限政府。^[16]（1）共和主义。普布利乌斯认为，美国政府只能是共和政体，它从大部分人民那里直接、间接地得到一切权力，“共和政体能够医治共和政府最易发生的弊病”。那么什么是共和政体呢？普布利乌斯认为，在美国这样幅员辽阔的大国，只能采用直接民主和间接民主相结合的方式。大共和国和小共和国的共和主义是有所区别的，在大共和国完全实行直接民主是不现实的。因此，普布利乌斯所指的共和政体就是代表式民主制，即完全大众政府并完全建立在代表制基础上。^[17]在资产阶级的政治学史上，尤其是代议制政体的理论方面，该书都被认为是一部重要的著作，对后世产生了重要的影响，也是我们了解、研究资本主义政治制度，尤其是美国的政治制度的一个突破口。托克维尔在《论美国的民主》一书中评价道：“《联邦党人文集》是一部好书，尽管它是专门为美国而写的，但亦为全世界的国务活动家所必读。”（2）分权原则。普布利乌斯认为，前述代议制民主政体存在问题，最根本的是如何保障社会不受统治者的压迫以及如何防止多数人的“专横”问题，根本的解决方法是三权分立。他们继承并发展了孟德斯鸠的权力分立理论，不仅要把不同的权力分掌于不同的人和部门手中，而且，第一，各部门的不同选举模式是防止一个部门侵占另一个部门权力的手段，不同的选举渠道对确保分权的实现来说是必不可少的；第二，各部门的权力分立，并不排斥部门间的必要联系；第三，立法部门是最有权力的部门，处于支配地位，补救的方法就是把立法机关分为不同单位，并且用不同的选举方式和行动原则使它们尽可能少地发生联系；第四，总统在分权中扮演着对抗国会的角色；第五，司法部门是最弱的部门，但是其对国会制定的法律可以进行违宪审查^[18]。（3）联邦

主义。[19]在解释联邦政体方面，这本书可以说是具有创造性的，它把联邦制度由一时的权益办法变成了一项信条，把它由历史上的偶然事件变成了一项具有永久性、宪政原理的表现形式。在联邦党人看来，联邦政府不仅是联邦性的，也是国家性的。联邦政府必须直接对个人行使权力；在中央和各州之间的权力划分上，新宪法授予联邦政府的权力很少而且有明确规定，而各州政府所保留的权力很多但没有明确规定；中央政府在指定的权力范围内，必须具有不容置疑的、至高无上的权力。

（4）有限政府。在政府的权力限制上，论文重点考虑了政府的内部结构以及各部门之间权力的制约与均衡。“倘若一个政府的结果使它不宜赋予自由人民所应该授予任何政府的一切权力，这个政府就会是国民利益的不安全和不适当的储藏所。在适于托付这些国民利益的地方，同时也应给予相应的权力。”[20]

总之，这本书可以说是一部全面为新宪法进行辩护的著作。它不仅推动了各州对新宪法的批准，而且其中许多精辟的论断与见解经常被后来的美国法学家和法官所引用，被视为美国宪法的理论来源。正如克林登·罗西特所描述的：“律师们在分析国会权力的时候经常参考这本书；历史学家在揭露当年制定宪法那批人的希望和恐惧时，经常引述它；最高法院在为司法审查、行政独立和国家主权进行辩护时，也把它当做经典加以引用。若是说《联邦党人文集》在美国一切重要政治文献中的地位仅次于《独立宣言》和宪法本身，并不为过……正如杰斐逊所说，一般人在对宪法的‘真正意义’发生怀疑时，‘习惯上都以它作为判断根据，很少有人拒绝或否定它的说法’。”[21]华盛顿说：“危机消失、环境安定后，这本书将得到后世的瞩目。因为这本书对自由的原理，对政治问题，提出了坦率精湛的讨论。凡有公民社会存在的地方，人们永远会对这些问题发生兴趣。”[22]

在看到本书伟大功绩的同时，我们也应该注意到其存在的一些缺憾。（1）新宪法最为人所诟病的就是缺少人权法案的内容。[23]这本书为此进行了辩护，认为联邦宪法虽然没有明确列入人权法案，但是其包括许多此类条款，而且宪法全部沿用不列颠之习惯法及成文法，许多未作明文规定的权利可同样得到保证。作者还进一步断言，将人权法案列入拟议中的宪法，不仅无此必要，甚至可能造成伤害。因为人权法案条

款中包括若干未曾授予政府的权力限制，这将为政府要求多于已授权力提供借口。反联邦党人对这一论点并不以为然，其主要回应强调了新宪法第一章第九节所包含的限制。他们认为，如果全民政府被限制于所指定的权力，那么是否还有必要比如禁止国会授予贵族头衔呢？不论如何，当时对人权法案具有充分支持，以至它成为许多代表批准宪法的事实条件。^[24]（2）新宪法中对奴隶制度并未予以否定，相反在第一条第二款对奴隶的地位作了妥协，认为奴隶兼有人和财产的特性，该条规定：“众议院人数和直接税税额均应按本联邦所辖各州的人口比例分配于各州，各州人口数目指自由人总数加上所有其他人口的3/5。”这里其他人口指的就是奴隶。《联邦党人文集》对奴隶制度的存废问题并未发表意见，论文仅仅论证了为什么众议院选举要和直接税征收采用同样的原则。这与作者所处的时代是紧密联系的。在当时的条件下完全废除奴隶制度是不可能的，尤其是在要联合南方各蓄奴州组成联邦政府的情况下，激进的废除奴隶制度只能造成分裂。1865年宪法修正案第十三条生效后奴隶制度才得以废除，而这发生在制宪会议召开后七十多年。

（3）这本书也没有解决一个困扰美国多年直至内战爆发才得以解决的问题，那就是既然政府建立在各州联合、人民同意的基础上，那么各州能不能选择退出联合政府呢？当然，对此我们也不能过分苛求，毕竟这些论文的目的在于为拟议中的新宪法进行辩护，其论述的重心在于指出各州不和甚至敌对的严重后果，进而分析依据新宪法所建立的新政府的必要性和紧迫性。

最后，在阅读《联邦党人文集》的时候，还有一群人是不能忽视的，那就是联邦党人所批判的反对者——反联邦党人^[25]。在整个论战过程中，他们虽然是失败者，但他们的思考和辩论为《美国宪法》作出了伟大的贡献——正是由于他们的不懈努力，《美国宪法》在1791年增加了被概称为“权利法案”的10条宪法修正案，其中第10条更是明确宣布了州的主权。并且他们的存在本身也是本书产生的重要原因，因此也可以说，没有这些反联邦党人的存在，也就不会有《联邦党人文集》这部经典的宪法力作。

二

《联邦党人文集》共收录了论文85篇，第一篇发表于1787年10月

27日，最后一篇发表于1788年8月16日^[26]。各篇论文均无标题，仅冠以“联邦党人第XX篇”字样。85篇论文并不是松散的论证，而是一个有机的整体，其主题可以概括为这样几个内容：各州不联合的危险，联邦政府的作用，目前邦联政府的缺点，拟议中的联邦政府的政体、权力及其特殊机构和各部门的权力分配。

（一）总论（第一篇）

第一篇是整个论文集的总论部分。本篇主要论述了以下几个内容：

（1）新宪法的重要性。在文章一开始，作者就指出为美利坚合众国慎重考虑一部新宪法的重要性，不仅这个问题本身就能说明它的重要性，而且因为它的后果涉及联邦的生存、联邦各组成部分的安全与福利以及一个在许多方面可以说是世界上最引人注目的帝国的命运。这种论断并不过分，因为当时邦联政府的种种弊端都充分显露出来，联合体面临解体的危险，而十三个州之间的矛盾错综复杂。（2）新宪法的批准必然会有很多阻碍。因为它要影响太多人的私人利益，要改革太多的地方机构，因此在讨论中必然会涉及与宪法的是非曲直无关的各种事物，并且激起对寻求真理不利的观点、情感和偏见。不过新宪法碰到的最大障碍主要来自各州政府的当权者，他们唯恐改革会影响他们的权力、待遇和地位。（3）政治辩论，真假难辨，因此必须抱持谨慎和宽容的态度。因为在政治上，如同在宗教上一样，要想用火与剑迫使人们改宗，是同样荒谬的。两者的异端，很少能用迫害来消除。（4）既要政府有权有效，又要保护公民权利，是制宪者的两难。这种两难的境地一直贯彻制宪会议的始终。^[27]作者在这里提醒读者，不要忘记自由的崇高热情容易受到狭隘的怀疑精神的影响，不要忘记政府的力量是保障自由不可缺少的东西。因此，要想有效保护公民权利，必须要赋予政府相应的权力。（5）文章的最后，主要指出接下来一系列论文探讨的目的在于：指出联邦对政治繁荣的裨益；指出新宪法与共和政体的原则是一致的，与州宪法是相类似的，是对自由和财产的进一步保证。作者并没有界定什么是联邦，只是指出目前的邦联政府缺乏效率，不能维持联邦制度，要达到这一目标，政府最少必须具有新宪法中规定的权力。这里需要特别注意的是，作者为什么要指出新宪法与共和政体的原则是一致的呢？这是因为作者所要阐述的一个最重要的主张就是“共和政体能够医治共和

政府最易发生的弊病”。当然，联邦党人所阐述的共和政体并不是一个单纯的共和政体，而是一个混合政体、复合政体，追求在大众、精英、领袖之间的平衡，追求在强大（效率）和安全之间的平衡。而这也正是联邦党人对政治理论的伟大贡献之一。（关于共和政体的具体论证见第十篇、第三十七篇至第四十篇）

（二）各州不联合的危险（第二篇至第八篇）

这部分主要从两个角度分析了各州不联合的危险，一方面各州如果不联合，在国际上就处于劣势，无法抵制外来干涉和战争的影响；另一方面，各州如果不联合，那么各州之间由于猜忌、利益竞争等因素而陷于彼此为敌的状态，内战不可避免地迟早会发生。

第二篇至第五篇，讲的是外国势力和影响的危险。第二篇是对此问题的概述，指出美国领土相连，人民同文同种同信仰、目标共同、感情相通、权利同等，理当联合为一个国家。美国人民的幸福有赖于他们持续不断的牢固团结。有人提倡把联邦分为几个联盟，这种看法是错误的。人民在接受这种观点之前，应该确信它们是以真理和正确的政策为基础的。第三篇论述的是联邦政府对人民的安全更有保障，因为较之于州或者邦联来说，联邦政府会较少受到得失或者激情的影响，更容易遵守条约，从而避免发生战争的种种正当理由。并且，联邦政府更有能力解决国际争端，一个全国政府的承诺，更容易得到外国的接受。第三篇论述了联邦政府如何能够避免基于正当理由而发生的战争，而第四篇则从另一个侧面论证了联邦政府对人民安全的重要性，即作战理由有正当的，也有虚构的，战争可能起因于所处的状况或环境。而联邦政府能够使自已处于或继续处于一种不致引起敌意或侮辱的境地，从而有助于制止和阻碍战争的状态。第五篇从大不列颠的历史出发，希望从他们的经验中得到教益，避免付出同样的代价：大不列颠的三个王国之间相互猜忌、恐惧和不同的利益，给彼此造成的不便和麻烦，远远超过了彼此之间的相互帮助，因此论文得出的结论是，将美国分为几个独立国，怎么能够有助于反对来自外国的战争和不合理的干涉呢？

第六篇至第八篇，讲的是各州不和甚至敌对的危险和后果。第六篇论述的是，各州如果不联合就会出现种种不和的原因：妒忌权力或渴望

平等和安全、贸易上的对抗和竞争等，尤其从历史角度重点分析了个人野心、私怨所造成的邻国之间的战争。第七篇进一步分析了各州如果不联合，会有什么动机能使彼此作战。这些动机包括：领土争端、商业上的竞争、联邦公债以及违背私人契约。第八篇分析了各州敌对的后果：战争会对生命与财产造成强烈的破坏；连续不断的危险状态所带来的不断努力和惊恐，会迫使最爱慕自由的国家为了安宁和安全而采取有破坏自身民权和政治权利倾向的制度，这就是常备军。军权和行政权力的不断增长，会逐渐威胁民权。而联邦的存在，则使军队不至于产生这样的危险。

（三）联邦的作用（第九篇至第十四篇）

在分析了各州不联合会造成内忧外患的局面之后，作者从防止国内派别斗争和暴乱、对商业关系和海军的裨益、税收、政府经济方面分析了联邦的优越性。

第九篇、第十篇讲的是联邦能够防止国内派别之争和暴乱。一个牢固的联邦，对于各州和平和自由非常重要，因为它是分裂和叛乱的障碍。邦联在镇压内乱、保卫各州内部的平静以及在增加各州的对外力量和安全方面发挥了重要作用。这并不是一种新见解，它已在不同的国家和时代得到实践，并且取得了最受称赞的政治家的承认。反对者不厌其烦地引证和传播孟德斯鸠关于实行共和政体版图必须狭小的论述，是没有了解其全部意见，也未想到他们轻率同意的原则所产生的后果。孟德斯鸠提出，共和国的范围要小，实际上他的标准要比现在每个州的范围要小得多，一旦将他在这一点上的意见当做真理，可能要作出以下抉择：要么立刻投入君主制的怀抱，要么分裂成许多互相嫉妒、互相冲突和动乱的小州。就孟德斯鸠反对一般性的各邦联合的建议而论，他明确地把联邦共和国当做扩大民众政府范围并使君主政体和共和政体的利益调和一致的手段。作者大段引用了孟德斯鸠的论证，说明联邦有镇压国内分裂和叛乱的趋势。联邦不同于各州的合并，前者限制其成员的集体权力的权威，而不限制组成联邦的个别成员的权威。此外，党争精神可以败坏公共管理，造成不稳定、不公平的状态。消除党争的危害有两种方法，一种是消除其原因，一种是控制其危害。消除党争原因还有两种方法，一种是消除其存在所必不可少的自由，一种是给予每个公民同样

的主张、同样的热情和同样的利益。前者比弊病本身更坏，而第二种方法则显然是办不到的，因此只能从结果上控制其影响。在控制党争的影响方面，共和政体优于民主政体，大共和国优于小共和国，也就是联邦优于组成联邦的各州之处。

第十一篇讲的是联邦对商业关系和海军的裨益。通过统一的政府才能达成商业利益的一致，并且联邦对外政策的一致性，能够迫使各国为取得美国市场的特权而相互竞争，从而使得各州能够在国际商业竞争中处于优势。更为重要的是，只有在强大的联邦政府下，才有可能大规模发展航海事业，建立一支蓬勃发展的海军，而这又有助于保护对外贸易或者海上贸易。

第十二篇讲的是联邦在税收方面的作用。一个政府的绝大部分收入来源于间接税、关税和消费税。成立联邦有利于税收，因为其可以用较少的武装力量就可以防止走私，从而增加关税收入，尤其是进口商品的关税。

第十三篇讲的是联邦在政府经济方面的优越性。在联合的情况下，能够节约很多费用，比如公务员薪金，为了警卫各邦联之间的内陆交通、防止非法贸易而必须雇佣的人手，各州因为猜忌和冲突所不可避免产生的军事机构。总之，分裂对于经济的危害，不亚于对于各部分安定、商业、税收和自由的危害。

第十四篇主要是答复由于幅员广大而反对拟议中的宪法的意见。共和政府下，人民通过代表和代理人组织和管理政府，而不像民主政体下，人民亲自管理政府，因而共和政体能够扩展到一个大的地区。因此，因为联邦的范围太大而反对拟议中的宪法是错误的。

（四）当前邦联的缺点（第十五篇至第二十二篇）

第十五篇至第二十篇分析了邦联政府的第一个显著的缺点：当前的邦联政府不足以维持联邦。当前的合众国政府是无能的，对外不能维护主权，对内不能有效应对各种债务。它的各项重要举措不能得到有效执行，除非取得十三个州的一致同意。这种状况基本在人民之间已经达成了共识。当前邦联政府结构上的主要弊病，在于立法原则是以各州或各

州政府的共同的或集体的权能为单位，而不是以它们包含的各个个人为单位。在此种立法原则下，法律的实施不能依靠法院和司法人员，而只能借助于军事力量来处理。这导致的后果要么是战争状态，要么是法律的虚设，因此有效的管理必须及于个人。针对有人基于这样的理由反对美国个别公民的立法原则：联邦政府过于强大，使它能够吸收各州的剩余权力，第十七篇至第二十篇进行了充分的论证。州政府在影响方面所具有的优势使其能够对抗全国政府的不合理侵犯，一方面是由于全国政府的结构松弛；而主要的原因在于州政府所管理对象的性质：个人由于与州政府距离更近，而在情感上更倾向于州政府，尤其是州政府对刑事和民事案件审判的一般管理，是民众服从和依附的最有力、最普遍和最有吸引力的根源。而全国政府的作用很少直接被公民所注意，不易引起一种习惯的义务感和积极的依附感。接下来联邦党人列举了希腊共和国联盟、日耳曼国家、尼德兰联盟作为联盟失败的例子，希望读者从中有有所启发，那就是：主权上面的主权，政府上面的政府，以社会为对象而不是以个人为对象的立法，在理论上是一种错误。一旦实施，便会破坏公民政治题的秩序和目的，因为它用暴力代替法律，或者用破坏性的武力高压代替温和而有益的行政制约。

第二十一篇、第二十二篇分析了当前邦联政府的其他缺点。这些缺点包括：（1）它的法律完全缺乏支持，这是目前邦联政府第二个最明显的缺点；（2）各州政府缺乏相互保证；（3）用定额规定各州向国库捐献的数量的原则，这是邦联政府另一个主要错误；（4）缺乏管理商业的权力，这也是所有党派都承认的一个缺点；（5）招募军队的权力，只是向各州招募一定人数的权力，这种做法既是愚蠢的，也是一种对各成员不平等和不公正的制度；（6）各州的平等投票权，实际上使少数有权否决多数；（7）缺乏司法权，尤其是在全国的法律与地方法律有彼此抵触危险的情况下，统一的司法权就显得尤为必要；（8）当前的联盟制度从未经过人民批准，它所依靠的基础仅仅是几个议会的同意，所以经常会遇到它的权力的合法性问题，某些情况下还产生立法撤销权的重大原则问题。

（五）联邦政府的目的及所需权力（第二十三篇至第三十六篇）

这部分研究主要牵涉三个方面：联邦政府规定的目的、达到这些目

的所需要的权力以及这种权力对何人起作用。联邦要达到的主要目的是：其成员的共同防务；维持公共和平，既要对付国内动乱，又要抵抗外国的进攻；管理国际贸易和州际贸易；管理同外国的政治交往和商业往来。为了实现联邦的这些目的，就需要赋予联邦共同防御的必要权力和一般征税权。

第二十三篇至第二十九篇，主要论证了联邦共同防御的必要权力。共同防务只能交给联合政府，而不能交给各州。国会基于共同防务的目的，必须要被赋予相应的必要权力。共同防御的必要权力包括：建立陆军；建立和装备舰队；制定管理海陆军的规则，指挥海陆军作战；为海陆军提供给养。而且这种权力不应该受到限制，因为不可能预测或规定国家发生紧急情况的范围和变化，以及符合需要的方法的相应范围和变化。和平时期常备军的存在是必要的，但招募军队的全权在立法机关手里，而不在最高行政首脑手里，并且维持常备军的权力也不应受到限制。民兵的管理必须交给联邦政府，以保证组织和纪律的统一。

第三十篇至第三十六篇讲的是联邦政府的一般征税权问题。（1）需要赋予联邦政府全面征税权。手段必须与目的相称，每种权力应当与其对象相称。为了实现联邦的目的，联邦政府需要全面征税权。这种征税权是不受限制的，不仅对进出口商品拥有征税权，而且对国内征税对象也享有征税权。因为联邦政府需要供养国家军队、文官，支付各种开销。邦联的摊派制度，不能解决财政的需要，容易削弱联邦，引起联邦和各州以及各州之间的彼此不和、紧张对立。如果限制联邦的征税权，会产生两种弊端：压迫工业中的某些部门，和实行不平等的税额分配。反对派反对赋予联邦完全的征税权，他们认为这样会导致联邦政府最后会取消各州政府。联邦政府的组成方式和结构使这种担心成为多余。人民会将天平置于自己手中，维持两级政府的宪政平衡。（2）各州政府拥有独立的征税权，即除了进口关税外，各州在税收项目上同联邦有同等权力。两级政府共享征税权，并不矛盾。因为州与联邦的关系是并存的而非从属关系。（3）反对派对宪法中征税条款的其他意见，主要是基于宪法中的两个条款：“制定为执行以上各项权力和依据本宪法授予合众国政府或政府中任何机关或官员的其他一切权力所必要的和恰当的法律。”“本宪法及依照本宪法所制定之合众国法律以及根据合众国权力所

缔结或将缔结的一切条约，均为全国的最高法律；即使与任何一州的宪法或法律相抵触，各州的法官仍应遵守。”贯彻税法，就需要制定必要和恰当的法律。

（六）拟议中的政府的政体（第三十七篇至第四十篇）

第三十七篇至第三十八篇分析了制宪会议在设计适当政体方面的困难。第三十七篇具体分析了制宪会议在设计适当政体方面的困难，包括：（1）把政府需要的稳定和能力与对自由和共和政体应有的神圣关注结合起来的困难。共和政体的自由性质，一方面是要求不仅一切权力应当来自人民，而且通过短期的任职，使被授予全权的人始终依赖于人民；而且即使在这短时期内，权力也不应该委托给少数人，而应该委托给许多人。可是，稳定却要求被授权的人执政政权的时间要长，经常选举造成经常更换人选，经常更换人选又造成措施的经常改变。而政府的坚强有力不仅需要权力的某种持续，而且需要由一个人执行权力。

（2）标出全国政府和州政府的权力的适当界线，必然是一项同样艰巨的任务。对象难以辨认，构思器官不完善，传达思想的手段不合适，制宪会议勾画联邦和州的权限时，必然体会到这三种原因的全部作用。

（3）大州和小州的互相抵触的要求。前者要求参加政府，是同它们的超常财富和重要性相称的，而后者则很少不坚持它们目前享有的平等。大州和小州之间的这种斗争只能以妥协告终。（4）各地的态度和政策的不同会造成更多的困难。第三十八篇指出，历史经验证明，建立在每个人同意基础上的政府同样面临种种危险和困难。因而，制宪会议计划中可能含有的错误并非是由于对这问题的研究缺乏正确性或关心，而是由于以前关于这个复杂而困难的的问题的经验的缺点，反对意见和矫正方法对于改善或纠正这种错误无济于事。

第三十九篇至第四十篇论述了美国必须是共和政体，而新宪法的设计是符合共和政体的标准的。联邦党人从三个方面考察了反对意见：第一，考察了讨论中的政府的真正性质。拟议中的宪法严格说来既不是一部国家宪法，也不是一部联邦宪法，而是二者的结合。（1）其必须根据各州的一致同意产生，因此其基础是联邦性的不是国家性的。（2）众议院将从美国人民那里得到权力，就这点来说，政府是国家性的，而不是联邦性的。而参议院将从作为政治上平等的团体的各州得到权力，

就这点来说，政府是联邦性的，不是国家性的。因此，在政府的一般权力的来源方面，它部分是联邦性的，部分是国家性的。（3）在行使这些权力方面，政府对个人身份组成的国家的各个公民行使权力，因此它是国家性的，不是联邦性的。（4）在权力范围方面，拟议中的政府的权限只限于某些列举的对象，其他则由各州保留，因此它又是联邦性的，不是国家性的。（5）在修改权方面，它既不完全不是联邦性的，也不完全是国家性的。第二，探究了制宪会议有多少权力提出这样一个政府。制宪会议的权力应该严格地通过选民给予会议成员的代表权的审查来决定，接着作者从1786年9月安纳波利斯会议的建议以及1787年2月国会的建议两个文件入手进行了分析，指出制宪会议的目的是在这些州内建立一个牢固的全国政府，这个政府应该足以应付政府的急务和保持联邦，这些目的可以通过国会法令所体现的邦联条款中的修改和规定或者是必要的进一步的规定来实现。第三，探究了制宪会议对自己国家所负的责任能在何种程度上补充正常权力的缺陷。制宪会议只是顾问和建议的权力，其设计并提出的宪法，除非经接受者正式批准，否则只不过是一纸空文。

（七）宪法授予政府的权力的分配（第四十一篇至第八十三篇）

宪法授予政府的权力的分配，可以从两个方面予以考察，一方面是全国政府和州政府的权力分配问题，一方面是各部门之间的权力分配问题。

第四十一篇至第四十六篇考察了全国政府和州政府的权力分配问题，即制宪会议提出的宪法授予政府的权力总数或总额，包括对各州的约束在内。这就产生了两个问题。第一，任何部分的权力移交给全国政府是否都是不必要或不适当的？第四十一篇至第四十四篇考察了授予联邦政府的权力，这些权力可以被分为六大类：（1）防御外来威胁，包括宣战和颁发逮捕特许证，设置陆军和海军，训练和召集民兵，募款和借款等等；（2）同外国交往的规定，包括管理外交的权力；（3）各州之间保持融洽和适当的来往，包括对各州权力的某些特殊限制以及对司法部门的某些权力，如对州级贸易的管理、度量衡的管理、归化条例等等；（4）公用事业的某些琐碎问题，包括对著作家与发明家的著作与发明给予定期的专利权的权力、宣布对叛逆罪的惩罚、接纳新州加入联

邦等等；（5）制止各州的某些有害行动，即对某些州的权力有下列限制，包括禁止加入条约、同盟或联盟，不得铸造钱币，禁止发行信用证券，不得通过褫夺公权的法案、溯及既往的法律或损害契约义务的法律，不得封赐任何爵位，限制各州对进出口商品的权力等等；（6）使所有这些权力产生应有效力的规定，包括为实施上述各种权力而制定一切必要与适当的法律的权力、宪法和合众国依此制定的法律以及根据合众国的权力而缔结或将要缔结的一切条约，皆为本国的最高法律，各州法官必须受其约束等等。通过对以上六个方面的考察，作者得出的结论是已经移交给联邦政府的权力没有一种是不需要或不适当的。第二个问题是，所有这些权力对留给某些州的那部分权限是否是一种威胁？新宪法授予联邦政府的权力很少而又有明确的规定，而各州政府所保留的权力很多但没有明确的规定；联邦政府的作用在战争和危险时期极为广泛而且重要，州政府的作用在和平与安定时期极为广泛而且重要。联邦政府成员对州政府成员的依赖甚于后者对前者的依赖，两者所依赖的人民偏袒州政府甚于联邦政府。而且州政府所拥有的抵制和破坏联邦政府措施的倾向和能力要大于联邦政府。因此，打算交付联邦政府的权力对保留给各州的权力来说并不怎么可怕，它是达到联邦目的所必不可少的。

第四十七篇至第八十三篇分析了拟议中的政府的特殊结构及各部门之间的权力分配。其中，第四十七篇至第五十一篇是对政府各个部分的笼统探讨，接下来作者对各个部门进行了更加详细的分析，这些部门包括：众议院、参议院、行政部门和司法部门。

第四十七篇至第五十一篇考察了政府的特殊结构和政府的权力在一些分支机构中的分配问题。立法、行政、司法三大权力部门各自分立的意义，并不是这些部门不应部分参与或支配彼此的行动；分立只是意味着一个部门的全部权力不能由掌握另一部门的全部权力的同一些人行使，否则自由宪法的基本原则就会遭到破坏。仅在书面上划分各部门的法定范围，并不足以防止导致政府所有权力残暴地集中在同一些人手的那种侵犯。为了防止这种侵犯，杰斐逊建议，必要时召开民意大会，纠正违反宪法的行为。但不定期向人民呼吁，既非适当的办法，也并非有效的途径；而宾夕法尼亚州的例子也证明，定期向人民呼吁，也不是纠正违宪行为的适当办法。要切实保持宪法所规定的各部门之间的权力

的必要划分，最根本的方法就是在设计政府的内部结构时，使其某些组成部分可以由于相互关系成为各守本分的手段，也就是说，在成员的任命和公职报酬尽量独立的基础上，给予各部门的主管人抵制其他部门侵犯的必要法定手段和个人的主动。

第五十二篇至第六十一篇详细分析了众议院的相关问题，包括选举、各州众议员的分配比例、众议员的全部人数以及议员的选举权力。（1）选举包括选举人和被选举人资格以及选举的期限，联邦党人用了两篇的篇幅重点分析了两年一度的选举是安全的和必要的，是有助于公众事业的。（2）各州众议员的分配比例用决定直接税的同一条规则来决定，即按照联邦所辖各州的人口比例分配于各州，各州人口数指自由人总数加上所有其他人口的 $\frac{3}{5}$ 。联邦党人在第五十四篇中分析了为什么众议员的分配比例要与决定直接税的同一规则来决定。（3）众议员人数以每3万人选出1人为限，但每州至少应有众议员1人。联邦党人认为用此种办法决定众议院的全部人数是适当的，并且反驳了以下四种反对意见：第一，如此少的众议员会是公众利益的不可靠的受托人；第二，众议院太小，不能掌握有关选民利益的应有知识；第三，它将由最不同情人民群众，而且多半旨在野心勃勃地为抬高少数人的地位而牺牲多数人的那个阶级的公民来选举；第四，众议员人数不会随着人口增长的需要而随时增加。（4）第五十九篇至第六十一篇研究了授权全国立法机关作为最后手段规定选举自己议员的宪法条款，即“举行参议员和众议员选举的时间、地点和方式，由各州州议会自行规定，但除选举参议员地点一项外，国会可随时以法律规定或改变此类规定”。

第六十二篇至第六十六篇主要分析了参议员的资格、任命、平等代表权、人数、任期及权力。（1）参议员的资格，不同于众议员资格之处在于年龄更高和入籍时间更长的规定：年龄未满30岁，为合众国公民未满9年的，不得为参议院议员。（2）参议员的任命由各州议会进行。（3）每名参议员有1票表决权，即参议员具有平等的代表权，这是大小不同的州之间相互妥协的结果。（4）合众国参议院由每州州议会选出2名参议员组成，参议员任期6年。（5）参议院的权力，联邦党人重点分析了其中的两种：对总统对外缔约权的限制以及参议院的司法职能——弹劾权。

第六十七篇至第七十七篇分析了行政部门尤其是行政首脑的相关问题，包括总统选举的方式，行政首脑的性质、任期及相关权力。第六十七篇驳斥了有关政府行政部门组成的歪曲说法，尤其是驳斥了“参议院空缺的补缺任命权属于总统”这一说法。第六十八篇分析了总统、副总统的选举方式。第六十九篇分析了拟议中行政部门的真实性质，将总统与国王从以下几个方面进行了比较：任期、是否神圣不可侵犯、对议会法案的否决权、对陆军和海军的统辖权、缔结条约之权、委任官员的权力、能否授予特权等等。第七十篇至七十三篇反驳了“强有力的行政部门是同共和政体的本质不相符合的”的观点，并从以下几个方面分析了使行政部门能够强而有力所需要的因素：第一个要素是统一，即行政权适宜集于一人；第二个要素是任职期限，4年的任期是合理的，不准连任的看法是有害的；第三个要素是对其薪给作出适当的规定。第七十四篇至第七十七篇分析了授予总统的种种权力：总统对立法机关两院之提案与决议可作有条件的否定，总统的赦免权、对外缔约权以及对大使等官员的提名和任命权。

第七十八篇至第八十三篇分析了拟议中政府的司法部门。其中，第七十八篇、第七十九篇分析了法官的任期，包括任期长短、薪俸以及执行职务的保证。法官的职务固定，只要其行为正当即应继续任职，而不以无能、年龄界限来进行判断；法官的薪俸固定，在任职期内不得减少。这两项都有助于维护法官独立，而法官独立的意义在于：在限权宪法下能够限制立法机关越权，有助于保卫宪法与人权。对法官责任的防范包含在关于弹劾的规定之中，即法官的行为不检得由众议员提出弹劾、参议院加以审判；如判定有罪，可予以撤职，不得再行叙用。第八十至第八十二篇分析了联邦司法系统的设立以及各级法院的分工以及彼此之间的关系。第八十三篇回应了“宪法缺少民事案件由陪审团审判的规定”的指责，认为在民事案件中陪审制度并不是必须的，既然宪法无明文规定，则立法机关自然拥有采用或不采用陪审制的自由。

（八）对其他反对意见的驳斥（第八十四篇）

第八十四篇探讨并反驳对宪法草案的其他反对意见，包括：（1）制宪会议草案的内容未列入人权法案。对于此反对意见，普布利乌斯认为，联邦宪法包括许多此类条款，如第一条第三项第七节——“弹劾案的

判决，应以免职和剥夺其担任和享有合众国荣誉职位、信任职位或高收益职位的资格为限；但被定罪者仍应依法接受起诉、审讯、判决和惩罚。”同条第九项——“根据人身保护令享有的特权，除非在发生叛乱或遭遇入侵，公共治安需要停止此项特权时，不得中止。”“不得通过公民权利剥夺法案或追溯既往的法律。”“合众国不得授予贵族爵位；在合众国担任任何信任职位或高收益职位者，未经国会许可，不得接受任何外国君主或国家所赠予的任何礼物、酬金、官职或爵位。”……并且宪法全部沿用不列颠之习惯法及成文法，许多未作明文规定的权利可同样得到保证。作者还进一步断言，将人权法案列入拟议中的宪法，不仅无此必要，甚至可能造成伤害。因为人权法案条款中包括若干未曾授予政府的权力限制，这将为政府要求多于已授权力提供借口。（2）宪法未曾包含合众国应还债务的有关规定。对于这点，普布利乌斯的回应是，“各个国家，不因其改变政府形式，丧失任何权利，也不因此而解除任何义务”是政治法则的一个信条，因此没有必要担心联邦宪法通过后，联邦会拒不偿还以前的债务。（3）批准宪法草案会造成政府额外开支。普布利乌斯认为，建立联邦政府会增加开支，但建立新政府后，也会节省开支从而抵消这些额外开支，比如议会两院开会时间会减少；各州议会只管本州事务，因此各州议会议员的人数会大大缩减，而且开会时间也将缩短。所以建立新政府，开支有增有减，最终开支是增是减还有待观察，并且可以肯定的是：一个开支更少的政府，会没有能力实现联邦的目的。

（九）总结（第八十五篇）

第八十五篇是结束语。（1）拟议中的宪法草案与纽约州宪法的一致性。这种相似性，不仅说明反对派所谓的缺点，而且恰好说明前者的完善，实为称道之处。所谓的缺点包括：总统得以连选连任，未设行政会议机构，未列入正式的人权法案，未列入尊重出版自由的条款。这些缺点使得州宪法和联邦宪法草案应该受到同样的责难。对后者大肆攻击而对前者加以宽恕的人，无法掩饰其本身的缺乏一贯性。（2）宪法通过以后将对共和政体、自由、财产提供更大的保证。这主要体现在：联邦能对地方派别和叛乱行为、个别州内权势人物的野心加以节制；减少外国因邦联解散借机进行阴谋活动的机会；防止各州穷兵黩武，从而防

止在邦联解散的情况下酿成州际间的战争；可明文保证各州的共和政体；将绝对、普遍地废除贵族爵位；可防止各州政府重复曾经使财产、债务的结构基础发生动摇的做法，不致失信于各阶层人民，造成几乎遍于全民的道德沦丧状态。（3）当前的宪法草案是不完善的，因为它是集体讨论、妥协和折中的结果。再开一次制宪会议或者换一批人再次制宪，也不可能得出更好的结果。合理的解决办法是先批准再通过修正案的方式修正，而不是先修正再批准。因为正如某位作家（休谟）所说：“在一般法律方面欲平衡一大国或社会，无论其为君主或共和政体，乃极为艰巨的工作，任何人间才子，尽管博学多能，亦不能仅靠理性与沉思可以期冀完成。在此项工作中必须集中众人的判断，以经验为先导，靠时间以完善之，在其初次实验中不能避免发生的错误，须由实践中感到不便时加以改正。”

2013年3月

强梅梅，中国人民大学法学理论博士。现为中国法学会法律信息部助理研究员。主要研究领域为西方法律思想史、比较法学、法社会学等。

注释

[1] 大陆会议是英属北美十三个殖民地以及后来美利坚合众国的立法机构，共举办了两届。1781年《邦联条例》生效后，据此成立的邦联国会代替大陆会议，成为直到1789年3月为止的美国立法机构。

[2] [美]保罗·布莱斯特、桑福·列文森、杰克·巴尔金、阿基尔·阿玛编著，张千帆、范亚峰、孙雯译：《宪法决策的过程：案例与材料》，1—2页，北京，中国政法大学出版社，2002。

[3] 《邦联条例》的全称是《邦联和永久联合条例》(Articles of Confederation and Perpetual Union)。根据这部宪法建立起来的美国俨然是13个国家组成的松散的国际同盟。

[4] 《邦联条例》一共13条，按《邦联条例》成立起来的美国有以下几个特点：第一，各州保留了很大的独立性。第二，中央最高机构是

一院制的邦联国会，每州选出代表2至7人组成；中央不设置国家元首，只是在国会下面设立一个诸州委员会，在国会休会时管理经常性事务。第三，中央权力极小。参见百度百科《邦联条例》词条。

[5] 如1786年5月，罗德岛议会通过立法，大开印钞机，一下就印制了价值10万英镑的纸币。这些纸币由于没有坚实的贵金属储备做后盾，从一开始就贬值，最后价格跌得只剩1/10，以至债权人都拒绝接受。参见林达著：《如彗星划过夜空》，82—95页，北京，生活·读书·新知三联书店，2006。

[6] 安纳波利斯会议虽然未能取得实质性成果，却为制宪会议的召开奠定了基础，其建议内容也成为联邦党人为联邦宪法辩护的依据，具体内容见第四十篇。

[7] 美国13个州，会议所代表的州在任何时间都没有超过11个，罗德岛从未派代表出席；新罕布什尔州的代表由于旅费问题直到7月底才到会，姗姗来迟了两个月；而此时纽约州的两名代表离会已久。参见[美]戴维斯·图沃特著，顾元译：《1787年之夏缔造美国宪法的人们》，47页，北京，中国政法大学出版社，2011。

[8] 费城会议从一开始就约定不公开，议事的内容、过程、结果都不能随意向外界透露。可能的原因是与会代表意识到，他们自己讨论要达成协议都非常难，如果会议过程外传，经过媒体的渲染就很容易酿成民众的激愤情绪。假如民众再涌上来逼迫自己的代表，那么任何妥协就休想达成了。

[9] 亚历山大·汉密尔顿（Alexander Hamilton，1755/1757—1804），原为律师，之后曾任华盛顿总司令的军事秘书和革命军团长；参加过被称为制宪会议前驱的安纳波利斯会议，是制宪会议成员；新政府成立后，任首任财政部长。参见俞可平主编：《西方政治学名著提要》，189页，南昌，江西人民出版社，2000。

[10] 约翰·杰伊（John Jay，1745—1829），律师兼外交家。主要从事外交活动，是1783年订立美国独立条约的签订人，也是1793年中立宣言的起草人；1794年，曾同英国签订解决和约签订后争端的《杰伊

条约》。新政府成立后，曾任临时国务卿，后任第一任联邦最高法院首席大法官，以及纽约州州长等职。参见俞可平主编：《西方政治学名著提要》，189—190页，南昌，江西人民出版社，2000。杰伊为《联邦党人文集》贡献了5篇论文，主要论述外交，后由于受伤中途退出写作。

[11] 詹姆斯·麦迪逊（James Madison，1751—1836），独立运动的主要人物之一。曾参加第一届大陆会议；在费城制宪会议中作用卓著，并且保存了最完整的会议辩论记录，有“宪法定人”之称。新政府成立后，任众议院议员；在第一届国会期间，他在拟定关于宪法第一次十项修正案（即《人权法案》）时，担任主要角色；后来又任国务卿和第四任总统。参见俞可平主编：《西方政治学名著提要》，190页，南昌，江西人民出版社，2000。

[12] 使用普布利乌斯这个笔名是大有深意的，其来源于古罗马执政官Publius Valerius Publicola。Publius活跃在约公元前500年前后，在政治上倾向于共和制度，是挽救罗马共和国的英雄人物，地位相当于古希腊的立法者梭伦（Solon）。

[13] 这些文章都以“致纽约州人民”开头，是为了说服纽约州通过宪法而写。1787年9月《联邦宪法》制定完毕，等待各州制宪会议批准。1787年12月特拉华制宪会议以30比0率先批准宪法，接着宾夕法尼亚（12月12日）和新泽西（12月18日）批准宪法。1788年，佐治亚（1月2日）、康涅狄格（1月9日）、马萨诸塞（2月6日）、马里兰（4月28日）、南卡罗来纳（5月23日）先后批准宪法。至此，批准宪法的州达到8个，距离建立联邦所需的9个州还差1个州。纽约州批准联邦宪法的阻力最大。在制宪会议期间，它的两名代表就以退会方式抵制制宪。到批准讨论阶段，又反复提出重新召开制宪会议的要求，拖而不决。《联邦党人文集》的一系列论文正是在这种背景下发表。鉴于纽约州批准宪法的重要性，麦迪逊虽然不是纽约州的代表，却放下了其在弗吉尼亚州的活动，常驻纽约，支持汉密尔顿。

[14] 他们三人虽然自称联邦党人，但他们的观点并不完全一致，尤其是汉密尔顿和麦迪逊两人，在第一届政府成立后因为重建美国信用问

题而分道扬镳。即使在费城会议上，他们的观点也存在很大的差别。但是，现在为了说服民众认同宪法，他们把原来的不同意见都掩埋不提而全力以赴地投入说服工作。

[15] 反对派被贴上了反联邦党人的标签，这使得他们在论战中处于被动地位，再加上他们没有统一的对外观点，也不能提出新的解决问题的方案，这导致了他们在论战中的最后失败。但是，尽管不存在为所有反联邦党人接受的立场，但是他们还是有一些政治上的共识和主张。关于反联邦党人的观点，请参考[美]赫伯特·J·斯托林著，汪庆华译：《反联邦党人赞成什么——宪法反对者的政治思想》，北京，北京大学出版社，2006。

[16] 参见褚乐平：“《联邦党人文集》思想探源”，载《江西社会科学》，2003年第2期。

[17] 古代有许多完全的民治政府，但大都属于纯粹民主一类，即直接式的而不是代表式的；而欧洲有部分代表制或完全代表制的政府。普布利乌斯认为，二者的真正结合有待于美国创立。

[18] 关于违宪审查的论证参见《联邦党人文集》第七十八篇，这也为后来美国违宪审查制度的确立奠定了思想和理论基础。参见[美]西尔维亚·斯诺维斯著，谌洪果译：《司法审查与宪法》，北京，北京大学出版社，2005。

[19] 在联邦党人看来，联邦和邦联在制度上是一致的，甚至在论证的过程中，有时也不区分联邦（federation）和邦联（confederation）这两个词。参见[美]文森特·奥斯特罗姆著，王建勋译：《美国联邦主义》，上海，上海三联书店，2003。虽然三位作者自称联邦党人，但对于什么是联邦他们却并没有进行统一的界定，相反在《联邦党人文集》的系列论文中各个作者对“联邦”一词进行了各种各样的解释。

[20] 参见《联邦党人文集》第二十三篇。

[21] 参见谢叔斐译：《联邦论》（The Federalist Papers），长春，吉林出版集团有限责任公司，2012。

[22] 转引自尹宣：“《联邦论》汉语译本序言”，2页，参见尹宣译：《联邦论》，南京，译林出版社，2010。

[23] 费城代表中最受尊重的成员梅森拒绝签署宪法，原因就是因为它缺少了弗吉尼亚宪法所包含的权利宣言。这成为那些反对批准宪法的人持有的中心论点之一。

[24] 麦迪逊一开始对一部正式的权利法案的无效性和汉密尔顿持一致意见，但在1789年国会第一次开会期间却成为第一修正案的主要设计师。

[25] 反联邦党人一直以失败者的形象在美国历史舞台上受到批判，但自从查尔斯·A·比尔德《〈美国宪法〉的经济观》一书出版后，人们对联邦党人的看法有了新的认识，反联邦党人的思想也开始越来越受到重视，特别是赫伯特·J·斯托林和默里·德赖合编的七卷本《反联邦党人全集》的出版，使人们对他们反对宪法的动机有了更深入的了解，对他们的评价也有所改变。

[26] 自1787年10月27日开始，这些论文以公开信的形式陆续刊登在纽约市的三家报纸上，分别是：The Independent Journal、New York Packet和Daily Advertiser。当时，作者们的写作速度非常快，通常在一周之内就会以普布利乌斯的笔名发表三到四篇新的评论。此后，由于这些文章受到广泛好评，作者们开始考虑更为稳定的发表方式。1788年1月1日，纽约的J. & A. McLean出版社宣布将把文集的前36篇文章作为一个合集出版，该合集在当年3月2日出版，取名为《联邦人》（The Federalist）。之后，新的文章仍在各家报纸陆续发表。自4月2日第七十七篇文章发表后，报纸上的连载停顿了一段时间，到6月14日又再恢复刊登，最后于8月16日结束。同时，包括第三十七篇至第八十五篇文章的第二期合集于5月28日出版。参见谢叔斐译：《联邦论》（The Federalist Papers），长春，吉林出版集团有限责任公司，2012；维基百科，“联邦党人文集”词条，网址：<http://zh.wikipedia.org/zh-cn/%E8%81%94%E9%82%A6%E5%85%9A%E4%BA%BA%E6%96%87%E9%9B%86>，访问时间：2013年4月8日。

[27] 把握和理解这种两难，就能更好地理解《美国宪法》的内容，

制宪者就是试图要在二者中间寻找平衡。

FEDERALIST No. 1 General Introduction

For the Independent Journal.
Saturday, October 27, 1787
Hamilton

To the People of the State of New York:

AFTER an unequivocal experience of the inefficacy of the subsisting federal government, you are called upon to deliberate on a new Constitution for the United States of America. The subject speaks its own importance; comprehending in its consequences nothing less than the existence of the UNION, the safety and welfare of the parts of which it is composed, the fate of an empire in many respects the most interesting in the world. It has been frequently remarked that it seems to have been reserved to the people of this country, by their conduct and example, to decide the important question, whether societies of men are really capable or not of establishing good government from reflection and choice, or whether they are forever destined to depend for their political constitutions on accident and force. If there be any truth in the remark, the crisis at which we are arrived may with propriety be regarded as the era in which that decision is to be made; and a wrong election of the part we shall act may, in this view, deserve to be considered as the general misfortune of mankind.

This idea will add the inducements of philanthropy to those of patriotism, to heighten the solicitude which all considerate and good men must feel for the event. Happy will it be if our choice should be

directed by a judicious estimate of our true interests, unperplexed and unbiased by considerations not connected with the public good. But this is a thing more ardently to be wished than seriously to be expected. The plan offered to our deliberations affects too many particular interests, innovates upon too many local institutions, not to involve in its discussion a variety of objects foreign to its merits, and of views, passions and prejudices little favorable to the discovery of truth.

Among the most formidable of the obstacles which the new Constitution will have to encounter may readily be distinguished the obvious interest of a certain class of men in every State to resist all changes which may hazard a diminution of the power, emolument, and consequence of the offices they hold under the State establishments; and the perverted ambition of another class of men, who will either hope to aggrandize themselves by the confusions of their country, or will flatter themselves with fairer prospects of elevation from the subdivision of the empire into several partial confederacies than from its union under one government.

It is not, however, my design to dwell upon observations of this nature. I am well aware that it would be disingenuous to resolve indiscriminately the opposition of any set of men (merely because their situations might subject them to suspicion) into interested or ambitious views. Candor will oblige us to admit that even such men may be actuated by upright intentions; and it cannot be doubted that much of the opposition which has made its appearance, or may hereafter make its appearance, will spring from sources, blameless at least, if not respectable—the honest errors of minds led astray by preconceived jealousies and fears. So numerous indeed and so powerful are the causes which serve to give a false bias to the judgment, that we, upon many occasions, see wise and good men on the wrong as well as on the right side of questions of the first

magnitude to society. This circumstance, if duly attended to, would furnish a lesson of moderation to those who are ever so thoroughly persuaded of their being in the right in any controversy. And a further reason for caution, in this respect, might be drawn from the reflection that we are not always sure that those who advocate the truth are influenced by purer principles than their antagonists. Ambition, avarice, personal animosity, party opposition, and many other motives not more laudable than these, are apt to operate as well upon those who support as those who oppose the right side of a question. Were there not even these inducements to moderation, nothing could be more ill-judged than that intolerant spirit which has, at all times, characterized political parties. For in politics, as in religion, it is equally absurd to aim at making proselytes by fire and sword. Heresies in either can rarely be cured by persecution.

亚历山大·汉密尔顿（1755/1757—1804），美国军人，经济学家，政治哲学家，美国宪法起草人之一，第一任美国财政部长。创立了联邦党，并成为该党的领袖，与托马斯·杰斐逊、詹姆斯·麦迪逊领导的民主共和党对抗。

And yet, however just these sentiments will be allowed to be, we have already sufficient indications that it will happen in this as in all former cases of great national discussion. A torrent of angry and malignant passions will be let loose. To judge from the conduct of the opposite parties, we shall be led to conclude that they will mutually hope to evince the justness of their opinions, and to increase the number of their converts by the loudness of their declamations and the bitterness of their invectives. An enlightened zeal for the energy and efficiency of government will be stigmatized as the offspring of a temper fond of despotic power and hostile to the principles of liberty. An over-scrupulous jealousy of danger to the rights of the people, which is more commonly the fault of the head than of the heart, will be represented as mere pretense and artifice, the stale bait for popularity at the expense of public good. It will be forgotten, on the one hand, that jealousy is the usual concomitant of violent love, and that the noble enthusiasm of liberty is too apt to be infected with a spirit of narrow and illiberal distrust. On the other hand, it will be equally forgotten that the vigor of government is essential to the security of liberty; that, in the contemplation of a sound and well-informed judgment, their interests can never be separated; and that a dangerous ambition more often lurks behind the specious mask of zeal for the rights of the people than under the forbidden appearance of zeal for the firmness and efficiency of government. History will teach us that the former has been found a much more certain road to the introduction of despotism than the latter, and that of those men who have overturned the liberties of republics, the greatest number have begun their career by paying an obsequious court to the people; commencing demagogues, and ending tyrants.

In the course of the preceding observations, I have had an eye,

my fellow-citizens, to putting you upon your guard against all attempts, from whatever quarter, to influence your decision in a matter of the utmost moment to your welfare, by any impressions other than those which may result from the evidence of truth. You will, no doubt, at the same time, have collected from the general scope of them, that they proceed from a source not unfriendly to the new Constitution. Yes, my countrymen, I own to you that, after having given it an attentive consideration, I am clearly of opinion it is your interest to adopt it. I am convinced that this is the safest course for your liberty, your dignity, and your happiness. I affect not reserves which I do not feel. I will not amuse you with an appearance of deliberation when I have decided. I frankly acknowledge to you my convictions, and I will freely lay before you the reasons on which they are founded. The consciousness of good intentions disdains ambiguity. I shall not, however, multiply professions on this head. My motives must remain in the depository of my own breast. My arguments will be open to all, and may be judged of by all. They shall at least be offered in a spirit which will not disgrace the cause of truth.

I propose, in a series of papers, to discuss the following interesting particulars:—The utility of the UNION to your political prosperity—The insufficiency of the present confederation to preserve that Union—The necessity of a government at least equally energetic with the one proposed, to the attainment of this object—The conformity of the proposed constitution to the true principles of republican government—Its analogy to your own state constitution—and lastly, The additional security which its adoption will afford to the preservation of that species of government, to liberty, and to property.^[1]

In the progress of this discussion I shall endeavor to give a satisfactory answer to all the objections which shall have made their appearance, that may seem to have any claim to your attention.

It may perhaps be thought superfluous to offer arguments to prove the utility of the UNION, a point, no doubt, deeply engraved on the hearts of the great body of the people in every State, and one, which it may be imagined, has no adversaries. But the fact is, that we already hear it whispered in the private circles of those who oppose the new Constitution, that the thirteen States are of too great extent for any general system, and that we must of necessity resort to separate confederacies of distinct portions of the whole.^[2] This doctrine will, in all probability, be gradually propagated, till it has votaries enough to countenance an open avowal of it. For nothing can be more evident, to those who are able to take an enlarged view of the subject, than the alternative of an adoption of the new Constitution or a dismemberment of the Union. It will therefore be of use to begin by examining the advantages of that Union, the certain evils, and the probable dangers, to which every State will be exposed from its dissolution. This shall accordingly constitute the subject of my next address.

PUBLIUS

注释

[1] 这段话指出接下来一系列论文讨论的目的：联邦政府对你们政治繁荣的裨益；目前的邦联不足以维持联邦制度，要达到此一目标，政府最少必须具有宪法中所规定的权力；新宪法与共和政体的真正原则是一致的，与州宪法是相类似的；通过新宪法是对维持那种政府以及自由和财产的进一步保障。这段话也是把握和理解以后各篇论文的核心和关键。——此类注释为导读作者所加。

FEDERALIST No. 2 Concerning Dangers from Foreign Force and Influence

**For the Independent Journal.
Wednesday, October 31, 1787
Jay**

To the People of the State of New York:

WHEN the people of America reflect that they are now called upon to decide a question, which, in its consequences, must prove one of the most important that ever engaged their attention, the propriety of their taking a very comprehensive, as well as a very serious, view of it, will be evident.

Nothing is more certain than the indispensable necessity of government, and it is equally undeniable, that whenever and however it is instituted, the people must cede to it some of their natural rights in order to vest it with requisite powers. It is well worthy of consideration therefore, whether it would conduce more to the interest of the people of America that they should, to all general purposes, be one nation, under one federal government, or that they should divide themselves into separate confederacies, and give to the head of each the same kind of powers which they are advised to place in one national government.

It has until lately been a received and uncontradicted opinion that the prosperity of the people of America depended on their continuing

firmly united, and the wishes, prayers, and efforts of our best and wisest citizens have been constantly directed to that object. But politicians now appear, who insist that this opinion is erroneous, and that instead of looking for safety and happiness in union, we ought to seek it in a division of the States into distinct confederacies or sovereignties. However extraordinary this new doctrine may appear, it nevertheless has its advocates; and certain characters who were much opposed to it formerly are at present of the number. Whatever may be the arguments or inducements which have wrought this change in the sentiments and declarations of these gentlemen, it certainly would not be wise in the people at large to adopt these new political tenets without being fully convinced that they are founded in truth and sound policy.

约翰·杰伊（1745—1829），美国政治家、革命家、外交家和法学家，曾任美国联邦最高法院首席大法官。

It has often given me pleasure to observe that independent America was not composed of detached and distant territories, but that one connected, fertile, widespreading country was the portion of our western sons of liberty. Providence has in a particular manner blessed it with a variety of soils and productions, and watered it with innumerable streams, for the delight and accommodation of its inhabitants. A succession of navigable waters forms a kind of chain round its borders, as if to bind it together; while the most noble rivers in the world, running at convenient distances, present them with

highways for the easy communication of friendly aids, and the mutual transportation and exchange of their various commodities.

With equal pleasure I have as often taken notice that Providence has been pleased to give this one connected country to one united people—a people descended from the same ancestors, speaking the same language, professing the same religion, attached to the same principles of government, very similar in their manners and customs, and who, by their joint counsels, arms, and efforts, fighting side by side throughout a long and bloody war, have nobly established their general liberty and independence.

This country and this people seem to have been made for each other, and it appears as if it was the design of Providence that an inheritance so proper and convenient for a band of brethren, united to each other by the strongest ties, should never be split into a number of unsocial, jealous, and alien sovereignties.

Similar sentiments have hitherto prevailed among all orders and denominations of men among us. To all general purposes we have uniformly been one people each individual citizen everywhere enjoying the same national rights, privileges, and protection. As a nation we have made peace and war; as a nation we have vanquished our common enemies; as a nation we have formed alliances, and made treaties, and entered into various compacts and conventions with foreign states.

A strong sense of the value and blessings of union induced the people, at a very early period, to institute a federal government to preserve and perpetuate it. They formed it almost as soon as they had a political existence; nay, at a time when their habitations were in flames, when many of their citizens were bleeding, and when the progress of hostility and desolation left little room for those calm and mature inquiries and reflections which must ever precede the

formation of a wise and well-balanced government for a free people. It is not to be wondered at that a government instituted in times so inauspicious should on experiment be found greatly deficient and inadequate to the purpose it was intended to answer.

This intelligent people perceived and regretted these defects. Still continuing no less attached to union than enamored of liberty, they observed the danger which immediately threatened the former and more remotely the latter; and being persuaded that ample security for both could only be found in a national government more wisely framed, they as with one voice, convened the late convention at Philadelphia, to take that important subject under consideration.

This convention, composed of men who possessed the confidence of the people, and many of whom had become highly distinguished by their patriotism, virtue and wisdom, in times which tried the minds and hearts of men, undertook the arduous task. In the mild season of peace, with minds unoccupied by other subjects, they passed many months in cool, uninterrupted, and daily consultation; and finally, without having been awed by power, or influenced by any passions except love for their country, they presented and recommended to the people the plan produced by their joint and very unanimous councils.

Admit, for so is the fact, that this plan is only recommended, not imposed, yet let it be remembered that it is neither recommended to blind approbation, nor to blind reprobation; but to that sedate and candid consideration which the magnitude and importance of the subject demand, and which it certainly ought to receive. But, as has been already remarked, it is more to be wished than expected that it may be so considered and examined. Experience on a former occasion teaches us not to be too sanguine in such hopes. It is not yet forgotten that well-grounded apprehensions of imminent danger induced the people of America to form the memorable Congress of 1774. That body recommended certain measures to their constituents, and the

event proved their wisdom; yet it is fresh in our memories how soon the press began to teem with pamphlets and weekly papers against those very measures. Not only many of the officers of government, who obeyed the dictates of personal interest, but others, from a mistaken estimate of consequences, from the undue influence of former attachments, or whose ambition aimed at objects which did not correspond with the public good, were indefatigable in their endeavors to persuade the people to reject the advice of that patriotic Congress. Many, indeed, were deceived and deluded, but the great majority of the people reasoned and decided judiciously; and happy they are in reflecting that they did so.

They considered that the Congress was composed of many wise and experienced men. That, being convened from different parts of the country, they brought with them and communicated to each other a variety of useful information. That, in the course of the time they passed together in inquiring into and discussing the true interests of their country, they must have acquired very accurate knowledge on that head. That they were individually interested in the public liberty and prosperity, and therefore that it was not less their inclination than their duty to recommend only such measures as, after the most mature deliberation, they really thought prudent and advisable.

These and similar considerations then induced the people to rely greatly on the judgment and integrity of the Congress; and they took their advice, notwithstanding the various arts and endeavors used to deter and dissuade them from it. But if the people at large had reason to confide in the men of that Congress, few of whom had been fully tried or generally known, still greater reason have they now to respect the judgment and advice of the convention, for it is well known that some of the most distinguished members of that Congress, who have been since tried and justly approved for patriotism and abilities, and who have grown old in acquiring political information, were also

members of this convention, and carried into it their accumulated knowledge and experience.

It is worthy of remark that not only the first, but every succeeding Congress, as well as the late convention, have invariably joined with the people in thinking that the prosperity of America depended on its Union. To preserve and perpetuate it was the great object of the people in forming that convention, and it is also the great object of the plan which the convention has advised them to adopt. With what propriety, therefore, or for what good purposes, are attempts at this particular period made by some men to depreciate the importance of the Union? Or why is it suggested that three or four confederacies would be better than one? I am persuaded in my own mind that the people have always thought right on this subject, and that their universal and uniform attachment to the cause of the Union rests on great and weighty reasons, which I shall endeavor to develop and explain in some ensuing papers. They who promote the idea of substituting a number of distinct confederacies in the room of the plan of the convention, seem clearly to foresee that the rejection of it would put the continuance of the Union in the utmost jeopardy. That certainly would be the case, and I sincerely wish that it may be as clearly foreseen by every good citizen, that whenever the dissolution of the Union arrives, America will have reason to exclaim, in the words of the poet:“FAREWELL! A LONG FAREWELL TO ALL MY GREATNESS.”

PUBLIUS

FEDERALIST No. 3 The Same Subject Continued (Concerning Dangers from Foreign Force and Influence)

**For the Independent Journal.
Saturday, November 3, 1787 Jay**

To the People of the State of New York:

IT IS not a new observation that the people of any country (if, like the Americans, intelligent and well-informed) seldom adopt and steadily persevere for many years in an erroneous opinion respecting their interests. That consideration naturally tends to create great respect for the high opinion which the people of America have so long and uniformly entertained of the importance of their continuing firmly united under one federal government, vested with sufficient powers for all general and national purposes.

The more attentively I consider and investigate the reasons which appear to have given birth to this opinion, the more I become convinced that they are cogent and conclusive.

Among the many objects to which a wise and free people find it necessary to direct their attention, that of providing for their safety seems to be the first. The safety of the people doubtless has relation to a great variety of circumstances and considerations, and consequently affords great latitude to those who wish to define it precisely and comprehensively.

At present I mean only to consider it as it respects security for the preservation of peace and tranquillity, as well as against dangers from foreign arms and influence, as from dangers of the like kind arising from domestic causes. As the former of these comes first in order, it is proper it should be the first discussed. Let us therefore proceed to examine whether the people are not right in their opinion that a cordial Union, under an efficient national government, affords them the best security that can be devised against hostilities from abroad.

The number of wars which have happened or will happen in the world will always be found to be in proportion to the number and weight of the causes, whether real or pretended, which provoke or invite them. If this remark be just, it becomes useful to inquire whether so many just causes of war are likely to be given by united America as by disunited America; for if it should turn out that united America will probably give the fewest, then it will follow that in this respect the Union tends most to preserve the people in a state of peace with other nations.^[1]

The just causes of war, for the most part, arise either from violation of treaties or from direct violence.^[2] America has already formed treaties with no less than six foreign nations, and all of them, except Prussia, are maritime, and therefore able to annoy and injure us. She has also extensive commerce with Portugal, Spain, and Britain, and, with respect to the two latter, has, in addition, the circumstance of neighborhood to attend to.

It is of high importance to the peace of America that she observe the laws of nations towards all these powers, and to me it appears evident that this will be more perfectly and punctually done by one national government than it could be either by thirteen separate States or by three or four distinct confederacies. For this opinion various reasons may be assigned.

When once an efficient national government is established, the best men in the country will not only consent to serve, but also will generally be appointed to manage it; for, although town or country, or other contracted influence, may place men in State assemblies, or senates, or courts of justice, or executive departments, yet more general and extensive reputation for talents and other qualifications will be necessary to recommend men to offices under the national government—especially as it will have the widest field for choice, and never experience that want of proper persons which is not uncommon in some of the States. Hence, it will result that the administration, the political counsels, and the judicial decisions of the national government will be more wise, systematical, and judicious than those of individual States, and consequently more satisfactory with respect to other nations, as well as more safe with respect to us.

Under the national government, treaties and articles of treaties, as well as the laws of nations, will always be expounded in one sense and executed in the same manner—whereas adjudications on the same points and questions in thirteen States, or in three or four confederacies, will not always accord or be consistent; and that, as well from the variety of independent courts and judges appointed by different and independent governments as from the different local laws and interests which may affect and influence them.^[3] The wisdom of the convention in committing such questions to the jurisdiction and judgment of courts appointed by and responsible only to one national government cannot be too much commended.

The prospect of present loss or advantage may often tempt the governing party in one or two States to swerve from good faith and justice; but those temptations, not reaching the other States, and consequently having little or no influence on the national government, the temptation will be fruitless, and good faith and justice be preserved. The case of the treaty of peace with Britain adds great

weight to this reasoning.

If even the governing party in a State should be disposed to resist such temptations, yet, as such temptations may, and commonly do, result from circumstances peculiar to the State, and may affect a great number of the inhabitants, the governing party may not always be able, if willing, to prevent the injustice meditated, or to punish the aggressors. But the national government, not being affected by those local circumstances, will neither be induced to commit the wrong themselves, nor want power or inclination to prevent or punish its commission by others.

So far, therefore, as either designed or accidental violations of treaties and of the laws of nations afford just causes of war, they are less to be apprehended under one general government than under several lesser ones, and in that respect the former most favors the safety of the people.

As to those just causes of war which proceed from direct and unlawful violence, it appears equally clear to me that one good national government affords vastly more security against dangers of that sort than can be derived from any other quarter.

Such violences are more frequently occasioned by the passions and interests of a part than of the whole; of one or two States than of the Union. Not a single Indian war has yet been produced by aggressions of the present federal government, feeble as it is; but there are several instances of Indian hostilities having been provoked by the improper conduct of individual States, who, either unable or unwilling to restrain or punish offenses, have given occasion to the slaughter of many innocent inhabitants.

The neighborhood of Spanish and British territories, bordering on some States and not on others, naturally confines the causes of quarrel more immediately to the borderers. The bordering States, if any, will

be those who, under the impulse of sudden irritation, and a quick sense of apparent interest or injury, will be most likely, by direct violence, to excite war with these nations; and nothing can so effectually obviate that danger as a national government, whose wisdom and prudence will not be diminished by the passions which actuate the parties immediately interested.

But not only fewer just causes of war will be given by the national government, but it will also be more in their power to accommodate and settle them amicably. They will be more temperate and cool, and in that respect, as well as in others, will be more in capacity to act with circumspection than the offending State. The pride of states, as well as of men, naturally disposes them to justify all their actions, and opposes their acknowledging, correcting, or repairing their errors and offenses. The national government, in such cases, will not be affected by this pride, but will proceed with moderation and candor to consider and decide on the means most proper to extricate them from the difficulties which threaten them.

Besides, it is well known that acknowledgments, explanations, and compensations are often accepted as satisfactory from a strong united nation, which would be rejected as unsatisfactory if offered by a State or confederacy of little consideration or power.

In the year 1685, the state of Genoa having offended LouisXIV, endeavored to appease him. He demanded that they shouldsend their Doge, or chief magistrate, accompanied by four of their senators, to France, to ask his pardon and receive his terms. They were obliged to submit to it for the sake of peace. Would he on any occasion either have demanded or have received the like humiliation from Spain, or Britain, or any other powerful nation?

路易十四（1638—1715），波旁王朝的法国国王和纳瓦拉国王，是在位时间最长的君主之一。

[1] 这段话点出了本篇论文论述的核心，即讨论是一个团结一致的美国还是分为若干联盟，哪个会导致更多的引发战争的正当理由。如果团结一致的美国可能提供的理由更少，也就是说继续联合有利于维持人民的对外和平。

[2] 引发战争的正当理由，在大多数情况下源于违反条约或直接的暴力行为。

[3] 这段话的意思是：在全国政府领导下，条约和条约条款以及国际法经常会按照一种口径解释，并且按照同样的方式执行，而在十三个州或是在三四个邦联里，对于同样的条款或问题会有不同的解释，因为各独立政府所指定的法院和法官不同，并且不同的地方法律和利益可能影响这些判断。

FEDERALIST No. 4 The Same Subject Continued (Concerning Dangers from Foreign Force and Influence)

**For the Independent Journal.
Wednesday, November 7, 1787
Jay**

To the People of the State of New York:

MY LAST paper assigned several reasons why the safety of the people would be best secured by union against the danger it may be exposed to by just causes of war given to other nations; and those reasons show that such causes would not only be more rarely given, but would also be more easily accommodated by a national government than either by the State governments or the proposed little confederacies.

But the safety of the people of America against dangers from foreign force depends not only on their forbearing to give just causes of war to other nations, but also on their placing and continuing themselves in such a situation as not to invite hostility or insult; for it need not be observed that there are pretended as well as just causes of war.^[1]

It is too true, however disgraceful it may be to human nature, that nations in general will make war whenever they have a prospect of getting anything by it; nay, that absolute monarchs will often make

war when their nations are to get nothing by it, but for purposes and objects merely personal, such as a thirst for military glory, revenge for personal affronts, ambition, or private compacts to aggrandize or support their particular families or partisans. These and a variety of other motives, which affect only the mind of the sovereign, often lead him to engage in wars not sanctified by justice or the voice and interests of his people. But, independent of these inducements to war, which are more prevalent in absolute monarchies, but which well deserve our attention, there are others which affect nations as often as kings; and some of them will on examination be found to grow out of our relative situation and circumstances.

With France and with Britain we are rivals in the fisheries, and can supply their markets cheaper than they can themselves, notwithstanding any efforts to prevent it by bounties on their own or duties on foreign fish.

With them and with most other European nations we are rivals in navigation and the carrying trade; and we shall deceive ourselves if we suppose that any of them will rejoice to see it flourish; for, as our carrying trade cannot increase without in some degree diminishing theirs, it is more their interest, and will be more their policy, to restrain than to promote it.

In the trade to China and India, we interfere with more than one nation, inasmuch as it enables us to partake in advantages which they had in a manner monopolized, and as we thereby supply ourselves with commodities which we used to purchase from them. The extension of our own commerce in our own vessels cannot give pleasure to any nations who possess territories on or near this continent, because the cheapness and excellence of our productions, added to the circumstance of vicinity, and the enterprise and address of our merchants and navigators, will give us a greater share in the advantages which those territories afford than consists with the wishes

or policy of their respective sovereigns.

Spain thinks it convenient to shut the Mississippi against us on the one side, and Britain excludes us from the Saint Lawrence on the other; nor will either of them permit the other waters which are between them and us to become the means of mutual intercourse and traffic.

From these and such like considerations, which might, if consistent with prudence, be more amplified and detailed, it is easy to see that jealousies and uneasiness may gradually slide into the minds and cabinets of other nations, and that we are not to expect that they should regard our advancement in union, in power and consequence by land and by sea, with an eye of indifference and composure.

The people of America are aware that inducements to war may arise out of these circumstances, as well as from others not so obvious at present, and that whenever such inducements may find fit time and opportunity for operation, pretenses to color and justify them will not be wanting. Wisely, therefore, do they consider union and a good national government as necessary to put and keep them in such a situation as, instead of inciting war, will tend to repress and discourage it. That situation consists in the best possible state of defense, and necessarily depends on the government, the arms, and the resources of the country.

As the safety of the whole is the interest of the whole, and cannot be provided for without government, either one or more or many, let us inquire whether one good government is not, relative to the object in question, more competent than any other given number whatever.

One government can collect and avail itself of the talents and experience of the ablest men, in whatever part of the Union they may be found. It can move on uniform principles of policy. It can harmonize, assimilate, and protect the several parts and members, and

extend the benefit of its foresight and precautions to each. In the formation of treaties, it will regard the interest of the whole, and the particular interests of the parts as connected with that of the whole. It can apply the resources and power of the whole to the defense of any particular part, and that more easily and expeditiously than State governments or separate confederacies can possibly do, for want of concert and unity of system. It can place the militia under one plan of discipline, and, by putting their officers in a proper line of subordination to the Chief Magistrate, will, in a manner, consolidate them into one corps, and thereby render them more efficient than if divided into thirteen or into three or four distinct independent bodies.

What would the militia of Britain be if the English militia obeyed the government of England, if the Scotch militia obeyed the government of Scotland, and if the Welsh militia obeyed the government of Wales? Suppose an invasion; would those three governments (if they agreed at all) be able, with all their respective forces, to operate against the enemy so effectually as the single government of Great Britain would?

We have heard much of the fleets of Britain, and the time may come, if we are wise, when the fleets of America may engage attention. But if one national government, had not so regulated the navigation of Britain as to make it a nursery for seamen—if one national government had not called forth all the national means and materials for forming fleets, their prowess and their thunder would never have been celebrated. Let England have its navigation and fleet—let Scotland have its navigation and fleet—let Wales have its navigation and fleet—let Ireland have its navigation and fleet—let those four of the constituent parts of the British Empire be under four independent governments, and it is easy to perceive how soon they would each dwindle into comparative insignificance.

Apply these facts to our own case. Leave America divided into

thirteen or, if you please, into three or four independent governments—what armies could they raise and pay—what fleets could they ever hope to have? If one was attacked, would the others fly to its succor and spend their blood and money in its defense? Would there be no danger of their being flattered into neutrality by specious promises, or seduced by a too great fondness for peace to decline hazarding their tranquillity and present safety for the sake of neighbors, of whom perhaps they have been jealous, and whose importance they are content to see diminished? Although such conduct would not be wise, it would, nevertheless, be natural. The history of the states of Greece, and of other countries, abounds with such instances, and it is not improbable that what has so often happened would, under similar circumstances, happen again.

But admit that they might be willing to help the invaded State or confederacy. How, and when, and in what proportion shall aids of men and money be afforded? Who shall command the allied armies, and from which of them shall he receive his orders? Who shall settle the terms of peace, and in case of disputes what umpire shall decide between them and compel acquiescence? Various difficulties and inconveniences would be inseparable from such a situation; whereas one government, watching over the general and common interests and combining and directing the powers and resources of the whole, would be free from all these embarrassments and conduce far more to the safety of the people.

But whatever may be our situation, whether firmly united under one national government, or split into a number of confederacies, certain it is that foreign nations will know and view it exactly as it is; and they will act towards us accordingly. If they see that our national government is efficient and well administered, our trade prudently regulated, our militia properly organized and disciplined, our resources and finances discreetly managed, our credit re-established,

our people free, contented, and united, they will be much more disposed to cultivate our friendship than provoke our resentment. If, on the other hand, they find us either destitute of an effectual government (each State doing right or wrong, as to its rulers may seem convenient), or split into three or four independent and probably discordant republics or confederacies, one inclining to Britain, another to France, and a third to Spain, and perhaps played off against each other by the three, what a poor, pitiful figure will America make in their eyes! How liable would she become not only to their contempt but to their outrage, and how soon would dear-bought experience proclaim that when a people or family so divide, it never fails to be against themselves.

注释

[1] 这段话点出了第四篇论文的论证核心：作战理由有正当的，也有虚构的。要防止外来力量危害美国人民的安全，不仅在于不给外国提供正当的开战理由，而且在于使自己处于或继续处于一种不致引起敌意或侮辱的境地。

FEDERALIST No. 5 The Same Subject Continued (Concerning Dangers from Foreign Force and Influence)

**For the Independent Journal.
Saturday, November 10, 1787
Jay**

To the People of the State of New York:

QUEEN ANNE, in her letter of the 1st July, 1706, to the Scotch Parliament, makes some observations on the importance of the Union then forming between England and Scotland, which merit our attention. I shall present the public with one or two extracts from it: “An entire and perfect union will be the solid foundation of lasting peace: It will secure your religion, liberty, and property; remove the animosities amongst yourselves, and the jealousies and differences betwixt our two kingdoms. It must increase your strength, riches, and trade; and by this union the whole island, being joined in affection and free from all apprehensions of different interest, will be enabled to resist all its enemies.” “We most earnestly recommend to you calmness and unanimity in this great and weighty affair, that the union may be brought to a happy conclusion, being the only effectual way to secure our present and future happiness, and disappoint the designs of our and your enemies, who will doubtless, on this occasion, use their utmost endeavors to prevent or delay this union.”

It was remarked in the preceding paper that weakness and

divisions at home would invite dangers from abroad; and that nothing would tend more to secure us from them than union, strength, and good government within ourselves. This subject is copious and cannot easily be exhausted.

The history of Great Britain is the one with which we are in general the best acquainted, and it gives us many useful lessons. We may profit by their experience without paying the price which it cost them. Although it seems obvious to common sense that the people of such an island should be but one nation, yet we find that they were for ages divided into three, and that those three were almost constantly embroiled in quarrels and wars with one another. Notwithstanding their true interest with respect to the continental nations was really the same, yet by the arts and policy and practices of those nations, their mutual jealousies were perpetually kept inflamed, and for a long series of years they were far more inconvenient and troublesome than they were useful and assisting to each other.

Should the people of America divide themselves into three or four nations, would not the same thing happen? Would not similar jealousies arise, and be in like manner cherished? Instead of their being "joined in affection and free from all apprehension of different interests," envy and jealousy would soon extinguish confidence and affection, and the partial interests of each confederacy, instead of the general interests of all America, would be the only objects of their policy and pursuits. Hence, like most other bordering nations, they would always be either involved in disputes and war, or live in the constant apprehension of them.

The most sanguine advocates for three or four confederacies cannot reasonably suppose that they would long remain exactly on an equal footing in point of strength, even if it was possible to form them so at first; but, admitting that to be practicable, yet what human contrivance can secure the continuance of such equality? Independent

of those local circumstances which tend to beget and increase power in one part and to impede its progress in another, we must advert to the effects of that superior policy and good management which would probably distinguish the government of one above the rest, and by which their relative equality in strength and consideration would be destroyed. For it cannot be presumed that the same degree of sound policy, prudence, and foresight would uniformly be observed by each of these confederacies for a long succession of years.

安妮女王（1665—1714），大不列颠王国女王。

Whenever, and from whatever causes, it might happen, and happen it would, that any one of these nations or confederacies should rise on the scale of political importance much above the degree of her neighbors, that moment would those neighbors behold her with envy and with fear. Both those passions would lead them to countenance, if not to promote, whatever might promise to diminish her importance;

and would also restrain them from measures calculated to advance or even to secure her prosperity. Much time would not be necessary to enable her to discern these unfriendly dispositions. She would soon begin, not only to lose confidence in her neighbors, but also to feel a disposition equally unfavorable to them. Distrust naturally creates distrust, and by nothing is good will and kind conduct more speedily changed than by invidious jealousies and uncandid imputations, whether expressed or implied.

The North is generally the region of strength, and many local circumstances render it probable that the most Northern of the proposed confederacies would, at a period not very distant, be unquestionably more formidable than any of the others. No sooner would this become evident than the Northern Hive would excite the same ideas and sensations in the more southern parts of America which it formerly did in the southern parts of Europe. Nor does it appear to be a rash conjecture that its young swarms might often be tempted to gather honey in the more blooming fields and milder air of their luxurious and more delicate neighbors.

They who well consider the history of similar divisions and confederacies will find abundant reason to apprehend that those in contemplation would in no other sense be neighbors than as they would be borderers; that they would neither love nor trust one another, but on the contrary would be a prey to discord, jealousy, and mutual injuries; in short, that they would place us exactly in the situations in which some nations doubtless wish to see us, viz., formidable only to each other.

From these considerations it appears that those gentlemen are greatly mistaken who suppose that alliances offensive and defensive might be formed between these confederacies, and would produce that combination and union of wills of arms and of resources, which would be necessary to put and keep them in a formidable state of

defense against foreign enemies.

When did the independent states into which Britain and Spain were formerly divided combine in such alliance, or unite their forces against a foreign enemy? The proposed confederacies will be distinct nations. Each of them would have its commerce with foreigners to regulate by distinct treaties; and as their productions and commodities are different and proper for different markets, so would those treaties be essentially different. Different commercial concerns must create different interests, and of course different degrees of political attachment to and connection with different foreign nations. Hence it might and probably would happen that the foreign nation with whom the Southern confederacy might be at war would be the one with whom the Northern confederacy would be the most desirous of preserving peace and friendship. An alliance so contrary to their immediate interest would not therefore be easy to form, nor, if formed, would it be observed and fulfilled with perfect good faith.

Nay, it is far more probable that in America, as in Europe, neighboring nations, acting under the impulse of opposite interests and unfriendly passions, would frequently be found taking different sides. Considering our distance from Europe, it would be more natural for these confederacies to apprehend danger from one another than from distant nations, and therefore that each of them should be more desirous to guard against the others by the aid of foreign alliances, than to guard against foreign dangers by alliances between themselves. And here let us not forget how much more easy it is to receive foreign fleets into our ports, and foreign armies into our country, than it is to persuade or compel them to depart. How many conquests did the Romans and others make in the characters of allies, and what innovations did they under the same character introduce into the governments of those whom they pretended to protect.

Let candid men judge, then, whether the division of America into

any given number of independent sovereignties would tend to secure us against the hostilities and improper interference of foreign nations.

PUBLIUS

FEDERALIST No. 6 Concerning Dangers from Dissensions Between the States

**For the Independent Journal.
Wednesday, November 14, 1787
Hamilton**

To the People of the State of New York:

THE three last numbers of this paper have been dedicated to an enumeration of the dangers to which we should be exposed, in a state of disunion, from the arms and arts of foreign nations. I shall now proceed to delineate dangers of a different and, perhaps, still more alarming kind—those which will in all probability flow from dissensions between the States themselves and from domestic factions and convulsions. These have been already in some instances slightly anticipated; but they deserve a more particular and more full investigation.

A man must be far gone in Utopian speculations who can seriously doubt that if these States should either be wholly disunited, or only united in partial confederacies, the subdivisions into which they might be thrown would have frequent and violent contests with each other. To presume a want of motives for such contests as an argument against their existence would be to forget that men are ambitious, vindictive, and rapacious. To look for a continuation of harmony between a number of independent, unconnected sovereignties situated in the same neighborhood would be to disregard

the uniform course of human events, and to set at defiance the accumulated experience of ages.

The causes of hostility among nations are innumerable. There are some which have a general and almost constant operation upon the collective bodies of society. Of this description are the love of power or the desire of pre-eminence and dominion—the jealousy of power, or the desire of equality and safety. There are others which have a more circumscribed though an equally operative influence within their spheres. Such are the rivalships and competitions of commerce between commercial nations. And there are others, not less numerous than either of the former, which take their origin entirely in private passions; in the attachments, enmities, interests, hopes, and fears of leading individuals in the communities of which they are members. Men of this class, whether the favorites of a king or of a people, have in too many instances abused the confidence they possessed; and assuming the pretext of some public motive, have not scrupled to sacrifice the national tranquillity to personal advantage or personal gratification.

The celebrated Pericles, in compliance with the resentment of a prostitute,^[1] at the expense of much of the blood and treasure of his countrymen, attacked, vanquished, and destroyed the city of the Samnians. The same man, stimulated by private pique against the Megarensians,^[2] another nation of Greece, or to avoid a prosecution with which he was threatened as an accomplice of a supposed theft of the statuary of Phidias,^[3] or to get rid of the accusations prepared to be brought against him for dissipating the funds of the state in the purchase of popularity,^[4] or from a combination of all these causes, was the primitive author of that famous and fatal war, distinguished in the Grecian annals by the name of the Peloponnesian war; which, after various vicissitudes, intermissions, and renewals, terminated in the ruin of the Athenian commonwealth.

The ambitious cardinal, who was prime minister to Henry VIII, permitting his vanity to aspire to the triple crown,^[5] entertained hopes of succeeding in the acquisition of that splendid prize by the influence of the Emperor Charles V. To secure the favor and interest of this enterprising and powerful monarch, he precipitated England into a war with France, contrary to the plainest dictates of policy, and at the hazard of the safety and independence, as well of the kingdom over which he presided by his counsels as of Europe in general. For if there ever was a sovereign who bid fair to realize the project of universal monarchy, it was the Emperor Charles V, of whose intrigues Wolsey was at once the instrument and the dupe.

The influence which the bigotry of one female,^[6] the petulancies of another,^[7] and the cabals of a third,^[8] had in the contemporary policy, ferments, and pacifications of a considerable part of Europe, are topics that have been too often descanted upon not to be generally known.

To multiply examples of the agency of personal considerations in the production of great national events, either foreign or domestic, according to their direction, would be an unnecessary waste of time. Those who have but a superficial acquaintance with the sources from which they are to be drawn will themselves recollect a variety of instances; and those who have a tolerable knowledge of human nature will not stand in need of such lights to form their opinion either of the reality or extent of that agency. Perhaps, however, a reference, tending to illustrate the general principle, may with propriety be made to a case which has lately happened among ourselves. If Shays had not been a desperate debtor, it is much to be doubted whether Massachusetts would have been plunged into a civil war.^[9]

菲狄亚斯（约公元前480—前430），古希腊的雕刻家、画家和建筑师，被公认为最伟大的古典雕刻家。雅典人。

伯罗奔尼撒战争

亨利八世（1491—1547），英格兰亨利七世次子，都铎王朝第二任国王，1509年4月22日继位。他也是爱尔兰领主，后来更成为爱尔兰国王。

查理五世（1337—1381），瓦卢瓦王朝第3位国王。逆转了百年战争第一阶段的战局，使法国得以复兴。

But notwithstanding the concurring testimony of experience, in this particular, there are still to be found visionary or designing men, who stand ready to advocate the paradox of perpetual peace between the States, though dismembered and alienated from each other. The genius of republics (say they) is pacific; the spirit of commerce has a tendency to soften the manners of men, and to extinguish those inflammable humors which have so often kindled into wars. Commercial republics, like ours, will never be disposed to waste themselves in ruinous contentions with each other. They will be governed by mutual interest, and will cultivate a spirit of mutual amity and concord.

Is it not (we may ask these projectors in politics) the true interest of all nations to cultivate the same benevolent and philosophic spirit? If this be their true interest, have they in fact pursued it? Has it not, on the contrary, invariably been found that momentary passions, and immediate interest, have a more active and imperious control over human conduct than general or remote considerations of policy, utility or justice? Have republics in practice been less addicted to war than monarchies? Are not the former administered by men as well as the latter? Are there not aversions, predilections, rivalships, and desires of unjust acquisitions that affect nations as well as kings? Are not popular assemblies frequently subject to the impulses of rage, resentment, jealousy, avarice, and of other irregular and violent propensities? Is it not well known that their determinations are often governed by a few individuals in whom they place confidence, and are, of course, liable to be tinged by the passions and views of those individuals? Has commerce hitherto done anything more than change the objects of war? Is not the love of wealth as domineering and enterprising a passion as that of power or glory? Have there not been as many wars founded upon commercial motives since that has become the prevailing system of nations, as were before occasioned by the cupidity of territory or dominion? Has not the spirit of commerce, in many instances, administered new incentives to the appetite, both for the one and for the other? Let experience, the least fallible guide of human opinions, be appealed to for an answer to these inquiries.

Sparta, Athens, Rome, and Carthage were all republics; two of them, Athens and Carthage, of the commercial kind. Yet were they as often engaged in wars, offensive and defensive, as the neighboring monarchies of the same times. Sparta was little better than a well-regulated camp; and Rome was never sated of carnage and conquest.

Carthage, though a commercial republic, was the aggressor in the very war that ended in her destruction. Hannibal had carried her arms

into the heart of Italy and to the gates of Rome, before Scipio, in turn, gave him an overthrow in the territories of Carthage, and made a conquest of the commonwealth.

Venice, in later times, figured more than once in wars of ambition, till, becoming an object to the other Italian states, Pope Julius the Second found means to accomplish that formidable league, [10] which gave a deadly blow to the power and pride of this haughty republic.

The provinces of Holland, till they were overwhelmed in debts and taxes, took a leading and conspicuous part in the wars of Europe. They had furious contests with England for the dominion of the sea, and were among the most persevering and most implacable of the opponents of Louis XIV.

In the government of Britain the representatives of the people compose one branch of the national legislature. Commerce has been for ages the predominant pursuit of that country. Few nations, nevertheless, have been more frequently engaged in war; and the wars in which that kingdom has been engaged have, in numerous instances, proceeded from the people.

There have been, if I may so express it, almost as many popular as royal wars. The cries of the nation and the importunities of their representatives have, upon various occasions, dragged their monarchs into war, or continued them in it, contrary to their inclinations, and sometimes contrary to the real interests of the State. In that memorable struggle for superiority between the rival houses of Austria and Bourbon, which so long kept Europe in a flame, it is well known that the antipathies of the English against the French, seconding the ambition, or rather the avarice, of a favorite leader, [11] protracted the war beyond the limits marked out by sound policy, and for a considerable time in opposition to the views of the court.

The wars of these two last-mentioned nations have in a great measure grown out of commercial considerations—the desire of supplanting and the fear of being supplanted, either in particular branches of traffic or in the general advantages of trade and navigation, and sometimes even the more culpable desire of sharing in the commerce of other nations without their consent.

The last war but two between Britain and Spain sprang from the attempts of the English merchants to prosecute an illicit trade with the Spanish Main. These unjustifiable practices on their part produced severity on the part of the Spaniards toward the subjects of Great Britain which were not more justifiable, because they exceeded the bounds of a just retaliation and were chargeable with inhumanity and cruelty. Many of the English who were taken on the Spanish coast were sent to dig in the mines of Potosi; and by the usual progress of a spirit of resentment, the innocent were, after a while, confounded with the guilty in indiscriminate punishment. The complaints of the merchants kindled a violent flame throughout the nation, which soon after broke out in the House of Commons, and was communicated from that body to the ministry. Letters of reprisal were granted, and a war ensued, which in its consequences overthrew all the alliances that but twenty years before had been formed with sanguine expectations of the most beneficial fruits.

From this summary of what has taken place in other countries, whose situations have borne the nearest resemblance to our own, what reason can we have to confide in those reveries which would seduce us into an expectation of peace and cordiality between the members of the present confederacy, in a state of separation? Have we not already seen enough of the fallacy and extravagance of those idle theories which have amused us with promises of an exemption from the imperfections, the weaknesses, and the evils incident to society in every shape? Is it not time to awake from the deceitful dream of a

golden age, and to adopt as a practical maxim for the direction of our political conduct that we, as well as the other inhabitants of the globe, are yet remote from the happy empire of perfect wisdom and perfect virtue?

Let the point of extreme depression to which our national dignity and credit have sunk, let the inconveniences felt everywhere from a lax and ill administration of government, let the revolt of a part of the State of North Carolina, the late menacing disturbances in Pennsylvania, and the actual insurrections and rebellions in Massachusetts, declare—!

So far is the general sense of mankind from corresponding with the tenets of those who endeavor to lull asleep our apprehensions of discord and hostility between the States, in the event of disunion, that it has from long observation of the progress of society become a sort of axiom in politics that vicinity, or nearness of situation, constitutes nations' natural enemies. An intelligent writer expresses himself on this subject to this effect:“NEIGHBORING NATIONS (says he) are naturally ENEMIES of each other, unless their common weakness forces them to league in a CONFEDERATE REPUBLIC, and their constitution prevents the differences that neighborhood occasions, extinguishing that secret jealousy which disposes all states to aggrandize themselves at the expense of their neighbors.”^[12] This passage, at the same time, points out the EVIL and suggests the REMEDY.

FEDERALIST No. 7 The Same Subject Continued (Concerning Dangers from Dissensions Between the States)

**For the Independent Journal.
Thursday, November 15, 1787
Hamilton**

To the People of the State of New York:

IT IS sometimes asked, with an air of seeming triumph, what inducements could the States have, if disunited, to make war upon each other? It would be a full answer to this question to say—precisely the same inducements which have, at different times, deluged in blood all the nations in the world. But, unfortunately for us, the question admits of a more particular answer. There are causes of differences within our immediate contemplation, of the tendency of which, even under the restraints of a federal constitution, we have had sufficient experience to enable us to form a judgment of what might be expected if those restraints were removed.

Territorial disputes have at all times been found one of the most fertile sources of hostility among nations.^[1] Perhaps the greatest proportion of wars that have desolated the earth have sprung from this origin. This cause would exist among us in full force. We have a vast tract of unsettled territory within the boundaries of the United States. There still are discordant and undecided claims between several of them, and the dissolution of the Union would lay a

foundation for similar claims between them all. It is well known that they have heretofore had serious and animated discussion concerning the rights to the lands which were ungranted at the time of the Revolution, and which usually went under the name of crown lands. The States within the limits of whose colonial governments they were comprised have claimed them as their property, the others have contended that the rights of the crown in this article devolved upon the Union; especially as to all that part of the Western territory which, either by actual possession, or through the submission of the Indian proprietors, was subjected to the jurisdiction of the king of Great Britain, till it was relinquished in the treaty of peace. This, it has been said, was at all events an acquisition to the Confederacy by compact with a foreign power. It has been the prudent policy of Congress to appease this controversy, by prevailing upon the States to make cessions to the United States for the benefit of the whole. This has been so far accomplished as, under a continuation of the Union, to afford a decided prospect of an amicable termination of the dispute. A dismemberment of the Confederacy, however, would revive this dispute, and would create others on the same subject. At present a large part of the vacant Western territory is, by cession at least, if not by any anterior right, the common property of the Union. If that were at an end, the States which have made cessions on a principle of federal compromise would be apt, when the motive of the grant had ceased, to reclaim the lands as a reversion. The other States would no doubt insist on a proportion by right of representation. Their argument would be that a grant once made could not be revoked; and that the justice of their participating in territory acquired or secured by the joint efforts of the Confederacy remained undiminished. If, contrary to probability, it should be admitted by all the States that each had a right to a share of this common stock, there would still be a difficulty to be surmounted as to a proper rule of apportionment. Different principles would be set up by different States for this purpose; and as they would affect the opposite interests of the parties,

they might not easily be susceptible of a pacific adjustment.

In the wide field of Western territory, therefore, we perceive an ample theatre for hostile pretensions, without any umpire or common judge to interpose between the contending parties. To reason from the past to the future, we shall have good ground to apprehend that the sword would sometimes be appealed to as the arbiter of their differences. The circumstances of the dispute between Connecticut and Pennsylvania, respecting the land at Wyoming, admonish us not to be sanguine in expecting an easy accommodation of such differences. The Articles of Confederation obliged the parties to submit the matter to the decision of a federal court. The submission was made, and the court decided in favor of Pennsylvania. But Connecticut gave strong indications of dissatisfaction with that determination; nor did she appear to be entirely resigned to it, till, by negotiation and management, something like an equivalent was found for the loss she supposed herself to have sustained. Nothing here said is intended to convey the slightest censure on the conduct of that State. She no doubt sincerely believed herself to have been injured by the decision; and States, like individuals, acquiesce with great reluctance in determinations to their disadvantage.

Those who had an opportunity of seeing the inside of the transactions which attended the progress of the controversy between this State and the district of Vermont can vouch the opposition we experienced, as well from States not interested as from those which were interested in the claim, and can attest the danger to which the peace of the Confederacy might have been exposed, had this State attempted to assert its rights by force. Two motives preponderated in that opposition: one, a jealousy entertained of our future power; and the other, the interest of certain individuals of influence in the neighboring States, who had obtained grants of land under the actual government of that district. Even the States which brought forward

claims in contradiction to ours seemed more solicitous to dismember this State, than to establish their own pretensions. These were New Hampshire, Massachusetts, and Connecticut. New Jersey and Rhode Island upon all occasions discovered a warm zeal for the independence of Vermont; and Maryland, until alarmed by the appearance of a connection between Canada and that place, entered deeply into the same views. These being small States, saw with an unfriendly eye the perspective of our growing greatness. In a review of these transactions we may trace some of the causes which would be likely to embroil the States with each other, if it should be their unpropitious destiny to become disunited.

Competitions of commerce would be another fruitful source of contention. The States less favorably circumstanced would be desirous of escaping from the disadvantages of local situation, and of sharing in the advantages of their more fortunate neighbors. Each State, or separate confederacy, would pursue a system of commercial policy peculiar to itself. This would occasion distinctions, preferences, and exclusions, which would beget discontent. The habits of intercourse, on the basis of equal privileges, to which we have been accustomed since the earliest settlement of the country, would give a keener edge to those causes of discontent than they would naturally have independent of this circumstance. We should be ready to denominate injuries those things which were in reality the justifiable acts of independent sovereignties consulting a distinct interest. The spirit of enterprise, which characterizes the commercial part of America, has left no occasion of displaying itself unimproved. It is not at all probable that this unbridled spirit would pay much respect to those regulations of trade by which particular States might endeavor to secure exclusive benefits to their own citizens. The infractions of these regulations, on one side, the efforts to prevent and repel them, on the other, would naturally lead to outrages, and these to reprisals and wars.

The opportunities which some States would have of rendering others tributary to them by commercial regulations would be impatiently submitted to by the tributary States. The relative situation of New York, Connecticut, and New Jersey would afford an example of this kind. New York, from the necessities of revenue, must lay duties on her importations. A great part of these duties must be paid by the inhabitants of the two other States in the capacity of consumers of what we import. New York would neither be willing nor able to forego this advantage. Her citizens would not consent that a duty paid by them should be remitted in favor of the citizens of her neighbors; nor would it be practicable, if there were not this impediment in the way, to distinguish the customers in our own markets. Would Connecticut and New Jersey long submit to be taxed by New York for her exclusive benefit? Should we be long permitted to remain in the quiet and undisturbed enjoyment of a metropolis, from the possession of which we derived an advantage so odious to our neighbors, and, in their opinion, so oppressive? Should we be able to preserve it against the incumbent weight of Connecticut on the one side, and the co-operating pressure of New Jersey on the other? These are questions that temerity alone will answer in the affirmative.

The public debt of the Union would be a further cause of collision between the separate States or confederacies. The apportionment, in the first instance, and the progressive extinguishment afterward, would be alike productive of ill humor and animosity. How would it be possible to agree upon a rule of apportionment satisfactory to all? There is scarcely any that can be proposed which is entirely free from real objections. These, as usual, would be exaggerated by the adverse interest of the parties. There are even dissimilar views among the States as to the general principle of discharging the public debt. Some of them, either less impressed with the importance of national credit, or because their citizens have little, if any, immediate interest in the question, feel an indifference, if not a repugnance, to the payment of

the domestic debt at any rate. These would be inclined to magnify the difficulties of a distribution. Others of them, a numerous body of whose citizens are creditors to the public beyond the proportion of the State in the total amount of the national debt, would be strenuous for some equitable and effective provision. The procrastinations of the former would excite the resentments of the latter. The settlement of a rule would, in the meantime, be postponed by real differences of opinion and affected delays. The citizens of the States interested would clamor; foreign powers would urge for the satisfaction of their just demands, and the peace of the States would be hazarded to the double contingency of external invasion in internal contention.

Suppose the difficulties of agreeing upon a rule surmounted and the apportionment made. Still there is great room to suppose that the rule agreed upon would, upon experiment, be found to bear harder upon some States than upon others. Those which were sufferers by it would naturally seek for a mitigation of the burden. The others would as naturally be disinclined to a revision, which was likely to end in an increase of their own incumbrances. Their refusal would be too plausible a pretext to the complaining States to withhold their contributions, not to be embraced with avidity; and the non-compliance of these States with their engagements would be a ground of bitter discussion and altercation. If even the rule adopted should in practice justify the equality of its principle, still delinquencies in payments on the part of some of the States would result from a diversity of other causes—the real deficiency of resources; the mismanagement of their finances; accidental disorders in the management of the government; and, in addition to the rest, the reluctance with which men commonly part with money for purposes that have outlived the exigencies which produced them and interfere with the supply of immediate wants. Delinquencies, from whatever causes, would be productive of complaints, recriminations, and quarrels. There is, perhaps, nothing more likely to disturb the

tranquillity of nations than their being bound to mutual contributions for any common object that does not yield an equal and coincident benefit. For it is an observation, as true as it is trite, that there is nothing men differ so readily about as the payment of money.

Laws in violation of private contracts, as they amount to aggressions on the rights of those States whose citizens are injured by them, may be considered as another probable source of hostility. We are not authorized to expect that a more liberal or more equitable spirit would preside over the legislations of the individual States hereafter, if unrestrained by any additional checks, than we have heretofore seen in too many instances disgracing their several codes. We have observed the disposition to retaliation excited in Connecticut in consequence of the enormities perpetrated by the Legislature of Rhode Island; and we reasonably infer that, in similar cases under other circumstances, a war, not of parchment, but of the sword, would chastise such atrocious breaches of moral obligation and social justice.

The probability of incompatible alliances between the different States, or confederacies, and different foreign nations, and the effects of this situation upon the peace of the whole, have been sufficiently unfolded in some preceding papers. From the view they have exhibited of this part of the subject, this conclusion is to be drawn, that America, if not connected at all, or only by the feeble tie of a simple league, offensive and defensive, would, by the operation of such jarring alliances, be gradually entangled in all the pernicious labyrinths of European politics and wars; and by the destructive contentions of the parts into which she was divided, would be likely to become a prey to the artifices and machinations of powers equally the enemies of them all. *Divide et impera*^[2] must be the motto of every nation that either hates or fears us.

[1] 这句话的意思是：领土争端无论何时都被认为是国与国之间发生敌对的最常见的原因之一。对于当时的美国而言，各州之间关系紧张的一个方面就体现在对西部领土的争夺上。西部存在广袤的未开发的土地，有6个州声称他们对西部土地拥有主权，其权利主张存在着相互矛盾重叠，它们的根据是英国人所授予的殖民地特许状，当时英国人尚不能确定北美究竟应该延伸多远的地方。17世纪的几个特许状宣布，殖民地存在范围是从大海到大海，或者远至“南方诸海”。各州坚守这些授权，尽管它们并不切合实际。参见[美]戴维斯图沃特著，顾元译：《1787年之夏缔造美国宪法的人们》，120—121页，北京，中国政法大学出版社，2011。

[2] Divide and command.

FEDERALIST No. 8 The Consequences of Hostilities Between the States

**From the New York Packet.
Tuesday, November 20, 1787
Hamilton**

To the People of the State of New York:

ASSUMING it therefore as an established truth that the several States, in case of disunion, or such combinations of them as might happen to be formed out of the wreck of the general Confederacy, would be subject to those vicissitudes of peace and war, of friendship and enmity, with each other, which have fallen to the lot of all neighboring nations not united under one government, let us enter into a concise detail of some of the consequences that would attend such a situation.

War between the States, in the first period of their separate existence, would be accompanied with much greater distresses than it commonly is in those countries where regular military establishments have long obtained. The disciplined armies always kept on foot on the continent of Europe, though they bear a malignant aspect to liberty and economy, have, notwithstanding, been productive of the signal advantage of rendering sudden conquests impracticable, and of preventing that rapid desolation which used to mark the progress of war prior to their introduction. The art of fortification has contributed to the same ends. The nations of Europe are encircled with chains of

fortified places, which mutually obstruct invasion. Campaigns are wasted in reducing two or three frontier garrisons to gain admittance into an enemy's country. Similar impediments occur at every step to exhaust the strength and delay the progress of an invader. Formerly an invading army would penetrate into the heart of a neighboring country almost as soon as intelligence of its approach could be received; but now a comparatively small force of disciplined troops, acting on the defensive, with the aid of posts, is able to impede, and finally to frustrate, the enterprises of one much more considerable. The history of war in that quarter of the globe is no longer a history of nations subdued and empires overturned, but of towns taken and retaken, of battles that decide nothing, of retreats more beneficial than victories, of much effort and little acquisition.

In this country the scene would be altogether reversed. The jealousy of military establishments would postpone them as long as possible. The want of fortifications, leaving the frontiers of one state open to another, would facilitate inroads. The populous States would, with little difficulty, overrun their less populous neighbors. Conquests would be as easy to be made as difficult to be retained. War, therefore, would be desultory and predatory. PLUNDER and devastation ever march in the train of irregulars. The calamities of individuals would make the principal figure in the events which would characterize our military exploits.

This picture is not too highly wrought; though, I confess, it would not long remain a just one. Safety from external danger is the most powerful director of national conduct. Even the ardent love of liberty will, after a time, give way to its dictates. The violent destruction of life and property incident to war, the continual effort and alarm attendant on a state of continual danger, will compel nations the most attached to liberty to resort for repose and security to institutions which have a tendency to destroy their civil and political rights. To be

more safe, they at length become willing to run the risk of being less free.

The institutions chiefly alluded to are STANDING ARMIES and the correspondent appendages of military establishments. Standing armies, it is said, are not provided against in the new Constitution; and it is thence inferred that they may exist under it. This inference, from the very form of the proposition, is, at best, problematical and uncertain.^[1] But standing armies, it may be replied, must inevitably result from a dissolution of the Confederacy. Frequent war and constant apprehension, which require a state of as constant preparation, will infallibly produce them. The weaker States or confederacies would first have recourse to them to put themselves upon an equality with their more potent neighbors. They would endeavor to supply the inferiority of population and resources by a more regular and effective system of defense, by disciplined troops, and by fortifications. They would, at the same time, be necessitated to strengthen the executive arm of government, in doing which their constitutions would acquire a progressive direction towards monarchy. It is of the nature of war to increase the executive at the expense of the legislative authority.

The expedients which have been mentioned would soon give the States or confederacies that made use of them a superiority over their neighbors. Small states, or states of less natural strength, under vigorous governments, and with the assistance of disciplined armies, have often triumphed over large states, or states of greater natural strength, which have been destitute of these advantages. Neither the pride nor the safety of the more important States, or confederacies, would permit them long to submit to this mortifying and adventitious superiority. They would quickly resort to means similar to those by which it had been effected, to reinstate themselves in their lost pre-eminence. Thus we should, in a little time, see established in every

part of this country the same engines of despotism which have been the scourge of the old world. This, at least, would be the natural course of things; and our reasonings will be the more likely to be just in proportion as they are accommodated to this standard.

These are not vague inferences drawn from supposed or speculative defects in a Constitution, the whole power of which is lodged in the hands of a people, or their representatives and delegates, but they are solid conclusions, drawn from the natural and necessary progress of human affairs.

It may, perhaps, be asked, by way of objection to this, why did not standing armies spring up out of the contentions which so often distracted the ancient republics of Greece? Different answers, equally satisfactory, may be given to this question. The industrious habits of the people of the present day, absorbed in the pursuits of gain and devoted to the improvements of agriculture and commerce, are incompatible with the condition of a nation of soldiers, which was the true condition of the people of those republics. The means of revenue, which have been so greatly multiplied by the increase of gold and silver and of the arts of industry, and the science of finance, which is the offspring of modern times, concurring with the habits of nations, have produced an entire revolution in the system of war, and have rendered disciplined armies, distinct from the body of the citizens, the inseparable companions of frequent hostility.

There is a wide difference, also, between military establishments in a country seldom exposed by its situation to internal invasions, and in one which is often subject to them and always apprehensive of them. The rulers of the former can have no good pretext, if they are even so inclined, to keep on foot armies so numerous as must of necessity be maintained in the latter. These armies being, in the first case, rarely if at all called into activity for interior defense, the people are in no danger of being broken to military subordination. The laws

are not accustomed to relaxations in favor of military exigencies; the civil state remains in full vigor, neither corrupted, nor confounded with the principles or propensities of the other state. The smallness of the army renders the natural strength of the community an overmatch for it; and the citizens, not habituated to look up to the military power for protection, or to submit to its oppressions, neither love nor fear the soldiery; they view them with a spirit of jealous acquiescence in a necessary evil and stand ready to resist a power which they suppose may be exerted to the prejudice of their rights.

The army under such circumstances may usefully aid the magistrate to suppress a small faction, or an occasional mob, or insurrection; but it will be unable to enforce encroachments against the united efforts of the great body of the people.

In a country in the predicament last described, the contrary of all this happens. The perpetual menacings of danger oblige the government to be always prepared to repel it; its armies must be numerous enough for instant defense. The continual necessity for their services enhances the importance of the soldier, and proportionably degrades the condition of the citizen. The military state becomes elevated above the civil. The inhabitants of territories, often the theatre of war, are unavoidably subjected to frequent infringements on their rights, which serve to weaken their sense of those rights; and by degrees the people are brought to consider the soldiery not only as their protectors but as their superiors. The transition from this disposition to that of considering them masters is neither remote nor difficult; but it is very difficult to prevail upon a people under such impressions to make a bold or effectual resistance to usurpations supported by the military power.

The kingdom of Great Britain falls within the first description. An insular situation, and a powerful marine, guarding it in a great measure against the possibility of foreign invasion, supersede the

necessity of a numerous army within the kingdom. A sufficient force to make head against a sudden descent, till the militia could have time to rally and embody, is all that has been deemed requisite. No motive of national policy has demanded, nor would public opinion have tolerated, a larger number of troops upon its domestic establishment. There has been, for a long time past, little room for the operation of the other causes, which have been enumerated as the consequences of internal war. This peculiar felicity of situation has, in a great degree, contributed to preserve the liberty which that country to this day enjoys, in spite of the prevalent venality and corruption. If, on the contrary, Britain had been situated on the continent, and had been compelled, as she would have been, by that situation, to make her military establishments at home coextensive with those of the other great powers of Europe, she, like them, would in all probability be, at this day, a victim to the absolute power of a single man. 'Tis possible, though not easy, that the people of that island may be enslaved from other causes; but it cannot be by the prowess of an army so inconsiderable as that which has been usually kept up within the kingdom.

If we are wise enough to preserve the Union we may for ages enjoy an advantage similar to that of an insulated situation. Europe is at a great distance from us. Her colonies in our vicinity will be likely to continue too much disproportioned in strength to be able to give us any dangerous annoyance. Extensive military establishments cannot, in this position, be necessary to our security. But if we should be disunited, and the integral parts should either remain separated, or, which is most probable, should be thrown together into two or three confederacies, we should be, in a short course of time, in the predicament of the continental powers of Europe—our liberties would be a prey to the means of defending ourselves against the ambition and jealousy of each other.

This is an idea not superficial or futile, but solid and weighty. It deserves the most serious and mature consideration of every prudent and honest man of whatever party. If such men will make a firm and solemn pause, and meditate dispassionately on the importance of this interesting idea; if they will contemplate it in all its attitudes, and trace it to all its consequences, they will not hesitate to part with trivial objections to a Constitution, the rejection of which would in all probability put a final period to the Union. The airy phantoms that flit before the distempered imaginations of some of its adversaries would quickly give place to the more substantial prospects of dangers, real, certain, and formidable.

注释

[1] This objection will be fully examined in its proper place, and it will be shown that the only rational precaution which could have been taken on this subject has been taken; and a much better one than is to be found in any constitution that has been heretofore framed in America, most of which contain no guard at all on this subject.

FEDERALIST No. 9 The Union as a Safeguard Against Domestic Faction and Insurrection

**For the Independent Journal.
Wednesday, November 21, 1787
Hamilton**

To the People of the State of New York:

A FIRM Union will be of the utmost moment to the peace and liberty of the States as a barrier against domestic faction and insurrection. It is impossible to read the history of the petty republics of Greece and Italy without feeling sensations of horror and disgust at the distractions with which they were continually agitated, and at the rapid succession of revolutions by which they were kept in a state of perpetual vibration between the extremes of tyranny and anarchy. If they exhibit occasional calms, these only serve as short-lived contrasts to the furious storms that are to succeed. If now and then intervals of felicity open themselves to view, we behold them with a mixture of regret, arising from the reflection that the pleasing scenes before us are soon to be overwhelmed by the tempestuous waves of sedition and party rage. If momentary rays of glory break forth from the gloom, while they dazzle us with a transient and fleeting brilliancy, they at the same time admonish us to lament that the vices of government should pervert the direction and tarnish the luster of those bright talents and exalted endowments for which the favored soils that produced them have been so justly celebrated.

From the disorders that disfigure the annals of those republics the advocates of despotism have drawn arguments, not only against the forms of republican government, but against the very principles of civil liberty. They have decried all free government as inconsistent with the order of society, and have indulged themselves in malicious exultation over its friends and partisans. Happily for mankind, stupendous fabrics reared on the basis of liberty, which have flourished for ages, have, in a few glorious instances, refuted their gloomy sophisms. And, I trust, America will be the broad and solid foundation of other edifices, not less magnificent, which will be equally permanent monuments of their errors.

But it is not to be denied that the portraits they have sketched of republican government were too just copies of the originals from which they were taken. If it had been found impracticable to have devised models of a more perfect structure, the enlightened friends to liberty would have been obliged to abandon the cause of that species of government as indefensible. The science of politics, however, like most other sciences, has received great improvement. The efficacy of various principles is now well understood, which were either not known at all, or imperfectly known to the ancients. The regular distribution of power into distinct departments; the introduction of legislative balances and checks; the institution of courts composed of judges holding their offices during good behavior; the representation of the people in the legislature by deputies of their own election: these are wholly new discoveries, or have made their principal progress towards perfection in modern times. They are means, and powerful means, by which the excellences of republican government may be retained and its imperfections lessened or avoided. To this catalogue of circumstances that tend to the amelioration of popular systems of civil government, I shall venture, however novel it may appear to some, to add one more, on a principle which has been made the foundation of an objection to the new Constitution; I mean the

ENLARGEMENT of the ORBIT within which such systems are to revolve, either in respect to the dimensions of a single State or to the consolidation of several smaller States into one great Confederacy. The latter is that which immediately concerns the object under consideration. It will, however, be of use to examine the principle in its application to a single State, which shall be attended to in another place.

The utility of a Confederacy, as well to suppress faction and to guard the internal tranquillity of States as to increase their external force and security, is in reality not a new idea. It has been practiced upon in different countries and ages, and has received the sanction of the most approved writers on the subject of politics. The opponents of the PLAN proposed have, with great assiduity, cited and circulated the observations of Montesquieu on the necessity of a contracted territory for a republican government. But they seem not to have been apprised of the sentiments of that great man expressed in another part of his work, nor to have adverted to the consequences of the principle to which they subscribe with such ready acquiescence.

When Montesquieu recommends a small extent for republics, the standards he had in view were of dimensions far short of the limits of almost every one of these States. Neither Virginia, Massachusetts, Pennsylvania, New York, North Carolina, nor Georgia can by any means be compared with the models from which he reasoned and to which the terms of his description apply. If we therefore take his ideas on this point as the criterion of truth, we shall be driven to the alternative either of taking refuge at once in the arms of monarchy, or of splitting ourselves into an infinity of little, jealous, clashing, tumultuous commonwealths, the wretched nurseries of unceasing discord and the miserable objects of universal pity or contempt. Some of the writers who have come forward on the other side of the question seem to have been aware of the dilemma; and have even

been bold enough to hint at the division of the larger States as a desirable thing. Such an infatuated policy, such a desperate expedient, might, by the multiplication of petty offices, answer the views of men who possess not qualifications to extend their influence beyond the narrow circles of personal intrigue, but it could never promote the greatness or happiness of the people of America.

Referring the examination of the principle itself to another place, as has been already mentioned, it will be sufficient to remark here that, in the sense of the author who has been most emphatically quoted upon the occasion, it would only dictate a reduction of the SIZE of the more considerable MEMBERS of the Union, but would not militate against their being all comprehended in one confederate government. And this is the true question, in the discussion of which we are at present interested.

So far are the suggestions of Montesquieu from standing in opposition to a general Union of the States that he explicitly treats of a CONFEDERATE REPUBLIC as the expedient for extending the sphere of popular government and reconciling the advantages of monarchy with those of republicanism.

“It is very probable”(says he^[1])“that mankind would have been obliged at length to live constantly under the government of a SINGLE PERSON, had they not contrived a kind of constitution that has all the internal advantages of a republican, together with the external force of a monarchical, government. I mean a CONFEDERATE REPUBLIC.

“This form of government is a convention by which several smaller states agree to become members of a larger one, which they intend to form. It is a kind of assemblage of societies that constitute a new one, capable of increasing, by means of new associations, till they arrive to such a degree of power as to be able to provide for the security of the united body.

“A republic of this kind, able to withstand an external force, may support itself without any internal corruptions. The form of this society prevents all manner of inconveniences.

“If a single member should attempt to usurp the supreme authority, he could not be supposed to have an equal authority and credit in all the confederate states. Were he to have too great influence over one, this would alarm the rest. Were he to subdue a part, that which would still remain free might oppose him with forces independent of those which he had usurped and overpower him before he could be settled in his usurpation.

“Should a popular insurrection happen in one of the confederate states, the others are able to quell it. Should abuses creep into one part, they are reformed by those that remain sound. The state may be destroyed on one side, and not on the other; the confederacy may be dissolved, and the confederates preserve their sovereignty.

“As this government is composed of small republics, it enjoys the internal happiness of each; and with respect to its external situation, it is possessed, by means of the association, of all the advantages of large monarchies.”

I have thought it proper to quote at length these interesting passages, because they contain a luminous abridgment of the principal arguments in favor of the Union, and must effectually remove the false impressions which a misapplication of other parts of the work was calculated to produce. They have, at the same time, an intimate connection with the more immediate design of this paper, which is to illustrate the tendency of the Union to repress domestic faction and insurrection.

A distinction, more subtle than accurate, has been raised between a confederacy and a consolidation of the States. The essential characteristic of the first is said to be the restriction of its authority to

the members in their collective capacities, without reaching to the individuals of whom they are composed.^[2] It is contended that the national council ought to have no concern with any object of internal administration. An exact equality of suffrage between the members has also been insisted upon as a leading feature of a confederate government. These positions are, in the main, arbitrary; they are supported neither by principle nor precedent. It has indeed happened that governments of this kind have generally operated in the manner which the distinction taken notice of, supposes to be inherent in their nature; but there have been in most of them extensive exceptions to the practice, which serve to prove, as far as example will go, that there is no absolute rule on the subject. And it will be clearly shown, in the course of this investigation, that as far as the principle contended for has prevailed, it has been the cause of incurable disorder and imbecility in the government.

The definition of a confederate republic seems simply to be “an assemblage of societies,” or an association of two or more states into one state.^[3] The extent, modifications, and objects of the federal authority are mere matters of discretion. So long as the separate organization of the members be not abolished; so long as it exists, by a constitutional necessity, for local purposes; though it should be in perfect subordination to the general authority of the union, it would still be, in fact and in theory, an association of states, or a confederacy. The proposed Constitution, so far from implying an abolition of the State governments, makes them constituent parts of the national sovereignty, by allowing them a direct representation in the Senate, and leaves in their possession certain exclusive and very important portions of sovereign power. This fully corresponds, in every rational import of the terms, with the idea of a federal government.

In the Lycian confederacy, which consisted of twenty-three

CITIES, or republics, the largest were entitled to three votes in the COMMON COUNCIL, those of the middle class to two, and the smallest to one. The COMMON COUNCIL had the appointment of all the judges and magistrates of the respective CITIES. This was certainly the most delicate species of interference in their internal administration; for if there be any thing that seems exclusively appropriated to the local jurisdictions, it is the appointment of their own officers. Yet Montesquieu, speaking of this association, says:“Were I to give a model of an excellent Confederate Republic, it would be that of Lycia.”Thus we perceive that the distinctions insisted upon were not within the contemplation of this enlightened civilian; and we shall be led to conclude that they are the novel refinements of an erroneous theory.

注释

[1] Spirit of Laws, Vol. I., Book IX., Chap. I.

[2] 有人将联邦国家与统一的国家加以区别，但这种区分并不明显。据说，前者的主要特征是，它的权力只能及于成员的集体，不能达到组成成员的个人身上。这种观点是被普布利乌斯所批判的，他们认为，邦联政府之所以软弱无能，就是因为其无法管理公民个人。

[3] 联邦共和国的定义，看来就是“一些社会的集合体”或者是由两个或更多的州联合成一个国家。这段话对联邦共和国进行了粗略的定义，即联邦并不要求废除各州政府，而是要把它们联合起来成为全国政府的一部分，允许它们在参议院中有自己的代表，允许它们保持若干单独的、非常重要的主权。进而作者得出结论，拟议中的宪法与联邦政府的观念完全吻合。在宪法制定和批准过程中，反对者反对新宪法的一个理由就是害怕强大的中央政府会吞噬州的主权。

FEDERALIST No. 10 The Same Subject Continued (The Union as a Safeguard Against Domestic Faction and Insurrection)

**From the Daily Advertiser.
Thursday, November 22, 1787
Madison**

To the People of the State of New York:

AMONG the numerous advantages promised by a well constructed Union, none deserves to be more accurately developed than its tendency to break and control the violence of faction. The friend of popular governments never finds himself so much alarmed for their character and fate, as when he contemplates their propensity to this dangerous vice. He will not fail, therefore, to set a due value on any plan which, without violating the principles to which he is attached, provides a proper cure for it. The instability, injustice, and confusion introduced into the public councils, have, in truth, been the mortal diseases under which popular governments have everywhere perished, as they continue to be the favorite and fruitful topics from which the adversaries to liberty derive their most specious declamations. The valuable improvements made by the American constitutions on the popular models, both ancient and modern, cannot certainly be too much admired; but it would be an unwarrantable partiality, to contend that they have as effectually obviated the danger on this side, as was wished and expected. Complaints are everywhere

heard from our most considerate and virtuous citizens, equally the friends of public and private faith and of public and personal liberty, that our governments are too unstable, that the public good is disregarded in the conflicts of rival parties, and that measures are too often decided, not according to the rules of justice and the rights of the minor party, but by the superior force of an interested and overbearing majority. However anxiously we may wish that these complaints had no foundation, the evidence of known facts will not permit us to deny that they are in some degree true. It will be found, indeed, on a candid review of our situation, that some of the distresses under which we labor have been erroneously charged on the operation of our governments; but it will be found, at the same time, that other causes will not alone account for many of our heaviest misfortunes; and, particularly, for that prevailing and increasing distrust of public engagements and alarm for private rights which are echoed from one end of the continent to the other. These must be chiefly, if not wholly, effects of the unsteadiness and injustice with which a factious spirit has tainted our public administrations.

By a faction I understand a number of citizens, whether amounting to a majority or minority of the whole, who are united and actuated by some common impulse of passion, or of interest, adverse to the rights of other citizens, or to the permanent and aggregate interests of the community.

There are two methods of curing the mischiefs of faction: the one, by removing its causes; the other, by controlling its effects.

There are again two methods of removing the causes of faction: the one, by destroying the liberty which is essential to its existence; the other, by giving to every citizen the same opinions, the same passions, and the same interests.

It could never be more truly said than of the first remedy that it

was worse than the disease. Liberty is to faction what air is to fire, an aliment without which it instantly expires. But it could not be less folly to abolish liberty, which is essential to political life, because it nourishes faction than it would be to wish the annihilation of air, which is essential to animal life, because it imparts to fire its destructive agency.

詹姆斯·麦迪逊（1751—1836），美国第四任总统。他是最后一位去世的美国开国之父。他与约翰·杰伊及亚历山大·汉密尔顿共同编写《联邦党人文集》，也被一些人视为“美国宪法之父”。

The second expedient is as impracticable as the first would be unwise. As long as the reason of man continues fallible, and he is at liberty to exercise it, different opinions will be formed. As long as the connection subsists between his reason and his self-love, his opinions and his passions will have a reciprocal influence on each other; and the former will be objects to which the latter will attach themselves. The diversity in the faculties of men, from which the rights of property originate, is not less an insuperable obstacle to a uniformity of interests. The protection of these faculties is the first object of government. From the protection of different and unequal faculties of acquiring property, the possession of different degrees and kinds of

property immediately results; and from the influence of these on the sentiments and views of the respective proprietors ensues a division of the society into different interests and parties.

The latent causes of faction are thus sown in the nature of man; and we see them everywhere brought into different degrees of activity, according to the different circumstances of civil society. A zeal for different opinions concerning religion, concerning government, and many other points, as well of speculation as of practice; an attachment to different leaders ambitiously contending for pre-eminence and power; or to persons of other descriptions whose fortunes have been interesting to the human passions, have, in turn, divided mankind into parties, inflamed them with mutual animosity, and rendered them much more disposed to vex and oppress each other than to co-operate for their common good. So strong is this propensity of mankind to fall into mutual animosities that where no substantial occasion presents itself the most frivolous and fanciful distinctions have been sufficient to kindle their unfriendly passions and excite their most violent conflicts. But the most common and durable source of factions has been the various and unequal distribution of property. Those who hold and those who are without property have ever formed distinct interests in society. Those who are creditors, and those who are debtors, fall under a like discrimination. A landed interest, a manufacturing interest, a mercantile interest, a moneyed interest, with many lesser interests, grow up of necessity in civilized nations, and divide them into different classes, actuated by different sentiments and views. The regulation of these various and interfering interests forms the principal task of modern legislation, and involves the spirit of party and faction in the necessary and ordinary operations of government.

No man is allowed to be a judge in his own cause, because his interest would certainly bias his judgment, and, not improbably,
